EXTRA-TERRITORIALITY IN JAPAN.

IV.

WE alluded in our last article to the fact, that writers on public law have in some instances claimed, that Europeans in the states of the Levant are entitled to the same Extra-territorial privileges that they would have enjoyed from a "cession or conquest of territory." That is to say; the privilege of preserving their natural right, and being subject only to their national jurisdiction and laws, and of entire immunity from the laws of the Territory.

This claim, whether well founded or not, is based upon implied consent, or immemorial usage and suffrance, no less than upon express treaty stipulations. The important fact should not be ignored that Consular Jurisdiction originated and grew up, in the countries of the Levant, under a peculiar system of public law, that had been discarded and repudiated by all the nations, long before Consular Jurisdiction was established in Japan. Whether the claim of complete extra-territoriality in those countries is well taken or not, we shall not undertake to discuss. Our only purpose at present is to show, that the argument or reasoning by which that claim is attempted to be established, whether valid or not, does not apply to Japan. To render this entirely clear, it is desirable to glance at the history of the beginnings and development of Consular Jurisdiction in the Levant and Europe. We ask the indulgence of the reader, therefore, for this historical digression, and promise to be as brief as the nature of the subject will permit.

The advantages of some kind of magistracy for the settlement of commercial disputes appears to have been obvious to the nations of remotest antiquity. We are informed that as early as 1,300 years B. C. the Egyptians

permitted maritime cases to be decided by a high priest in a temple at Memphis, dedicated to the Gods for that purpose; and that 800 years later, the Greeks established a number of maritime courts. Certain Greek magistrates were authorized to act as judges and conciliators of the disputes of foreign merchants, it was also their duty to entertain strangers, to receive Ambassadors and to preside at religious ceremonies and public fêtes. Like the Consuls of modern times, these officers displayed above the door of their houses, the arms of the State. At Athens these officers went on board vessels in the port and decided the disputes of seamen "According to their confessions and the testimony of witnesses." Teos and other cities of antiquity had similar officers. But the Republic of Rhodes is entitled to the credit of having first adopted a maritime code; and it is to an acquaintance with the *Lex Rhodia*, that the nations of Europe first obtained any just notions of the great principles of justice, honor or liberality, in commercial matters. This body of laws is a most fitting monument to the genius of a people, adventurous enough in the darkness and superstition of that remote age, to push their commerce beyond the Pillars of Hercules.

The historian Varro, had given a detailed account of the commercial institutions of the ancient Romans, but his works have unfortunately been lost, and succeeding writers have treated the subject in a vague and imperfect manner. We are informed, however, that, like the Greeks, they had commercial magistrates, who decided the disputes of sailors in the cabins of the vessels to which they belonged. For a period of nearly a thousand years however, after the dawn of the Christian era, the laws and usages of maritime commerce in Europe scarcely rose above the level which they had reached in ancient Greece. During the conflicts which overran the Roman Empire, commerce was almost extinguished and the voice of justice and reason was silenced in the fiercer clash of arms that filled all mediæval Europe with its din. About the beginning of the Ninth Century, the Republic of Amalphi, situated on the borders of the Mediterranean, framed a regular code of maritime laws, and in the following century the Republic of Pisa, established the office of *Consuls*, for the adjudication of mercantile disputes. The word Consul, says Mr. Tuson, is derived from the Latin, *consulere*, to counsel and advise. It is a name renowned in history, and was originally employed to designate the first magistrate of Rome. Through the ambition of Caesar for the Imperial Purple it was however, laid aside, and in the reign of Justinian, it was discarded altogether. It is supposed that the Pisans adopted this title as the most appropriate appellation for their maritime judges. The establishment of the Consulate of Pisa was soon followed by similar institutions in all the commercial and maritime states of Europe. These magistrates were however only *local municipal* officers, authorized to act at the ports of their own country, and in no case to live abroad. These early mercantile institutions

were however, the first stone of the present judicial authority of the Consul.*

It has been conjectured that the institution of Consuls, in their present capacity of International Agents, took its rise in the wars of crusades. The *Pisans*, *Venitians* and *Genoese*, from motives of gain, supplied the Crusaders with ships and provisions. From these they obtained charters which secured to them great privileges and immunities: amongst other things, "the right of municipal establishments in many of the maritime towns and ports of the Levant, and of governing their subjects residing therein, by laws and ordinances of their own creation."† As early as A.D. 1204, the Venitians had established consular jurisdictions in Dalmatia, Candia and Cephalonia, and in 1229, they obtained, by treaty, with the Sultan of Egypt, permission to establish consulates at Aleppo and Alexandria, the two great marts of Asiatic commerce at that time. In a commercial convention concluded between the Count of Savoy and the Municipality of Marseilles in 1226, the privilege of establishing Consuls at Acre, and various towns in Syria and Sicily, with complete jurisdiction over its subjects, was granted to the Commonalty of Marseilles. The same year the King of Aragon granted by charter to the Magistracy of Barcelona, the privilege of appointing Consuls, "in the countries beyond the sea," in Syria, in Egypt and all ports of the Grecian archipelago, and in the Levant. During the 13th and 14th centuries, after the East had completely fallen under the captivity of Islam, there were numerous instances of treaties between the Christian and the Moslem powers, and especially with Egypt which confirmed the establishment of European consulates in Mahomedan countries; those treaties conferred upon consuls the most extensive powers of jurisdiction. At this period, the System of Personal Laws, described by Savigny, and before referred to by us, prevailed among all the Nations of Western Europe.‡

According to this theory the laws of the nation to which an individual belonged, followed him wherever he went, and he was entitled to their protection and benefits without reference to the laws of the Territory or State in which he sojourned. Hence in the same place or state, there might be found several persons living together each governed by a distinct code of laws. Such being the generally received notion of personal rights, it was only natural that Consuls should be authorized to administer justice to their fellow-countrymen according to their own national laws and usages, without any regard to the laws of the territory in which the authority was exercised. Consuls at that time, we are informed, enjoyed all the privileges of the *Jus Gentium*, and all the immunities accorded at the present day to Public Ministers or Ambassadors.§ Thus, we see, that at the time consular jurisdiction was established in the Levant, it implied absolutely and altogether the rights, privileges and immunities of extra-territoriality, in the complete sense of that term. It was a *fact*, and not a "legal fiction." It is claimed therefore, that by immemorial usage, by long established practice and by suffrage, if not by express treaty stipulations, the Consuls in the States of the Levant

lawfully retain their *Mediaeval Status*, viz:—of enjoying the privileges of the *Jus Gentium*, and of administering justice to their countrymen according to the laws of their own country. Hence the claim that Europeans are entitled to immunity from the laws of the territory. Consular Jurisdiction in the Levant, it is claimed originated, developed and took root in the system of *Personal Laws*. To uproot the one system therefore, is to certainly destroy the other. In other words; the Mediaeval system of extra-territoriality had become by implied if not by express consent, *vested rights* in the Levant, before the modern theories of the sovereignty and independence of nations, and the doctrine of the *territoriality* of laws, came to be accepted as fundamental principles of International law. It has been shrewdly observed, that no national servitudes are so easily borne or so difficult to shake off, as those imposed by the bondage of tradition; and this we conceive to be the best explanation of the fact, asserted by a recent writer, that the Mahomedan nations, not only never thought of displacing the private jurisprudence of the Greek Empire in its application to the conquered people, but have never claimed to subject christian foreigners within their states to the territorial laws.¶

Not only so, but by the municipal laws of Turkey itself, and some of the other Mahomedan nations, the Consulates therein are allowed to receive under their protection, christian strangers and sojourners. The individuals thus protected, are by usage, if not by positive local law, clothed with the nationality of the protecting Consulate. "Usage if not positive stipulation, recognizes and sanctions the rights acquired by this connection."‡

The earliest treaty between the United States and Turkey takes notice of, and recognizes, these ancient usages, by providing that Americans committing offences in Turkey, "shall not be arrested and put in prison by the local authorities, but they shall be tried by their Minister or Consul and punished according to their offence, following in this respect the usage observed towards other Franks." In another article it is provided that "Americans established in the well defended states of the Sublime Porte, for purposes of commerce, shall not be disturbed in their affairs, nor shall they be treated in any way, contrary to established usages." The "established usages" as we have before said, are the absolute exemption of all Franks from the territorial laws.

As we have already stated, we do not undertake to decide whether the historical causes which have been just given sufficiently establish the right of Consuls in the Levant to exercise their *mediaeval jurisdiction*, or whether they do not. That question is apart from our inquiry. Our only purpose is, to point out, that the reasoning upon which that claim is sought to be established—whether sufficient or not—does not apply to the question of consular jurisdiction in Japan. The laws of interpretation in the case of treaties are substantially the same as in the case of other contracts; and it is a well understood principle, that the interpretation of a contract should be governed by the law under which it was made.** In seeking for an interpretation of the Extra-territorial provisions of the treaties with Japan, therefore, the law of nations as it existed at the time the contract was made, should govern so far as it is applicable thereto.

* It would be entirely out of place for us to dwell longer, in a paper of this kind, upon the commercial institutions of ancient Europe. The subject however is one of singular interest. The reader, if he is desirous of pursuing this inquiry, can do better than consult: Miltitz' "*Manuel des Consuls*," London and Berlin 1837, and Warden's "*Origin, Nature and Progress of Consular Institutions*," Paris 1813. Both of these works abound in curious research and most varied and interesting information.

PROFESSOR MORSE'S SHELL MOUNDS OF OMORI.

THE first volume of the Memoirs of the Science Department of the University of Tokio has just been issued, containing the results of Professor Morse's investigations in connection with the shell mounds near Omori. The publication of this memoir undoubtedly marks an important epoch in the history of the science of archaeology in Japan, both on account of the importance of the subject matter and the fact of its publication.

About two years ago Professor Morse, having been in the country but a few days, saw these mounds as he passed by in a railway car. Being a trained observer and especially having had much experience in the study of mounds and shell heaps in America, he was quick to recognize their character and immediately made arrangements for their exploration, which were soon successfully carried out. In this study he was led to certain conclusions which were briefly presented at the time at a meeting of the Asiatic Society and were afterward published in the *Popular Science Monthly*. These conclusions or suggestions, for some of them were hardly more, attracted much attention at the time and provoked a good deal of discussion which indicated that the current of opinion was not entirely in one direction. Since that time Professor Morse has been engaged in an exhaustive study of the remains discovered at Omori, the results of which are to be found in this handsome volume. It is safe to say that this memoir will attract the attention of archaeologists, not only in Japan, but throughout the world at large, where so much interest is felt and so little known of the archaeology of the East. While the book will generally find its way only into the hands of scholars and will in time meet with proper criticism and comment from them, there are many things in it of popular interest which may be referred to in a newspaper article.

In the first place it may not be undesirable to say that shell mounds have been found in greater or less abundance in various and widely separated parts of the world; that they are generally on or near the shore of the sea or ocean and that they are simply "the refuse piles of savage races who came to the shore at certain times of the year, or who occupied the shore permanently and there availed themselves of the food so easily secured from the water in the shape of mollusks and fishes." Here they cooked in their rude fashion and here they ate the food thus procured from the water or hunted from the land. In short here they lived, and here therefore will be found relics of that life, in the shells of the mollusks and the bones of the fishes, birds and other animals; in the fragments or complete specimens of their rude pottery, consisting generally of vessels used in the preparation and preservation of their food; in their rude implements of bone or stone of which they made use in their simple mechanical operations; and sometimes in what were evidently ornaments for the adornment of their persons:—for all of these are generally composed of more or less imperishable materials.

By the careful study and comparison of these things and their surroundings, the archaeologist is often able to construct reasonable hypotheses in regard to these races; their habits of life; the degree of intelligence or skill which they may have reached; whether or not they belong to pre-historic ages and many other things of interest concerning them. In this way it has certainly been established that man belongs to a much earlier period than was thought possible a few years ago, and all must welcome a discovery which adds to our already accumulated stock of knowledge upon this

subject. Although the shell mounds found in various parts of the world have many features in common, yet they also have peculiarities which doubtless arise from local surroundings, age and other causes. Professor Morse classifies the objects found in the Omori mounds as earthen, stone, horn, bone, and miscellaneous.

There were found a considerable number of earthenware vessels more or less perfect and thousands of fragments. Of this ancient pottery, the author of the memoir says; that the variety was infinite; that the specimens were hand-made, no trace of the use of the lathe having been discovered; that many were ornamented, although in no case does the ornamentation appear to be an imitation of any natural object; that many of the vessels were painted with mercury sulphide, although no attempt to produce a pattern or design appears; the material used was coarse; many of the pieces were used for cooking purposes, and in some instances the charred remains of food can be seen. Some of them were evidently ornamental jars and remarkable for their apparent symmetry of form; although measurement shows them to be irregular in their proportions. That these vessels were at that time difficult to make and expensive is shown by the numerous instances in which mending has been resorted to, and by others in which the edges of broken pots have evidently been ground down to render them fit for use.

It is curious to observe the great abundance, and infinite variety in form, of the pottery from the Omori mounds, and the same abundance and variety occur in other mounds in Japan which Professor Morse has examined. It would seem like an early promise of the future of Japan in an art for which it is justly celebrated. Attention is called to the entire absence in these mounds of anything evidently designed for personal ornament, with the exception of a single earthen bead. However, this is one of the possible uses of some curious clay tablets, four or five of which were found in the mounds. These the author considers as unique. They are highly ornamented; of the finest clay and show great care in their making. The designs upon them differ widely. Professor Morse finds it difficult to account for them, but ventures to suggest that they might have been used in some game; or that they represent insignia of authority, or that they were amulets or charms of some sort.

Many horn and bone implements were found, the greater number, however, being of horn from the antlers of the deer. These were of various forms evidently used for boring and cutting. There was a hook from a deer's antler and an exquisitely wrought arrow point or fish lance point from a boar's canine. It is noticed that notwithstanding the prevalence of so many shells, often massive in size, not a single worked shell either "as an implement, utensil or ornament" has yet been found and none of the little shell beads so common in other deposits of a similar character.

The collection of stone implements from these mounds is exceedingly meagre, consisting of three chisel-like implements, the fragments of a couple of rollers and two or three wrought stones which, from their shape and the evidence of wear upon their faces, Professor Morse conceives to have been hammers. He remarks that finished stone implements are to be found in great variety and abundance in Japan and he regards their almost entire absence from the Omori mounds as evidence of their high antiquity.

Very many bones of animals were found mixed with the shells composing the deposits. They were broken or split irregularly and it is therefore difficult to identify them.

There have been recognized, however, the bones of man, monkey, deer, wild boar, wolf and dog. Many of these, especially the deer and wild boar, indicate that the animals were of the largest size. The right lower jaw of what was probably a baboon-like ape was found, which is entirely unlike anything in Japan to-day.

But the most interesting bones found in the mounds are the bones of man. From the study of these Professor Morse draws some of his most important conclusions and makes some suggestions which are of the greatest value to archaeologists in Japan. He maintains that these bones exhibit the strongest evidences that *cannibalism* existed at that time. The reasons are, briefly, that they were found entirely unrelated to each other, which would not have been the case had the mound been used as a place of burial; that they were all broken into fragments, as were the bones of other animals, either for the purpose of convenient introduction into the pots for cooking, or for extracting the marrow; and that they exhibit scratches and cuts especially at those places where the muscle would be separated from the bone with difficulty. He calls attention to the fact that the history of the Japanese seems to show that they were never cannibals and that there are no records to show that any of the tribes which they encountered in their conquest of the country were addicted to tastes of this character. Attention is also called to the fact that the historians of the Ainos represent them to be a race "so mild and gentle in their disposition that the art of murder was unknown among them." It is easy to see that these facts clearly suggest that the race of men to whom these mounds must be attributed, are of greater antiquity than any of which we have any historical account.

Professor Morse finds further and very interesting evidence of the antiquity of these men in the discovery of a single shaft of a *tibia* associated with other human bones. The excessive flattening of the *tibia* seems to be a characteristic of all pre-historic races.

The *index*, that is the ratio of the transverse to the interior and posterior diameter, in nine recent Japanese *tibia* selected at random was .74—this being the average while the lowest was .68. Of the specimen found at Omori the index was .62 and Professor Morse has since found one in a large shell mound at Higo with an index of .50, being one of the most flattened ever discovered.

In addition to these facts there is also presented in the memoir an elaborate discussion of a comparison between the ancient and modern molluscan fauna of Omori. This portion of the volume cannot fail to be of the highest importance to those interested in questions pertaining to the modification and variation of species.

Careful measurements of a large number of recent specimens found to-day at Omori, were compared with similar measurements of specimens taken from the mound. This comparison establishes the fact that many changes have taken place both in form and dimensions of the shells, since the time of the mounds and in some instances entire extinction has occurred. To the archaeologist these are important observations as tending to establish the great antiquity of the mounds, for all study of the subject demonstrates that very considerable periods of time are required for the production of such marked changes in species.

In brief it may be said that the evidence of the memoir is to the end that the Omori shell mounds are the work of a prehistoric race of men; a race addicted to cannibalism; a race familiar, perhaps to a disproportionate extent, with the art of pottery and that since the period of their existence sufficient time has elapsed to permit of a consider-

able variation in the molluscan fauna of that locality. Whether all of these conclusions are admitted or not, it will not be denied that the memoir is a valuable contribution toward the solution of many questions with which it is concerned.

In his preface Professor Morse very properly expresses his obligations to the Directors of the University, Mr. Kato and Mr. Hamao, for the interest shown in the investigation and the publication of the memoir in so complete and handsome a form. In mechanical execution the book must certainly be considered a marvel when it is remembered that it is almost exclusively a native product. The paper is of native manufacture and is certainly of excellent quality; the numerous plates are the work of native artists and the press-work, binding &c. have been done entirely by native workmen. The fact of its publication is important as showing a disposition to encourage original research, at least in matters pertaining to the early history of the races of men who have in past times inhabited Japan. Next to the author who has thrown into his work a rare combination of ability and enthusiasm, the authorities of the University deserve the thanks of all who are interested in this department of science, for their intelligence in recognizing the value of the contribution, as well as for the full and complete form in which it is now brought to the attention of scholars.

THE RETROSPECTIVE RAMBLER.

II

"IF Punch grows extravagant I shall reprimand him very freely; if the stage becomes a nursery of folly and impertinence, I shall not be afraid to animadvert upon it. In short, if I meet with anything in city, court or country, that shocks modesty or good manners, I shall use my utmost endeavours to make an example of it."—(Spectator, No. 34.)

When Addison wrote these words, little did he imagine in what a form, and to what an extent, "Punch" would become an Institution and a Power. In our 'Ramblings' we have found those little puppets, with the same peculiar reedy quality of voice, and the same reckless extravagance of action, in China, as are to be heard and seen in England and all over Europe.

But what is this in comparison with that weekly brochure of wit and wisdom which now finds its way almost all over the world—certainly farther than the *orbis terrarum* of the boastful, masterful Romans; and with an effect, in the way of checking follies and unmasking shams, which no other treatment perhaps could touch so well, or cauterize so effectually. And then Punch—the London Punch we mean—is such a gentleman! No indecorum in his wit; no indecencies in his sketches; no spite, or *double entendre* in his pleasantries. In the midst of all the grotesque and satirical, the hard-hitting and plain-speaking of "our Friend from Fleet Street," there is a wholesomeness of tone, a salubrity of atmosphere about him, which makes his visits as safe as they are welcome, as delightful as they are decorous.

But Punch has imitators, and a Rambler meets with them not unfrequently. Peking has, or had, its local Punch; so had Shanghai—at least occasionally; and as to Yokohama—its history would hardly be traceable without a file of Punch lying on the table. Even a trip across the Pacific, or a month in the country, must be enlivened by some little attempt in the Punch line.

"All as good as the original"—did you ask? Well, no—not exactly. There are artists of exquisite talent, who

yet have not perception enough to understand that caricature defeats its own end by mere extravagance; and there are wits not witty enough to know that personality is not personation. That sort of etching which produces a portrait only by exaggerating some one feature, and that sort of jocularly which finds its most natural vent in buffoonery and practical joking—these do not furnish the material wherewith to concoct the Punch of a pleasant flavour, an intellectual beverage fit for ladies and gentlemen. The failure appears in that "growing extravagance" which Addison declared he should "reprimand very freely," and in more than one place east of the Cape, such a *Spectator* as he would find not a few occasions for such reprimands.

Then the stage—the amateur, local, private-theatrical stage; especially when it "becomes a nursery of folly and impertinence;" when "local hits" are ill-natured, and the sacred relations of life are disparaged, and the solemnities of religion are parodied—should not such things be "animadverted on?" Otherwise, would-be wit runs riot and degenerates into foolish frothiness, and the love of "fun" destroys the tone of manners, and substitutes an air of self-admiring impertinence.

Perhaps the present generation has suffered from the habit of looking at all things in their ludicrous aspects; and some would make *Punch* and the burlesque drama largely responsible for this. Shall the charge be admitted? or, shall we not rather lay the blame on that way of "carrying things to extremes" which joyous gay-hearted youth always exhibits; which shows itself in slang phrases, and *outré* fashions, and outrageous theorizings; and only gets tamed down and exhausted by the sober realities of middle-life; and then Pater-familias looks on with a benignant smile, and says "Boys will be boys!"

But we are not a "gay-hearted" people. England is "Merric England" no longer. Rather should it be called, Mournful England! We manufacture desperately, and markets are inadequate. We try to raise our own crops, and the farmer loses more and more every year. We build ships, and can only get freights at forty shillings a ton. Our "talented" colonial Governors get into wars; and whole regiments are cut up, and a Prince Imperial is surprized and speared. The finances of India are in a state of collapse, and we cannot dispense with the opium revenue. One of the largest items of our home income is an evidence of the people's love of "drink." Ireland is restless under our rule, and we have got entangled in a joint-responsibility with the unmanageable Ottoman!

A melancholy list of difficulties and draw-backs; but in the midst of it all, John Bull contrives to "laugh and grow fat," and the Pilot at the Helm declares the ship of State has "weathered worse storms than this, before."

Nevertheless, in "city, court and country," now, as in the day of good Queen Anne, and here as well as in the remote "right little, tight little Island," there are things which "shock modesty and good manners," and concerning which one who has not become too much orientalized may feel free to "use his utmost endeavours to make an example of."

"Will he be found fault with?" Of course, he will; especially by those whose objectionable toes are trodden upon. He will have the *Spectator's* experience all over again: Will Honeycomb will whisper the ladies complaints at the "liberties taken with opera and puppet show;" Sir Andrew Freeport will demur at "that foolish beaten road of falling upon aldermen and citizens;" the Templars will think our Rambler "has made too great an excursion in attacking persons of the "Inns of Court;" Sir Roger de Coverly—even charming

Sir Roger, would say "take care how you meddle with country squires," especially those of the fox-hunting, or horse-racing persuasion; and Captain Sentry will commend the prudence of "not touching upon the army"—which includes, of course, Naval Hospitals, Military Store-houses and the Marine Artillery.

It is probable, however, that this present Rambler will act upon the conclusion to which all the members of the famous Club were brought by Addison's "worthy friend, the clergyman;" namely—that he "should be at liberty to carry the war into what quarter he pleased; provided he continued to combat with criminals in a body, and to assault the vice without hurting the person."

If therefore, in our Ramblings, we should visit a city which has not public spirit enough to light its streets with gas, although the pipes are laid and the lamp-posts set up; if we should happen to notice structures, in an earthquake country, whose chief beauty is excessive and ill-supported height; if we should find ourselves in the midst of a community where literature languishes while the Turf is in the ascendant; where public journalism is conducted on the plan of mutual recrimination, and international antipathies are cultivated rather than repressed; if we should hear of a government in whose favor the showy charlatan may calculate safely upon being able to supplant the conscientious expert, and the upstart of a moment to displace the well-proved friend of many years;—if anything like this should occur in our experiences, it would be difficult to say what amount of intervention would be sufficient to keep us from having a fair shot at the fleeting follies and giving a sharp check to the evil tendencies of a deteriorating civilization.

THE NORTH-EAST PASSAGE.

THE safe arrival of the *Vega* in our harbour, on Tuesday night, will now be known all over the world, and will everywhere be heard with interest and enthusiasm. The discovery of a practical North-East passage from Europe to the Pacific will rank as one of the triumphs of the year, the peaceful triumph of science and enterprise in which Norden-skjold and his companions gained their laurels. It is only lately that we published* a full account of this expedition, in which the *Vega* was brought to her winter quarters on the 16th September last, at a place named Serts Kamen; but, from information which has now been kindly afforded us, we find that the spot marked as Serts Kamen on the chart we published was properly Tschelagskoj, and that Serts Kamen, where the *Vega* actually wintered, was some 400 miles further to the eastward, in Lat: 67° 6" and Long: 173° 30" W., near Koliuchin Bay, and therefore much nearer to Behring's Straits than we had imagined. From the 28th September to the 18th July, the *Vega* was frozen up, where she remained within 5,000 feet of the beach as safe as in any dock. The cold was intense, averaging about 46° centigrade, but except on the occasion of snow storms, it did not cause any suffering. During the shortest day of the year the upper limb of the sun was visible, whilst in clear weather daylight existed for four hours in each day during the height of the winter. A considerable population lives on the coast, (some 4,000 people scattered in villages about two miles distant from each other,) bearing the name of Tchuktchis, which is also the title given to that part of the country. These people are described as intensely dirty, and their huts of the smallest size each crowded with occupants. They subsist on fish and gain their livelihood by seal catching. During the winter these people supplied

* See *The Japan Weekly Mail*, of 23rd August.

the frozen-up expedition with a few bears and reindeer, but as spring advanced, game and wild fowl became abundant.

After 294 days detention in winter quarters, the *Vega* was released from ice and again commenced her progress on the 18th July. On the 20th she passed the East Cape of Behring's Straits, thus actually completing the object of her voyage, and practically proving the North-East Passage—a day which the members of the expedition will remember as the most gratifying of their expedition. Thence the *Vega* went to the Asiatic side of St. Lawrence Bay, crossed to Port Clarence on the American side; and again recrossed the Straits to Konyam Bay. This direction was taken for dredging in Behring's Straits, ascertaining the formation of the bottom and procuring specimens of shells, etc.; the position being especially interesting for that purpose owing to the meeting, there, of the currents from the Arctic and Pacific Oceans. From Konyam Bay, the *Vega* touched at St. Lawrence island and thence proceeded to Behring's island where, after a years' isolation from home, the travellers were enabled to get their first news from Europe from the representative of the Alaska Trading Company. She left Behring's island on the 19th August, and, after a pleasant voyage, has now safely come to anchor in our harbour.

The following is a list of the officers of the expedition, who, with Professor Nordenskjöld as their chief, have indeed to be congratulated on their success and upon their well earned triumph, after many months of discomfort and privation:—

Lieutenant L. Palander, of the Royal Swedish Navy (in command of the ship, and second of the expedition).

Lieutenant E. Brusewitz, of the Royal Swedish Navy.

" A. Hovgaard, of the Royal Danish Navy.

" G. Bove, of the Royal Italian Navy.

" O. Nordqvist, of the Imperial Russian Navy.

Doctor F. R. Kjellman, Naturalist.

" A. Stuxberg, Naturalist.

" E. Almquist, Naturalist and Surgeon.

It is satisfactory to hear that no sickness has occurred during the voyage, and not a single case of scurvy, facts which reflect the highest credit on the organization of the expedition. The North-East Passage has now been proved a practical route for navigation between Europe and the Pacific; but, although it has been shown that such a voyage might occasionally be successfully completed in a season, the risks of getting blocked in the ice are evidently too great to expect that ships will make use of Professor Nordenskjöld's discovery in preference to taking the route by the Suez Canal, or the one through Panama when that isthmus has also been pierced. But a way has now been shown by which the centre of Siberia can be reached through her great rivers, either from the Pacific or the North Sea, and a direct trade be carried on with the inhabitants of Central and Northern Asia without the expensive and tedious overland journey now necessary. The *Léna* may at no distant date be the rendezvous of ships coming from America or Japan and Europe, and become the new highway of trade with Central Asia. We may certainly expect that the news of Nordenskjöld's arctic circumnavigation will induce others to follow on the same track, and seek a commercial triumph where the learned Professor has now gained such a brilliant scientific one.

HIS Excellency the Finance Minister doubtless intended a compliment to the foreign mercantile community on Saturday last by inviting several merchants and bankers to inspect the detail working of his department and especially to show them the Paper-money factory (*Shi-hei-rio*), which is deservedly one of the most interesting sights in the capital. The entertainment provided by Mr. Okuma was an act of unofficial courtesy, but, although ostensibly of a private nature, it has since been understood that the information acquired was for communication without breach of confidence; in fact, it can hardly be doubted it was the express wish of the

Finance Minister that the personal observations of his guests should be made public. Mr. Okuma had probably been informed that doubts had been expressed as to the amount of metallic reserve held by the Government in its treasury, and he therefore took the opportunity of members of the foreign community being present, in order to show the actual existence of treasure in his vaults. As an official act such a course would have been beneath the dignity of a government, and even in a semi-official way it was unnecessary. If any excuse has existed for the uncertainty of the public as to the reserves of treasure held by the Government, it has entirely rested upon the fact that the Government itself has made no explicit declaration on the subject. Any such declaration would have commanded the confidence of an official statement, and would have been accepted in even more ready a manner than the figures which are now, semi-officially, made public. These figures, which were given to Mr. Okuma's guests as the reserves of bullion held by the Government on the day of their visit, showed that in Tokio the treasury contained gold coin to the value of twelve million yen, silver coin to the extent of eight millions; whilst at Osaka a further supply of coin and bullion existed to the amount of ten millions, in addition to specie still at the Government mines in the interior. The metallic reserve, therefore, held by the Finance Department on the 30th August was, in round figures, of the value of thirty millions of yen. Such a statement is highly satisfactory and will command credence without the knowledge that several foreigners had the opportunity of seeing some of the boxes in which the treasure was packed.

Since this visit was made we have been informed by the native papers that, at the request of the United States Minister, the Government are preparing an official statement of the stock of bullion and coin held in the national treasuries throughout the country, as also of the supply in the hands of the native Banks on the 30th June last. The Finance Minister will thus render an important service to his Government and to the public, in a far more satisfactory and conclusive manner than was possible by the private visit of his guests last Saturday—presuming that visit had the full object which has been attached to it.

THE reports of the different meetings of the Local Board of Health will be found well worth perusal, and we hope that those we publish this week will not be passed over as reading likely to be flat, stale or unprofitable. These reports show that the officers appointed are doing hard and good work, that a spirit of unanimity pervades their deliberations; or that, if differences exist, they are overcome by the one purpose of harmonious action for a general good. The Governor of Kanagawa must be congratulated on the business-like manner in which he limits the discussion to practical issues, upon the frank manner in which he candidly asks for the advice of the Board, and still more so for the prompt way in which he acts upon its advice. To our mind, the constitution of this Board of Health, and the manner in which its work is being carried out, is not one of the least signs we have lately had of Japanese progress. It becomes indeed difficult to realize that we are in Japan,—impossible to recognize it as old Japan,—when we read that the Governor of a district, who formerly would have dictated his commands to subservient attendants crouching at his feet, now consults his own and foreign advisers as to the treatment of Japanese subjects, confides to them the prejudices of a priest, the action of the mayor of a village, or asks whether the people should be forced to accept medical aid or not, and leaves it to his advisers to decide the question. And it is no less satisfactory to see that the principles which pervade the Board are those of persuasion and argument, not force and might; to read that "a gentle be-

haviour towards the patients shall be recommended to the police, the waiters and nurses"—that the places of amusement shall not be closed—that the people should be encouraged to co-operate. The report made by Drs. Wheeler, Shima and Hiodo upon the outbreak of cholera in the village near Yokoska will be read with interest, as showing the causes which doubtless have led to the spread of this epidemic, if not to its origin in so many parts of the country—an absence of drains; shallow wells with bad water, pools of stagnant dirty water near them; the houses built on swampy ground without a current of air to enter them, etc., etc., causes which exist in almost every Japanese town or village; but which now, if the action of the Kanagawa Kenrei be generally followed, will stand some chance of being permanently removed.

RESIDENTS in Japan cannot fail to appreciate the interest taken in Europe regarding the country they have, most of them, to pass so many years of their life in; and Japanese cannot feel otherwise than flattered at the attention their favored land receives from the West. The latest instance of this gratifying attention is that Mr. Pfoundes, under the auspices of Sir Rutherford Alcock, has suggested the formation of a Society in London "to bring into closer communication admirers and students of Japanese art, literature, and kindred subjects; to facilitate the collection, preservation, and dissemination of all information relative to Japan; to encourage European residents in the country and the Japanese themselves to collect the material for such knowledge; to endeavour to enlist the cordial co-operation of scientific and literary societies and of individuals in extending the usefulness of such an institution; to publish proceedings, notes, queries and other matter; and generally to promote so interesting a branch of research and study as that afforded by so unique a country as Japan."

Mr. Pfoundes may possibly be remembered by a few residents, but their recollection of him will hardly have led them to read this notice with the seriousness which Sir Rutherford Alcock and some other influential people at home have, apparently, attached to a suggestion emanating from him. In any case such a society would correspond so closely to those which have already done so much good work here as the "Asiatic Society of Japan" and the "Deutsche Gesellschaft für Natur und Völkerkunde Ostasiens," that we are unable to feel as grateful for this proposition as we otherwise should. Nor shall we suffer any great pangs of disappointment if we find that this latest mark of attention to Japan is not carried out. Many contributors to the public knowledge of Japanese subjects now prefer sending their papers to the "Royal" or other old established Society, rather than make use of the sister establishment in Japan, and this practice would not, we expect, be discontinued even if a new special Japanese Society were started in London. Such an institution as that proposed could only tend to increase the disadvantage, which already somewhat exists, of useful and interesting papers being scattered instead of being combined.

IT has become the custom, of late years, to spare neither expense or labour in advertising; and many publications, of which the object is to advertise the productions of some manufacturer, have now the more ambitious appearance of standard literature and, often, works of art, than mere advertising sheets. Certainly the handsomely bound, gilt edged and beautifully illustrated volume we have lately received from Messrs. Ransomes and Rapier, London, entitled "Remunerative Railways for new countries (edited by Mr. Richard R. Rapier), seems more intended for a drawing room table

than for an office desk. It contains, however, much useful information on the subject of preparing estimates for the construction of Railways, and we doubt not will prove the means of inducing many communications from distant countries to the enterprising firm who have published it. A considerable portion of the work is devoted to a history of the first railway in China, the toy railway between Shanghai and Woosung which, however, proved itself capable of doing good carrying work for the short time it was allowed to exist. We are informed that the contract for the equipment of this line was undertaken by Mr. John Dixon for £28,000, or roughly \$140,000; but the high cost of constructing the road itself and purchasing the land, made this but a small portion of the total outlay, which was subsequently paid by the Chinese Government. Interesting as Mr. Rapier's account is of the Shanghai railway, with its numerous photographs of the line, we doubt if the result of the "Woosung Road" is likely to have hastened the time when railways are to be common in China. We fear that the troublesome negotiations connected with the transfer of that property to the Taotai of Shanghai, and the subsequent dead loss of the money, will retain a stronger hold on the Chinese mind than the temporary pleasure which so many Celestials derived from a trip by the railway to Woosung and back. Mr. Rapier lays stress on the advantage of narrow gauge lines for new countries and, although a general preference is now shown for a medium one, there are doubtless many places where such a system must be advantageous. In Japan many ore producing districts are shut out from cheap communication with the sea coast by the absence of good roads, and in many such places narrow gauge railways would doubtless be of the greatest service. We cannot doubt that we fulfil the purpose of the publishers in sending to us the book we have noticed, by adding the fact that if such work is at any time wanted in Japan Messrs. Ransomes and Rapier would be glad to undertake it.

WE have before us the 2nd volume of this year's reports of the Geographical Society of Tokio, containing an account of the regular meeting of that Society held on the 31st of July last. Their Imperial Highnesses Kita Shira-kawa no Miya and Higashi Fushimi no Miya were present, together with thirty-seven other members, and nineteen officers of the Japanese man-of-war *Seiki*.

Two papers were read, the first being "Notes of Travel in Liaotong," by Mr. Furukawa Nobuyoshi. Liaotong, he states, is a portion of the province of Shun-chin-shun, in the south of Manchuria, and gives its name to the Gulf of Liaotong to the north of the Gulf of Petcheli. Mr. Furukawa's paper—a most elaborate and carefully compiled treatise—is divided into seven sections, viz., geographical division of the country, climate, population, historical sketch, language and customs, productions, and means of transport. The second paper was on the ancient divisions of the Chinese Empire and Central Asia under the Yuen Dynasty, by Mr. Kitazawa Masayuki. This paper is full of valuable statistics, and to the report is attached a lithographed copy of the map which was laid before the Society in illustration of the author's statements.

In the evening the company adjourned to the Seiyōken restaurant in the park at Uyēno, where Captain Inouyé and his officers were entertained by the members of the Society at a dinner, provided out of the general funds. After dinner, H. I. H. the President proposed the health of the guests from the *Seiki*, and felicitated them upon their safe return from their western cruise, during which, as he observed, the *Seiki* had accomplished a voyage of 27,000 *ri*, and had shown the flag of Japan in no less than eleven different countries extending over three continents. Captain Inouyé responded on behalf of himself and his brother officers, and concluded by

congratulating the members upon the success with which they had hitherto met in starting the Geographical Society.

WE conclude, this week, our extracts from the English Blue Book on the subject of Public Health, by reprinting Doctor Seaton's Abstract of the Proceedings of the International Sanitary Conference at Vienna in 1874. The information afforded in this paper is almost indispensable to an understanding of the advantages of Quarantine or Inspection, and it cannot fail to be read with interest at the present time. Every European state was represented at the Vienna Conference, also Persia and Egypt; most of them had several representatives although each only commanded one vote, and the present Abstract shows in what an exhaustive manner the work was performed. A few points may here be mentioned, but the whole paper should be studied to enable the reader to grasp the full amount of information afforded and the results arrived at.

The Conference was of unanimous opinion that epidemic cholera has its origin in India, and that, in a permanent form, it is only to be found there. It affirmed that the disease was transmissible by the human subject and that the rapidity of its transmission corresponded to the rapidity and activity of human communication. It established that the atmosphere alone was not sufficient to propagate cholera to any distance, since no epidemic had ever been carried from one point to another in a shorter time than was necessary for a human being to travel the same distance: "The surrounding air is the chief vehicle of the cholera-producing agent, but the transmission of the disease by the air is limited, in the immense majority of cases, to a distance very close to the source of infection. None of the facts which have been cited of transport of cholera by the atmosphere to the distance of one or of several miles is sufficiently conclusive."

The subject of Quarantine is treated under the heads of Land, Maritime and River Quarantine. On the former point the Conference decided by 13 votes against 4 that: "in view of the numerous modes of communication which existed and increased from day to day, land quarantines were inexecutable and useless; and that on this account and for the serious damage they did besides to commercial interests, they ought to be abolished." On the second point (Sea Quarantine) perfect unanimity could not be arrived at, since however much the Conference was disposed to recommend a system of medical inspection instead of one of Quarantine, some maritime States would not fall in with these views. We should only spoil the purport of the resolutions finally arrived at on this subject, by a cursory notice of them in this 'Note': they should be read in detail. As regards river quarantine the same objections were found valid as existed against land quarantine; but in reference to the Danube, special precautions were recommended for adoption at its mouth.

To general readers these papers on Public Health are not without interest; whilst to those engaged in the discussion of the most suitable preventive measures to be adopted in Japan—not as a spasmodic effort, but as a permanent regulation—they will prove invaluable.

REUTER'S TELEGRAMS.

CAPETOWN, 12th August, 1879.

Sir G. Wolseley and Clarke's column are at Ulundi. Russel's column has reached Eutelog (?) and are fortifying themselves. The country is quiet, the Zulus have dispersed to their homes.

Negotiations continue with principal Chiefs, who have promised submission. Cetewayo is in the vicinity.

LONDON, September 3rd.

Cetewayo's Kraal destroyed. Cetewayo himself has fled to the bush.

The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 6, 1879.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 9TH MONTH, 6TH DAY, DO-TÔ-BI.

DEATH.

On the 12th July, at 14, Longridge-road, Kensington, THOMAS BLACK, of the P. and O. Company, aged 52 years.

On the 5th instant, at No. 155, Bluff, JOHN JULIUS DARE, aged 38 years.

NOTES OF THE WEEK.

The London mail of July 18th, was received here on Tuesday evening, per the P. & O. S. S. *Malacca*, from Hongkong. The homeward mails were despatched by the P. M. S. S. *City of Tokio*, which left for San Francisco, on Wednesday forenoon; and by the M. M. steamer *Tibre*, for Hongkong, this morning at 9 o'clock. The *Nagoya Maru* left for Shanghai and way ports, on Wednesday evening. No Shanghai mail has been received during the week.

The M. M. steamer *Volga*, with the Marseilles Mail of 27th July, left Hongkong for this port on the 3rd instant, at 7 p. m.

A telegram has been received stating that the steamer *Argyll*, which sailed from London at the end of last month for this port, with a large cargo of piece goods, &c., has been totally lost.

The S. S. *Guy Mannering* was advertised to leave Hongkong for Yokohama, via Shanghai, on the 27th August.

The U. S. S. *Monongahala*, arrived on Sunday last, from Hakodate. She is under orders to proceed home to San Francisco, next month, where she will then go out of commission.

The M. B. steamer was due here from Shanghai and way ports on Thursday last, and on the same day the public were informed that no steamer would arrive this week, owing to an accident having happened to the *Tokio Maru* in the Shanghai river. Considering that this accident must have occurred at least ten days earlier, and the fact of the *Tokio Maru* not coming must have been known at least seven days before it was made public in Yokohama, it is not unnatural that the question should be asked—why have kept it a secret until the day the steamer was due here? And Yokohama seems especially to have been left in the cold, as the Nagasaki newspaper of the 30th August, to hand this afternoon, gives a full account of the accident. If Nagasaki got the news why not Yokohama? *à qui la faute?*

The long looked for *Vega* arrived safely on the evening of the 2nd September, and the same night numerous and lengthy telegrams flashed the news to Europe and America that NORDENSKJÖLD had triumphed, and that the North-East Passage had been discovered and passed. The lengthy account published by us a fortnight ago of this expedition, up to the time of the *Vega* going into winter quarters, and the notice which will be found in another column of our present issue, will afford our readers all general information about this most interesting voyage. Hopes are entertained that before leaving Yokohama, the learned Professor will afford the public more information as to his discoveries than has yet been published; but we should be loath to press such a task upon him or his companions, during their short stay at this their first civilized resting place, after so long a voyage. Their well-earned rest will, we trust, be enjoyed by every member of the expedition; and those eager to show them every honor and extend to them every mark of hospitality will, we feel sure, be most gratified by

knowing that no unwilling labour has been asked from them in return.

Prophets of a coming typhoon thought yesterday that their predictions would be realized; but nothing came of many threatening appearances in the sky beyond a sharp blow and heavy rain. The wind sent rollers against the bund, leaving a fair legacy of seaweed for removal this morning. But a decided change has taken place in the temperature, and with this a marked decrease in the cholera statistics. Yesterday, but one death is recorded from the native town. The returns issued by the Sanitary Bureau of the Home Department, and compiled up to the 30th August, for the whole country, gives the following totals:—Cases, 111,518; deaths, 59,993; recoveries, 14,034; still under treatment, 37,491; mortality, 53.80 per cent.

The anxious suspense of the community during the past week, concerning the life or death of one of its most popular members, has been cruelly terminated by the sad news of the death, last evening, of JULIUS DARE. For a week, hopes and fears have alternated as to the chances of his recovery, and for a week the deepest sympathy has been felt for those who were watching him so tenderly. It seemed incredible, that even cholera should have attacked so robust a constitution, and too cruel to think that death could take from us so general a favorite. But so it has been. The first victim from our midst, is one who, of all others, might have best been expected to battle with disease; and our first loss is one that could scarcely be greater. Last week, full of his usual vigour, joining as usual in our sports, Julius Dare was the picture of health and strength,—and to-day, we followed him to his grave! His death is a keen loss to the whole community. His long residence amongst us, his genial manner, his hearty companionship in everything that keeps a community together, had justly made him a general favorite; and but one feeling can have existed in the mournful gathering (consisting of nearly every resident in Yokohama), which has just returned from his last resting place—the feeling that each had sustained a personal loss.

The native papers still continue their discussion of the Loochooan question, and if grounds exist for all the rumors that are afloat, war would appear to be inevitable between Japan and China. But a considerable portion of the news which finds its way into print is not confined to rumor; and where dates, names and facts are stated it is impossible not to attach credence to the existence of a real and serious difficulty between the two countries. The position is this: China has addressed a strong remonstrance to Japan for having formally included the Loochoos in her territory and has urged her own claims to the suzerainty of these Islands. But evidently anxious to avoid a war she has offered to submit the question to arbitration,—a suggestion which Japan hesitates to accept; in fact (as far as we can hear) has altogether refused to entertain. Japan has now 'nine points of the law' in her favor, and so the question must remain until China makes the next move, for it is impossible to think that this country has any further initiative to take. It is known that, when in Pekin, General Grant was asked by the Chinese Government to use his influence to bring about an amicable settlement of the discussion with Japan, and thus act upon a clause in the American-Chinese Treaty, which promises the good offices of America in cases where China should be in difficulties with her neighbours. General Grant, however, pointed out that his position then was merely that of a private citizen and that he could not interfere in the matter. In any case, even had the General accepted the office of mediator between two countries, as suggested by China, it is uncertain whether Japan would have agreed to discuss rights which she has assumed and upon which she has already acted. No country, even possessed of less spirit than Japan, would willingly submit to arbitration upon a *fait accompli*, such as the formation of the Okinawa Ken; and certainly it is not likely that—without great pressure—Japan will agree to such a course. It is sincerely to be hoped that such influence as the foreign powers may be able to bring upon both countries to avoid a war will be successful in its object. And appearances are decidedly in favor of this pressure being wanted.

Just two months ago General Grant landed in Yokohama, and as his arrival was favored with fine weather, so on the 3rd September was his departure made on one of the pleasantest and brightest mornings we have had since last spring. A bright

sun, tempered by a cool breeze, showed that the General was leaving us just as the finest season in Japan was commencing. Yokohama looked at its best, and the bunting of the shipping in harbour gave a gay look to the natural beauty of the place. From the palace of the Yenryo-Kwan to the Railway Station at Tokio, the General was escorted by the cavalry of the garrison. At the terminus he was received by the Generals and Admirals, who there bid him farewell, as the special train went out of the station. At a few minutes past nine the train reached Yokohama, where the Governor of Kanagawa received the parting guest, and afterwards accompanied him on board ship. After a short rest the General and Mrs. Grant entered one of the carriages of the Household Department and drove to the Eastern Admiralty office, the others also following in carriages. As the cortege left the Railway Station, rockets and day fireworks were let off. The route was gaily decorated with the National and American flags. At the entrance gate of the Admiralty a very pretty arch was erected, covered with red, white and yellow chrysanthemums. A detachment of Blue Jackets was drawn up in front of the gate, and presented arms as the General's carriage entered, the Imperial Marine Band striking up *Hail Columbia*. The Port Admiral and a brilliant staff were also in attendance at the gate. Alighting from his carriage the General and Mrs. Grant were escorted to the reception room, where a large gathering of Japanese officials, Admiral Patterson, General Van Buren and other distinguished gentlemen, native and foreign, were in waiting. After a rest of about 15 minutes the General and Mrs. Grant proceeded down a covered way to the pier and entered the Admiral's barge. A detachment of sailors was drawn up on the right of the passage way and presented arms as they passed down, the band again playing *Hail Columbia*, and *The Star Spangled Banner*, as the barge, in tow of a steam launch, moved away. More fireworks and rockets were discharged and the clear sky became speckled with banners, balloons, fishes, stars and stripes and coloured smoke. The barge left the pier at 9.45 and was followed by quite a fleet of steam launches, gigs, &c. At 10 o'clock it came alongside the *City of Tokio* and, on the General going on board, the American ensign was run up at the main. A large number of people had already assembled on board the steamer to take farewell of the visitors. After bidding good-bye to his hosts and friends, receiving many a "God speed," the steamer about half-past ten, slowly swung round and started on her long voyage. The men-of-war now manned yards and as the steamer passed down the harbour, the *Richmond* thundered out 21 guns; the *Monongahela*, *Ashuelot*, *Fuso Kan* and *Kongo Kan* and the distant fort at Kanagawa, taking up the order, also fired their farewell salute. The *City of Tokio* with dipped flag passed on, returning the compliment with blasts of her whistle. The *Richmond's* band played the now familiar *Hail Columbia*, the *Kongo Kan* struck up *The Star Spangled Banner*, and the Admiral's tender escorted the departing steamer down the harbour. The *Kongo Kan* also followed her round the lightship for some distance, until Japan's fêted guest was fairly started on his homeward voyage.

Amongst the passengers by the *City of Tokio* to America was Professor Edward S. Morse, accompanied by his family, whose departure will be a great loss to the department in which he has been laboring for the past two years. Coming here on a purely scientific expedition, he acceded to a request from the Directors of the University of Tokio to fill, for a short term at least, the Chair of Zoology in that institution. His work during the two years of his stay in Japan, has not been confined to the performance of the regular professional duties of the college, for he has made unstinted use of his ability and energy for the benefit of the natives of this country. Being a man of irrepressible activity and inexhaustible enthusiasm, also an impressive and fluent speaker, and possessed of great skill in black-board illustration, he has given many lectures on a variety of subjects before native audiences; never refusing, when occasion demanded it, going miles into the country for that purpose. He has travelled from one end of Japan to the other to make collections for the Zoological Museum of the University, which has received large additions through his efforts. In the same institution he has founded an Archaeological Museum where will be found his Omori collections and many others made by him which will, without doubt, greatly facilitate the work of others interested in the study of anti-

quities. A man of genial and pleasant manners, and of a most generous disposition, making many acquaintances and friends among the people of Japan, he has endeared himself to them to an extent equalled by few foreign residents. He returns to America to resume work which has necessarily been interrupted by his stay here, but not without a hope, felt on both sides, that he may visit Japan again within a few years.

The successor of Professor Morse in the Tokio Daigaku, Professor C. O. Whitman, arrived in the last steamer from America. Professor Whitman began his Zoological studies under Agassiz in America and afterwards spent three years in Germany at the University of Leipsic—where he studied zoology under Leuckart, botany under Schenk and chemistry under Colby and Wiedeman. His thesis, upon receiving the degree of Doctor of Philosophy, was an exhaustive discussion of the "Embryology of Clepsine." Professor Whitman has had much experience as a teacher and will doubtless do much to make up for the loss the Daigaku suffers in the departure of Professor Morse.

Was the *Nichi Nichi Shinbun* represented by a reporter at the entertainment given by the Finance Minister to some foreign guests on Saturday last; or are we to imagine that the following extract from that paper has been furnished from an official source, or is it possible that the whole account emanates solely from the brain of the editor? The following is an extract from one of its yesterday's articles:—

"In accordance with the application from Mr. Wilkin (the Chairman of the Yokohama Chamber of Commerce), and several other foreign merchants, to be allowed to visit the Treasury, H. E. Okuma received these persons at the Finance Department, on the 30th ulto., and personally conducted them through the treasury &c. Afterwards, while they were entertained at tiffin in the Printing Office, the Minister asked Mr. Wilkin 'how long he had been in Japan?' to which he replied that he had been here seventeen years. Mr. Okuma then said, 'In that case you would be well acquainted with the state of trade in our country and I should like to ask you a question. I have read the memorial addressed by yourself and others to Sir Harry Parkes, upon the subject of treaty revision, and find that it contains nothing but your desire to maintain the old treaty. A treaty of commerce needs frequent revision, as, although it may have seemed perfect at the time of its being made, there arises more or less obstruction as the position of both nations changes in commercial matters. Now, as our treaty was made at the time of the Tokugawa Government, more than ten years ago, there are, of course, several clauses which are disadvantageous under the present circumstances. We had placed much value upon yourselves and expected that you would fully explain the advantages and disadvantages now attending our trade, and recommend such alterations in the existing treaty as would make it convenient to both parties. But, contrary to expectation, you seem to say that the revision is inconvenient and the existing treaty should be maintained, which is nothing more or less than saying that if import duties were increased we cannot carry on our business. Commerce is not a matter of such limited character, and we regretted that you, contrary to the generally received opinion that the English are the leaders of mercantile matters all over the world, should be so narrow-minded in your ideas; but as you are the Chairman of the Chamber of Commerce you must have some profound view on this subject, and as this is a good opportunity, I should like to learn your views.'" Mr. Wilkin seems to have had nothing to reply to this enquiry and, hurrying his friends, suddenly took leave of His Excellency."

The few gentlemen who were honored by Mr. Okuma's invitation last Saturday, will doubtless be surprised to find that amongst them there was a native 'chiel takin' notes,' and also surprised to find that their visit was as much of the character of an embassy as one for simple sightseeing. The publicity which has been given to this visit by the native press must be our excuse for having alluded to it in one of our Editorial Notes this week—a course we should, otherwise, have been reluctant to follow.

Our next item of news is (and the two events are not unlikely to be intentionally a sequence one of the other) that the foreign merchants and bankers have agreed to accept the Japanese Silver Yen, on a par with the Mexican Dollar, in all their transactions. This also reaches us from the native press,

but it anticipates by a few days a fact which now can only be described as imminent.

We hear from Tokio that the performances of the Vernon Opera Company at the Shintomiza Theatre are growing in favor with the Japanese theatre-goers. At first the attendance was rather meagre, but the enterprise of the proprietor was rewarded on Thursday night by a very full house. The appreciation of the Japanese public shows itself, however, in the very opposite manner to that of a Western audience. Whilst breathless silence and rapt attention attend each note or action of one of the junior members of the corps—who here aspired to the quiet honors of a "walking gentleman,"—shouts of laughter greet the most thrilling notes of the Prima Donna! It has often been noticed that Japanese do everything in the very opposite way to what we do. They laugh when we should mourn, their carpenters saw or plane inwards when ours would do so outwards, they sit when we should stand, they drink when we should eat and now, as a climax, we find that they applaud when we should hiss!

A most impudent robbery took place in Honmura Road, on Wednesday evening, between 7 and 8 o'clock. Three respectably dressed Japanese called at an exchange shop, kept by a Chinaman on lot 165, and said they wished to change \$100 into satsu. The Chinaman opened his till for the purpose of obtaining the money, and while in the act of doing so, he was cut down by the Japanese, receiving several severe sword cuts. The robbers then rifled the drawer of its contents (about 200 yen) and escaped. The most extraordinary part of the whole proceeding is, that notwithstanding the fact that the shop is situated in perhaps the most frequented part of Honmura, no one seems to have noticed the robbers who, up to the present, have succeeded in baffling the police. The Chinaman was removed to the hospital and his injuries attended to.

The S. S. *Oceanic* is to proceed to England, via Suez Canal, for the purpose of having new boilers put into her, and of being altered to suit the requirements of the journey across the Pacific, which does not necessitate so large a first-class passenger accommodation as she now possesses. The steamers running between this port and San Francisco will until next summer therefore be reduced to four, two belonging to each Company, *Occidental and Oriental* and *Pacific Mail*, which will run alternately every third Saturday, the schedule of departures will therefore be as follows, viz:

From Yokohama:

<i>Belgic</i>	20th September, 1879.
<i>City of Peking</i>	11th October, "
<i>Gaelic</i>	1st November, "
<i>City of Tokio</i>	22nd November, "
<i>Belgic</i>	13th December, "
<i>City of Peking</i>	3rd January, 1880.
<i>Gaelic</i>	24th January, "
<i>City of Tokio</i>	14th February, "
<i>Belgic</i>	6th March, "
<i>City of Peking</i>	27th March, "

From San Francisco:

<i>Oceanic</i>	13th September, 1879.
<i>City of Tokio</i>	4th October, "
<i>Belgic</i>	25th October, "
<i>City of Peking</i>	15th November, "
<i>Gaelic</i>	6th December, "
<i>City of Tokio</i>	27th December, "
<i>Belgic</i>	17th January, 1880.
<i>City of Peking</i>	7th February, "
<i>Gaelic</i>	28th February, "
<i>City of Tokio</i>	20th March, "

Mr. Labouchère the Editor of "Truth" has his own way of putting things, but he often puts them in a clear way and strikes well home when doing so. In penning the following paragraphs for one of his last numbers, he has not only made appropriate remarks upon press criticism at home, but he has given a few hints which would be equally applicable to Japan:—

"Never," said Mr. Justice Denman, who was trying *Kate Webster*. "did the press behave so badly as in this case." I was nearly getting up and observing that the accusation ought to be specific, and not general. There was, it is true, one newspaper that hounded witnesses and cross-examined them, and whose reporters even went so far as to menace police-agents when they refused to furnish information. This newspaper has already earned an un-

enviable notoriety for hunting up sensational garbage; but I think that it was somewhat hard on other newspapers that Mr. Justice Denman should visit its sins upon the entire press.

But in these days of abject servility to the self-constituted censors of public morals, I admire Mr. Justice Denman for his independence of press criticism. When the advocate of Mrs. Thomas complained of having himself suffered from this criticism, the Judge rightly told him that this was a cowardly remark, and that lawyers in the exercise of their duties should not be influenced by remarks in the press. I never have yet understood why any human being should care one atom what is said of him by the press. A man buys some machines, covers the hoardings with flaming advertisements, and issues a newspaper. Why should this man's opinion be worth more than that of any one else? We are, however, a press-ridden community, and the owners of these commercial ventures give themselves patronising airs, and obtain homage to an extent that positively disgusts me.

Look at Mr. Gladstone. Never has fouler invective been heaped upon a public man than on him since he has ceased to be. As Lord Beaconsfield puts it, intimately connected with honours and rewards.

What has been the result? There is a reaction in his favour, and his bitterest enemies now sadly admit that he is the most popular man in England."

EDWIN WHEELER, M.D.,

PARIS LETTER.

PARIS, 19th July, 1879.

The Napoleon legend is dead, but the anniversary of the destruction of the Bastille, is a living fact. Every dynasty has its fête-day; the Republic had not officially decided upon one, so public opinion has anticipated the hesitation of the government, and with M. Gambetta's magnificent soirée held on the fourteenth, have instinctively and tacitly, proclaimed now and for ever, that date as sacred to French republicanism. The mere attack and defence of the old castle of the Bastille was in no sense a military feat: the victory lies in the moral consequences, and signifies the destruction of arbitrary arrests, of condemnations without trial, of personal and irresponsible government. The fall of the Bastille meant emancipation and liberty for this country, and it is the date from which modern French society counts its existence. The Bastille was the visible, tangible image of centuries of arbitrary government and wrong; its demolition the emblem of freedom; and when out of its stones models were sculptured of the donjon and distributed over the country, or sent to sympathising nations, they meant another age of renaissance, for human thought, political rights, and equality before the law. The "day we celebrate" passed off in the greatest tranquility, strong testimony that the Republic is at home. Indeed the event was less connected with retrospective adoration, than a homage to the satisfactory present, and confidence in its desirability. This will explain, why there was no ardent manifestation for a cherished souvenir. The Chambers took holiday, to mark their respect for the significant past: there were balls and dinner parties; picnics; a limited display of flags, and isolated cases of enthusiastic illumination.

An out-cry is being made against the Republic, because it adopts a course of safety, of self-defence, peculiar to every government. Neither empire nor royalty ever allowed its enemies to hold positions of trust and power. It superseded declared foes, by tried friends, and functionaries that snub the constitution it rebukes and justly so, without pity. It has thus replaced councillors of state, who openly aided the duc de Broglie and his intrigues or conspirators, to overthrow the Republic; who urged MacMahon, not to obey the verdict of the general elections, to put the statute book in his pocket, collect taxes by the aid of the army, and despite the parliament. The monarchy and empire have weighted the code with iron laws against the press, and when ministers apply the law, they are accused of tyranny. When the late Bonapartist rowdies organised a scene in the Chamber, Gambetta was accused of arbitrary conduct for repressing the rioters. There are some very free

constitutions that suspend the *habeas corpus* act, the more effectually to strike extreme opponents; and the model parliament of the world has also its *bourgeois* party, yclept home rulers, or irreconcilables. Each people likes the *tapageurs* of other nations, never its own. But this is only ignoring the beam in our own eye. Bear in mind that France, the Republic, is distracted by three factions that compose a respectable reactionary minority, capable of harassing, but totally unable to reconstruct, if they succeeded to demolish. And this state of affairs is unhappily envenomed by the episcopal bench having become politically aggressive towards the constitution. Now the republicans resemble that very large class of animals, which when struck, defend themselves. It explains also, why the government educational bill has assumed such importance; it does not prevent the regular clergy from opening and conducting colleges, nor parents from sending their children to a sectarian school; its aim, according to prime minister Waddington, is to "repress the Jesuits as teachers, because, unlike the regular clergy, their mission is political," and the Republic only defends itself against them, as did preceding monarchies.

The Republic is also being blamed, because it refused permission to *functionaries* to attend the obsequies of Prince Louis. England owed honors to his name, his courage, and his misfortune. Even his political enemies here have not been unmoved at his tragic end; they did not forget that he was young, French, and brave; while at the same time they remembered he was a pretender avowed, and declared, pledged to destroy the Republic, and on its liberalism build the bastard Caesarism of his dynasty. In flocking to the funeral, partisans mixed business with their sobs. But the government allowed all private individuals to attend the memorial manifestations, as freely in Paris as at London. However, the moment an official joined in the demonstration, he had to choose between serving two masters. Thus at Lyons, Col. Leperche who attended an obituary-political Bonapartist Mass, has been cashiered, and the subordinate officers and men, sentenced to a few weeks imprisonment, and drafted into other regiments—where they will learn to do well. *Fait il faut!*

It is only the republic that can afford to allow royalists to banquet St. Henri the patron saint of the Comte de Chambord; the Bonapartists can do the same, when they find their saint, and in the interim all are free to peg away at the Republic.

The French are astounded at the reported verdict of the court martial ordering Lieutenant Carey, "to be shot for cowardice"—*pour encourager les autres* doubtless, as Voltaire remarked of the execution of Admiral Byng. They know very well Carey is not the horse to be saddled, but those who allowed the prince to recklessly expose himself—not so much to civilise the Zulus, as to make personal political capital. It is felt, that were the whole escort massacred, if an ordinary reconnoitering party were in question, not a word would be uttered. But when a prince—attached and unattached, becomes the victim of his own imprudence, complicated with the chances of war—matters change. It is mentioned among the *sa dits*, that Carey was an affiliate of the "Intertational;" why not make him a Nihilist? Even this honor is denied him, for a cartoon represents a red republican behind a Zulu, pointing out the prince. Pity the deceased had not been able to run away as quickly as the others: what glory he would then have achieved, had he returned with his four or five horse-men, and slayed that half-hundred Zulus! Who sanctioned the French demand, the prince's going to the front? Who invested him with the authority to order the horses to be unsaddled, and saddled?

The French were very anxious to know the opinion of the Germans about the recent review of the army of Paris; this opinion has been remarkably favorable, however uncomfortable the fact may be. One leading military critic admits, the Prussian artillery could not make a better display. Impartial Judges are aware the French artillery is superior now to the victors. The weak point in the army is, the want of effective companies of infantry; to exist, not on paper, but in fact. Also, the French are far behind the Germans in the tactics of mobilisation, and the country that can quickest put a quarter of million of men in campaign, can organise victory as surely as a Carnot.

M. Gambetta's first reception is far from being a thing of the past: it is one of those extraordinary events that men will not willingly let die. It was a ball, less ladies and dancing. The concert was perfect, the *incroyable* and original ballet, a gem, leaving the souvenir of a regret, that it was too brief. Of the 4,000 persons present, one-fourth were superior officers of the army—a nut for pretenders to crack. To show that he was not a platonic democrat, Gambetta invited some non-commissioned officers, and his election committee of Belleville; the latter alleged they had no dress suits "come then in your Sunday clothes;" they did so; I spoke to a group of them, found them to be very intelligent men, holding no extreme views, and chiefly interested in the recovery of business from stagnation. One man, who spoke, from a hole in his cheek

rather than a month—having been wounded during the siege, informed me, that the last time he was in the splendid *salon* where we stood, was in June, 1848, when, as a national guard sentry, he had orders to allow no one to enter. The Lucullus supper, &c., cost fr. 35,000; but then everything was of the best, and as plentiful as a Bolton Abbey of the Olden Time. Even cigars were provided *ad libitum*, and the materials of the garden tents, had in their time, "sheltered" three different dynasties.

Prince Jérôme has not yet given any sign of becoming "pretender;" the moment he does so, he must take up his bed and walk out of France—an event he most abhors. He has everything to gain by time, though silence is not a proof that Bonapartism has vitality. It will, however, wear out the patience of such fire-brands as de Casagrande & Co., whose company he does not desire; his advisers are, Emile Ollivier, Renan, Admiral de la Roncière, Col. Stoffel, Richard, &c. It is all a joke about his being a coward; he fought a duel in his early life, and received his baptism of fire at the battle of the Alma. When he came to Paris with his father in 1846, they were so poor, that he himself opened the door for visitors. His mortal enemy, the Duc de Morny, said, he "had cowardice, but was not a coward;" he is beyond doubt a free-thinker; or, as the Archbishop of Bourges said when he had ordained young Tallyrand a bishop: "He is very clear, but I believe, he believes in nothing at all." It is this circumstance, along with an irregular life, that have made the prince so unpopular. When Napoleon III. was taken prisoner, he offered to share his captivity. His antipathy to the ex-Empress is due, partly to her having snubbed his wife and her desire to make the Patterson branch of the family rank first in the rights of succession. Prince Jérôme is 57 years of age: he never laughs, only smiles; talks best when pacing with his hands in pocket, smoking a cigarette. His rooms are full of busts, souvenirs and volumes belonging to the First Emperor for whose memory he has a positive fetichism. A point to the prince's credit, his servants, five men and two women have lived with him since he was a boy. On Thursdays, he generally rides out with his two sons, Victor, who resembles his father, and Louis aged 13 who takes after his mother. But he rides as badly as Napoleon III., who was bandy-legged, walked. Louis is an idle boy, more apt for fun than lessons: he is frequently locked up in school on account of idleness, and he states since his cousin's death, "I am less confined in the cell, though I do not work a bit more." Evidently Prince Jérôme wants to shake off M. Rouher whom he calls a "magnificent ruminant," and that set. As to his free-thinking views there is no reason to conclude the road to a throne, is not also "a road to Damascus." He protested against the coup d'état but not the less sat on the steps of the throne, and enjoyed a magnificent revenue under the Second Empire. Put no faith in princes.

Napoleon I. said; "to kill the Republic, one must march across my corpse." And yet he made the 18 Brumaire. "I will not permit any one to accuse me of projects against the Republic which has received my oaths," said Napoleon III. And yet he made his Brumaire in December, 1851. "How the world is given to lying," sighed Falstaff.

It is impossible to write any letter without an allusion to the rain. Going to the seaside is now synonymous with remaining in town. And America, not content with flooding old Europe with wheat, meat—in the live, slaughtered, and canned state, now coolly sends us orders to be prepared to receive showers, with tails the length of comets, and storms that never cease blowing. Only think that in the south of France and Spain, people die of sun-strokes. There is balm in Gilead: last year Belgium had only two days of sun-shine out of the 365. The damage done to the production of poetry, and love-making—for there are no summer evenings for cushat doves to coo, is about on a par, with that inflicted on cereals and vines. Note, that patent medicines, "for coughs not to be neglected," and "rheumatisms in their infancy," never were so much advertised as now.

Two *demi-mondians*, foreigners, but the oldest of the old-guard, attempted to have an obituary mass celebrated for Louis, and have been conducted to the frontier, by two gendarmes, for irreverence.

The cavalry escort that accompanied Gambetta's carriage to the review on Sunday last, was commanded by the duc de Mortemart. The Divorce Society of Paris, has sent an address of sympathy to Garibaldi.

Sign of the times; the famous château of Ménéars, has been purchased for an "umbrella" manufacturer; price fr. 3 million; out of evil—good.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

The Prime Minister has announced to the faithful lieges of Japan, that on the 31st August, Yanagiwara Aiko, one of the

Gon Tenji was safely delivered of an Imperial Prince. During the three days succeeding the auspicious event, Prince Shōtai the ex King of Loochoo, Prince Shōten his son, and all the Imperial Princes, Prime Ministers, Councillors of State, and other officials of the *Chokunin* and *Sōnin* rank, as well as the *Kizakoku*, called at the Palace to congratulate H. M. the Emperor. To-day, the ceremony of naming the Prince has taken place at the Palace, the men-of-war in harbour were dressed with flags and the Japanese vessels fired a royal salute. The ceremony of naming an infant Prince in Japan, consists simply in the Emperor writing the name on a paper called a *Hiōcho*, and forwarding it to the Palace in which the young Prince resides. The Prince is reported to be in good health, and as the ceremony of naming him has taken place, he will be removed to the new Palace recently built in the grounds of Mr. Nakayama, who has been appointed to take charge of the youthful Prince.

It is rumoured, that H. E. Inouye Kaworu, will proceed to England in the early part of the present month on an important special mission.

H. E. Ito, the Home Minister, who has for sometime past been seriously indisposed, having recovered, resumed his duties on the 2nd inst.

A letter lately received in Tokio from Sydney, states that Mr. Sakata, the Japanese Commissioner to the Sydney Exhibition, arrived safely in that city on the 18th July last.

It is rumoured that H. E. Matsukata, the Senior Vice Minister of Finance, will be appointed Chief Commissioner of the 2nd National Exhibition of Industry, which will be held here in the year 1881.

The Japanese are anxious to extent their business relations with neighboring countries, and have succeeded in getting Motoyamatsu chosen as one of the two Korean ports to be open to Japanese trade. Mr. Hanabusa is now engaged in obtaining the consent of the Korean Government, to open another port.

Mr. Nomura, the Governor of Kanagawa Ken, entertained the members (native and foreign) of the District Board of Health, at a banquet in the Grand Hotel, on the 3rd instant.

Mr. Kojima, the Secretary of Kanagawa Ken was, at his own request, allowed to retire from his office on the 3rd instant, and in consideration of his long and able services, his social rank was advanced one degree, a graceful recognition which will doubtless have the effect of encouraging other officials to display the same qualities which have been so prominent in Mr. Kojima.

It is said that as cholera in Tokio is gradually decreasing, H. R. H. the Duke of Genoa, will arrive here about the middle of this month; the Japanese Government will then have a fresh opportunity of exhibiting their wonted hospitality to another distinguished foreign visitor.

H. E. Iwakura, the Vice Prime Minister, paid a complimentary visit to the Dutch Consul, on the 30th ultimo.

H. E. the Austro-Hungarian Minister for Japan, had an audience of H. M. the Emperor on the 5th instant, to present his letters of credence. In the evening H. E. Teraahima, the Minister for Foreign Affairs, entertained him at a banquet in the Yenriyōkwan.

The erection of the new German Legation, in Nagata Machi, Tokio, having been nearly completed, a banquet will be given shortly in the building by the German Minister to the Japanese Minister for Foreign Affairs and other officials, as well as the different Foreign Representatives.

It is rumoured that Mr. Shimadzu Saburo, the ex-Daimio of Satsuma, has been ordered to come to Tokio at once. We believe that no political significance is to be attached to this action on the part of the Government.

Fifty policemen of Kagoshima Ken have been ordered to proceed to Loochoo, not that there is any apprehension of their services being immediately required, but simply as a matter of precaution, natural under existing circumstances.

The distance from Tokio to Shuri (Loochoo) has hitherto been approximately estimated at 707 ri. The Post Office Authorities have lately ascertained that the distance by the mail route is only about 580 ri.

NAVAL AND MILITARY.

The existing Powder Factory of the Naval Department at Meguro, Tokio, being found insufficient for the requirements of the Department, the authorities have lately purchased about 3,000 *tsubo* of ground adjoining the factory, and intend to increase the manufacturing capacity of the establishment by the erection of three additional buildings thereon.

A telegram has been received from Nagasaki, that the Japanese man-of-war *Nisshin Kan*, which was ordered to return here from the Chinese Sea, arrived on the night of the 29th ultimo, and we also learn that the Japanese man-of-war *Hiyri Kan*, will shortly proceed to Amoy.

Mr. Yamagata, the Chief Engineer of the Japanese Navy, has been ordered to proceed to London at once, in order to purchase torpedo boats for the government. In the meantime a school for teaching the use of torpedoes has been established in connection the Naval College, in Tokio. Lieut. Shibayama has been appointed instructor, and no doubt by the time the boats arrive from England, the students will be quite *au fait* in the theoretical portion of their duties.

The *Mainichi Shimbun*, which has quite a reputation for the manufacture of *canards* states "that at a meeting of General Officers lately held in Tokio, one of the Lieut. Generals present said, that if a war broke out with China, he would be able to defeat the Chinese with a force of 120,000 men and fully explained his plans, which seemed to meet with the approval of those present." There is, we are glad to say, little probability of the "Lieutenant General" having an opportunity of carrying the design credited to him by the *Mainichi* into execution.

A native paper has the rather improbable statement "that Major Kajiyama of the Japanese Army, lately went to China on Government business, but as the Chinese Government would not allow him to land at any place except Hongkong and Shanghai, he returned here a few days ago."

INDUSTRIES, TRADE AND FINANCE.

Pisciculture has been successfully practiced in Japan. We learn that the salmon which were brought from the Ishikari river, in Yezo, and have since been kept in the ponds in the premises of the Colonization Department in Tokio, having now grown to five inches in length, about 1,000 of them have recently been released in the Tamagawa and Rokugogawa, for experimental purposes. The Colonization Department have requested the local authorities to order the fishermen in the neighbourhood of these rivers to let the fish free again in the event of their catching them during the next two or three years, or, until salmon have become thoroughly acclimatized.

Fresh industries continue to spring up and afford a pleasing evidence of the progress being made by Japan in material prosperity, the latest proof is given by the announcement in a native paper, that permission having been granted for the establishment of a Sulphuric Acid Factory in Osaka. A company will shortly be formed, under the title of *Riusan Seizō Kaisha*, with a capital of yen 100,000. The erection of the Factory was commenced on the 15th ultimo.

We are informed that on the 21st ultimo, the Authorities of the Colonization Commission granted permission to Mr. Iwabashi to establish the *Hokkaido Kaishin Kaisha* (Association for the development of the Hokkaido). We referred to this undertaking sometime since, and although we fear the hopes of the promoter are rather too sanguine, the enterprise is likely to result in benefit to the northern part of the Empire.

Satisfactory intelligence continues to reach us respecting the crops. A report from Kochi Ken, dated 18th August, states that the rice plants are now in a healthy state. Although some villages suffered from the changeable weather in March and April last, the continuance of fine weather, with an occasional and suitable amount of rain in June and July, have restored the health of the plants; and under present circumstances, full crops are expected in both the provinces of Tosa and Awa.

In order to relieve as far as possible any inconvenience which might be felt among the poorer classes by a scarcity of their staple food before the new crop comes forward, the Government have been disposing of their stocks of rice in various parts of the country, and three thousand *koku* of rice, belonging to the Government, were sold at the Government Rice Godown in Asakusa, Tokio, on the 2nd instant.

The same paper also informs the public "that the American Government having asked to be furnished with a statement of the quantity of coin and bullion in Japan, our Government is now engaged in ascertaining the amount of coin, &c., in the treasuries, and the produce of the different mines. The Government has also requested all the National banks to forward a statement of the coin and bullion in their possession on the 30th June last."

The following are the Custom's receipts in the port of Yokohama, during August last:—

Export Duties	Yen	53,222.737
Import	"	91,370.497
Miscellaneous Receipts	"	1,777.955

Total... .. Yen 146,371.189

The following is the list of shipping in this port during August last:—

Arrivals.					
Native ships	79
Foreign "	21
					100
Departures.					
Native ships	76
Foreign "	18
					94

The number of passengers conveyed in the steamers running between this port and Yokosuka, during August last, amounted to 13,560.—*Idem*.

MISCELLANEOUS.

Matters at Niigata appear from the last accounts to be still in a very unsettled state, and the local papers report the most serious disturbance that has taken place, since the outbreak at Numatari in the beginning of last month. The exact causes of this fresh commotion are at present unknown, but it is probably owing to the feeling of discontent that exists amongst the lower orders in Niigata. It appears that on the 17th ultimo, at Chiu-jo machi, some policemen escorting the body of a man who had died from cholera to the place of burial, were set upon by a number of people, but succeeded in dispersing them with some little difficulty. At about eleven o'clock the same night a gun was fired four or five times, by some person at present unknown, and was doubtless a signal. On the 22nd, when the officials were giving to the *Shizoku* who had commuted their pensions, possession of their allotted plots of ground, the farmers assembled to the number of about five or six hundred and destroyed the house of Owo, one of the *Shizoku* and committed other acts of violence. The police endeavoured to quell the riot, but without success, and being themselves assailed by the mob, were compelled to use their swords in self defence, two or three of the rioters being slightly wounded. The police appear to have retreated, as the rioters destroyed the local police station, and shortly afterwards the chapel occupied by Mr. Palm, of the Edinburgh Medical Missionary Society, and set fire to the contents of two godowns belonging to a cotton merchant. By this time a strong reinforcement of police had arrived on the scene from Shibata, and, after a sharp struggle the rioters were dispersed. Eight of the ringleaders have been arrested and a searching investigation is to be made into the whole matter.

Another cholera riot is reported to have taken place at Toyohama Mura, in Aichi Ken, which resulted in the arrest of 11 rioters, who are now undergoing examination before the Police Authorities.

The population of the Bonin Islands having gradually increased to such an extent that the local production of rice has become insufficient for their requirements, the Government forwarded to the islands 120 bags of rice, in the S. S. *Toyoshima Maru*, which left Yokohama on the 30th ultimo. The same steamer also took 50 pounds of carbolic acid, some agricultural implements, and a quantity of timber for the use of the islanders.

The editor of the *Akebono Shimbun* was sentenced, on the 1st instant, to thirty days' imprisonment for having indirectly libelled the authorities of the Branch Police Station in the town of Kanagawa, respecting their mode of dealing with cholera patients.

Education has always received great attention at the hands of the government and we notice that a public evening school has been established in each of the Districts in Tokio, where the members of poor families, persons employed in business, coolies, &c., will receive gratuitous instruction.

Public lecturing has become quite the rage amongst a section of the Japanese; the *Asahi Shinbun* says it is reported, that Mr. Itagaki Taisuke, will shortly land in Ise and come to Tokio by way of the Tokaido, lecturing at every town along the road upon the subject of the extension of the personal liberties of the people.

Relics of the times now happily past when the great Daimio maintained independent state were obtained recently when twenty-three guns were recovered from the wreck of a man-of-war, belonging to the late Satsuma clan, which was lost some years ago off Bantiau.

A heavy rain storm, accompanied by thunder and lightning, passed over the city of Kiyoto on the evening of the 24th ultimo. The building of Honguwanji and six or seven other places were struck by the lightning.

A disinfecting office has lately been established in Kinshichô, Hongô, Tokio, for the purpose of washing or disinfecting the clothes, bedding, &c., of the cholera patients, instead of burning them as has hitherto been the practice. This has been done in order that the articles disinfected may again be servicable to the owners, as great dissatisfaction was occasioned by the total destruction of infected property, particularly articles of household use.

Instances continue to occur of great liberality on the part of the wealthy Japanese towards their poorer brethren during the present epidemic. We are informed that H. I. H. Prince Arisugawa, and five other of the Princes lately presented the sum of Yen 1,000 to the people of the fifteen *Ku*, in Tokio, to be expended for sanatory purposes.

Ribiyô (Dysentery) is reported to be prevalent in Katsuka Mura and its neighbourhood in the Miyagi Ken, since the middle of last month. It is however said to be quite different from cholera.

The number of new cases of cholera and deaths in Tokio reported during the week, is as follows:—

Date.	New Patients.	Deaths.
August 29th.....	42	30
" 30th.....	44	20
" 31st.....	22	14
Sept. 1st.....	36	18
" 2nd.....	34	8
" 3rd.....	26	8
Total (6 days).....	204	98

Return of cholera cases in Kanagawa Ken from the commencement of the epidemic up to the 5th September, 1879:—

Date	New Patients.	Recovered.	Died.	Under Treatment.
June 18th to }	1,030	111	691	246
August 29th }	35	6	42	233
" 30th.....	29	5	31	226
" 31st.....	31	12	20	225
Sept. 1st.....	37	4	22	236
" 2nd.....	41	13	27	237
" 3rd.....	15	6	18	228
" 4th.....	29	8	13	236
" 5th.....				
Total.....	1,247	165	864	

In Yokohama alone there were yesterday only 3 new cases, 4 recoveries and 1 deaths.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA JOCKEY CLUB.

AUTUMN MEETING.

The following is the programme for the forthcoming Autumn Meeting of the Jockey Club, which is fixed for the 6th, 7th, and 8th of November.

FIRST DAY,—THURSDAY, NOVEMBER 6TH, 1879.

1.—For China Ponies that have never won a race. Weight as per scale. Entrance \$5. One mile. Open to amateur riders only.

2.—GRIFFINS' PLATE. For Japan Ponies, *bond fide* Griffins. Weight as per scale. Entrance \$5. Five furlongs. Open to amateur riders only.

3.—For China and Japan Ponies. Weight as per scale. Entrance \$5. Three-quarters of a mile. Open to amateur riders only.

4.—For Japan Ponies. Winners of any open race excluded. Weight as per scale. Entrance \$5. Five furlongs. Open to amateur riders only.

5.—For China Ponies. Weight as per scale. Entrance \$5. One mile and a half.

6.—For Half-bred Japan Ponies that have never won a race. Weight as per scale. Entrance \$5. Five furlongs. Open to amateur riders only.

7.—For Japan Ponies. Weight as per scale. Entrance \$5. Three quarters of a mile.

8.—For China Ponies. Winners at this meeting 7 lbs. extra. Weight as per scale. Entrance \$5. One mile and a quarter. Open to amateur riders only.

SECOND DAY,—FRIDAY, NOVEMBER 7TH, 1879.

1.—For Japan and China Ponies. Weight as per scale. Entrance \$5. Once round.

2.—For Japan Ponies that have never won a race. Weight as per scale. Entrance \$5. Half a mile. Open to amateur riders only.

3.—For China Ponies. Weight as per scale. Entrance \$5. One mile and three-quarters. Open to amateur riders only.

4.—For Japan and China Ponies. Winners of No. 3 or No. 7, first day, 7lbs. extra. Weight as per scale. Entrance \$5. Half a mile. Open to amateur riders only.

5.—For Half-bred Japan Ponies. Weight as per scale. Entrance \$5. Three quarters of a mile.

6.—For China Ponies. Winners in 1878 or 1879, of one race, 7lbs.; of two or more races, 10lbs. extra. Weight as per scale. Entrance \$5. One mile. Open to amateur riders only.

7.—For Japan Ponies. Winners, in 1878 or 1879, of one race, 7lbs.; of two or more races, 10lbs. extra. Weight as per scale. Entrance \$5. Three quarters of a mile. Open to amateur riders only.

8.—For China Ponies. Winners at the meeting excluded. Weight as per scale. Entrance \$5. Three quarters of a mile. Open to amateur riders only.

THIRD DAY,—SATURDAY, NOVEMBER 8TH, 1879.

1.—THE HURDLE RACE. For China and Japan Ponies. Over six hurdles. Weight as per scale. Entrance \$5. Once round and a distance.

2.—For Half-bred Japan Ponies. Sweepstake of \$10 each, with \$75, added from the fund. Winners of one race, 7lbs., of two or more races, 10lbs. extra. Weight as per scale. Once round and a distance. Open to amateur riders only.

3.—THE CHINA CHAMPION STAKES. For China Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of \$10, with \$5 extra for every Race won. Open also to Ponies placed second, at an entrance fee of \$5, to go to the Fund. Entries to be made on the Course at the close of the second day's racing. First Pony to receive 75 per cent., second Pony to receive 25 per cent. Weight for inches. One mile and a quarter. Open to amateur riders only.

4.—THE JAPAN CHAMPION STAKES. For Japan Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of \$10, with \$5 extra for every Race won. Open

also to Ponies placed second, at an entrance fee of \$5, to go to the Fund. Entries to be made on the Course at the close of the second day's racing. First Pony to receive 75 per cent., second Pony to receive 25 per cent. Weight as per scale. One mile. Open to amateur riders only.

5.—**WELTER STAKES.** Sweepstakes of \$10 with \$50 added. For China and Japan Ponies that have not won a flat race since Spring meeting, 1878. To be ridden by amateur jockeys that have not had a winning mount during the meeting. 12 stone. Three quarters of a mile.

6.—**THE CHINA CONSOLATION.** For China Ponies beaten at this meeting. Weight for inches. Entrance, \$5. Once round and a distance. Open to amateur riders only.

7.—**THE JAPAN CONSOLATION.** For Japan Ponies beaten at this meeting. Weight as per scale. Entrance, \$5. Five furlongs. Open to amateur riders only.

8.—A handicap for all Ponies that have run at this meeting. To be handicapped by the Stewards at the close of the second day's racing. Entries to be made on the Course before the last race, and winners of any race after the publication of the Handicap 5lbs. extra. Entrance \$10. Second Pony to save Entrance fee. Once round.

Entries to close on the 18th October, except for the "Griffins' Plate," "Hurdle Race," and "Welter Stakes," which will close on the 28th October.

YOKOHAMA LOCAL BOARD OF HEALTH.

The sixth meeting of this Board was held on the 20th ultimo, at 11 a. m., at the Machi-gaisho. President, Governor of Kanagawa Ken.

The President remarked that the following subjects were on the order of the day:—

- 1.—The Report of the Hospital Committee;
- 2.—Regulation of the time when the medical members of the Board will alternately go to visit the cholera lazarets, and consult with the Japanese physicians in charge of these hospitals;
- 3.—The *resumé* of the minutes of the first meeting, as prepared by the Committee of redaction;

4.—Advice upon some rare medicines, which are said to be useful for treatment of cholera, but which are exceedingly high in price (cotoïne, paracotoïne, pilocarpine, jaborandi).

1.—The President said, that as the medical members of the Board had held their hospital committee meeting and had sent in a Report, he should request the Foreign Secretary to read the same. The following is a short *resumé*:—

I.—Quantity of nurses for the cholera lazarets. Recommended to regulate this quantity as follows: For severe cases two nurses for each room of 2 patients; for light cases two nurses for two rooms of 2 patients each; for convalescent cases one nurse for three rooms of 2 patients each.

II.—Quality of nurses. Honest, diligent and good-hearted persons only would be chosen for nurses and more liberal wages would be given to diligent nurses.

III.—Patients who had died from the disease should be directly removed to the mortuary and as much as possible kept out of sight of the sick and convalescents in the hospital.

IV.—A gentle and respectful behaviour towards the patients is recommended to the police, the waiters and the nurses.

V.—To notify as quickly as possible to the family or relatives the death of a patient in the hospital.

VI.—Regular visits and cleaning of all the wards three times a day, and twice during the night.

VII.—Erection of a decent mortuary, where the patients who died shall remain during three hours, in order that the family or relatives may visit the body before its interment.

After some discussion, in which Messrs. Isogai, the President, Drs. Wheeler, Simmons, Kondo, Miyajima and Geerts took part, it was resolved to adopt the report and to act accordingly.

Dr. Wheeler observed that as to the mode of medical treatment, this must be left generally to the judgment of the physicians in charge, because it was impossible to fix such a mode of treatment beforehand for all cases.

2.—The President then asked the medical members of the Board to fix and regulate the days when each of them shall alternately visit the cholera lazarets in order to have consultations with the Japanese Doctors in charge. After some discussion between Drs. Simmons, Miyajima, Gutschow and the President, it was decided that the Doctors will fix, in committee, the time when each of them will visit the hospitals.

3.—The redaction committee handed over the *resumé* of the minutes of the 1st meeting, intended for publication in the foreign and Japanese newspapers. After some few alterations were made it was adopted.

4.—Mr. Kawano asked the opinion of the professional members about some rare medicines (cotoïne, paracotoïne,

pilocarpine and jaborandi), which are recommended by some in the treatment of cholera. As these medicines are however exceedingly high in price, he wished to inform himself as to their utility, before large quantities are bought.

In a subsequent discussion between Dr. Geerts and Simmons, it was observed that these new medicines were not recognised by any pharmacopœia; that they had not come into general use, but that some few medical men had reported favourably upon some of them; that there was, however, till now no specific against cholera, and that there seemed to be no sufficient reason for buying large quantities of the said very dear medicines for the lazarets, although it would be good to have a certain quantity in hand.

The meeting closed at 1.30 p.m.

The Seventh meeting was held on the 22nd ultimo, at 10.30 a.m., at the Machi-gaisho.

President, the Governor of Kanagawa Ken.

The President fixed the following subjects to be discussed to-day:—

1.—Virulent form of the disease at Hemmi-mura, near Yokosaka, and difficulties met with at Hodogaya, where the people refused to receive foreign medical aid.

2.—Determination of the distance necessary between dwellings and the places where the dead bodies of cholera patients are burnt.

3.—Resolution of the Central Government to raise the local Quarantine Board of Naga-ura, and transfer of the duties of that Board to the Local Board of Health of Kanagawa.

4.—Appointment of a special Quarantine Committee on the Board.

5.—The question whether public places of amusement, like theatres, exhibitions, &c., shall remain open, or shall be closed on account of the epidemic.

6.—*Resumé* of the minutes of the second and third meetings.

1.—The President regretted to state that the disease had assumed a very virulent form at Hemmi-mura, near Yokosaka, and also in Hodogaya. At Hemmi-mura, four persons out of a family of five members had died, whilst the fifth person, the father of the household, was the only one still living, and under treatment.

Dr. Shima, of the Board, had gone to Yokosaka, to act together with the local physicians. But as the advice of the foreign medical members was also very much desired, he requested Dr. Wheeler to go to Yokosaka, to make a careful inspection, and to report upon his visit.

Adopted, that Dr. Wheeler should go that afternoon, in company with one of the Japanese members.

The President then asked what should be done at Hodogaya? When a person had fallen sick in that village, the family, friends, and neighbours surrounded the house and the patient; they then invoked the gods by reciting Buddhist prayers, but obstinately refused to receive any foreign medical aid from the physicians in charge. They strongly objected to be treated at a lazaret. Can we force them to receive medical aid or not? The *kocho* of Hodogaya had been here and he had seen everything at the lazaret of Idzumi-cho, in order to convince the inhabitants of his village that now every possible care was taken for the patients at our cholera lazaret.

Dr. Geerts proposed to arrange two or three houses at Hodogaya into a cottage hospital, as the Yokohama lazaret was too far away.

Dr. Wheeler observed whether it would not be possible to ask two or three Buddhist priests there to convince the people that we only wish to help them, and that it is not wise to refuse any medical aid?

Dr. Hiedo thought that there was only the choice between two things: 1, to let everything go as it is; or 2, to force people to be treated and nursed in the hospital. He expected no result from reasoning, as the *kocho* and some respectable citizens had done this already without success. The Chinese doctors of the village also would not co-operate with our measures. But the only thing which remained to be done was to address the *kocho* again, and ask their co-operation.

Dr. Gutschow remarked that it was, in fact, a very bad situation. In case of compulsory measures, all the lighter cases would not be seen; and as the excreta of these patients are also infectious, the danger of the disease spreading further will be greater. On the other side, such measures might cause a revolt amongst the people.

After some further discussion between Drs. Miyajima, Kondo, Wheeler and others, it was decided not to use compulsory measures, but to try once more to tranquillise and convince the people, with the aid of the respectable citizens of the village.

2.—As to the question of the interment, or the burning of the bodies of cholera patients, Mr. Kawano pointed out that the difficulties were not so much in Yokohama, but in the smaller villages of Kanagawa Ken, because the inhabitants of one village objected to the dead bodies of the neighbouring village being buried or burned in their village. The distance between two villages being often less than eight *chû*, it was very difficult to

fix this distance as the minimum between the cremation ground and inhabited places.

After some further discussion, in which Messrs. Wheeler, Kawano, Geerts, Gütschow, Ninomiya, and the President took part, it was decided to burn the bodies where this was possible, and where this was found impossible, to bury the corpses, after disinfection with strong sulphuric acid or with freshly burnt lime.

3.—The President communicated the decision of the Central Government to raise the local Quarantine Board at Nagaura and to transfer the duties of that Board to the Yokohama Local Board of Health.

4.—In accordance with this order, the President proposed a committee of six members to be nominated for all quarantine and inspection matters.

It was unanimously adopted that Messrs. Gütschow, Geerts, Wheeler, Isogai, Kawano, and Imanishi should form this committee, because they had now already much experience of the matter.

5.—As to the question of the closing of places of public amusement like theatres, &c., Dr. Geerts proposed, and Messrs. Isogai, Miyajima, and others seconded, that the epidemic had not yet assumed such alarming proportions at Yokohama, as to warrant the closure of these places of amusement.

Accordingly it was decided not to close these places for the time being.

6.—The *Redaction* Committee read the extracts of the minutes of the second and third meetings, which were adopted for publication.

The meeting closed at 1.30 p.m.

The eighth meeting was held on the 25th August, 1879, at 10.30 a.m., at the Machi-gaisho.

Present: The Governor of Kanagawa ken.

The President fixed as subjects on the order of the day.

1.—Report of the committee (Drs. Wheeler, Shima, and Hiodo) for the medical inspection at Hemmi-mura and Yokoska.

2.—*Resumé* of the minutes of the fourth meeting.

1.—Drs. Wheeler, Shima, and Hiodo reported the following:

1.—The total number of cholera cases in the village was 30.

2.—There was a total absence of any drains whatever in the village.

3.—Bad water in very shallow wells.

4.—At the house where the five members of one family were attacked, there was a pool of stagnant, dirty water near the shallow well.

5.—The wooden tubs of the privies were all leaky and badly constructed; and they must contaminate the water of the wells which are often close to the privies.

6.—The place is very much exposed to the hot sun.

7.—The whole village is built upon a swampy under-ground, which has been filled up artificially by pieces of soft clay-slate (loess) from the neighbouring hills. The soil has therefore a very porous character.

8.—No current of air can enter under the houses, as the floors rest nearly upon the ground.

9.—The people in the village are poor, very ignorant and careless, and did not take any care for the disinfection or destruction by fire of the alvino discharges, which very probably have been simply cast away, and might have poisoned the water of the well.

10.—The water of the well near the house where the five members of one family were attacked, has been taken to Yokohama and analysed at the Benten Laboratory. It was found to be extremely foul, filled with insects and bacteria, with a large amount of ammonia and dissolved organic matter.

11.—The village counts about 300 inhabitants; after the disease appeared in such a virulent form, several inhabitants ran away to other places.

After some discussion between Drs. Wheeler, Geerts, Shima, Kondo, Miyajima, and Mr. Isogai, Dr. Geerts proposed, and Dr. Wheeler seconded, that a committee, consisting of Dr. Shima, Mr. Ninomiya, one *kencho* officer, and one of the sanitary chemists of the Benten Laboratory, should go at once to the place,—1st, to choke all bad wells; 2nd, to provide at once the village with a proper water supply from Yokohama or Nagaura; 3rd, to clean and disinfect all the houses where patients of cholera had been; 4th, to destroy or disinfect the infected closets; 5th, to warn and advise the people to observe cleanliness.

It was unanimously resolved that this committee should go in the afternoon to Yokoska and Hemmi-mura, and directly take the matter in hand.

2.—The Committee of *redaction* submitted the *resumé* of the proceedings of the fourth meeting, which was adopted.

The meeting closed at 12 noon.

The ninth meeting of this Board was held on the 27th ulto., at 10.30 a.m., at the Machi-gaisho. President—the Governor of Kanagawa Ken.

The subjects to be considered by the Board were:—

1.—The report of the special committee (Drs. Shima and Ninomiya, Mr. F. Koiso, sanitary chemist of the Laboratory, and officers of the building department of the Kencho), which had taken sanitary measures at Hemmi-mura;

2.—The system of building privies and closets in Kanagawa Ken;

3.—The methods of burning the discharges and the bodies of cholera patients at the cremation grounds of Kuboyama and Aizawa;

4.—Communication of the President regarding the Daijokwan Regulation No. 23;

5.—Proposal of Dr. Hiodo, to have a kind of popular medicine adopted by the Board against the premonitory diarrhoea, by reason that people in the villages were often without timely medical attendance;

6.—The question whether reporters of newspapers may be allowed to visit, in that capacity, the cholera hospitals.

1.—Mr. T. T. Ninomiya reported the following as to what had been done in Hemmi-mura, on the 25th August, and following days:

1.—The chemical and microscopical analysis had proved all the wells of drinking water of this village to be in a highly polluted state. The wells had been all closed for this reason, and three tons weight of pure drinking water was now daily brought to the village. A water conduit from the hills was also made. For the moment, these two means would suffice.

2.—A general survey of the village was made. All the filth lying near the houses was collected, and brought to one place, where it has been burnt.

3.—The closets, which were nearly all in a bad condition, made of leaky wooden tubs and over-filled with excreta, were disinfected, emptied, and cleaned. But as this will only be a partial remedy as the ground is very porous, and in several places saturated with excreta, many closets have been destroyed wholly, in order to have others built, with earthenware pots set in cement. Several inhabitants had already changed their closets accordingly, and the *gun* officials were now busy in providing the poorer peasants with such a new closet.

4.—The drains could not be made at once, as the cost was too high, and could not be paid for by the villagers. A gradual improvement as to the drains will only be possible.

5.—All houses where any cholera patient has been have been disinfected and cleaned carefully by us; when the occupants of the neighbouring houses wished their houses also to be cleaned and disinfected, it was done; but where the occupants objected, it was not insisted upon.

6.—After these measures had been carried out, and pure water provided, the number of new cases diminished immediately, and is now only few.

11.—As to the system of building closets, the President observed that in July, 1878, and again in April, 1879, circulars had been issued by the local government, recommending to the people the use of large pots of glazed earthenware, and condemning the old practice of building new closets with wooden tubs. It was also said in these circulars that existing privies were to be gradually changed into the new system of the pots set in cement.

Dr. Geerts remarked that the board had to discuss a most important subject, although it might seem of a repulsive nature. In a densely populated town like Yokohama, which increases moreover steadily in size, the danger to the public health, caused by the present very imperfect closets, becomes with every day greater and greater, because the soil, on which we live gets more and more saturated with putrid organic matter of animal origin, poisoning both the air we breathe and the well-water we drink. He deemed two systems of closets good for Japan viz., 1st, the pail-system, which he considered the best, and, 2nd, the pot-system. Which of the two should be adopted was now open for discussion. Although it might be difficult for the executive government to make at once a radical change in the former customs of the people, still as regards such a very important sanitary subject, the people might be forced to erect proper privies within a certain fixed time. In foreign countries there existed also police regulations respecting closets, and there is no reason whatever why such should not exist in Japan, if the present closets were a danger to the public at large. If it be resolved to go in for the matter practically, it was desirable that it should be done, 1st in a systematic and rigorous way, and 2nd as soon as possible. The cost did not seem to be an insurmountable difficulty, as the government might raise a loan or subscription to provide the houses of the poor with a proper closet.

Dr. Gütschow observed that, although the pail-system was no doubt excellent and very suitable for Japan, where the peasants eagerly collect and make use of human excreta as manure, it would perhaps be found difficult to introduce this system generally on account of its greater cost, and on account of the people being not accustomed to it. He wished to make the change as economical and effective as possible, and found it also desirable to commence with the carrying out of the matter as soon as may be convenient. He deemed the pot-system the most advisable under the present circumstances, if properly carried out, and he gave some useful and practical explanations

as to the manner of placing and fixing the pots into the concrete. In order to give a distinct form to his proposal, he fixed the following points: 1st, That each house shall have its own closet, 2nd, that every closet shall be built in a proper way, and that it be left to the people to choose between the pail or the pot system; 3rd, that the cleaning of closets shall be supervised by the sanitary police of the *Kencho*.

Dr. Wheeler deemed it also necessary that the erection of proper watertight closets should be enforced for all new buildings.

The President would order a careful investigation to be made at the *Kencho* into the question whether the necessary funds for providing the poor with good closets should be raised by subscription or by any other means. Part of the cost could be realized by the sale of the manure.

Dr. Kondo remarked that the pot system would likely be the easiest for general introduction, as it did not differ much from the present custom.

Messrs. Kawano, Itogai, Miyajima, and others considered the matter also of great importance.

The Board voted unanimously: 1.—That a change in the way of building closets was necessary from a sanitary point of view; 2.—That the question of finance be left to the *Kencho* for careful investigation; 3.—That Dr. Gütschow shall be requested to draw up a report as to the mode of carrying the new system into practice.

III.—The President observed that some complaints were made about the smell from the cremation grounds, especially of the burning of the discharges of cholera patients. He asked the opinion of the members how this should be remedied.

It was agreed that Drs. Geerts and Nimomiya should make a careful investigation of the matter, inspect the cremation grounds at Kuboyama and Aizawa, and report upon the matter at next meeting.

IV.—The President communicated that Regulation No. 23 of the *Daijokuan* had been revised, and was now called Regulation No. 32. Although the new regulations were in principle the same as the former, some articles had received a milder form. As soon as the translation was finished, the regulation would be handed to the foreign members; copies in Japanese were distributed at the meeting.

V.—Dr. Hiodo proposed that the Board might recommend and adopt some kind of popular medicine against premonitory diarrhoea, because many people in the villages could not get timely medical aid. As the people feared the disease so much, it would also serve to tranquilize them in a moral sense, if they could have some medicine, that might be useful in the beginning.

It was resolved that the hospital committee shall consider the matter and report at next meeting.

VI.—The President observed that one of the foreign newspapers had applied for permission to send a reporter to the cholera hospital. He wished to know the opinion of the members about this request.

After some discussion in which Drs. Gütschow, Geerts, Miyajima, and Wheeler took part, it was remarked that the regulations did not allow visitors to go to the cholera hospitals, except medical men and relatives of the patients. Consequently it was resolved that only medical men could be allowed to visit, as reporters, the cholera-lazarets.

THE FAMOUS PLACES OF YAMATO AND KISHIU.

(Continued.)

YOSHINO

In crossing the ferry over the Yoshino-gaha at Kami-ichi, the view up the stream is very picturesque. The pointed thickly wooded hill about half mile distant on the right bank is the *Imo yama*, or Sweet-heart's mount. Mention is frequently made in ancient poetry of the *Imose yama*, which is usually explained to mean the Sweet-heart's and Lover's Mounts, but there is no *Se yama* or Lover's mount to correspond with that interpretation. Various explanations have been proposed; some say that it has been washed down the river into Kishiu, others deny that it ever existed. In a great deal of the old poetry the *Imose yama* are spoken of as being on the usual route to Kishiu, which certainly did not lie by way of Kami-ichi, and they are still pointed out by the river-side below Godeu. Landing at Ikahi we go a short way down the stream to Tañji, and then turning to the south enter the lower hills. Cherry-trees line the path and cover the hill-side for a considerable distance from a small tea-house up to the entrance of the town of Yoshino, where stands a huge bronze *torii*, built up of broad rings three feet in diameter. These trees, which are supposed to number exactly

a thousand, are famous throughout Japan. There is no sight compared to them for beauty when covered with delicate pale pink blossoms in the month of April, except perhaps the plum-trees of Tsuki-ga-se in the north of the province, whose fragrance extending a mile away adds an additional charm. But the cherry blossoms of Yoshino enjoy a far wider reputation. Further up the mountain side, beyond the town of Yoshino, is a second thousand of these trees, the pride of Japan. Yoshino has a population of about 1,400 inhabitants; it is built along the top of a narrow spur, and consists almost entirely of shops for the sale of rosaries and pilgrims' staves and of inns which line both sides of the road. Half-way up the town stands the temple called Kuchi no Miya. At the top of a flight of steps is the great red two-storied gate, from the side-niches of which the Two Kings have been removed. A second flight leads up into the court in front of the great hall, where formerly stood the colossal statue of Zawan Gongeh, 26 feet in height, flanked by statues of Kuwañon and Miroku each only two feet less. This is one of the largest edifices of its kind in Japan. It was built by order of Hidenoshi (Taico sama) to replace an earlier structure which had been destroyed during the civil wars. The pillars which support the lofty roof are huge tree-trunks, lopped of their branches and roughly trimmed, the largest logs which could be got. Their gradually tapering form reminds us of the way in which the stone pillars of Doric temples derived their shape from the primitive trunks which they replaced. One of the pillars is a gigantic azalea, at least thirty inches in diameter, grown upon mount Ohomine, where those shrubs frequently attain an enormous size, though seldom reaching the bulk of this specimen. Ex-voto pictures of proportionate dimensions and great age adorn the walls of the portico. The founder of this temple was the famous Weñ no Seukaku, who was born at Chihara in the province of Yamato. His mother dreamt that a single-branched vajra descended from heaven and entered her bosom, and on awaking she found herself pregnant. A strange child from his very birth, he loved to spend his time alone in the woods far up the mountain side. At the age of thirteen he already displayed an extraordinary acquaintance with Buddhist formulæ, could go out in the rain without getting wet, never trod by accident on the smallest insect, wore clothes woven of wistaria tendrils and lived upon nuts and berries. In his 17th year he ascended Koñgausen on the western side of the province not far from his birthplace, and lived there the life of a hermit for ten years by the side of a temple which he had raised to Fudou and other gods. In 658 he removed to Mount Minoo in Setsutsu, where he found three cascades. The basin of the upper fall was occupied by a dragon 30 feet in length, who from time to time emitted from his mouth clouds and rain. Seukaku dreamt that he visited the hermit Nāgārdjuna in a palace at the bottom of the pool, and received injunctions from him to climb all high and difficult mountains and bring them under the dominion of Buddha. In consequence he built a hut by the cascade in which he placed images of Riuzhiyu Bosatsu (Nāgārdjuna) and Beñ-zai-teñ. The next twenty years he spent in repeating sacred formulæ. Koñgara Douzhi and Seitaka Douzhi, or Miroku and Kuwañon under other forms, came and served him by day and night, while two hill-spirits called Zeñki and Goki provided him with fuel and water. These two spirits are always represented in attendance on him both in sculpture and in painting. By virtue of his devoted practice of religious exercises he at last attained to the possession of miraculous powers; he could walk on the water, fly through the air, foretell the future and cure all diseases. In 668, he cut a path up to the summit of mount Ohomine in Yamato, where he found a sword and a vajra in the rigid grasp of the body which had belonged to him in a previous state of existence. Having obtained possession of them by means of spells which loosened the grip of the skeleton, he was enabled to undertake still further achievements. After opening up a path across the mountains to Kumano, he returned to Yoshino, where he passed several years in religious exercises. In 698, he ordered the hill-spirits to build a stone bridge for him to Koñgausen, and as a punishment to one of them named Hito-koto-nushi, who delayed the work by refusing to labour during the day, bound him hand and foot by means of spells, and condemned him to remain a prisoner for 5,670,000,000 years, until the coming of Miroku, the Buddhist Messiah. He now conceived the purpose of erecting a temple at Yoshino to the god who might be fittest to ensure the salvation of the human race, and offered up prayers to all the Buddhas to

undertake the charge. The first that appeared was Jizau with his mild countenance, but the hermit, feeling that such a gentle god would be unfit to cope with the wickedness of the race, took him up and cast him far away, so that he fell to earth in the province of Hanki. Miroku was the next to present himself, who turned out equally unsatisfactory. The hermit spent seven days more in an upright posture, with glaring eyes and clenched fists, so that the gods might better understand the nature of his requirements, until at last there stood before him a being pale with concentrated rage, who made with his left hand the mystic sign of the sword and in his right held a triple-pointed *raijira*. Senkaku recognized in him the god Zawau Goŕgen who could effectually turn away human beings from their evil lusts, and having carved an image of him out of a huge rhododendron, set it up in the temple prepared for its reception. In spite of the manifold good works of the saint, he did not escape the effects of envious calumny. One of his disciples, whom he had corrected with necessary severity, revenged himself by turning traitor and denouncing him to the Mikado as a wicked magician and worker of evil miracles. The police were sent to arrest him at Yoshino, but he refused to obey their mandate, and conveyed himself out of their sight through the air. His persecutors then seized his mother, and kept her as a hostage until he surrendered. Being exiled to the island of Ohoshima off Cape Idzu, he flew back nightly to visit his mother in her own home, besides making excursions about the whole country to climb all the most famous mountain peaks, but in the daytime he was always present to the sight of his guards. Not satisfied with the partial success of his intrigues, the unfaithful disciple persuaded the Mikado's ministers that he still practised his magic arts against the life of the sovereign, and officers were sent to examine into the truth of the accusation. The disciple corrupted the messengers of the law, and persuaded them to put him to death without a trial, but when they tried to behead him, he so fortified himself by the use of mystic signs and formulae that their swords snapped in pieces. The Mikado hearing of the miracle, called upon the diviners to exercise their skill in the matter, and they reported that they found Senkaku to be a holy and innocent man. He was consequently pardoned and invited to Court. Among the mountains first ascended by him are Atagosan in Yamashiro, Onitorisaki in Setsutsu, Daisen in Hanki, Hikosan in Buzen, Hakusan in Kaga, Tateyama in Wetsuchiu and Hagurosan in Deba. Senkaku finally flew away to China in the year 701, and was never seen again among mortal men.

On the right side of the street a little way beyond this temple is a much smaller one called Yamaguchi no Zhiŕzhiya dedicated to the forest gods, with no chapel. Here a narrow path branches off to the left to the tomb of Go-Daigo Teŕwau, distance about half a mile. It was in 1336 that this unfortunate prince took refuge in the mountains of Yoshino, and there bade defiance to the traitor Ashikaga Takauji. He only survived his flight three years. By going along the path for a short distance we can see the pine wood which surrounds the tomb, on the side of the opposite hill, with a piling in front. One of the pleasantest houses for the traveller to lodge at is the Buddhist monastery of Chikuriŕ-wiŕ, beyond the street of inns. It was formerly richly endowed, but the Abbot's only present source of income is derived from the pilgrims whom he provides with accommodation and anchorite's fare. The view from a little hill in the garden above the house is extremely pretty. About half an hour's walk beyond this monastery is the Mikumari no Zhiŕzhiya, or "Temple of the Parting of the Waters," formerly called Komori no Daimiyauzhiŕ, or "Great Illustrious God who protects children." At the top of the steps is a two-storied gate with a closed gallery extending right and left. On entering the court, there are three chapels in a row on the right hand, and the oratory and priests' apartments on the left. All the buildings were formerly highly decorated, but are fast falling into ruin in consequence of the endowment having been confiscated. Another half hour's climb brings us to the principal temple, a small and uninteresting building lately erected; the two-storied gateway below is old. Azaleas of several species abound on this part of the ascent. A stiff piece of climbing for twenty-five minutes then succeeds, and we descend again to the Kokoromi tea-house in half-an-hour. Fifteen minutes above this is another tea-lut, and an ascent of twenty-five minutes brings us to the top of a tooth of the sierra by which we have to reach the summit of Ohomine. From this the path des-

cends again for 600 feet, and then reascends for 400 feet to the Koteŕzhiyau. About ten minutes before attaining this peak, is the Hiyaku chiyau jiya-ya or Hundred chiyau tea-shed, that being the distance still remaining to the summit. Just below this tea-shed is a troublesome place called the Zhiyu-bara, or serpents' belly, where the pilgrim has to clamber over almost precipitous rocks with hands and feet. Another dive down and climb up the opposite side of a great depression in the ridge, which occupy about forty minutes, bring us to the Oho-teŕzhiyau. Again we descend for half an hour and re-ascend to the Dorotsuji tea-house in another hour. From this point commences the worst part, and the last bit of the ascent has to be accomplished by means of ladders resting against the steep rocks. The pilgrims choose this spot for changing their straw-sandals, and washing their hands, so that they may not provoke the wrath of the god of the mountain by trespassing on his domain in a state of impurity. There is no danger, except for persons of very weak nerves. The path ends at a group of huts picturesquely planted on terraces one above the other, from which there is a fine view of the mountain ranges due north. A pointed summit bearing N. E. is Takami-yama, below which passes the mountain-path from Washika over into Ise. Leaving the huts and turning along the path to the left, we arrive at the Oku no Wiŕ, from which the Shiŕtau priests have been permitted to expel the image of Weŕ no Giyanzhiya, who was the originator of the religious worship on this mountain, and it is now dedicated to some vague spirit whose name nobody knows. But the old building remains untouched. A few steps through the wood directly opposite bring one to the topmost summit of the mountain, the very Ohomine Saŕzhiyau, and in a couple of minutes we reach an open space covered by bamboo-grass from which there is a magnificent prospect of the sea of mountains which entirely covers the south of Yamato, right away to Shiyaka-ga-take, the highest of the group. A little south of east rises Kunimi Yama, which hides the celebrated Ohodai ga hara, parent of the Yoshinogaha. To the south, in front of Shiyaka-ga-take, is Misen, and close at hand bearing south-west is Inamura-ga-take, with Teusen-ga-take and Shichimen-zan behind it. Proceeding along the path westwards, we reach the new temple which is being erected for the accommodation of the hermit by his devotees. Several fine bronze images which represent him equipped for a pilgrimage, with one-toothed clogs on his feet and accompanied by the faithful demons Zeŕki and Goki, line one side of the open space in front. From here we return by another path to the huts. The height above the sea has been variously estimated. One careful observer gives 1,882 m. or 6,173 ft.; another places it at 1,644 m. or 5,394 ft., and the truth perhaps lies between the two. In any case, calculations based on observations with aneroids are to be accepted with great caution. It is not so much the height as the length of the climb, and the repeated short ascents and descents of a few hundred feet at a time by which the summit is reached that make the excursion fatiguing. Seven hours from Chikuriŕ-wiŕ afford ample time for resting and botanizing on the way, for which purpose the month of June is most favourable. In the neighbourhood of the top of the ladders are several projecting rocks, which are difficult and slightly dangerous to climb, such as the Kane-kake-ishi (Bell-hung rock) and the Nishi-nozoki (Western Peep). To visit these is considered by the pilgrims a meritorious action.

From Ohomine it is convenient to turn off westwards, and visit the famous monastery of Kaŕya-san in Kishiu. In order to take the usual route by the Ten no kaha valley, the traveller must return to Dorotsuji, and descend to Dorogaha, about 2,800 feet below the summit of the mountain. Another route lately opened, is by returning to Hiyaku-chiyau Jiya-ya, and thence descending to a place called Akataki. It then passes by the Shiŕtau temple at Nifu, after which its course is not to be found on any of the maps. Full particulars can be obtained from the Abbot of Chikuriŕ-wiŕ. Its reputation with the professional conductors of pilgrimages is unfavourable, and unless the traveller has a taste for adventure in unknown regions, he had better take the road down the Teŕ no kaha valley, which we will proceed to describe.

The descent from the summit of Ohomine to the level ground at the head of the valley takes about 1 hr. 20 min., and from the tea-house which stands here to Dorogaha is about 1 ri. Shortly after passing the tea-house we cross the Teŕ no kaha near its source, a deliciously cool, clear

and inviting stream. Half an hour more brings us to a tea-house, where a path turns off to the right across the stream to some caves in the white marble rock, called Taurau no Iha-ya. These are as interesting as small caves usually are. They have slippery floors and low roofs with pine-torch embers under foot and soot on every side. Dorogaha, being a favourite place of resort for pilgrims who come Ohomine from Kauyasañ, has numerous and good inns. The village is about 2,800 feet below the summit of Ohomine, and is therefore at least 2,560 feet above sea level. It possesses a very temperate climate, and rice-cultivation is impossible in the immediate neighbourhood, but *daikon* and the ordinary potato do well. The local name for the latter is Giyaunzhiya-imo, after Weiñ no Senkaku on the right, Zawan Gogheñ (the god of Yoshino) and Rigeñ Daihi (b. 832, d. 909) founder of the Yama-bushi sect on the left. The path descends the valley on the right bank of the stream, and climbing over a hill, the top of which is in reality only about 50 feet above Dorogaha, though it seems very much higher, descends to Nakagoshi (1976 feet) and Kabahi (1882). At Nakahara the pilgrim's route crosses the stream to the temple of Kuwañof, now little better than a ruin, and recrosses shortly afterwards to the right bank. At Wada a path branches off over the river to some copper mines, which were first opened in 1862: the yield in 1872 was over 165 tons of metal. As the curves of the river's course lengthen in proportion to the increase in the volume of water, so the spurs which have to be crossed become higher, for the perpendicular rocks which line its course in most places do not permit the path to be carried along on a level with the stream. The scenery is varied, though never affording extensive prospects. From Wada and Yamanishi the path usually follows the left bank, but during certain seasons when timber is being felled in the woods, the route is diverted to the opposite side, and recrosses again between Komoriyama and Yamanishi (1560 feet). Instead of halting for the mid-day meal at the latter place, it is better to go on half a mile farther to a small inn kept by Tatsumi Sawemof, charmingly situated above a deep bend in a stream. A long steep ascent leads up to Takiwo, where one can rest and enjoy a fine prospect of hills and stream. Just before reaching Hirose there is a choice of paths, one of which climbs high up to the right to a point from which there is a splendid view and avoids Hirose, while the other continues along the river bank for a short distance, and rises to a considerable height in its turn, passing through that village. The accommodation all along this valley is very poor, fresh sea fish is never seen, and fresh-water fish only during the season, when mountain-trout, here called *amego* or *ame no uro*, are taken. *Banchiya*, which tastes like a decoction of dried fallen leaves of no kind of tree in particular, is the only form of tea procurable, and it is therefore advisable to carry a small tin canister of good leaf in one's pocket to infuse at tea-houses where hot water is to be had. A small teapot and a couple of tea-cups will also be found useful. Half a *ri* before reaching Teñ-no-kaha tsuji occurs a long ascent called the Matsuwotage; at the top a road branches off to the right to Godeu and Shimo-ichi on the Yoshino-gaha. At the entrance to Teñ-no-kaha tsuji a path crosses the stream, and passing through Kodai, continues along the bank of the river, which here becomes the Totsu-kaha. At this village the river turns to the south, and the path follows it through the village of Sakanoto, to where a small tributary torrent flowing west from the frontier of Kii falls in. Crossing the bridge (1240 ft.), and leaving the path, which continues south towards Sarutani village, we turn to the right, and after a climb of $\frac{1}{2}$ *ri*, reach Nakabara (1950 ft.). This hamlet contains four or five good-sized inns. Cultivation appears confined to barley and *fukii* (Petasites Japonicus), the young stems of which form the principal green vegetable food in the Yoshino valleys. From Nakabara the path continually ascends for some distance. In a quarter of an hour we reach a point from which there is an extremely fine view look-

ing backwards down the valley towards the Totsu-kaha. Inuawi (2000 ft.), situated on the opposite bank of the stream close to the bridge, is reached in half an hour more. Here are several decent inns. Just beyond the village a path turns off right to Godeu, and a little further another branches away left to Iketsugaha (2 *ri*), and a temple called Kuwauzhiñ on a high peak. From Iketsugaha there is a path to Kauyasañ, $2\frac{1}{2}$ *ri*. From Inuawi the road passes through two or three small hamlets and finally climbs through a wood to the Teñgu-gi ridge (3070 ft.), which separates Yamato from Kishiu, in $1\frac{1}{2}$ hrs. The view here looking backwards includes the whole of the Yoshino range from Ohomine down to Shiyaka-ga-take. North of us rise Kōgausen and Katsuragi-yama. A more extensive view embracing the whole horizon, except to the south, may be obtained from a small hill about 200 yards north of the tea-house; here Tasu-uo-mine and Takami-yama on the border of Ise come into view, and westwards we have a peep over the trees into the very heart of Kauyasañ, where the residences of the priests lie thickly together near the main entrance from the Wakayama side. From the bottom of a valley on the right the final portion of the "New Route" from Akataki struggles up the steep hillside by numerous zigzags, to a point where it meets the path round the side of the hill from Teñgu-gi, and both disappear into the forest beyond. Close to the tea-house on the ridge the writer saw *Pyrus Japonica* (*boke*), *P. Spectabilis* (*kailan*), purple magnolia and a double cherry all in full bloom together on the 17th May, long after they had ceased to flower in Toukiyau.

(To be continued.)

PUBLIC HEALTH.*

APPENDIX TO DR. SIMON'S REPORT TO THE LOCAL GOVERNMENT BOARD.

[From Papers presented to the British Parliament, 1875.]

NO. 2.—ABSTRACT BY DR. SEATON OF PROCEEDINGS OF THE INTERNATIONAL SANITARY CONFERENCE, HELD AT VIENNA, JULY 1 TO AUGUST 1, 1874.

The International Sanitary Conference of Vienna, to which I had the honour of being delegated, along with Dr. Dickson of Constantinople, as representing the United Kingdom, was assembled at the instance of the Austro-Hungarian Government for objects which are stated at length in the despatch of Count Andrássy, appended to this paper (Annex I). Summarily, these objects were (1) to re-examine the state of the knowledge of cholera in reference to prophylaxy, with the view of establishing, if possible, a complete understanding between the Governments who had been convoked as to the national and international measures adopted for preventing the spread of that disease, "de concerter entre les Etats intéressés des arrangements obligatoires qui auraient pour but d'amener une parfaite conformité dans les dispositions à prendre pour se prémunir contre ce danger commun;" (2) to consider the question of instituting a permanent, or temporary, international sanitary commission of the further investigation of epidemics and the means of combatting them. It was reserved for the conference to enter or not, as it might see fit, on the subject of quarantine against other diseases than cholera.

Every European state was represented at this Conference. Persia and Egypt were also represented. The United States of America had been invited by the Austro-Hungarian Government, and had accepted the invitation, but no representatives attended. The States represented were 22 in number, "each sending as many delegates as it thought fit, but each disposing of one vote only. The delegates were, with few exceptions, of the medical profession, and no state was without a medical representative. Most of the delegates were persons holding office in the public service, sanitary or medical, of their respective countries.

The Conference was formally opened July 1st, 1874, and formally closed August 1st, 1874. During this time 20 sittings of the full Conference were held, independent of the meetings of the several committees to which had been entrusted the preliminary consideration, and preparation for discussion, of some of the more important questions on which the Conference had to decide.

Following the programme which had been proposed and submitted to the respective Governments in Count Andrássy's despatch (Annex II.) certain preliminary scientific questions in reference to cholera were first submitted for consideration.

* See the Japan Weekly Mail of 30th August.

1. Austria, Hungary, Belgium, Denmark, Egypt, France, Germany, Great Britain, Greece, Holland, Italy, Luxembourg, Norway, Persia, Portugal, Roumania, Russia, Servia, Spain, Sweden, Switzerland, Turkey.

These the Conference decided to consider in full assembly without the intermedium of committees. As most (though not all) of these questions had been thoroughly discussed by the Conference which had been held eight years previously at Constantinople, it was determined, in order to facilitate business, that as each such question arose the conclusions arrived at on the subject by the Constantinople Conference should be read, and a provisional vote thereon taken without discussion. If the result were one of unanimous assent, the question was regarded as settled in that sense, and the Conference passed on to the next question. But if the assent were not unanimous, if a single delegation of those present at the particular time even obtained from voting, the discussion was declared open. This mode of proceeding was found in practice extremely convenient and led to a great saving of time.

I.—SCIENTIFIC QUESTIONS.

The first of the preliminary questions was as follows:—"Le choléra Asiatique, susceptible de s'étendre (épidémique), ne se développe-t-il spontanément que dans l'Inde, et est-ce toujours du dehors qu'il arrive quand il éclate dans d'autres pays? Ou bien revêt-il aussi le caractère endémique dans d'autres pays que l'Inde? dans ce cas, quels sont ces pays?"

On the points involved in this question the Conference was in unanimous agreement with that of Constantinople, that epidemic cholera has its origin in India, and exists permanently there in an endemic state, that it is probably endemic only in India, though there are some countries bordering on India, concerning which sufficient grounds do not exist for a formal conclusion on this point; that it has never been observed in a really endemic state, (which of course must be carefully distinguished from an origin from secondary foci) either in any part of Europe, or in Turkey in Asia or in the Caucasus, or in the north of Africa, or in America; and that, though the possibility of its becoming acclimatized in any of those countries is not to be rejected, such event is to be held as extremely problematical.

On the second question, "Le choléra est-il transmissible par l'homme?" some discussion took place, not in reference to the main question, in which the conference was entirely in accord with that of Constantinople, but on an exception taken by the German delegates to the wording of one of the conclusions of the Constantinople conference on the subject.

With certain qualifications to meet this view, and which recognized the influence of localities, the conference accepted those conclusions, thereby affirming that cholera is transmissible by the human subject coming from an infected locality; that the rapidity of its transmission is in correspondence with the activity and rapidity of human communications; that the introduction of a single cholera patient may give rise to the development of an epidemic; and that there are facts which tend to prove that a single individual (and a *fortiori* several) coming from an infected place, and affected with diarrhoea only, may be enough to give rise to the development of an epidemic of cholera, or, in other words, that the premonitory diarrhoea of cholera may be the means of transmitting the disease.

On the points raised in the third question, "Le choléra peut-il être propagé par des effets qui, provenant d'un lieu infecté, ont servi à l'usage, et spécialement par ceux qui ont appartenu à des cholériques?" the conclusions of the Constantinople Conference were unanimously accepted, viz., that cholera is transmissible by goods employed for personal use coming from an infected place, and especially by such as have been used by cholera patients; and that there are even facts which show that the disease may be conveyed to a distance by such goods, if they have been kept close and unexposed to free circulation of air.

The fourth question, "Le choléra peut-il être propagé par des comestibles?" was one which had not been considered at Constantinople. This question it was decided after a short

discussion to divide into two, the one having reference to food, and the other to drink, especially to drinkable water. To the first branch of the question, "Le choléra peut-il être propagé par les aliments?" the answer given by a majority, after considerable discussion, was that the conference having no conclusive facts of the transmission of cholera by food, was not in a position to give a formal decision on the point. To the second division of the question, "Le choléra peut-il être propagé par des boissons, particulièrement par l'eau?" the reply was unanimously in the affirmative.

On the fifth question, "Peut-il être importé par des animaux vivants?" the conclusion arrived at by a majority, after some discussion, was that there exists no proof of the transmission of cholera from animals to mankind, but that the possibility of it may reasonably be admitted.

On the sixth question, "Le choléra peut-il être importé par les marchandises?" the conclusion of the conference at Constantinople, that, while they were unanimous as to the absence of any proof of the transmission of cholera by merchandise, they must admit the possibility of such occurrence under certain conditions, was, after discussion, adopted by a majority. No vote was given against it, but several delegations abstained from voting. As is evident from the wording of the resolution, it was only as to the concluding phrase that there was any difference of opinion.

On the seventh question, "Le choléra peut-il être propagé par les cadavres des cholériques?" the conclusion of the former conference, that though there was no conclusive evidence of the transmission of cholera by the corpses of cholera patients, it was prudent to consider them as dangerous, was unanimously adopted.

On the eighth question, "Le choléra peut-il se propager au loin par l'atmosphère seule?" the conference adopted, with equal unanimity, the conclusions of that of Constantinople, which were as follows: No fact up to the present time has shown that cholera can be propagated to a distance by the atmosphere alone, whatever the atmospheric conditions may be; and it is further a law, without exception, that no epidemic of cholera has ever been propagated from one point to another in a shorter time than was requisite for a human being to travel from the one point to the other.

The surrounding air is the chief vehicle of the cholera-producing agent, but the transmission of the disease by the air is limited, in the immense majority of cases, to a distance very close to the source of infection. None of the facts which have been cited of transport of cholera by the atmosphere to the distance of one or of several miles is sufficiently conclusive.

The conference assented also with unanimity to the answer which had been given at Constantinople to the ninth question, viz., "L'air frais arrivant de dehors aux agents donnant naissance ou propageant le choléra, et les aérant, ou bien l'isolement de ces agents de l'air extérieur, constituent-ils des éléments ayant ou non une influence sur le caractère contagieux de choléra?" This reply was to the effect that in fresh air the generative principle of cholera rapidly loses its morbid activity, but that under special conditions of confinement of air such activity might be preserved for an undetermined time; that it was under these conditions of confinement of air that, (as already stated in reply to question 3), cholera might be transmitted even to a distance by goods employed for personal use; that great deserts were a very efficacious barrier against the propagation of cholera, and that there was no example of that disease having even been imported either into Egypt or Syria across the desert by caravans coming from Mecca.

The two remaining preliminary questions of the programme gave rise to long and animated discussions.

Question 10 was, "Quand il y a contagion, quelle est la durée de l'incubation?" The resolutions of the Constantinople conference on this point had been as follows:—"In almost all cases, the period of incubation, i.e., the time which elapses between the moment at which the individual receives the cholera infection and the commencement of the premonitory diarrhoea, or of the confirmed cholera does not exceed a few days (elsewhere more precisely limited by the words, 'a week' at the outside.) All facts which have been cited of a longer incubation relate to cases which are inconclusive, either because the premonitory diarrhoea has been included in the period of incubation, or because the infection might have taken place after the person's departure from the infected locality. Observation shows that the duration of the choleraic diarrhoea which has been termed premonitory, (which must not be confounded with every diarrhoea met with at cholera times), does not exceed a few days. The facts which have been cited as exceptional do not prove that the cases of diarrhoea prolonged beyond this period are really choleraic, and are susceptible of transmitting cholera when the individual suffering has been withdrawn from all sources of infection."

After a very long debate, the Conference of Vienna assented to these conclusions by 13 affirmative votes to 1 negative, four delegations abstaining from voting.

5. The difference of opinion, at least between the delegations which voted in the affirmative and those which abstained from

2. Throughout this abstract I have given in full the conclusions as voted by the Conference. They frequently go beyond a mere categorical reply to the questions asked, and sometimes contain qualifications of the conclusions stated in the final "Relevé des Conclusions, &c." (Annex III.) which should not be disregarded.

3. The phrase objected to was "L'homme atteint de choléra est par lui-même le principal agent propagateur de cette maladie." And the objection taken by Professor Pattenkofer was particularly to the words "par lui-même." The view of the German delegation was thus formulated by Professor Hirsch:—"Je ne conteste nullement la transmissibilité du choléra par l'homme venant d'un milieu infecté; je considère l'homme seulement comme la cause spécifique, en dehors l'influence de la localité infectée; en outre je le considère comme le propagateur du choléra, lorsqu'il vient d'un endroit où le germe de la maladie existe déjà."

4. It is apparently by an error, which escaped observation at the time in the Procès-verbaux, that the proposal of the German delegation therein stated to have been formally adopted, and to the exclusion of the Constantinople resolutions. But the fact was that the discussion showed that there was nothing really to dispute about; the Conference readily and at once recognized the influence of localities, and most certainly the resolutions of Constantinople, modified on this point only, as I have stated in the text were adopted. I find this error in the Procès-verbaux and the Relevé des conclusions, has been since noticed by other members of the Conference. (See Bull. de l'Acad. de Med. 1874, p. 926.)

The 11th and last question was this:—*Connait-on des moyens "ou des procédés de désinfection grâce auxquels le principe "générateur ou contagieux du choléra peut sûrement ou avec "quelque chance de succès être détruit ou perdre de son "intensité? Dans le cas affirmatif, quels sont ces moyens?"*

A short preliminary discussion made it evident that it would be desirable to take separately the opinion of the conference as to the existence of means of disinfection which might be relied on with certainty, or only of means for the probable success of which there was good evidence; to separate, in short, the "sûrement" from the "quelque chance de succès." The known existence of any means of disinfection, absolutely certain in its operation, was denied by 12 delegations, and affirmed by none, seven delegations abstaining from voting.

On the other hand 14 delegations asserted, while four denied, the existence of means of disinfection, of the successful application of which there was reasonable probability. The vote on this latter question, however, must be interpreted by reference to a further discussion to which it gave rise, which showed that the objection on the part of the delegations which had voted in the negative, to admit the probable efficacy of disinfectants, had arisen chiefly, or at least in great part, from the influence they conceived an affirmative answer to the question would have in leading to a reliance being placed on disinfectants, to the prejudice of the precautions (which they deemed much more important) of simple hygiene. This had certainly been the furthestest possible from the intention of those who had given the affirmative vote. A resolution, therefore, which should remove all ambiguity on this point was proposed, and unanimously adopted, as follows (I give the exact words of the resolution itself): "La science ne connaît pas encore de "moyens désinfectants certains et spécifiques; en conséquence, "la conférence reconnaît une grande valeur aux mesures "hygiéniques, telles que : aération, lotions profondes, nettoyage, "etc., combinées avec l'emploi des substances regardées actuellement comme désinfectantes."

No attempt was made at the present stage of proceedings to specify the various means of disinfection (as required by the last clause of the 11th question), the subject being held to belong in its details more properly to question 22 of the programme.

Four sittings of the Conference had been occupied with the determination of these preliminary questions. The conclusions arrived at were, it will have been seen, essentially of accord with those arrived at by the Conference of Constantinople. At the last of these sittings the course to be adopted in considering the second part of the programme, the practical questions relating to Quarantine, was also discussed. It was determined that the questions relative to Land and River quarantines (questions 12-15) should be entertained in full Conference, but that the subject of Maritime Quarantine (questions 16-22) should, in the first instance, be referred to a committee and discussed on the committee's report. It was further resolved that the questions relating to the establishment of an international sanitary commission (Part III. of Programme) should also, in the first instance, be referred to a committee. And the committees for the respective purposes were nominated.

voting, was I apprehend, more apparent than real. I did not gather from the discussion that it was at all disputed by the latter that in the immense majority of cases) perhaps the expression "almost all" might have been felt by them a little too strong) the period of incubation does not exceed the limits stated in the resolution. Their objection attached rather to the too small importance, which, in a prophylactic point of view, the resolution seemed to attach to the exceptional cases, of which the most reasonable explanation consisted in admitting a longer period of incubation. As Professor Patteuhofer put it, the question was to be regarded from a prophylactic not a clinical point of view; adding that from the latter "il "accepterait la thèse d'une courte durée." On the other hand it was by no means intended, as the limiting word "almost" shows, by those who supported the resolution to deny the possible, nor the probable existence of a longer period of incubation in some cases, nor that dangers might, though rarely, arise therefrom.

6. In the *Procès-verbaux* the votes are recorded as 13 affirmative to 5 negative; M. Schleisner's vote, which was affirmative, having been erroneously entered as negative.

7. In point of fact no enumeration of disinfectant substances or recommendation, as to special means of disinfection was ever made by the Conference. The committee on Maritime Quarantine (see *postea*) in the *Règlement* attached to their report, suggested certain means as applicable to ships, and to passengers by ship, their clothes, and effects, but on discussion it was felt that the best course was to leave the choice of means of disinfection to the competent authority of each country.

8. The committee on Maritime Quarantines, as first nominated, consisted of Hirsch (Germany), d'Alber-Glaustatten (Austria), de Ring (France), Polak (Persia) and Seaton (Great Britain); but M. de Ring and Polak declining, for reasons stated by them respectively, were replaced by M. M. Semmola (Italy), and van Cappelle (Holland). The committee on the subject of an International Commission consisted of M. M. Lenz (Russia), Catinelli (Hungary), Marcovitz (Roumania), Kierulf (Norway) and Polak (Persia).

II.—QUESTIONS OF QUARANTINE.

The mode in which the questions connected with Quarantine were submitted for the consideration of the Conference differed from that which had been taken with regard to the scientific questions. The Conference of Constantinople, having established facts which fairly lead to the inference that a theoretically perfect Quarantine is capable of arresting cholera, had conceived and adopted a scheme for applying Quarantine, which would keep cholera, as it was supposed, eventually out of Europe. This was to be done by maritime quarantine stations on the Red and Caspian Seas and Persian Gulf, and by land quarantine stations on the Turco-Persian and Russo-Persian frontiers, and on the side of Boukhara. The scheme involved further complete temporary interruption (if necessary) of all communication between Egypt and any places in the basin of the Mediterranean. That Conference had also laid down general rules for quarantine (*Règime Quarantenaire*). Its scheme, as a general scheme, had never been put into execution, and indeed was in great part quite inexecutable; and it had this great defect, that it included no provision whatever for what, during the interval which had elapsed since the Conference had reported, had been the sole cause of anxiety with reference to cholera in Europe, viz., the spread of the disease in Europe itself.

The Conference of Vienna was not called upon specifically to review the several recommendations on Quarantine of the Conference of Constantinople as it had been called on to review its conclusions on scientific matters; but certain broad general questions had been framed with the view of eliciting the opinion of the delegates assembled at Vienna as to the measures of restriction on the progress of cholera which were practicable, and likely to be efficacious, by land, by sea, or by river.

A.—LAND QUARANTINE.

The 12th question on the Programme was:—"Des établissements de quarantaine doivent-ils être construits sur terre contre le choléra?" Unless this question were answered in the affirmative, the following one, the 13th on the Programme, which had reference to the details of such establishments, fell to the ground. A resolution was proposed answering it in the negative, and adopted by a majority of 13 delegations to 4; two delegations abstaining from voting. The terms of the resolution adopted set forth that, in view of the numerous modes of communication which existed and increased from day to day, land quarantines were inexecutable and useless; and that on this account and on account of the serious damage they did besides to commercial interests, they ought to be abolished. (Considérant que les quarantaines de terre sont inexécutables et inutiles; vu les nombreux moyens de communication qui augmentent de jour en jour; considérant en outre qu'elles portent des atteintes graves aux intérêts commerciaux, la Conférence rejette les quarantaines de terre). Up to a certain point there was absolute unanimity of opinion in the Conference. No one contended that land quarantines on the continent of Europe wherever a railway system had been established, were practicable; but objection was taken to the universal condemnation of land quarantines which the resolution implied. This objection was represented in three degrees (if I may so say) by three amendments successively put and negatived. The one widest from the resolution was that formulated by M. Milosavljevitsh, the delegate for Servia, which, commencing by a recognition of the general utility of quarantines, went on to say that, though land quarantines were not practicable in the centre of Europe, they ought to be established wherever topographical and social conditions admitted. This amendment received 4 votes against 13 negative; two delegations abstaining. The next formulated by M. de Ring, delegate of France, was to the effect that the Conference was of opinion that land quarantines were in most cases impracticable, but that any States which deemed it possible to guard efficiently their land frontier by quarantines should have the liberty of doing so. This obtained 5 votes to 13 negatives; one delegation only abstaining. The last amendment put, that of M. Orphanides, the delegate for Greece, proposed the maintenance of land quarantines in Greece and Turkey, on the ground that the reasons which called for the rejection of such quarantines in Europe generally did not apply to those countries. This proposal equally obtained five votes only; but of the 13 delegations which had rejected the former amendments, and which voted afterwards for the resolution originally proposed, eight abstained from voting on this amendment. The effect was practically the same as though

9. The delegations which voted against this view were those of France, Greece, Portugal, and Servia. The delegations which abstained from voting were those of Luxemburg and Switzerland. It should be stated, however, that the delegations of Turkey, Egypt, and Spain had not up to this time taken their places in the Conference.

10. The exceptional circumstances of Greece were ably put to the Conference by M. Orphanides; but no statement whatever of such circumstances was made on behalf of Turkey (the Turkish delegation, it should be explained, had not then arrived). On the other hand, the utter inexecutability and consequent inutility of the Turkish land quarantines were strongly stated by the Russian

they had voted in the negative; an absolute majority of the delegations present being requisite for the adoption of any propositions.

The resolution, entirely condemnatory of land quarantine, was (as I have already stated) then adopted by the vote of 13 delegations to 4; two delegations abstaining.

B.—MARITIME QUARANTINE.

It having been decided that the questions (14 and 15) which stood next in the Programme should be postponed until the subject of maritime quarantine had been discussed, the conference next passed to that discussion, which proved an extremely animated one, and which occupied altogether nine sittings.

The discussion commenced of course with the consideration of the Report made by the Committee to whom the questions (16-22 in the Programme) relating to the subject had been referred, which Report was to the following effect:

That maritime quarantines can only be of real use, as protective against cholera, in those ports which may be regarded as the chief points of irruption of that disease in its progress by sea towards Europe.

That, wherever instituted, they should be of the completest kind, and in conformity with the strictest rules of hygiene. That they should be international institutions.

That when cholera has broken through the chief points of irruption, quarantines in the ports of continental Europe are useless, inasmuch as the communications by land take from them all their value.

That, under these circumstances, there should be substituted in the ports of Europe for quarantine a rigorous medical inspection of every ship coming from an infected locality, in conformity with regulations which the Committee had prepared, and which it submitted to the Conference.

The general discussion of the principles involved in this Report was of the highest interest, and occupied three sittings. It was characteristic of the different stand-points from which this practical subject was approached at Constantinople and at Vienna, that, while the attention of the former conference had, so far as it was concerned, been exclusively given to the establishment or maintenance of quarantine for the purpose of checking the progress of cholera by sea from Asia to Europe, it was with the question of the maintenance of quarantines in the ports of Europe itself that the conference of Vienna was chiefly occupied. Little or no difference of opinion was manifested amongst those assembled at Vienna as to the utility of sea quarantines between Asia and Europe; but very great diversity of opinion was found to exist as to the advantage of

delegates, who, however, were amongst those who took no part in voting on this amendment. As M. Fauvel, one of the French delegation (who had not taken his place in the Conference at the time this question was discussed), has since insisted before the French Académie de Médecine on the practicability and value of these quarantines, it may not be amiss to add the following reliable description of them by Surgeon-Major W. H. Colvil, civil surgeon, Baghdad, who had himself been subjected to them:—

"On my way from England last autumn, to rejoin my appointment, by Russia and Persia, I had to spend 10 days in quarantine on the frontier at Khanikin; and I can best give an idea of Turkish quarantine by trying to sketch what I saw. Khanikin is a town of about 2,000 inhabitants. Here the river Diyala, crossed by a stone bridge, separates Turkey from Persia, and at the Persian end, a plot of ground, bounded on one side by a canal, was marked out as the quarantine camp, and here for two months before my arrival as many as 5,000 travellers, Asiatic Russians, Afghans, and Persians, had at the same time been encamped. Each company on coming in was supposed to pitch its tents a few feet apart from the previous arrivals, though the people mixed freely together. I arrived half an hour before midnight, and the stench from dead quadrupeds and all manner of abominations was frightful; but that was not all, for if a person were found dead from cholera his company had to begin the quarantine afresh, the result being that no sooner was the breath out of the dying man than his friends scraped a hole in the ground under the tent and pushed him in, while after them another company would arrive, pitch on the same ground, and probably do the same. In one case the friends were in such a hurry that they left the dead man's beard protruding; the jackals came, and next morning his bare jawbones were sticking through the ground. No account is kept of the arrivals, and no care whatever is taken of the travellers, but that is no fault of the sanitary officers for they have not the means. I was very much struck with the energy and perseverance of the European officer here, but what could he do single-handed amongst 5,000, constantly coming and going, men from the North, not by any means in the best of temper, and whose language he could not understand?

The provisions purchased through intermediaries were dear. This camp varying from 3,000 to 5,000, was simply a hot-bed of disease; while it did not prevent cholera entering Turkey by that road, for it appeared at Kizil Robat, a village of about 800 inhabitants, 16 miles on the way towards Baghdad, and for ten days five to six people died daily; and yet this camp, behind the disease, was kept up for a couple of months after that, while no quarantine was established between Kizil Robat and the interior, that is to say towards Baghdad."—(Transactions of Medical and Physical Society of Bombay, N. S., No. XI. for 1871.)

such institutions in Europe itself, and it soon became evident in the progress of the debates that the conference was divided into two camps, one comprising the majority of the delegations, who were favourable to their entire abolition in European ports, and the substitution of a system of medical inspection of vessels coming from infected places; the other, the minority, who were for maintaining them.

At the close of this general discussion, a proposal that the report be reconsidered by the Committee with the addition of other members of the Conference entertaining views more favourable to quarantine having been rejected¹¹ the Committee itself undertook to review its report before the conference should proceed to consider and vote on the separate articles of it.

At the next sitting, (the 11th of the conference, and 4th of the discussion on the report.) Professor Hirsch, the reporter of the Committee, read a statement on its behalf as to the alterations and additions in the report, which, in view of the discussion which had taken place, it deemed advisable; and the conference then proceeded to the consideration of the report, article by article.

The first article was as follows:—

"Les quarantaines dans les ports de mer ne peuvent offrir une protection réelle et essentielle contre le choléra que dans ces ports qui peuvent être regardés comme les points principaux d'irruption du choléra dans sa marche maritime vers l'Europe."

The Committee in its supplementary statement had proposed to make this more precise by additions which should specify the caspian and the Red Sea, with the Canal of Suez, as the chief points of the maritime irruption of cholera, and should give a positive instead of an inferential approval of quarantine being established at Astrakan and Bakon on the Caspian Sea and at Lo Wesch on the Red Sea.

Another "réduction," intended, as expressly stated, to imply exactly the same thing, was moved by Mr. Fauvel as follows:—

"En vue de prévenir de nouvelles invasions du choléra en Europe, la conférence approuve, en principe, les mesures recommandées par la Conférence de Constantinople, et notamment les quarantaines maritimes dans la mer rouge, et sur le littoral de la mer Caspienne."

After some discussion a conclusion was arrived at which consisted in the adoption of the article as originally proposed by the committee with the addition of the words, "Dans cet ordre d'idées, la Conférence adopte les conclusions de la Conférence de Constantinople, quant aux quarantaines de la Mer Caspienne et de la Mer Rouge."

It was unfortunate that in the conclusion as thus expressed the words "en principe," which were part of M. Fauvel's proposal, were omitted. For it was the general scope and intention of the proposals made on this subject by the Conference of Constantinople, and not each individual recommendation of that Conference, which was approved. The individual recommendations were in fact never discussed, and I am satisfied that I am quite correct in stating that it never entered into the minds of any delegate present at the Conference at Vienna to revive, e.g., the proposal made at Constantinople for international quarantine at the straits of Bab-el-mandeb.

Of the second article of the committee's Report, "Ces quarantaines devraient être instituées et organisées d'une manière complète et satisfaisante selon les maximes d'hygiène les plus rigoureuses. Elles devraient être des institutions internationales," the first part was unanimously adopted.

The remainder relating to the internationality of these institutions was, after a short discussion, withdrawn.

To the third article of the Report, "Contre le choléra qui a franchi les points principaux de son irruption, quarantaines dans les ports de l'Europe continentale sont inutiles, vu que les communications par terre leur ôtent toute valeur," an amendment was proposed by M. Fauvel as follows: "Quand le choléra règne en Europe, les quarantaines maritimes perdent en général beaucoup de leur efficacité à raison des communications par terre. Cependant on ne saurait dire qu'elles soient devenues entièrement inutiles." It was on these respective proposals that what I may venture to call the critical vote of the Conference took place; the result being that the resolution contained in the committee's report for the abolition of quaran-

11. Though the Committee was unanimous in its Report, it need scarcely be said that it had not been nominated with any view to the representation in it of one set of opinions only. The Baron de Ring, the only member of the French delegation who was in Vienna when the Committee was appointed, was on the list first nominated, and on his declining to serve, a member of the Conference, whose opinions on the subject were unknown to the Conference, but generally believed to be favourable to maritime quarantine, was appointed to replace him.

12. A continuation, as follows, of the additional proposal of the Committee, "Quant aux ports Ottomans de la Mer-Noire, en la position géographique de la Turquie et ses relations spéciales avec les points principaux d'irruption du choléra, cette Puissance a la liberté d'établir des quarantaines. Les Dardanelles restent dans tous les cas ouvertes au commerce international," was at the request of the Turkish delegation, withdrawn.

tine in continental Europe, when cholera was already in Europe, was adopted by the votes of 12 delegations to 8.¹³

The fourth article of the report, "Dans ces conditions, il convient d'établir dans les ports de l'Europe, au lieu des quarantaines, une inspection sanitaire rigoureuse pour chaque navire provenant d'une localité infectée selon le règlement ci-après," was also adopted; subject, of course, to the consideration of the details of the "Règlement." These underwent discussion, in which they were considerably improved in form, but untouched in principle.¹⁴

As finally agreed upon they will be found inserted in extenso in the Annex No. III. to this abstract. In principle, the provisions are the following:—

1.—Local sanitary authorities in every port for the execution of these rules; such authorities to be kept always officially informed respecting cholera in other ports.

2.—Immediate free pratique to all vessels arriving from non-infected ports, which vessels, on the oath of the Captain, had not during their voyage touched at any intermediate suspected port, nor communicated directly with any infected ship, and on board which there had not been any suspected or confirmed case of cholera.

3.—Medical inspection, as soon possible after arrival, of all ships coming from suspected or infected ports, as well as of ships coming from non-suspected ports, but which had during the voyage touched at any suspected port or direct communication with any infected ship, or on which there had been any suspicious case of cholera sickness or death.

4.—Immediate free pratique to the ship and everything in it, when it appeared from this inspection that there was no actual cholera, or no suspected cholera, on board; except when there had been any such cases during the voyage, under which circumstances the ship itself, the crew and passengers, their clothes, and goods were to undergo disinfection before being admitted to pratique.

5.—If on the inspection there were found any case on board of cholera or suspected cholera, or any corpse of a person suspected to have died of cholera, (1) immediate removal of the sick (if any) to hospital, and immediate burial of corpses (if any) either in the sea with usual precautions, or on land after disinfection; (2) disinfection of the crew and passengers who were well, and of their clothes and goods; and (3) disinfection of the ship itself. All who were well to have free pratique, with their clothes and goods, as soon as the disinfection had been accomplished.

6.—Free pratique to all merchandise, except to rags and other objects of a susceptible kind which must first undergo a radical disinfection.

This system, it will be seen, is identical in principle with that which has for some time been in practice in the United Kingdom; but I had notified to the Committee at an early stage that certain of the details proposed to be introduced into the "Règlement," as e.g., the personal disinfection of passengers on an infected ship who were themselves certified on arrival to be unaffected with cholera or diarrhoea, with some other provisions in regard to disinfection, were not carried out, and could not be carried out, in this country in the precise way the "Règlement" directed, and that with regard to these provisions, none of which appeared to me to be fundamental, reserve would have to be made in accepting the Règlement in question.¹⁵

In the discussion which had thus far taken place on the subject of maritime quarantine, two things had become evident: (1) that whatever might be the recommendation of the conference in regard to the substitution of a system of medical inspection for one of quarantine in Europe, there were at least some maritime states which at present would not fall in with the recommendation, and that therefore "la parfaite conformité dans les dispositions à prendre &c.," which it was the desire of those who had convoked the conference to establish, could not as yet be arrived at, and (2) that the views of at least some of

13. Of States of the first rank, France alone voted in the minority. The delegations of Great Britain, Germany, Russia, Austria, Hungary, and Italy were ranged on the side of the majority. Again, while the 12 states constituting the majority, and comprising (in addition to the six just enumerated) Belgium, Holland, Denmark, Sweden, Norway, and Persia, were all of them maritime states, three out of the eight states constituting the minority had no maritime relations whatever, viz., Luxemburg, Switzerland, and Servia. The remaining five states in the minority were France, Portugal, Greece, Turkey, and Egypt. It should be stated, however, that the Spanish delegation, which would have undoubtedly voted with the minority, had not arrived when this vote was taken.

14. More than one attempt made by M. Fauvel to break in upon the principle of the system proposed met with discomfiture. On the other hand, his criticism was of great value in making more clear and concise the provisions of the Règlement as proposed by the Committee.

15. I think it may safely be affirmed that it was rather for the sake of countries which desired to pass from the quarantine system to the inspection system, than for countries in which, as in the United Kingdom, Sweden, Norway, Denmark, &c., such system was already in force, that the particular provisions relative to personal disinfection were introduced.

the advocates of quarantine as applied to European ports had undergone modification tending to improvement in the practice, and that probably the most important and influential of all the states still supporting the quarantine system in Europe, viz., France, would be ready to discontinue at once that system, and substitute the system of medical inspection in its northern ports, though not in all its ports and notably not in the ports in the Mediterranean. On these grounds, and with the object of arriving as far as possible at an understanding which might be the basis of such a convention as was desired, Professor Hirsch, in the name of the committee whose views had been adopted by the conference, proposed a further committee for considering a scheme which might be accepted by those states which for the present should decline to accept the scheme which the conference had approved. The proposal was adopted and a committee nominated for the purpose.¹⁶

The règlement quarantenaire, which the committee prepared and which was accepted by the conference, is given in extenso in Annex III. to this abstract. It modifies considerably the practice of quarantine as heretofore carried out in Europe generally.

1.—4. As to the duration of quarantine.—In the case of ships coming from ports known to be infected, this is fixed at from one to seven days, according to circumstances, which period however may be extended to 10 days in the Eastern States of Europe, or elsewhere under exceptional circumstances only. If the passage have lasted at least seven days, without these having been any suspicious case on board, the detention must be for one day only (24 hours), in other cases it may be from three to seven days, according to circumstances. In these cases, if the hygienic conditions of the vessel permit, this quarantine of observation may be performed on board, and no unloading of the vessel is required. If, however, there have been during the passage, or are found on the arrival of the ships, any cases of cholera or suspected cholera, the persons who are well are to be immediately removed and isolated in a lazaret or other place provided for the purpose, and there detained for seven full days from the date of their isolation. The sick are to be disembarked and cared for in an isolated locality, which must be quite separate from that destined for the persons under observation. After these removals, the ship itself, and all susceptible goods are to be rigorously disinfected. The persons who had necessarily remained on board are then to be the subjects of seven days' isolation and observation. In the case of ships coming from ports which are merely suspected, the duration of the quarantine of observation is not to exceed five days.

5.—Ships loaded with emigrants or pilgrims, or which may be judged of especial danger to the public health, may be the subject of special precautions to be determined by the sanitary authority of the port of arrival.

6.—Ships arriving at ports where there exist no efficient means of carrying out the above measures of quarantine are to receive all temporary succour that may be needed, but to be directed to the nearest port at which there is a proper establishment.

7.—A ship starting from an infected port, but touching at an intermediate port, and there receiving free pratique without having performed quarantine, is to be regarded as coming from an infected port.

8.—In all cases of mere suspicion, measures of disinfection may be employed when the sanitary authority thinks fit, but are not to be obligatory.

9.—In any port in which cholera is already epidemic, measures of quarantine are inapplicable, and measures of disinfection should alone be practised.

The conference added the following resolution, applicable alike whether the system of medical inspection or that of quarantine were the one adopted:—

The Captain, Medical Officer, and other Officers of ships are bound to furnish the sanitary authority of the port of arrival with every information as to any appearance or suspected appearance of disease among the crew and passengers. In case of false declaration, or of wilful concealment, they are liable to the penalties imposed by the sanitary laws of the respective countries. An international understanding on this subject would be most desirable.

The conference also decided, in answer to question 22 of the Programme, that the modes of disinfection to be employed be left to the competent authorities of each State.

And, at the suggestion of the delegates of Turkey, it expressed formally its desire that a penal law against sanitary offences might be promulgated in the Ottoman Empire.

C.—RIVER QUARANTINE.

The conference now returned to questions 13 and 14 of the Programme, which related to river quarantines. But the principles on which these questions were to be determined had been already all but completely discussed. It was obvious, for example, that to those parts of rivers which, whether situated

16. This Committee consisted of Messrs. Hirsch (Germany), d'Alber Glaustatten (Austro-Hungary), Fauvel (France), Seaton (Great Britain), and Bartoletti (Turkey).

exactly at their mouth or not, were really seaports, as London, Liverpool, Antwerp, the measures decided on by each country as applicable to maritime quarantine exactly applied. It was equally obvious that all reasons which had been urged against restriction of communications by land must equally apply to rivers in their inland course. The present discussion therefore was limited almost entirely to exceptional circumstances affecting one river only, the Danube. It was with reference to this river that the second paragraph of the following conclusions, which were the conclusions of the Conference on this subject, was adopted:—

"All the reasons which have been advanced to show that land quarantines are impracticable and useless in preventing the propagation of cholera are equally valid against quarantines in the course of rivers.

"Still the measures recommended in the system of medical inspection approved by the Conference may be applied to ships having cholera on board.

"Ports at the mouths of rivers enter into the category of seaports and are to be so dealt with."

III.—THE INTERNATIONAL SANITARY COMMISSION.

The questions 23—26 in the Programme, which related to the institution of an International Commission for the purpose of opposing the spread of epidemics (*à combattre les épidémies*) had, as already stated, been referred in the first instance to a committee; and, on the committee's Report, the subject now came before the Conference for consideration. Two sittings were devoted to the discussion, which resulted in a very general indeed almost unanimous, accord.

The conclusions arrived at are given in extenso in Annex III.

First, there was an universal recognition of an advantage which might be derived from the establishment of an International Commission for the further investigation of cholera and other epidemic diseases; but there was also almost complete unanimity of opinion that such Commission should be of a purely scientific character, without any administrative functions whatever. Further, it was agreed that such Commission might be consulted, by any of the Governments concerned, in regard to scientific questions, but in regard to such only. Its principal subject was to be the etiology and the prophylaxy of cholera; but it was to include the study of other epidemics also yellow fever and plague being particularly contemplated. It was proposed that the Commission should prepare a programme of scientific observation and research into the etiology and prophylaxy of these several epidemics, which should be carried out on a uniform plan by the several states; that it should publish the results of its work; and should have the faculty of proposing the convocation of international sanitary conferences.

Secondly, it was proposed that the Commission should consist of medical men, delegated by the respective Governments assenting to the proposal, and should hold their sittings from time to time; but that there should be a central bureau, appointed and composed as the Commission itself should determine, always open. The Governments participating were to see, through their several sanitary authorities, that the International Commission was supplied with all information relating to the subjects it had under investigation. Thirdly, the investigations in each country were to be of course undertaken by the sanitary authorities of the respective countries, but in any countries in which there was no organised sanitary service, investigation might be undertaken by the international commission itself, with the consent of the Government concerned, either by means of physicians resident at fixed sanitary posts, or by temporary missions of inquiry; these in any case receiving their instructions direct from and rendering their account direct to, the International Commission. The Conference left the subject of providing for the expenses of the proposed commission to be settled diplomatically between the Governments concerned.

It concluded this part of its work by the expression of its earnest desire to see instituted in Persia an international Council of Health analogous to the Councils of Health which act with such advantage at Constantinople and at Alexandria.

The particular kinds of questions relative to cholera which the international commission, if appointed, might, in the first instance, advantageously take up were indicated by various delegates in the discussions, and were some of them detailed by Professor Pettenkofer in a note which will be found attached to the third part of the *Relevé des conclusions* in Annex III. But this note, it must be distinctly understood, was only meant as a specimen of questions waiting for solution; and was not in the least intended as even a sketch of a complete plan of work for the commission to undertake. The determining the exact commencement of cholera in each locality, and the tracing exactly its progress and termination were considered among the first duties of the Commission; the regular and systematic study of the meteorological and telluric conditions of certain specified places was another; a more exact and analytical study than we have had at present of the breaking out of cholera on board ships was another; determination of the precise duration of the incubation of cholera; determination of the value of disinfectants, &c., were all among the specimen subjects.

IV.—QUARANTINE AGAINST OTHER DISEASES THAN CHOLERA.

A short sitting was devoted to hearing several communications on yellow fever, but it was unanimously decided that this question should be reserved for the international sanitary commission which it was proposed to institute.

THE JAPANESE PRESS.

JAPAN AND KOREA.

(From the *Choya Shimbun*.)

THE existence of a mutual good feeling is essential to the carrying on of satisfactory intercourse between any two nations. Insulting or overbearing conduct on the part of either is sure to provoke angry feelings and prove detrimental to the international friendship. If we regard the relations of two individuals we will find that if A treats B with kindness, courtesy and consideration, B will certainly reciprocate the conduct of A; but, on the other hand, if A acts in a contrary manner towards B, feelings of dislike will be engendered, which will probably result in quarrels, causing injury and loss to both parties. This principle is also applicable to any two nations which enter into a treaty of friendship and commerce for their mutual benefit, and should always be borne in mind by those who are entrusted with the management of the foreign affairs of a country. The soundness of this theory seems to us to be peculiarly applicable to the relations existing between Japan and Korea.

Formerly, the Koreans had a deep-rooted dislike to the Japanese, which shewed itself in insulting and unseemly behaviour towards any of our countrymen who ventured to Korea. In consequence, repeated communications reached Japan of quarrels taking place between the Japanese and Koreans, and we naturally came to the conclusion that the Koreans were a stupid, stubborn people, ignorant of the advantages to be derived from foreign trade and intercourse with foreigners. This opinion was very generally shared in by all Japanese, who considered that the Koreans were responsible for the disturbances which occurred. A complete change seems however to have taken place since Mr. Mayeda was sent some months ago to Fusan, to replace the former Japanese Consul stationed there, and all reports now agree in stating that the intercourse between the Japanese and Koreans is rapidly becoming of a most peaceful and friendly description. The latest intelligence we have received is of a most pleasing nature. We learn that "about thirty of the crew of the *Teibō Kan*, landed at Fusan, and were drilled in the plain of Kai-nukokwan, near the castle, without exciting any unpleasant demonstrations on the part of the natives. On the same day some of the officers and crew visited Tōrai Fu, and strolled through the town. Not only were the visitors unmolested, but the Governor of the place courteously invited them to partake of refreshments." It is not yet quite a year ago since the Korean Government imposed heavy import and export duties, and the Japanese residents proceeded to Tōrai Fu to demand the abolition of these duties, and occasioned by their action a serious disturbance; and only a few months since some of the crew of the *Hōshō Kan* were insulted and maltreated in the streets of the same town. Now, how are we to account for the sudden change which has taken place in the conduct of the Koreans towards us? It must be patent to everyone that no matter how intelligent and astute the Koreans may be, this abrupt alteration in their behaviour cannot be due to any desire to promote free intercourse with Japan and the consequent advancement of commerce, but that some other reason must be sought for, and that we will now proceed to explain. We have been informed by a person, not long since returned from Fusan, and in whose integrity we can place the most implicit confidence, that those Japanese residents who, for a considerable time had entire control of the foreign trade of that port, were principally from the province of Tsurushima, and had got into the habit of treating the Koreans on every occasion with the utmost contempt, being of opinion that the only way to deal with the Koreans was to carry matters with a high hand, resorting to violence even on very small

provocation. The Japanese officials stationed there seem, to some extent at least, to have adopted the same erroneous views. Indeed, to such an extent did the Japanese residents carry their unruly conduct that, whenever any act of the Korean Government or people was distasteful to them, they were in the habit of assembling, regardless of the Japanese authorities, and proceeding in a body to the Governor of Tôrai Fu and demanding satisfaction. Sometimes the Koreans used to endeavour to oppose them, and then serious disturbances would take place, the streets being the scene of a fierce and bloody struggle. However weak Korea may be, it is still an independent nation, and our Government clearly acknowledged it to be so in the treaty that was made, and those Japanese residents at Fusan who acted in the very reprehensible manner we have mentioned, were most undoubtedly guilty of a serious violation of the rules which govern intercourse between friendly countries. It is not to be wondered at that, although Koreans are physically unable to hold their own with Japanese, they should resent these high handed proceedings, and accordingly we find that whenever small parties of Japanese ventured to Tôrai Fu, the Koreans used to give vent to their hostile feelings by mobbing them and pelting them with stones. However, when Mr. Mayeda went some short time ago to occupy the position of Japanese Consul at Fusan, he determined to try and get matters put on a better footing, and the first step he took was to call upon the Governor of Tôrai Fu and explain to him the great benefit which would result from friendly intercourse being established between the two nations. Having succeeded in getting the Governor to adopt his views, Mr. Mayeda then assembled the Japanese residents and explained to them the course of action they ought to pursue, which was in fact only an indirect mode of reprimanding them for the improper conduct they had formerly been guilty of. This wise policy of the Consul is even already bearing fruit, the Japanese confine themselves to the peaceful pursuits of trade and treat the Koreans with courtesy, while the latter are gradually relinquishing their hostile feelings, and reports of kindly actions between the two people, such as we have described, are reaching us. It must, we think, be evident to all unprejudiced persons that the Japanese residents were alone to blame for the disturbances which took place between them and the Koreans, and that the reestablishment of friendly relations is due to the exertions of Mr. Mayeda.

What has occurred in Korea shows the importance of maintaining a courteous behaviour in all intercourse between two nations and should be borne in mind by all who may find themselves placed in similar delicate positions.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XIV.

THE FIGHT AT PALACE GATES.

At sunrise on a cloudless morning in the middle of May, the old stone-cutter had taken his wonted place before the porch, and was preparing to commence his daily task, when the figure of one that had seldom of late been absent from his thoughts, came hastily down the path from the direction of the cloisters. Friar Toyo, had altogether lost his former air of sombre dejection, and as he strode forward, his firm elastic tread and face of resolute purpose summoned a flash of sudden hope to the old man's eyes.

"Always early at your work I see, old friend," he said cheerily, pointing to the tools the other held. "Spring days apparently bring you no idle fancies."

The stone-cutter, impatient of these trifling words made no reply, and his visitor continued in the same careless strain:—

"The friars are all going a-Maying to-day, and as the cloisters will be quite deserted, it occurred to me that you might take the opportunity of completing that inscription."

"There is but a date wanting," the old man faltered. "Until that be known, opportunities of finishing the work are useless."

"The date is known," replied the friar. "I have come now to tell you, as I promised, though indeed the fulfillment

of that promise has been unexpectedly deferred. This is the day: a fine one too for both our purposes, and I would fain have your consent to my request before I set out with my comrades for Kiyoto."

He spoke with perfect unconcern, intentionally unobservant of the emotion his words caused. The old man, not trusting himself to reply, silently collected his tools and followed his visitor towards the cemetery.

Fresh vases of flowers had been placed that morning on either side of the fencing-master's tomb, and the fumes of burning incense rose from two censers in front. Friar Toyo knelt beside the grave, and after he had sprinkled some water over the head-stone and the flowers, joined his hands a moment in fervent prayer. Then turning to his companion, he addressed him in tones from which everything of gaiety and trifling had disappeared.

"During fifteen years," he said, "my father and I were exiles. For him all that pain is ended. His ashes are laid by those of his ancestors and his spirit has joined their's. I may not share this rest, yet would I fain think that, if in happier days the memory of those lying here should win some passing reverence, my name too may perchance be touched by the ascending breath of incense and of prayer. With this hope I have sought you to-day, and now, in bidding you farewell, I grieve only that I may not return to thank you for this service."

So saying he laid his hand lightly on the other's shoulder, and then took his way rapidly from the cemetery, so rapidly that his figure had ceased to be visible before the old man's tears suffered him to see clearly.

At the margin of the grove, however, he stopped for a moment and cast one long lingering look back over the valley from which he had just ascended. No breeze as yet shook the cherry blossoms, nor did any sound of life come from the unawakened city in the distance. Only the mellow note of a thrush sometimes stirred the soft air, and chequered shadows shortened slowly on the green slopes of the dells.

If in our moments of most tranquil happiness, the aspect of nature's pure beauty awakens tearful memories of lost friends and buried hopes, what unutterable sadness is added to those retrospects by the certain approach of eternal separation from the charms that evoke them!

When Friar Toyo reached the cloisters, he found their inmates in a tumult of preparation and excitement. From the court-yard of the principal fane down the whole length of the main avenue even to the threshold of the outmost gates, a huge procession gradually formed, receiving at each instant fresh accessions of strength and turbulence. Some of the friars wore complete suits of armour under their vestments; others had been obliged to content themselves with a single piece, but all carried weapons of some sort, whether glaive, coutel or sword. In the whole vast assembly there was not perhaps a single man whose ardour was damped by any doubt of success, for the power of the priesthood was not a whit weaker in those times of turmoil, than it had been a century before, when the Emperor Shirakawa said, that throughout Japan three things only despised the imperial mandates, the waters of the Kamogawa, the trees of the forest and the cenobites of Mount Hiye.

Presently the sacred cars with their glittering roofs and fluttering periapts were borne to the head of the procession, and behind them the Lord Abbot and the seven Priors took their places. They were clothed in albs of red samite, so richly embroidered that the folds seemed scarcely more flexible than the plates of gold damasked armour they covered, and each carried on his shoulder a long glaive, broad-bladed and keen-edged. So soon as their following was fully marshalled, the eight chiefs brandished their burnished points aloft in unison, and forthwith the sacred cars, snatched up by a hundred hands, were swung through the air, sometimes up and down, sometimes from side to side, while a mighty chorus of "yeisai, chosai, yeisai, chosai,"* chaunted by five thousand voices, marked the cadence of their movements.

In this fashion they descended the hill and reached the main road to the city. On the plains by the river side they found some three thousand friars waiting to join them—contingents from various neighbouring cloisters—and from thence

* The priest who originated the use of these sacred cars was called Yeisai Chosai Zenji. Hence his name came to be chaunted by their bearers, and the various ejaculations now employed by the coolies, &c., when putting forth their strength, are, for the most part, repetitions or corruptions of these words.

the growing enthusiasm of the whole body, as well as the constant passage, backwards and forwards, of those that bore the cars and those that relieved the bearers, soon deprived the procession of all semblance of order. The road was completely deserted—for to be trampled under foot or struck down during these sacred progresses, was accounted a judgment of the Gods indicative of some heinous crime—but from the door-ways and even the roofs of the houses on either side, men and women ceaselessly scattered handfuls of rice before the cars, so that the way was white as though a snow-storm had just passed.

Beside the leading car walked the two friars, Toyo and Shomon. The former was in full armour and carried a pair of swords in his girdle, but neither did his voice swell the unwearied shout, nor his hands help to swing the car. One might indeed have fancied that, seeking to husband his strength for some future effort, he left all the fruitless clamour and superfluous exertion to his more zealous comrades.

Soon the scarp of the palace moats came in sight and insensibly the procession began to slacken its speed. The cenobites had naturally chosen the most direct route from the cloisters, and it thus happened that they now found themselves approaching one of the side issues of the castle. As yet nothing indicated that their ingress would be opposed. The gates indeed were shut, but no armed men were visible, and when they had approached within bow-shot unmolested, a murmur of renewed confidence began to replace the anxious silence that had lately fallen on them.

But at that moment with one accord the leaders of the procession halted, for the gates were suddenly thrown open, and a body of horsemen, passing slowly out, reined up on either side of the bridge. At their head rode a knight, clad in a suit of richly inlaid armour, over which he wore a crimson surcoat embroidered with the Genji arms. He had on a tall helmet, gleaming with gold bosses, and slung over his shoulder was a short bow of immense strength, frapped from end to end with rattan withes.

This was Yorimasa, the Lord Seneschal, and Chief of the House of Gen.† A man of tried prowess and unrivalled martial renown, the hopes of all his clan had naturally centered on him after the Earl of Harima's death, but Yorimasa had no heart for rebellion or intrigue. His ardent love of literature and poetry—in which his attainments were second to none—had gained him the friendship of the ex-Emperor Shirakawa, who raised him to the third grade of official precedence, and the affectionate confidence of his Imperial master made him turn with aversion from everything that bore the semblance of defection. Thus, with no ambition save that of the scholar and a nature too gentle to be ostentatious, he had gradually suffered his retinue to dwindle down to the very lowest limit his rank permitted, so that when, in his capacity of Lord Seneschal, he received orders to garrison the barbicans of the north-eastern gate, he could scarcely muster thirty men-at-arms for the duty.

Nevertheless when it was whispered among the cenobites that their further progress was opposed by the illustrious Yorimasa, all perception of the paucity of the seneschal's following was prevented by the memory of his chivalrous reputation. To two men, above all the rest, this misadventure was in expressively grievous. Shomon, for his part, immediately determined to abstain from any subsequent action, unless it might be pacific, but even as he pushed forward to communicate this decision to his companion, his feet were arrested by a sight that filled him with amazement and delight.

Yorimasa, together with the whole of his following, had dismounted from their horses, and unlacing their helmets, kneeled in the dust before the sacred cars.

This unexpected action so bewildered the cenobites that for an instant, they stood astonished and motionless in their places, but almost immediately, beginning with the Lord Abbot and the seven Priors, the vast concourse of priests, moved by a common impulse, bowed down in lowly acknowledgment of the Lord Seneschal's courteous reverence.

Then Chohichi, the Seneschal's Lieutenant, coming forward demanded a parley, whereupon the Abbot and the seven Priors advanced before the procession to meet him. It was of course impossible for the main body of the priests to come

within ear-shot of the conference, nevertheless a wave of curiosity carried the whole concourse a few steps nearer to the castle, and of this impulse Friar Toyo took such nimble advantage that he found himself almost within the circle of the priors before the Lieutenant had commenced to speak.

"My Lord Abbot and Reverend Sirs, he said, my master, the Seneschal, deposes me to say that the object of your coming is well known to him, and that the justice of your cause commands at once his respect and his sympathy. Himself a constant worshipper at your fane, he has no feeling save one of submissive reverence in the presence of these sacred emblems. If, therefore, to enter the palace by this gate is your unchangeable resolve, the Lord Seneschal's sword shall never oppose your passage."

The speakers' clear soldierly tones pierced far into the dense mass of his hearers, and a low murmur of applause marked the pause he now made. When silence was again restored he continued thus:—

"You are not, however, ignorant that the wardenship of this gate has been entrusted to my master by His Majesty the Emperor, and that with life alone can the charge be abandoned. We are but thirty men in all, and did we forcibly oppose your entry, the issue would only add other victims to the fate we could not possibly avoid. Since then we may not do battle with those whose cause piety and justice compel us to approve, nor, avoiding that battle, live dishonored, we are determined to die by our own hands at our posts, if you must needs enter here. At the same time the Lord Seneschal bids me remind you that little honor is to be gained by passing over the bodies of allies and leaving enemies unmolested. Hard by is the main gate, guarded by ten thousand men under Shigemori's commands. It were not well should false report hereafter say that you had more fear of facing your foes than of sacrificing your friends."

These words were subtly devised for they appealed directly to three classes among the audience: those whom justice reminded that their complaint was against the Heike alone; those to whom their lately learned science rendered an uncontested victory distasteful, and those whose affection for the House of Gen made the life of its chief precious.

Amongst the last was Goun, the Lord abbot. From the first he had been anxiously pondering some method of avoiding this encounter, and he now addressed his followers in terms that left them no choice but to second his desire.

"You have heard the Lord Seneschal's courteous message," he said, "and hearing it, you will have learned—though not, I hope, for the first time—that were the power to decide our cause in other hands, we had not been here to-day seeking justice. These men that value our lives above their own, are neither those that have outraged us, nor those that have wrongfully refused us redress. For the moment at least our enemies are theirs, and I am much mistaken if you have come here to gladden your persecutors by the death of those they hate. Say then, shall we steal in like thieves by a side entrance, carrying the cars of the Gods, over the corpses of their faithful servants, or shall we seek the main gate, where the hierarchs of Japan may fitly pass, and where we may shew that we are neither ashamed of our cause nor afraid of our foes?"

An almost unanimous shout of applause greeted this appeal. Already the cars were raised aloft and the bearers had turned to retrace their steps, when a band of half a dozen men, combining their strength with a concord that betrayed preconcert, forced their way through the crowd, vociferating remonstrance and dissent.

"A trick! a trick!" they cried. "Yorimasa is in league with your enemies. Are you so mad as to run into their trap?"

Men who are on the eve of encountering some deadly peril, and who have surrendered the power of individual reflection to the keeping of a multitude, are prone to be uncontrollably swayed by rumours of treachery and guile. The very consciousness of combination that enables them to face a visible danger, deprives them of the self-reliance necessary to resist panic. Thus the impetuous action of these six men and the disquieting import of their words, had more effect on the cenobites than all the reasoning they had just heard. Suddenly, though not yet without faltering, the head of the procession surged forward, and in another moment this impetus would have culminated in a rush to the gate, when Friar Toyo, springing on to the bank of the moat, shouted in a voice that was distinctly audible above all the tumult.

† Yorimasa and Yoshimoto, Earl of Harima, were both sixth in descent from the Minamoto no Mitsuakata. Yorimasa's was the elder branch, but the power of the family had gradually passed into the hands of the younger through the superior ability and prowess of its representatives.

"Down with these lying strangers! See you not that they are the accomplices of your enemies?"

He spoke at random, for though the faces of these agitators were not familiar to him, his own knowledge embraced but a very small section of the inmates of the seven cloisters. That a similar uncertainty might perplex others also was however, a reasonable, and, as the event proved, a just calculation. Finding a more tormenting terror in this new suggestion, those who were nearest the point of danger paused involuntarily, and in that second of silence, the friar's voice was again heard loud and menacing.

"If any man elect to pass here, he must first have to do with me," he shouted, "and I think the Lord Seneschal will gladly help to oppose those that seek to disgrace their cause and disobey their chiefs."

Now these six men were friars from the monastery of Seisui, which had been destroyed ten years before by the priests of Hiye. The motive of their presence in the procession was a hope of discovering some opportunity to avenge that outrage, and if they could have persuaded the cenobites to force this gate at the certain cost of Yorimasa and his followers' lives, their object would have been well achieved, for the odium attaching to such an action would probably have sufficed to vitiate the case in which it had been undertaken.

Between the failure and the accomplishment of this design stood Friar Toyo. It was one of those crises when a little impulse can turn the flow of a mighty tide in either direction. The leader of the six agitators comprehended the position at a glance. He saw, though he did not understand, the great influence exercised by this priest who had so boldly singled himself out from the crowd, and he saw too that this wavering multitude had passed beyond the control of reason and was ready to accord a blind obedience to any victorious assertion of physical superiority. For the rest, a man of exceptional strength and resolution, he had scant patience in the presence of such opposition.

His party's first rush had brought them to the front of the procession. Now, therefore, watching his opportunity, he bent his head, and with the tightened sinews and rigid limbs of a practiced wrestler, hurled himself fiercely on the friar.

In point of size and weight the two men seemed about equally matched, but the friar had a source of strength that none of the spectators might appreciate. He too felt instinctively that the issue of this struggle would decide the action of the whole body of the cenobites, but he felt at the same time, that defeat signified not only the death of the men to whom he owed allegiance and love, but also the forfeiture of the revenge for which alone he himself lived. In the phrensy of this consciousness he could have held his own against two such opponents.

The onset was too sudden to be either completely avoided or successfully encountered, but the friar had never for an instant suffered his attention to relax. Trained by long usage to read the preface of attack in the glance of an eye or the tremor of a muscle, he sprang aside so deftly that his adversary could only clutch his arm as he passed. The result of this half eluded collision was to swing the two men round, so that the friar found himself for an instant behind his opponent, and in that instant, with inconceivable force and rapidity he grasped the other's girdle, and jerking him from his feet hurled him headlong into the middle of the moat.

Before his comrades had time—if indeed they had any inclination—to avenge their leader's fall, the glitter of the abbot and the priors' brandished glaives again caught the eyes of the multitude, and amid yells of laughter and applause the cars were rapidly borne back through the heart of the procession.

Relieved now from all apprehension, the Lord Seneschal, standing in one of the barbican tourelles, watched the disordered retreat of the cenobites. Presently his Lieutenant, coming to his side, said:—

"'Tis a very rabble, my Lord; yet, if I err not greatly, some shrewd strokes will be dealt ere long at the North gate."

"How should that be, Chohichi?" the Seneschal asked in some surprise. "To me it seems that such a mob will find more pretexts of flight than stomach to fight."

"Perhaps so, my Lord. But did you not recognize the man that turned the shavelings from their purpose of passing here?"

"Truly I have no recollection of him, though such thews may well have won renown ere now."

"That they surely have, my Lord, for the priest is no other than Matsuda Naajiro."

"Is it indeed so?" The Lord Seneschal exclaimed. "We I am glad to have seen the man's face again, though I fear me much 'tis for the last time."

Meanwhile the procession had painfully contracted its unwieldy length and was now again stretching itself rapidly along the road towards the southern entrance. The cenobites had tacitly promoted Friar Toyo to be their leader, and he, so far from avoiding the responsibility, had cast aside his priestly vestments, and donning an iron bascinet, marched some paces before the foremost car. He walked rapidly, encouraging his comrades to follow his example, for the reflection that they had wittingly placed ten thousand armed men between themselves and their destination was already beginning to make their feet falter.

Something in the aspect of the south Gate helped largely to increase these misgivings. It looked at once so stately and so defiant. Six mighty pillars supported a multitude of strangely shaped and deftly mortised timbers, piled tier upon tier in symmetrical confusion, every trave or stanchion capped with a bronze plate bearing a gold embossment of the Imperial arms, and above this elaborate intertexture, a lofty roof, with carved gables and countless ridges of copper plates, towered massive and menacing among the boughs of the giant pines that overhung it. For many a rood on either side a covered way stretched out bent arms to command or flank the entrance, and through the crenelles to right and left might be seen glittering armour and forests of bow and glaive.

Here was little hope of a gentle reception. Even as the head of the procession turned into the wide esplanade before the entrance, a crash of drum, bell and conch yarned the cenobites what to expect. Nevertheless, urged by their leader's exhortations and example, they pressed forward, slowly indeed but not unsteadily, until within half a furlong of the portal, when the din of the alarm suddenly ceasing, a loud voice of warning made itself heard in the silence that followed:—

"The passage of the gate to-day is forbidden by His Majesty. Those that oppose themselves to the order must accept the consequences."

In all probability this menace would have sufficed to arrest the leaders of the procession had they been free to obey their own inclinations but those that were behind, hearing and seeing nothing of the dangers they were approaching, pressed on so stoutly that the general forward movement was kept up for some time longer.

Then again voices of command were raised within the gates and a clatter of armour was heard on the covered way. Friar Toyo, knowing the import of these sounds, shouted words of encouragement to his followers, but a much more potent message reached them at the same time from the castle in the form of a flight of heavy arrows, two of which lodged in the roof of the leading car and three struck down as many of its bearers. The archers had not been very careful in their aim, yet might their purpose have been achieved at even a smaller cost, for the priests that carried the car, seeing its sacred canopy pierced and its periapts stained with holy blood, cast down their dishonored burthen and rushed wildly back into the crowd.

The panic spread faster than the knowledge of its cause, nor did the abbot and the priors make any attempts to arrest it, for they knew that the purpose of their expedition was attained. The abandoned car was, in truth, their salvation. No hands might restore it to its place save those of the cenobites themselves, and to leave it on the road-side was to incur the curses of the Gods. When therefore the entreaty for its removal came from the palace, the priests would be in a position to make their own terms.

Shigemori, who commanded the Palace Guards, also knew this, but his sympathies being ever on the side of justice, he had much less concern for the abandoned car than for the lives of its bearers. Ordering the gates therefore to be immediately opened, he went himself with half a score of soldiers to succour the wounded men.

Amongst these was Shomon. An arrow had struck his foot, but though the injury was severe, he was presently able to sit up and look about him.

Close beside him he saw the dead body of a friar, pierced from eye to brain, but whether any others were down he had no power to examine, for his gaze was riveted on a figure that lay a little distance before the car.

It was the body of a man in complete armour, even to the

helmet. He had not apparently fallen suddenly, but rather sunk down in a kneeling position, with his head resting on his arm, though the face was hidden. Shomon's first glance told him it was Friar Toyo.

So then the friar had fallen: fallen without striking a single blow or achieving anything of his life's purpose! God send that he be dead, thought Shomon, lest the bitterness of this failure wring his brave heart more than cruel tortures his enemies will surely inflict on him.

But the friar was not dead, nor even wounded. Just as the leading soldiers came beside him, he leaped to his feet and dealt one of them a buffet with his iron gauntlet that laid the man insensible on the road. Then drawing his sword, he sprung towards Shigemori.

An involuntary cry of awe passed Shomon's lips at the perception of this desperately daring scheme and its inevitable sequel came home to him. He had seen what the friar could do in sport, he had now to see of what he was capable when death was the limit of his exertions.

The Heike men, however, were too old soldiers to be easily surprised. Before their leader was within arm's reach of his assailant, two blades barred the latter's progress: blades neither unskillfully nor uselessly wielded, for though the hands that held them were in a moment powerless, that moment sufficed to arm the rest of the escort. The odds were terrible. Seven to one, and the certainty that in a few minutes these seven would be reinforced by a hundred. Two advantages, however, the friar had: one that his adversaries' heads were uncovered—for they had come out without their helmets the other that among the ten thousand men guarding the gate, not one might match him in strength or skill.

But was it possible for one man to kill or maim these seven soldiers that shielded their captain, before succour came from the palace? Even as Shomon asked himself this question he saw two more of the guards fall, but he saw also a terrible stroke from another of his adversaries shear off the friar's left brassard and bite deep into the flesh of his shoulder. It was an ugly gash, yet its recipient seemed to have no consciousness of the wound, unless indeed it added to his already irresistible fury. His comrade, who sat rapt upon the fight with all the breathless earnestness of one watching by a friend's death-bed, could never explain the details of its progress, but only remembered that from the time when Friar Toyo was first wounded until the moment when he stood face to face with Shigemori, he seemed to be endowed with the strength of a god rather than that of a man.

During the progress of the *melée* Shigemori had raised his sword once or twice as though impatient of inaction, but his fine sense of chivalry and something perhaps of admiration for such prowess had restrained him from helping his men, until he now found himself called on to avenge them. As he crossed swords with the friar, a tyro could have recognized the meeting of two masters. A hail of heavy blows was dealt and parried without any perceptible result, and already the Castle Guards were within a stride of the combatants. But Shigemori called to them to keep back, and however reluctant, they could not choose but obey.

So with the knowledge that death certainly awaited him, whether victor or vanquished, the friar fought, environed by his enemies, until feeling that loss of blood was beginning to diminish his strength and remembering how little reliance might be placed on the spectator's forbearance, he collected his strength for an effort, worthy to be the last. Beating down his opponents guard, he sprang in, at the cost of another grievous wound, and raising him bodily in his arms, dashed him to the ground.

Shigemori's sword was jerked from his hand by the violence of the fall and he lay helpless at his enemy's mercy. In another second the death-stroke had been dealt, when the prongs of a booked halberd descending with a crash on the friar's head he was dragged suddenly and swiftly backwards.

Shigemori shouted loudly to save his life, but it was too late. Twenty weapons were already hacking and hewing at the fallen man, and when the soldiers at last desisted, his armour was almost completely shorn off, and his body, a mass of hideous wounds.

The Heike chief looked sadly at his adversary's face over which the shadow of death was fast stealing, and then, turning to the soldiers asked whether anyone knew the friar.

"I have reason to know him, my Lord," replied one of the men, stepping forward, "for I bear the marks of his sword to this day. He used to be called Matsuda Naojiro."

At the sound of his name the dying man opened his eyes and looked painfully around. Shigemori, bending over him, said:—

"Matsuda, this is the end of all your grievous wrongs. Know at least, that none had fuller pity for your pains, nor will mourn your misfortunes more truly, than Taira no Shigemori."

The friar seemed to gather the import of these words slowly, as one that listens to the story of a hope he may not yet fully credit, but after a moment the lines of agony were smoothed from his face by a wonderful softness of tranquil joy. Those that stood about him, though they scarcely saw his lips move, heard a whisper, passionate and clear:—

"Father, I have done what man might do: the gods be thanked that I have failed!"

CLOUDLAND COLLOQUIES.

III.

CHARITY.

INTERLOCUTORS: CHARITY, FASHION, AND A DAME VENDEUSE.

FASHION.—Sweet Sister!—I may call you by that name, For surely, now, you'll not dispute my claim To kinship more than kind, nor less than close? See! I have gained a guinea for a rose, And all on your behalf, dear; you must see 'Twould not have fetched a shilling but for me.

CHARITY.—I fear 'tis true.

FASHION. You fear, *ma chère*, and why? Now do not be cantankerous, do try To look a little sunny. 'Tis so queer For you to seem stiff, chilly, and austere. You'll never win Society that way, The world's most liberal when 'tis most gay.

CHARITY.—So I perceive, and pray accept my thanks For your assistance; though the curious pranks You play before the public in my name Do sometimes touch me with a sort of shame.

FASHION.—Ungracious creature! They secure success. Society likes its favourites in full dress; Whilst you, my dear, most grave if gentle saint, Affect the Puritanic and the quaint; A huge mistake for which my arts atone.

CHARITY.—I would be worshipped for myself alone.

FASHION.—That's selfish if not sour. May I just hint That you, though sweet, are something pale of tint; Your charms, though chastely, blamelessly divine, Are *tant soit peu* severe in tone and line! The warmth and colour which you lack I give, And in my charge you really seem to live; I make your worship quite a modish cult, Let your swollen alms-bag tell with what result.

CHARITY.—So much to Fashion's almoners is owed, That to assay the motive or the mode May seem ungracious.

FASHION. To be sure, and pray Why should the world not give in its own way? So that it *give*, what matter how or why?

CHARITY.—The motive metes the action's worth,

FASHION. You try Things in too nice a balance. Can it hurt you If the world makes a pleasure of a virtue?

CHARITY.—No, but the act may need another measure When the world makes a virtue of a pleasure.

FASHION (to Dame Vendreuse).—Well, what say you, *ma belle*?

DAME VENDEUSE. 'Tis splendid fun! And, since we're never more to see the sun, A fancy fair would almost seem to be The sole excitement left Society. When prettiness and piety combine, Duty and lovely dresses, 'tis divine. Besides the admiration and applause Are nice, you know, earned in so good a cause; And then the freedom—it is really fun Reluctant purchasers to dog and dun, See stinginess contend with sheepish shame, Or fatuous admiration take the name Of fine benevolence.

CHARITY. A sorry sham!

DAME VENDEUSE.—To lead some smirking cynic like a lamb
To the stall's slaughter, or, by some smart "sell,"
Empty the pockets of a foolish swell
Is pleasant sport. And then 'tis nice to know
There *can* be naught indelicate or low
In "cheek," cajolery, e'en cheating, when
Charity calls them forth. 'Tis true the men
Are not *all* nice. No! and one's flesh *will* shrink
At the sly smile that savours of a wink.
To force cigars upon some leering lad,
Or fix the "buttonholer" of a cad
Is just a little trying, but you see
We're martyrs,—and in such good company!
Countess and *grande comédienne* stoop together
To the same task; with birds of such fine feather
It cannot be undignified to fly,
E'en when a cad's the quarry.

CHARITY. Charity
Covers, 'twould seem, more sins than she supposed,
Coarse lust of beauty with soft words o'erglozed,
Longing for rare *rapprochement* with the great;
Hope of snatched license to emancipate
Modesty, for the moment, from that rule
Whose barrier awes the snob and foils the fool;
Love of display and questionable praise,
Of all that gives a lady, for three days,
The tether and the taste of a shrewd tout,
Pander to the low tastes of lord or lout:—
Friend Fashion, if these things to you I owe,
My gratitude, though fervent in its flow,
Is tempered with the prick of pungent pain,
So to be linked with lures that I disdain.

FASHION.—Uncompromising creature! I've a mind
To leave you to yourself; you'd quickly find
Your alma-bags lightened. But 'tis ever so;
You Virtues have no *savoir vivre*, you know.

CHARITY.—The man who gives to please a pretty face,
Or win his vanity the moment's grace
Of mocking gratitude from two arch lips:—
The woman who a cad's cigar end nips
With teeth reluctant, just to draw men's gaze,
Perhaps a Prince's compliment, and raise
Her day's receipts some pounds above the haul
Of the proud Duchess in the neighbouring stall;
These may in Fashion's eyes be *comme il faut*,
I shall not stay to ask; but this know,
I in their service see but little proof
Of any earnest zeal in my behoof.
True I may gain, but when for selfish ends
Fashion the cause of Charity befriends,
Charity fears the triflers of the town
Scarcely feel her impulses or deserve her crown.
—*Whitehall Review*.

DOUBLE ACROSTIC.

"When will the 'Pinafore' arrive?" 'tis said;
And Echo answer 'when?'—but soon, instead,
My *first* would fain your kind attention claim,
And mimic actors, saving but the name;
On which occasion may your plaudits, round,
About my *second*, give approving sound!

1.
First, here's a sum, that any child could strike;
Though not a total, still it's something like.

2.
Though this is not the wig that bald men wear,
It's oft associated with the hair!

3.
If you can't guess this, it will prove a stopper;—
'Tis not a knife, yet 'tis a kind of chopper.

4.
Though far from war's alarms, and battle's hum,
You'll always find it in a kettle drum!

5.
The night has vanish'd—shines the glowing sun—
From this you'll guess how his race begun.

6.
A puzzle this—and yet, 'tis not so far—
Look straight towards yourself, and there you are!

7.
The sun does this; if you the light can't view,
That light will take the same thing out of you!

HOODLUM.

DOUBLE ACROSTIC.

The widowed mother mourns her only son,
She knows no comfort; overcome with grief
She weeps, sorrowing for her loved lost one,
And nought but tears can ever give relief.

1.
'Tis curious that the closing of the day
Reminds us of a kind of garden-play;
The actress was a naughtily girl they say.

2.
Phonetic spelling of a sort of cat-call,
If you stand upon your right, you'll find that's all.

3.
A perverse brute, if you would go ahead,
Just pull him back, and then you'll find he's lead.

4.
Who's economical will search his lockers,
And cut his trowsers down to knickerbockers.

5.
It would have been paradise but for this,
They knew too much, that's about the size,
They little thought that ignorance was bliss,
And 'twas the height of folly to be wise.

6.
An inn or hostelry, mayhap a khan,
Where used to stop the weary caravan.

7.
A similarity by which you show
That something else means also so-and-so.

THE HIPPOPOTAMUS OPENING.

A SKETCH FROM LIFE, BEING A FREE TRANSLATION FROM
THE GERMAN.*

Upon my arrival in the northern German metropolis, some months ago, I made diligent search for a comfortable restaurant, in which to indulge in my post-prandial cup of coffee, but found none suited to my mind. Chance, however, soon favored me with that which my efforts had sought in vain. I found, accidentally, the El Dorado of my warmest wishes, as I one afternoon entered a coffee-house, which presented, externally, but little promise, but which within showed itself at once to be the very place I had been looking for—a quiet, dimly lighted room, with an atmosphere redolent of fragrant Havanas, and, above all, provided with tables and men for the one noble game.

The room was at once a domino and a chess temple; both games had a numerous crowd of worshippers, and active and passive priests conducted the service of both. At the chess tables were not only the players, moving and checking as monotonously as usual, but a crowd gathered around each, and, like the "gods" in the gallery of a theatre, took part in the game, as they were inclined. Among the high priests of chess, I met there, for the first time, one who was evidently the "big Injin" of the place. He had his crowd of gallery friends, who encouraged and criticised his play, and with them he kept up an interchange of comments on the game. "See there, now; you will lose a piece!" cries one from the crowd. "Who's going to lose a piece? How shall I lose it now? Not a bit of it!" He seldom got vexed, for anger does not become the great, but bore ever in his countenance a beaming, childlike innocence.

I had a desire to play with this "great gun," but my inborn modesty prevented me from making such an audacious proposal. One afternoon, however, I mustered up courage. I was there early, and soon the gentleman entered, when, with beating heart, I stammered out my wish.

"You wish to play a game with me?" was his dubious reply.

"Yes," I said, and turned to the table.

While placing the men he gave me a little discourse:

"Chess is a difficult game. It can not be learned. You can learn anything else—Latin, Greek, medicine, art—but not chess. In that you must have genius: it must be born with you."

His crowd had circled around him and hung upon his ponderous words, while I, in their midst, was evidently looked upon compassionately as a poor victim. We drew for the move and I lost.

"Now, then, we will see how to play chess," he said, as he moved and I replied:

1 P to K 4 1 P to K 4

"You shall soon learn my opening," he said, as he played
2 K Kt to K 2d.

"It's in none your 'Handbuchs,' so far.
The knight, the knight is the piece."

I hesitated. Certainly, I had never seen that opening. I was embarrassed. Nevertheless I played—

2 Q to K R 5th

"Oh ho! you are going for my king's pawn, are you?—sly dog!—as though I could not see that! Forward, knight, march!" and again he played—

3 Q Kt to B 3d

Again a knight: and so I played one too:

3 Q Kt to B 3d.

He studied a while stroked his beard, and played—

4 P to K Kt 3d.

My queen was attacked, and I moved her away, of course:

4 Q to K Kt 4th.

Again he attacked her, with—

5 P to Q 4th.

upon which I rushed with my knight into the middle of the game.

5 Q Kt takes P.

"There you are, now! Every one thinks he can play chess, now-a-days. Don't you see your queen is in take? I'd let you take back the move, but you young fellows are becoming too proud, and would like to brag over the defeat of the old heads. You deserve the lesson!"—

6 Q B takes Q.

I replied—

6 Q Kt to K B 6 mate!

After the uproar of the gallery had subsided, and he was convinced that it was a mate, I said:

"You should call your opening of 2. K Kt to K 2d the

HIPPOPOTAMUS OPENING!"

*Neue Berliner Schachzeitung, Vol. V

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, AUGUST 29TH, 1879,
Observatory of Daigaku, Moto-Fujimicho Hongō, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.

Light Continuous line—max. & min. Thermometers.

-----represents velocity of wind.

.....percentage of Humidity.

The barometer is reduced to the freezing point and to the level of the sea.

Max. velocity of wind, 25 miles per hour on Sunday, 10 p.m.

It will be observed that during the week there have occurred considerable fluctuations in the humidity of the air and also a steady decline in the temperature. The week closes with a maximum temperature of 80°, which is the lowest point reached since July 15th. The wind at about 10 p.m. on Sunday night was tolerably high in velocity but of short duration. It was, however, remarkable owing to the fact that up to the very moment of its coming a steady wind from the south had been blowing when suddenly the wind-vane, turned through an angle of 180°, and the blow came from the North, with considerable violence, and a decided change in temperature.

SHIPPING INTELLIGENCE.

I N W A R D S .

Aug. 30, Brit. barquentine *Willie*, Badnoch, 274, from Newchwang, via Kobe, Beans, to Chinese.
Aug. 30, Jap. str. *Kokunoye-Maru*, Dithlefsen, 1,133, from Kobe, Mails and General, to M. B. Co.

**W. & A. GILBEY'S
WINES AND SPIRITS.**

W. & A. GILBEY have special facilities for carrying
on an extensive Foreign Trade, having held for
many years in their Excise Bonded Stores, for the purpose
of their Home Trade, a stock of not less than 12,000
Casks of Wines and Spirits, which are equally
available for Export. These stores are by far the largest
private Duty Free Warehouses in the World, and are under
the supervision of a staff of Excise Officers specially at-
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them
to give the best VALUE to the public, as a twentieth part of
the Foreign Wines consumed in the United Kingdom is
supplied from their stock. In the year 1876 W. & A.
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,
and the average quantity bottled and sent out by them
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same
whether the Wines or Spirits are obtained direct from their
Head Establishments or from any of their Agents. The
purity and genuineness of every article in this list are
guaranteed in accordance with Act of Parliament, 38 and
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of
Bottle Measure recently recognised by the Government,
namely—

6 bottles contain one gallon; 12 half-bottles contain
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing
W. & A. Gilbey's seal and label guaranteeing *quality* and
measure, and the *strength* also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;
(Warehouses, Duty Paid) Oval Road, Camden
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;
(Warehouses, Duty Paid) Upper Sackville St.,
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;
(Warehouses, Duty Paid) Haymarket, West
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-
Western Goods Station, and Bonny Street,
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,
London.

NOTICE TO MARINERS.

No. 1 of the 12th Year of Meiji, (1879.)

KODO NO SIMA BUOY.

AOGI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby give notice that a Buoy has been moored to mark the sunken rock north of Kodono Sima in the Aogi Seto, the northern passage between Misima Nada and Bingo Nada.

The Buoy is moored immediately to the northward of the rock, in $4\frac{1}{2}$ fathoms of water at low water; on the highest point of the rock, which is of very small area, there is only 10 feet of water at low water of lowest spring tides.

The Buoy is painted Black and white horizontal bands, and surmounted by a cage which stands 10 feet above the water.

The following bearings are taken from the Buoy.

Centre of Karasima (Single tree)...N. $41^{\circ} 15'$ W.Eastern extreme of Matsu Sima.....N. $37^{\circ} 45'$ E.Eastern extreme of Kodono Sima...S. $1^{\circ} 15'$ E.Bearings true. On the English Admiralty chart No. 132, $2\frac{1}{2}$ fathoms is given as the shallowest water on the rock.INOUE KAORU.
Minister of Public Works.

KEATING'S COUGH LOZENGES,

COUGHS,
ASTHMA,
BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 23, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., I.M.

Mr. T. KEATING, Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G——, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London,

Export Chemist and Druggist.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

EXTRA-TERRITORIALITY IN JAPAN.

V.

THE human understanding, says De Tocqueville, more easily invents new things than new words, and hence we are constrained to employ many improper and inadequate expressions. The use of the term "extra-territoriality" to designate the immunity of foreigners in Japan from the jurisdiction of the local courts, is but another instance of this well understood truth. Writers on public law complain, that this word is inapplicable even, as defining the privileges and immunities of public ministers; and that its use in that behalf, is illogical, misleading and even absurd.¹ The word however becomes much more misleading, illogical and absurd when employed to define the privileges, rights and immunities of private individuals, as these are determined by no fixed rule, but depend entirely upon the terms of the treaty by which they are alone conferred. We have already seen that private extra-territoriality originated in a peculiar system of public law, which prevailed among the nations of Europe during the dark ages.

The notion that every individual, wherever he went, carried the laws of his own country with him, was the great fundamental idea upon which all the extra-territorial rights, privileges and immunities of private individuals was founded. It is readily perceived that consular jurisdiction, founded upon such a system of public law, necessarily results in withdrawing private individuals residing abroad, not only from the jurisdiction of the local tribunals, but in exempting them absolutely from the laws of the territory. Under such a system, consular jurisdiction would neces-

sarily imply full sovereign authority in respect to persons. Such an institution would be little short of an *imperium in imperio*; and such personal privileges and immunities would imply nothing else than *extra-territoriality in fact*. There is no escape from these conclusions if the doctrine of personal laws is once presupposed; and if it can be rightly established that Americans and Englishmen carry with them the "laws of their country as their birthright" to Japan, it must result that they are then indeed entitled to the same rights, privileges and immunities, in Japan, which they would have enjoyed from a "cession or conquest of territory."

It has, however, been shown that such is not the case. At the time of the signing of the treaties between Japan and the Western Powers, the doctrine of personal laws was clearly repudiated by the positive law of nations.* As a proposition of international right it was a closed question. The opposite rule, "*Extra-territorium jus dicenti impune non paratur*," was universally accepted; and it was as clearly settled as any rule of international right, that no man, or class of men could claim, by reason of foreign birth or domicile, to be exempt from the common restraints of territorial law.²

The exemption of American and British subjects in Japan from the jurisdiction of the local courts in civil suits, is not therefore *complete* extra-territoriality. It is not an immunity from the general obligations and restraints of the municipal, or territorial laws, because the power to declare those laws has never been yielded up, and the usage of civilized nations makes it obligatory upon all strangers to respect and obey them, so long as they remain in the territory. Complete extra-territoriality can be claimed therefore, by virtue only of the express or implied consent of Japan: but the terms of the treaties express no such consent, and the law of nations existing at the time the treaties were signed absolutely forbids and repels such an implication.

As it was only proposed at this time to examine the subject of consular jurisdiction in Japan, with reference to the immunity of foreigners from the laws of the country, our inquiry—so far as it relates to consular jurisdiction in civil causes—properly closes here. It will however we think be neither unacceptable to the reader, nor wholly foreign to our purpose, if we stop here, and inquire by the laws of what country, consular courts in Japan should exercise the jurisdictions conferred upon them. Or to state it more accurately: by the laws of what country should consuls in Japan be governed in administering justice in private international cases, arising under existing treaties? It would be impossible to discuss in a paper of this kind,

² Bluntchili, International Law, 1868, § 360; Savigny, Vol. 1, Ch. 3, p. 99. Lord Brougham's celebrated judgment in the case *Warrender v. Warrender*, 9 Bligh, 111, 112; Lord Stowell's decision *Darymple v. Darymple*, and the authorities cited.

¹ Wheaton, Int. Law, P. III, Ch. I, § 226; and the interesting notes of Mr. Dana on the subject of diplomatic immunity.

all the rules and maxims of private international law applicable to such cases; to do so, would fill a volume; and besides, would require an amount of critical skill and learning to which we do not profess to lay claim. We only propose therefore, to present such of the leading principles of this branch of international jurisprudence as, in our opinion, directly or remotely, bear upon the main question. It is the province of private international law to determine before the courts of what nation each suit should be brought, and by the laws of what nation the rights of the parties should be determined. The first question named is settled by the terms of the treaty. The court of the defendant's country, in each case, entertains jurisdiction. The only question of international concern that remains to be settled is; by the law of what country should the consul proceed in the exercise of his jurisdiction? Should he, in determining the rights of the litigants, be governed by the laws of the defendant's country, or by the laws of Japan? And so, on the other hand, when an American or Englishman sues a Japanese; should the Japanese court be governed in deciding the suit, by the laws of the defendant's country, or by the laws of the United States or of Great Britain? Nothing can be plainer than that any general rules of public law, applicable to the courts of Japan, affecting the rights of the litigants in private international cases, should apply equally to the consular courts. For as we have already seen, the consular courts stand in the place of the Japanese courts, and exercise precisely the same jurisdiction as the Japanese courts would have done in the absence of any treaty agreement. Moreover, as a matter of moral obligation, or comity, the same rules that apply to the one should govern the other. In both cases however, there is something more than a question of comity; there is a matter of positive duty, imposed by treaty stipulations.

It is a well understood principle of jurisprudence that the origin of rights precedes the mode of enforcing them, and that the rights or merits of a case are anterior to, and independent of the remedy. Now although consular courts stand in the place of, the Japanese courts, and exercise the same jurisdiction in certain private international cases which belonged originally to these courts, they are nevertheless *Foreign courts*, and not Japanese courts. It becomes at once apparent therefore, that the merits and rights involved in private international cases in consular courts is separate and apart from the question of the remedy to be afforded; and that the former may be governed by the laws of the country where the right originated, while the latter may be controlled by the laws of the country or court in which such right is sought to be enforced.⁴

The general principle adopted among civilized nations, in private international cases is, that whatever regards the merits and rights involved in such actions, is governed by the law of the place where they originated, or are to be performed, without reference to the law of the former and that whatever relates to the order of judicial proceedings, or the remedy to be enforced, must be controlled by the *lex fori*,—the law of the country to the tribunals of which the appeal is made—without any regard to the domicile of the parties, the origin of the right, or the country of the act.⁵ "The laws of civil process," says Mr. Westlake, "are not like those which originated the rights,—commands addressed to the parties by their then permanent or temporary sovereign,—but they are commands address-

ed to the judge at the time of the suit and by his own sovereign, as to the conditions under which his justice is to be administered." It is nothing more than common sense, says Chief Justice Parker, to presume that when a citizen of the United States enters into a contract in another country with a subject or citizen thereof, and the contract is intended to be there performed, that both parties had regard to the law of the place where they were. And so likewise Mr. Chief Justice Taney, in delivering the judgment of the Supreme Court of the United States, in a celebrated case, declared: that courts of justice universally expound contracts made in a foreign country according to the law of the place where they were made, "such a practice," continued this learned judge, "contributes so largely to promote justice between individuals, and to produce a friendly intercourse between the sovereignties to which they belong, that courts of justice have continually acted upon it, as a part of the voluntary law of nations."⁶

"We all agree," says Mr. Justice Heath, "that in construing contracts we must be governed by the laws of the country where they are made, for all contracts have reference to such laws. But when we come to remedies, it is another thing. They must be pursued by the means which the law points out, where the case is tried."⁷

"What the nature of the obligation is," says Lord Chief Justice Eyre, "must be determined by the laws of the country where it was entered into, and then this country will apply its own law to enforce it."⁸

It would be useless to add authorities to prove the established usage among nations in regard to the law governing the construction of contracts and the mode of enforcing them in the respective national courts. It may be laid down as the settled usage of civilized nations, that the *lex loci* governs in everything that relates to the form, interpretation, obligation, and effect, of personal contracts,—and that the *lex fori* governs in everything relating to the forms and methods of proceeding, the remedy to be given, and the rules of evidence.⁹

These rules, says Judge Story, are founded, not merely in the convenience, but in the necessities of nations; for otherwise it would be impracticable to carry on an extensive intercourse with each other; "and the nation which should refuse to acknowledge these common principles, would soon find its whole commercial intercourse reduced to a state like that in which it now exists with savage tribes." There is an important exception to these rules however, which should not be overlooked. It is a maxim of universal application that, no court will enforce a contract in opposition to public morality, or opposed to the policy of the nation to which the court belongs. Mr. Justice Best has with great force said that contracts against good morals, or religion, or public rights, as well as contracts opposed to the national policy are deemed nullities in the courts of every nation where they are sought to be enforced, although they may be perfectly valid by the laws of the nation where they were entered into.¹⁰

We know of no provision in either of the existing treaties between Japan and the Western Powers which justifies, or requires a consul to deviate from either of these rules or maxims in the administration of justice in suits of a private international character. The courts of Great Britain and America are singularly committed to these principles. It has been said however, that these rules

rest upon comity or courtesy, and are therefore, only of imperfect obligation. In another article we shall endeavour to demonstrate that, upon whatever ground these rules may be sought to be placed, they rest for their true foundation upon the immutable principles of justice and reason, and that they are obligatory upon consular courts in Japan in a most peculiar and emphatic sense.

EDUCATION IN EUROPE AND JAPAN.

III.

THE next thing to Physical Education is moral training, for without this we only produce an armed savage; we improve powers which may turn upon us some day and become a pest only and a formidable danger to society. The exercise and nurture of reasoning power and practical skill are of vital importance to the welfare of nations and individuals, but by what are they to be governed in this microcosm of man? The will can set them to work for good or for evil, but when the eternal principles of right and duty, under the governing principle of love, not only to our own country but to mankind in general, are neglected, what acts of unreason may not be indulged in? Unless there be in this microcosm a love of truth and fidelity and the other ethical doctrines which are so well understood in China and Japan, the will itself becomes but an arbitrary guide, setting in motion the whole machinery of intellect and practical ability to attain ends that result only in a false civilization. As Mr. Helps, writing on this very subject has aptly said: "Civilization has made it easy for a man to brutalize himself." And however paradoxical this may appear, it is but too true.

We put moral training before intellectual therefore, for if we educate not the moral powers,—draw out and brighten the innate consciousness of right and wrong, and endeavour to give a propensity to the will towards truth and justice and kindness and compassion, we have no guarantee that our labour will be anything but vain.

Moral training must begin in the family. So it begins in China. The wise precepts of the ancient Chinese are admirable in this respect. They relate chiefly to the family and the state—the Emperor being the father of his people as he is also the Son of Heaven. Unfortunately for the Chinese the theory of the family has had a narrowing influence upon them, and has among other causes tended to retard their progress in science and civilization. It has produced that exclusive system which keeps everything in that country *in statu quo*. Such is doubtless the tendency of patriarchal governments generally; we see it even in the history of the Jewish people, who lacked that life-giving spirit of Christianity, which opens its arms to the whole world and makes all men brethren. Parents being the first teachers, moral training begins especially in the family, and the closer the resemblance of the school-teacher to the parental model, the more likely will he be to have a moral influence over his pupils.

But what are these moral influences to be aimed at, and how are they to be exerted? They are such as will improve the highest, the noblest and the tenderest feelings of the heart. The minds of the young are peculiarly open to influences of this kind, and the most enduring impressions are made by the example of the teacher himself. We have no better model of a good schoolmaster than the late Dr. Arnold of Rugby, and of him the boys used to say:—"We cannot tell him a lie for he always believes us." The confidence which he showed in the sincerity of his pupils, induced sincerity and truthfulness in them. This virtue is particularly to be insisted on, for without it there will be continual distrust and suspicion. One of the earliest

weaknesses displayed in the child is fear;—it should be met by teaching courage,—not animal courage merely, for this is often the result of physical causes—but a moral courage such as will make him brave to speak truth, to overcome difficulties in his daily task, to labour with diligence, and to stand up for the right. By this he may drive away all fear and be filled with hope in his efforts ending successfully. He gets self-reliance, and with it an originality and character which he cannot otherwise obtain. Again, wilfulness is a tendency of the young. There is an inclination to follow arbitrarily their own will without regard to the commands and instructions of parents and teachers. Hence arises the necessity for inculcating habits of implicit obedience while *in statu pupillari*. The relations between tutor and pupil have to be constantly insisted upon and explained; the reasoning faculty is called in to show the value of all these good habits, and by examples from history and life generally, the pupils, or at least some of them, imperceptibly receive the impression of the beauty of moral actions as well as their use. This becomes to them a *morale*, and illustrates that the true meaning of *morale*—which are in fact *customs, manners, habits*—are correct.

The teacher is a guide through a land hitherto untrodden by the pupil, who must place reliance upon his instructions if he wish to accomplish his journey with ease and profit. By a kindly manner the tutor will induce a belief in his own sincerity, but strict obedience must be enforced if not voluntarily given. It would be considered the height of absurdity for a traveller to dispute with his guide the direction to be taken in traversing a difficult mountain range, how much more foolish is it to allow pupils to question the desirability of a certain course which their instructor proposes and which he has successfully traversed himself already. It was a saying of Goethe that "he wished to spare the young the circuitous routes over which he himself had strayed. Painful therefore may be the first steps, because all is dark in the great unknown regions to which he is advancing, but as the pupil is exercising faith in his guide he is obtaining a moral lesson of no little value, while at the same time he acquires a power to help himself, and these advantages derived from his initiatory training excite not only confidence in himself but love and reverence for his instructor.

There can be no doubt in any good man's mind, but that systematic moral training in schools is of the greatest importance. The manner in which it may be done is hinted above. The whole subject of ethics or moral science—which forms a distinct part of the university course in Oxford—cannot well be introduced into common schools, or into schools where the minds of the students are as yet immature. Yet much more might be done than has been done in the way of well selected illustrations from History and Biography, to be used as a reading book. In England, where the Holy Scriptures are part as it were of the life of the people, the moral lessons of the Bible are sufficient in themselves, but in Japan and in China, where there is a basis of Chinese philosophy to go upon, a very effective system of moral instruction for schools might be devised, especially if the authors availed themselves of the opinions and sentiments of Christian writers with whom they could agree. Of course sound morals must rest upon sound reasoning, and therefore the intellectual and the moral education will go hand in hand, though it is an error to suppose, as is too often done, that with intellectual development moral power and sentiment will increase. An intense feeling of the righteousness of truth, the justice of gratitude, and the beauty of sympathy and love to our fellow men, are feel-

ings which cannot well be brought about by arguments however clear; there must be a moral perception, a moral sense, and this is what ought to be cultivated along with the intellectual faculties in the schools.

THE expected Notification in reference to the Japanese Silver Yen will be found amongst our advertisements this week, as also an intimation from the two foreign Banks that they are prepared to accept and pay the Japanese coin at par with the Mexican Dollar. Mr. Okuma must be congratulated on having thus attained the object he has been striving at for some time, and in having now succeeded in carrying through a highly important measure. The complete object in view, however, will not be attained until Silver Yen are made legal tender in Hongkong; but from news published during the week, to the effect that the Governor of the colony had received the sanction of the Home Government to legalize a par value between the Yen and Dollar, it is not likely that any great delay will occur before the whole wishes of the Finance Minister have been secured. The first step has now been taken, and we can see no reason to doubt that it will prove a success.

IT is not long since one of the native papers seriously described a council of military officers in Tokio, at which one of the Generals present declared that he could seize China with 120,000 troops. The public is naturally inclined, first of all to doubt the statement having been made; or, if made, to wonder where the troops are to come from;—again, if procured, how they could be transported to China, armed, equipped and maintained there. One of these points is answered by the announcement (which will be found amongst our items of Japanese news) that the population of Japan available for military service amounts to no less than 6,617,076 men between the ages of 17 and 40. This statement could only have been more astonishing if it had also included that arms and ammunition or funds existed for equipping a quarter of that force. We have gradually learnt to accept the native census as correct in its statement of the total population of Japan being thirty-three millions; but it is impossible to think that a fifth part of that should consist of men between 17 and 40, and it is of course still more absurd to think that any but a very small proportion of the people of that age could be available for actual service. However, we will not deny that even more than 120,000 fighting men could be raised in Japan; but not for service out of the country, and it would be folly for the Tokio Generals to think that they could collect that number for an invasion of China. And it would be equal folly for Japan to think that the force she could collect would be sufficient to carry out a successful invasion of that country. The *Akebono Shimbun* of to-day would appear to realize that the undertaking would not be an easy one, when it informs its readers that the population of China, in eighteen provinces, amounts to 405 millions, which, going upon the proportions applied to Japan, would produce a fighting population of eighty millions.

As regards the means of transport possessed by Japan, it is far greater than that allowed by one of our daily contemporaries, who lately considered 12,000 men as the utmost that could be carried by the fleet of the Mitsu Bishi. That Company alone possesses 32 seagoing steamers and 5 seagoing sailing ships; whilst in Japan there are, in all, 61 seagoing merchant steamers, and 66 sailing vessels of over 100 tons register, all of which, in case of emergency, could be available—especially for a short voyage. The old *Delta*, before her present alterations, carried 1,300 soldiers on her

first trip to Formosa in 1874, and each of the Shanghai Mail steamers could doubtless take 2,000 at a pinch. But we surely have no need to drift into a discussion as to the ways and means for a Japanese invasion of China. It cannot be possible that sensible men, and we are loath to doubt the good sense of the Japanese cabinet, for a moment contemplate such a proceeding. Whatever necessity may exist for a possible defence of her newly made Prefecture,⁹ Japan certainly has no reasons for thinking of waging a war out of her own territory.

THE proposed Memorial of the Tokio Chamber of Commerce to the Government, on the subject of amending the laws relating to Debtors and Creditors, will be read with interest. And we have every reason to think that the recommendations made by the Chamber will have great weight in influencing some early action on the part of Government, which has hitherto shown itself anxious to give the Tokio Chamber far more of a legislative power than that held by similar associations in other countries. The present memorial is the outcome of a communication from the Yokohama Chamber of Commerce, based upon facts drawn to its attention by one of our leading mercantile firms; and it shows that the Japanese representative merchants are quite alive to the unsatisfactory nature of their present Bankruptcy Laws. It can hardly be wondered at that a Japanese association should decline to recognize that foreign creditors have any greater claims to protection against their native debtors than the natives possess amongst themselves. This we are, also, quite willing to admit, and the changes which we hope may be made in the law are those which will be as advantageous to the native merchant as to the foreign one, and be applicable to both. The only fault we find with the Tokio memorial is that it is not strong enough in its recommendations. It justly points out that the disadvantages under which a creditor now labours in the native courts are: (1) the delay now allowed for notices of appeal, amounting to ninety days; (2) the debtor's power of delaying execution of judgment, even in summary cases; and (3) the debtor's power of disposing of his property during the progress of the case. The memorial suggests that the time for appeal should be shortened, but we think it would have realized the position better if it had urged its curtailment to ten days at the most, and then only upon payment into court of the judgment debt. Failing this payment it is unfair to a creditor that he should suffer further loss by property still remaining under the sole control of his debtor, even for a single day. The memorial does suggest that 'security money' should be deposited by any appellant, but this is rather vague; whilst the alternative appointment of a 'guarantor' is still more vague and—under the present laws—very tedious and difficult to realize as anything tangible. We believe that, at present, a guarantor is not liable until ninety days after his principal has been proved incapable of paying the guaranteed debt, and that then the claimant has to go through the same procedure against the guarantor as he formerly had to take against the original debtor—a course which proves a Japanese 'guarantee' to be of a very indefinite value.

The Tokio Chamber of Commerce has done good service to the interests it represents, to the commercial and moral interests of Japan, by pointing out to the Government the present unsatisfactory Bankruptcy laws; and, coming from its own subjects, the Government cannot fail to take some action upon this memorial which, we trust, will prove the means of increasing the credit and, thereby, the prosperity of Japanese trade.

WE publish this week the text of the usual Summary of Trade for the past year, compiled at H. M. Legation from the Consular Reports which have already appeared in our columns, and in our next issue we shall give the Tables

to which the present document refers. These tables are, this year, exceedingly comprehensive as they include statistics of the Foreign Trade of Japan since 1860, and thus establish a standard reference for future comparisons. We defer our own comments upon this summary until presenting the tables themselves, the scope of which will be found explained in the present document, which shows that H. M. Legation has devoted great labor to a task it has ably carried out.

A SUDDEN change has come upon the scene of Afghan politics. Whilst reading a description of the congratulations offered in Parliament to the Viceroy of India, and to the army, upon the successful termination of another Afghan war, we are suddenly reminded of the disorganized state of that country by hearing that an insurrection has broken out in Cabul; the English residency attacked; its defenders killed after a stubborn resistance, and our new ally, the Ameer, besieged. It was in September, 1840, that the first symptoms of the insurrection against Shah Shuja showed themselves, after the English army had defeated Dhost Mahomed and for nearly two years endeavoured to consolidate the power of their new protégé. History again seems to be repeating itself, but its repetition is not likely to go beyond this first and sudden success of the insurrectionists. Our present envoy is no repetition of Sir William Macnaghten, nor our General a second Elphinstone. It is not likely that the experiences of 1840 will have been forgotten or that proper precautions will have been omitted against the oft proved treachery of the Afghans. Forty years ago we lulled ourselves into the belief that, having once beaten the Afghan army, the people would be friendly to our influence; forty years ago our military chiefs showed incapacity and our envoy vacillation; but such weakness we will not think can again repeat itself. Luckily the present outbreak has declared itself before communications with India are made difficult, if not insuperable, by winter; and in a few days we shall doubtless hear of an ample force again passing the Khaiber to ensure our hold upon Afghanistan and to punish the treachery which has just been committed.

But, hopeful as we would still be that the disaster now telegraphed does not include the death of Major Cavagnari and the whole of his escort, the second telegram announcing that all the defenders of the residency have been killed gives great cause to dread that a very serious massacre has taken place. The news recalls the scenes of November 1840, so vividly described by Sir Vincent Eyre, when for more than a month the English garrison suffered so dreadfully in their badly constructed cantonments, without food or water, obliged to fight for almost each day's supply,—until starvation forced them to make that sham treaty with the chiefs and commence their sad march in mid-winter towards Jellalabad: a march which cost the lives of about twelve thousand people. But that disaster has remained without its parallel in modern history, and we will not think that its lessons can have been so disregarded as to make a repetition of any part of it possible.

The following extract from a late number of the *Friend of India* is very *à propos* to the news we have just received by telegraph:—

"Commercial information from Cabul is to the effect that the Amir Yakob Khan is by no means securely seated on the throne. He is said to be in great danger of losing Herat and the Turkistan districts, and also Candahar, as soon as our troops are withdrawn from the latter place; the most powerful chiefs and tribes are opposed to the fulfilment of the terms of his treaty with us; the hill tribes are decidedly hostile; a Persian army is concentrating on the borders of Herat. While trouble is thus looming in the future, it is added that internal disturbances already exist; that if Yakob Khan really is sincere, and endeavours to carry out the terms of the treaty and escapes assassination, we shall be compelled to support him with a

strong army, and to undergo the ruinous expense of another protracted and desultory campaign in Afghanistan, and will be fortunate if we are not eventually obliged to retain permanent military possession. There seems to be no reason to doubt the correctness of this news. Those who communicate it have no object in stating anything but the bare truth; they favor no particular policy, and are deeply interested in the preservation, of peace and the security and restoration of commerce, which has suffered much by our hostile advance into Afghanistan. Of course history repeats itself; and if our rulers will not profit by its teaching, they have no one else but themselves to blame. With a British Envoy resident in Cabul itself, and liable to assassination, it will be very easy for Yakob Khan's enemies at any time to compromise him, and bring on a rupture with the British Government. And any number of "Ghazis" are always forthcoming in Afghanistan, only too ready to accept the crown of martyrdom by killing a white and Nazarene infidel. It will yet be proved by sad experience that the objections consistently offered by the late Amirs Dost Mahomed and Shere Ali to the reception and residence of British Political Agents, were well founded. It is undeniable that the late Gholam Hyder, when heir-apparent to the Cabul throne and Governor of Candahar, had the greatest possible difficulty in preserving the lives of the members of the Lumsden Candahar Mission of 1856-57. Even at the present time, assassination by "Ghazis," of members of our force at Candahar, is by no means uncommon."

CHARLES RICKERBY.

"NEQUE ULLA EST AUT MAGNO AUT PARVO LETHI FUGA."

IT seems a miserable, almost a heartless, task to attempt any record of the measure or the motives of the mourning into which so many of us have been thrown by the news of our old friend's death. Not alone are we harassed by the wretched incompetence of language, the mockery of words that 'half conceal and half reveal the soul within,' but we are also painfully sensible that any exponent our own memory of such a man can furnish, must be at best a weak and faulty index of the large sympathy he earned and bestowed amongst us.

For his was not a mind that adapted itself to one phase of fellowship or one groove of fancy alone. Whether of those that associated with him personally, or of those that knew him only through his delightful pen, each found some music of thought that seemed in perfect harmony with his individual mood, and it is not our least melancholy reflection at this moment, that one who could thus be witty with the glad and sad with the sorrowful, was himself so seldom free from the communion of importunate care.

There may be those who will say that the profession he had chosen was to think and feel for us, or that large stores gathered from the treasures bequeathed to time by his master-minds made it easy to bestow fitting fragments on the requirements he encountered in his path; but this cold abstraction falls far, very far short of the genial reality. The journalist in a great metropolis may live almost entirely apart from the world of which he writes; the units of its mass may have for him no individuality; they may be but factors in a mighty aggregate, and if he approach them at all, it may be only to seek some fragmentary sentiment or apathetic inference. But the case is far different in such a community as ours. Common pain of weary exile; common contact of untiring trouble; common glimpses of fleeting prosperity; all these things constrain us to so close a vicinity of interest and impression, that we cannot afford to permit the distinction of individuality and catholicism; cannot be content to separate the public critic from the private censor. The pen that traces the annals of our doings and appraises the value of our efforts, is guided by a hand that daily meets our own in social intercourse: our journalist is our biographer: our author and his subjects walk side by side down paths that may not diverge. If the more untoward issue of these relations must inevitably be, here friendship sacrificed to justice, there justice blinded by umbrage, let us at this moment only remember that their happier outcome has also been, on the one side keen sympathy and gentle judgment, on the other congenial appreciation and affectionate esteem.

Looking back through a long vista of memories to the sunnier days of our settlement, we can recall the time when among the prospects that lightened the week-day's toil—not then indeed without golden reward—the perusal of the Sunday morning's journal was by no means least gladly anticipated. We

could afford then to be generous in more than thought alone. Our editor was our friend and guest, lacking neither sympathy nor support. We congratulated him on his sallies, twitted him with his foibles, and eagerly discussed with him possible and impossible phases of the romantic novelty that surrounded us. Would that we might tarry for ever among those reminiscences! Old familiar faces of well loved friends rise again from that radiance, one by one, and as we follow them with yearning gaze, fade from our tear-blurred eyes, some into the confusion of wider and busier spheres, some into the shadows of poverty and exile, and some, alas! too many, into the darkness of the 'undiscovered lands.' Of the few that remained, none was more intimately associated with the brightness of those days than the man who has just been taken from us. No time, however untimely, no season however unseasonable, found his pen unwilling or unready either to minister to our mirth or unravel our perplexities. He had never to search for, but only to select from, his ideas. Of merry quip, caustic couplet, happy metaphor or rounded period, he was an accomplished master, and whether vindicating the reputation of an outraged friend, casting up the chances of a commercial venture, or describing the experiences of a warm-hearted scholar, he carried with him an audience that cannot easily forget his excellence.

We would fain draw the curtain here, for we love to think that in those times, if not altogether fortunate, he was at least happy. But to spare our own sorrow were to do an injustice to his memory. The light affection of those that knew him in his prosperity is little worthy to be weighed against the deep respect of those that watched him in his adversity. Few, very few of us, had any opportunity of estimating the measure of his sufferings: he bore them too bravely; complained of them too little. Let it suffice to pray that none of us may ever know the bitter agony of the highly gifted man who, with health, strength and resources alike failing, sees himself beaten back, bruised and exhausted, from the struggle where others, incomparably his inferiors, are winning honour for themselves and affluence for those they love: and let us to this prayer add a hope that, if such a misfortune should unhappily overtake us, we may be granted the courage and the fortitude to endure it as he did.

He left us in the spring, not without faith in the constancy of our friendship, and the news of his death comes to us in the autumn, amid the patter of the sullen rain and the rustle of the falling leaves; yet it is some small solace to remember that, sailing into the summer of old England, his last hours wanted not the ministrations of gentle hands nor the tears of tender affection.

"Thy leaf has perish'd in the green,
And, while we breathe beneath the sun,
The world which credits what is done
Is cold to all that might have been."

THE JAPANESE STAGE.

The energetic proprietor of the Shintomiza Theatre has made a bold step in introducing scenes of western life, characters and costumes of European models, and an English Opera troupe, upon the Japanese stage. The innovation is a bold one, but it will not, we think, prove a successful one. To judge from the way the performance now going on at the Shintomiza Theatre is received by the Japanese public, it is evident that the blood and murder scenes of their own stage, the reedy theatrical tone of voice hitherto adopted by their actors, and the noisy orchestra of *samain*, drum and wooden clappers is far preferred to the quiet drawing room scene of a Japanese Consulate at San Francisco; to the ordinary colloquial voice and language of Japanese travellers; to the best notes from a well played piano, or to excellently rendered European song. The strained intonation of a gaudily dressed samurai draws its shout of applause from pit and gallery, whilst the highest effort of the *prima donna* evokes only laughter. And it was hardly to be expected that the result would be different; the Japanese public can believe in the reality of their own scenes, in the personality of their own characters, but they know not whether the Crystal Palace is real or fancied, whether the foreign dressed Danjuro is giving a caricature to be laughed at, or represents a type they are to copy. There could be no

mistake, however, in laughing at the constantly repeated *mina uroshii* or the piggy of the actors who took the parts of American sailors and English tourists and, accordingly, the laugh was general each time those words were used, or each time the wide-awake fell from the head of old Gonzayemon in the height of his grief at the loss of his son. The grief of the old man seemed but simulated when drying his tears with a white cotton handkerchief, but the joke of his hat falling off was real!

The first piece now performed at the Shintomiza, and which occupies the first three hours of the Japanese play-goer's holiday—a holiday from noon till midnight—is one of the good old style, an episode from the Minamoto and Taira time, the struggles between the Genji and Heiabi. Here we have murder and bloodshed (or rather decapitation without blood) in quantity; a child takes the life of an old man; people commit *kara kiri*, and retainers rush to their masters to be killed. Heads disappear within the folds of a cloak, and dummies are held up whilst the supposed corpse walks off the stage. And a horse comes on, larger than life, with curved neck, gaily caparisoned trappings; saddle with heavy stirrups into which the hero mounts, and harangues his army and the audience. The delusion is only spoilt by the four legs betraying men's feet and by a prop occasionally introduced under the horse to take the rider's weight off the men's shoulders, while he delivers a longer speech than usual, or takes the head off his prisoner. These are the sights to thrill a Japanese audience, and if they cared to learn anything from western notions it would be to encore the performance of that horse, or get that murder scene repeated.

But the play we have come to see is entitled the "Extraordinary Adventures of the Wrecked;" the piece which forms the attempt at revolutionizing the Japanese taste, and which in introducing western scenes and western costumes, leads up to the Grand Opera at Paris, where we are supposed to be when listening to the Vernon troupe, who now form part of the *personnel* of the Shintomiza Company. The first scene shows a Japanese fishing boat lately blown from the coast, and now toasting helplessly on the sea. Its occupants are old Gonzayemon, his son Miozo and a sailor; they are in the last extremities of hunger and despair and look in vain for any succour. The scene is effective, the actors are yet near Japan, the boat is thoroughly Japanese and the dresses, especially the one of the *senko*, are very Japanese. The sea is also admirably imitated, the rise and fall of the waves is done to perfection and the idea of distance is as well given as we have seen on many a London Theatre. The old man crouches down in his agony, but wishes to die that his companions may yet live a little longer; the son is prostrated and the only one with any energy left is the young sailor. He, however, thinks only of his masters, determines to sacrifice himself for them; and, before they can prevent it he stabs himself, and expires in their arms. But help is at hand: the smoke of a steamer has been seen in the distance; Miozo makes signals, although too weak to support the improvised flag for more than a few frantic wavings; they have been seen and ere long a boat comes to their rescue,—the gig of a Pacific Mail Steamer, with two sailors in unimpeachable nautical costume at the oars, and the purser or some equally well clad official in the stern sheets, in white clothes, a black neck tie and everything *selon les regles*. Except on the stage the boat would not have been considered sea worthy to launch in such a sea, and it is no wonder that she could not approach near the shipwrecked ones. The only plan is for Miozo, the son, to swim towards the pair-oared gig carrying a rope with him. This he succeeds in doing and draws loud applause from the audience as he disappears and reappears in the waves before reaching his goal. The father has now to be saved; the line is hauled upon, but alas! it breaks; the old man falls back in the boat and the current sweeps them both out of sight.

The second act introduces us to the front of the Japanese Consulate at San Francisco, the faithful copy of a small police station, similar to many now existing in Japan with the self conceit of fancying themselves European built houses. A portico, a sign board with 'Japanese Consulate,' two formidable looking lamp posts and four uncomfortable tea house chairs in

the street, complete the first picture of a civilized town. The officials of the Consulate lounge on to the chairs, of course they are smoking cigars and of course they have nothing to do beyond trying to look comfortable in their western attire. Two Chinese servants are introduced and they certainly are well 'got up,' affording some amusement by their pidgin Japanese. The Pacific Mail steamer has arrived and by her our hero Miozo, who now appears in a black suit with tight fitting boots and an awkward gait to report his arrival, accompanied by the people who had rescued him. Danjuro takes the part of Miozo and certainly does it as well as it could be performed. He well portrays the discomfort of his new dress, he still prefers kneeling in the presence of the Consulate officials to sitting on the chairs provided, and shows his trouble with the new boots by constantly nursing his 'poor feet.' The sailors, however, are as bold as could be, take their seats without hesitation and when the slightest chance occurs chime in with their pet phrase *minas uroshii*. Miozo is soon introduced into the interior of the Consulate where the Consul, formal as becomes a Japanese official, shows a gradually awakening interest as the story of the shipwreck and rescue proceeds—a story which Danjuro tells with much effect, with hesitation at first, as speaking to a superior, and then with excitement as he relates the loss of his father and his own rescue. The Consul's wife and sister-in-law appear, two characters taken by male actors, very well dressed as western ladies. Many foreign amateurs do not 'make up' so well, walk so well or dispose of their hands so well, when in ladies' attire, as do Messrs. Iwai-hanahiro and Sawe Mura: their dresses being excellent and in good taste. The sister-in-law (Miss Wakaba) is on the point of leaving for Washington and it is settled that Miozo shall accompany her. The next scene shows us a party of wild Indians preparing to attack the coming train and very wild they are indeed, being as little like Indians of any known race as their gibberish is unlike any known tongue. The train approaches, a very poor specimen of a Noah's ark on wheels, and a sad parody of anything deserving the name. The Indians have removed the rails, but some exertion of the scene shifters is necessary to capsize the car, after which a passenger or two emerges from the bottom and our own friends come on to the stage from the wings. Of course a general fight ensues, and thanks to very wild hitting and many feats of gymnastics, the *melée* lasts a long time before Miozo is left for dead on the field, and Miss Wakaba carried off by her captors.

The third Act brings us in front of the Crystal Palace "on the Tames" when most of our acquaintances turn up again. The scene is a poor one; as good as we could expect perhaps in a Japanese Theatre, but unlikely to impress any Japanese with a wish to visit it, or to satisfy others who may actually have seen it. Of course our sailor friends are here again, and here is also old Gonzayemon, in black suit and wide awake hat, whom we last saw crouching in the bottom of a Japanese boat and drifting, helpless, at sea. He had been picked up by an English vessel and, as a matter of course, comes to London and the Crystal Palace. He now hears of the death of his son Miozo in America, is overwhelmed with grief (very well acted by Nakamura) and finally jumps from the Crystal Palace steps into the Thames, the river, fortunately for his purpose, being close at hand. The Act closes as the old gentleman leaps below the footlights, a few excited people rush about the stage, and one of our *minas uroshii* acquaintances frantically waves a light fishing rod over the river.

Act IV. transports us to the front of the Grand Opera at Paris, a scene somewhat like the building itself, if a dome, windows and light shining through them can make up the likeness. Here Miozo re-appears, as the jockey servant of a French doctor, whom he is now serving out of gratitude for curing the wounds inflicted upon him by the American Indians, for, of course, he had not been killed. Miss Wakaba, whom we left in the hands of the Indians, has also been miraculously saved by some brave Frenchmen and she is now in Paris. Her brother-in-law, the Consul, has come to meet her from San Francisco, and a general happy meeting takes place of all our friends with the exception only of poor old Gonzayemon who was lately for the second time, left as drowned. However the old gentleman again comes to life in the Fifth Act, this

time in the Bois de Boulogne, having been saved from the 'Tames' by an Englishman. He here meets his son Miozo and all the other personages of the play—who have either been saved from death and brought by force of circumstances to the 'good country of France' or have travelled round the world to join in this happy meeting.

The plot of the "Wrecked ones" is very poor, the scenery, with the exception of the boat scene off Japan, is a sad parody on what might have been presented to a Japanese audience as descriptive of America or Europe, and must be a disappointment to those travelled Japanese who would like to see a fair description of the life they had led during their absence from Japan. Between the fourth and fifth acts the Vernon troupe take their part in the entertainment and one's interest is now centered upon the effect their performances may have on the Japanese public. The programme prepared us for the "Grand Duchess" but the performance turned out to be a selection from "The Daughter of the Regiment" a difference, however, which would not affect the majority of the audience. It must have required great good nature on the part of the performers to go through their parts when their best efforts and their best songs were laughed at by the house, or interrupted by inopportune applause, but the best was made of it and the supposed tastes of the native public consulted by more exaggerated acting than would be appreciated by a foreign audience. An important addition to the strength of Mr. Vernon's troupe has been made by the arrival of Madame and Maestro Hirlemann, the former being a most accomplished vocalist and the latter an excellent pianist and violinist. But Madame Hirlemann's song, given from the front of the stage to her husband's accompaniment; well as it was rendered, was lost upon her audience and great must have been her disappointment to find the last bar of her song greeted with laughter instead of an encore. The singers' universal trick of condensing all the effect of their powers into the last few notes of a song are lost upon the Japanese, who—in their innocence of music—look upon it more as a joke than art.

Altogether, the present performance at the Shintomiza Theatre does not impress us with the fact that the Japanese want any change in their theatrical shows, and still less with the idea that the way in which a change has now been attempted is satisfactory or likely to succeed.

A LOST DAY.

Back in that ancient and mystic time,
Dim and vague as the nursery rhyme,
That we conned in childhood over;
A mighty king, so the legends say,
Mourned in deep grief he had lost a day,
Which he never could discover.

And though you say with the skeptical air,
Which modern savants delight to wear,
That these fables are deceiving;
Still the thing is as plain as it ever can be,
That he must have sailed this very same sea,
And the tale is worth believing.

For the same thing happened to me, I know
A little more than three years ago,
And I put the two cases together;
I lost a day from the years glad prime,
A gem from the tiara of old Time,
In the golden autumn weather.

And like the king in the ancient tale,
With grief and longing that never fail,
I seek for its golden glory;
This vanished day, with its influence sweet,
Is needed to make my life complete,
To round out its perfect story.

This day that I lost from sun to sun,
Holds the gentle deeds I might have done,
The words that I might have spoken;
The glad success and the wishes crowned,
The perfect bliss I have never found,
The vows that were kept unbroken.

And as the king through the dusty years,
Has sent his moan, with its burden of tears;
—'Tis all that we know of his story;—
So I mourn my loss in this idle rhyme
And I know the tale of that olden time,
Is more than a legend hoary.

Yokohama, September, 1879.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR,—Riding down Nogé Hill one morning, some eleven years ago, I saw a large Japanese dog cross the road, carrying in its mouth a woman's fore-arm which had apparently been severed by a sword-cut. A lazy ejaculation of "oya, ningen no te ja nai ka?" was the only notice taken by the bystanders.

At that time there was a valley behind the Nogé execution ground where the spectacle of dogs gnawing beggars' remains might frequently be seen.

Is there, do you suppose, the remotest possibility—I employ the most hypothetical mood my knowledge suggests—that Professor Morse's cannibals may have been Pariah dogs?

Yours truly,

F. B.

REUTER'S TELEGRAMS.

LONDON, September 8th, 1879.

Mutiny has broken out amongst the inhabitants of Cabul. They have attacked and set fire to the British residency and besieged Yakoub Khan.

LONDON, September 10th, 1879.

The defence of the British residency at Cabul was most stubborn, and loss to enemy great. The Cabulese made an unsuccessful attempt to storm it. They then set fire to the doorway, swarmed in, and killed the defenders.

The Japan Weekly Mail.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 13, 1879.

JAPANESE ERA 2589, MEIJI 12TH YEAR, 9TH MONTH, 18TH DAY, DO-YO-III.

DEATHS.

At No. 157, Bluff, Yokohama, 10th September, 1879, SARAH SHRIEVE, relict of the late George Julius Dare, of Singapore, aged 62 years.

On the 17th July, at Brixton (three weeks after his return from Japan), CHARLES DUROC RICKERBY, aged forty-five, second son of the late Joseph Rickerby, of Sherborne-lane, City.

At the Yokohama General Hospital, on the 10th September, at 9.45 A.M., CAPTAIN T. HESCHOFF, of Poole, England.

At Totauka, on the 8th September, 1879, GEORGE WILLIAM ROSE, Aged 43.

NOTES OF THE WEEK.

The M. M. steamer *Volga* arrived from Hongkong early on Tuesday forenoon, bringing the London mail of 25th July. The *Genkai Maru* from Shanghai and way ports arrived on Thursday morning. The homeward mails were despatched by the P. and O. steamship *Malacca*, this morning, at daylight. The steamship *Viceroy*, which left on Tuesday, took forward a mail for Shanghai and way ports.

The usual September change in Yokohama weather has set in during the past week, and for five days cold winds and rain have proclaimed the summer finished. The unusual rainfall of last year caused serious floods throughout this province, but although our present downfall is steady enough, we are still far below last year in quantity. During the first week of last September we had 4.45 inches; in the second week 3.29; in the third 8.01; and in the fourth 0.03; giving a total for the

month of 15.78 inches. This year the rainfall for the month, up to Thursday night, had only amounted to 2.275 inches; but it still continues in an earnest manner as if anxious to make up for lost time. Snow has already appeared on the summit of Fujiyama—a month earlier than last year. This decided change in the temperature has caused a marked decrease in the cholera statistics. Yesterday, only one new case is on record as having occurred in the native town. The returns issued by the Sanitary Bureau of the Home Department, and compiled up to the 6th instant, for the whole country, notifies the following totals:—Cases, 126,145; deaths, 68,360; recoveries, 17,336; still under treatment, 40,449; mortality, 54.19 per cent.

On Wednesday the 10th, four changes were made in the Japanese Ministry which became public on the following morning. They were as follows:—

H. E. Terashima, Councillor of State and Minister for Foreign Affairs, to be Minister for Public Education.

H. E. Inouye, Councillor of State, Minister for Public Works and President of Legislative Bureau, to be Minister for Foreign Affairs.

H. E. Yamada, Lieut.-General, Senior Vice Minister of Justice and Councillor of Senate, to be Councillor of State and Minister for Public Works.

H. E. Yenomoto, Vice Admiral, Envoy Extraordinary and Minister Plenipotentiary, to be official of 2nd rank in the Department of Foreign Affairs. (still holding his former office.)

Some rumors had been in existence as to differences of opinion in the cabinet, but none affecting the offices which have just changed hands. We must accept the surprise with which the news now comes as a proof that Japan is still closed with the seal of secrecy, to her own people, and especially to foreign curiosity. In Europe, such coming events could not fail to have cast shadows before them which would have been reproduced in some club gossip or in some newspaper; but here we may be on the brink of a sudden change in politics or government and yet not know of it until the event is consummated. When it suits their purpose the Japanese officials can still maintain the closest secrecy and we may be sure that other changes, more important than those now made, would also come upon us with equal suddenness. To foreigners the most important appointment now made is that of His Excellency Inouye Kaoru to the post of Foreign Minister, thus replacing H. E. Terashima Munenori who has held that position for so many years. Whether justly or not, the opinion prevails that, able, amiable and courteous as the late Foreign minister is, he has been found wanting in decision and firmness when those qualities were especially required. The appointment now made will give satisfaction, for few members of the Government possess a more accurate knowledge of western life and people, (derived from personal intercourse,) than Mr. Inouye, whose courteous manner and sympathy with foreign modes of thought cannot fail to make his intercourse with the Diplomatic Body smooth and pleasant. He has given proof of firmness of character and he is accredited with moderate views regarding the future Tariff which Japan should adopt; whilst his known convictions as to financial policy are a guarantee that his advice will not lead the country into war or other extravagances, but that he will support the principles laid down by the Finance Minister in his last budget. Admiral Yenemoto, who has lately added diplomatic experience to the qualities of a brave and frank sailor, will doubtless be a valuable addition to the staff of the Foreign Office where work must now be very pressing. General Yamada, the new Minister of Public Works, has earned a high position by his courage and unswerving adherence to this Government in 1868, and, later, during the Satsuma rebellion. He is understood to have devoted himself to study and literary pursuits while holding his late office of Senior Vice Minister of the Judicial Department.

The *Nichi Nichi Shimbun* of the 11th makes a very lame withdrawal of the conversation it reported last week as having taken place between Mr. Okuma and the Chairman of the Yokohama Chamber of Commerce, and which we reproduced last Saturday. It now says "we find the account of the conversation between the Finance Minister and a certain foreign merchant of Yokohama, which we published the other day as it had been reported to us, was, in some points, erroneous, and that the Englishman was not so blameable as was

therein stated. We therefore take this opportunity of cancelling the statement." We expect the 'some points' referred to include the whole paragraph, but it would be amusing to hear wherein the editor thought he had attached blame to the foreign merchant. If he expected credence to be given to such a long speech actually having been delivered by the Minister, he surely could not have expected us to believe that Mr. Wilkin was without a reply. The *Nichi Nichi Shinbun* may rest assured that no foreigner believed one word of its long statement, and that few will care about its present contradiction. We merely availed ourselves of it to show a portion of the gossip with which the native papers are full. But, for the information of any who may think a more serious refutation of the *Nichi Nichi's* account should be given, we may add—on authority—that no request to visit the Treasury or Printing Department was ever made by the Chairman of our Chamber of Commerce, and that he and the other gentlemen who went up, did so upon an invitation conveyed to them. Mr. Okuma never made the remarks with which he was credited, and, in fact, the whole story of the *Nichi Nichi Shinbun* was little else than a pure fabrication.

We are glad to see that the advisability of a visitation of the Foreign settlement was discussed at the meeting of the Board of Health, on the 5th instant; and, as that took place a week ago, we presume that the wished for co-operation of the Foreign Consuls has since been obtained and the visits actually commenced. We hope the Inspectors have passed in front of the Grand and International Hotels, and that nothing interfered to afford them the full benefit of the horrid stench which proceeds from the two corner drains of those establishments.

A correspondent in Shanghai has furnished us with a few particulars about the Buddhist settlement in the island of Pootoo, (so well known as the summer resort of Shanghai residents,) which we are glad to make a note of. The island is solely inhabited by members of the Buddhist priesthood, where they first settled about the year A.D. 300. There are three large monasteries and a great number of small outlying temples: the chief monastery being one of the finest known by foreigners in China, whilst the priests are of a superior class. The chief principle of their creed is that of Amida Butsu (The Almighty) similar to the Japanese sects of Monto-shin and Jis-shin. Special temples are also dedicated to Kwan-Yin (Kwan-non in Japan), the Goddess of Mercy, who according to the traditions of Pootoo is said to have died in that island. It has already been suggested how interesting a field exists for enquiry as to the points of similitude and difference between the Buddhist sects of China and Japan, and also for a comparison between these and their Indian prototypes, and we are glad to hear that the study has been taken seriously in hand.

The wish to show a public recognition of the services to science and commerce of Professor Nordenstjöld and members of the *Vega* expedition, has resulted in a dinner to be given in Tokio, on Monday next, by the members of the two Asiatic Societies and the Tokio Geographical Society; whilst in Yokohama the intention is to give a picnic,—an intention the weather seems determined to thwart.

The community will be glad to hear that, under the auspices of the Amateur Associations of which the late Mr. Julius Dare was a member, a Committee has been formed to receive the signatures of those desirous of joining in a DARE MEMORIAL. The precise form which this memorial may take will be afterwards decided upon. Lists for signature will be found at the United Club, the Club Germania, the Oriental Bank Corporation and at the Hongkong and Shanghai Bank. They are to close on the 18th September instant.

The Committee of the "Société Suisse de Tir" announce that their meeting has been postponed from the 20th, to Saturday, the 27th September; also that it has been decided to allot eight prizes to the *Cible Patrie*.

The Shanghai *Mercury* hears that the damages to the China Merchants' S.N. Co.'s steamer *Harau* and the Mitsui Bishi Mail S. Co.'s *Tokio Maru* amount to about Twelv 30,000, the whole of which has to be paid by the China Merchants' S.N. Co.

The native papers of this morning state that, owing to some troubles reported in the Kochi Ken, 300 policemen have been sent to that prefecture (Tosa). The farmers near Odawara

and Hakone are also stated to have risen again: the authorities, on the evening of the 11th instant, in consequence of the preventive measures adopted there against cholera.

Considerable dissatisfaction is felt at the programme of the Jockey Club for the Autumn Meeting, which we published last week. The Committee seem to have had a very confused idea of the meaning of the alteration which was made in one of the Club rules at the last half-yearly meeting; and, although we have no sympathy with the alteration referred to—which we consider aimed a death blow at amateur racing in Yokohama—we must express surprise at the way in which the programme has been drawn up. The Committee have undoubtedly framed the programme with a view of shutting out certain well-known ponies from the course, and by so doing have succeeded in alienating the support of some of the owners, so many of whom have expressed their intention of not entering their ponies, that we should not be surprised if the Autumn meeting falls through altogether, unless some combined effort is made to bring about measures which will infuse new life into that sport so dear to Englishmen wherever they congregate.

SHANGHAI LETTER.

Shanghai, Sept. 3rd, 1879.

Dealers in piece goods have again had reason to congratulate themselves as the demand has almost exceeded the supply, and prices obtained have been all that could be expected. With their knowledge of the way in which foreigners conduct their business, native dealers are looking forward to the market being flooded with supplies in a few weeks time and a considerable fall in rates. We shall see if these expectations be realized. The Cotton crop has improved somewhat more than was expected owing to a timely fall of rain, but it will be far short of the average, so that the piece goods have still a healthy prospect. With Tea and Silk, matters are not so favourable. The news received from London of the sales of first arrivals of Green Teas is far from encouraging. In Silk, the total settlements this season, since June 1st, amount to 18,500 bales, against 14,500 the previous season.

One would hardly look to a circular, giving the barest particulars of business, for facetious remarks, and yet I read in one the other day that "nothing of importance had occurred in Dyes and Colours," but that the market was "a shade better."

Governor Hennessy arrived here by the *Gienhai Maru* on Sunday last, and paid visits to what are denominated our "institutions," and last night inspected our Fire Brigades, a night parade having been called for the purpose. The Governor has been staying at the Oriental Bank, but leaves for Hongkong by the mail steamer to-day.

The most serious conflagration that has ever taken place in Shanghai, occurred on the 16th August. Shortly after half-past five in the morning the bells announced a fire on the French Concession, and though the brigades turned out promptly, by the time the first engine had arrived on the spot—close to the city walls—the flames had obtained such a firm hold on the small houses among which the fire originated, that it was at once evident that the firemen had a serious task before them. A strong wind was blowing at the time and carried the flames across the narrow streets that distinguished that part of the settlement, and as there were a large number of oil and samshoo shops in that quarter, there was plenty of inflammable material to feed the flames. The fire gradually worked its way down to the bund, destroying numbers of godowns and their valuable contents, besides private dwellings, and it was not until 991 buildings had been swept away, that the fire was checked. The heat was something dreadful, and as the morning advanced Europeans found that they could not stand it, and were obliged to give up their exertions. The loss was stated by Chinamen to be upwards of four millions of taels.

We have not got through our summer yet by any means, though some welcome thunder-storms and falls of rain towards the end of last month lowered the temperature a few degrees, and gave us the hope of a speedy conclusion to the trying heat we have endured for the last two months. At the beginning of August the maximum kept just below 90 degrees for about a week, and then up it went again, the register from the 6th to the 27th inclusive showing a maximum never below 90° and as high as 99°, while the minimum was as a rule above 80°. No wonder that there have been about a dozen deaths from heat apoplexy and sun-stroke among foreigners, and that the Chinese have suffered very severely. Still no one can say that the summer has been unhealthy, or so trying as more moisture would undoubtedly have made it. A great many Shanghai residents have gone to Chefoo, where the temperature is

more moderate, but they have to put up with many inconveniences there, the want of ice among others. It is a great pity that the cholera scare prevented so many of our residents visiting Japan this year. Kobe must have felt this particularly. The *North China Daily News* strongly urges the Shanghai people to select Japan for their summer holiday, not only on account of the great change of scene, but also on account of the change of surroundings, which a visit to a Chinese port does not afford.

Death has played havoc amongst our old residents. On the 1st August, Mr. Rowley Miller died at Chefoo, and here on the 15th August, Mrs. Macgowan and on the 20th, Dr. Galle died. News has been received that Captain Tapp is progressing favourably and is likely to recover from his attack of paralysis, so that there is a chance that we may see him out here again. Another old resident of Shanghai has been stricken with paralysis. Mr. J. M. Taylor was returning to Shanghai, in the steamer *Guy Mannering*, but had to be left in hospital at Singapore.

A Japanese has got himself into trouble for stabbing a Chinaman, during a quarrel that arose about some domestic matters, but it turned out on examination that a mob of Chinamen had severely maltreated the Japanese before he resorted to the knife. The case is not important, but tends to show that bad feeling exists between the natives of China and Japan.

Our volunteers had another march out to the Bubbling Well on the 28th ultimo, the Municipal Council having ordered refreshments to be in waiting for the gallant and thirsty warriors when they arrived at the Bubbling Well Cottage. On the march out, several manoeuvres were gone through; one that was attempted in the Maloo having been rather a failure, necessitating a re-formation of the companies. On the whole the men drill well and the attendance at parade is fairly good, but the artillery want a little waking up. They are too slow with their guns, and have to be repeatedly urged to "get that gun off" before they succeed in doing so. Then the gunners are too ambitious—"the ambition of a private man"—and too many of them want to drive. Now as there are only two guns it is impossible that more than two men can be mounted as the corps is at present constituted, but rather than vex the hearts of these gallant volunteers, the corps should be made into horse artillery and every man in it be allowed to

"Witch the world with noble horsemanship."

But manoeuvring with the infantry on the march out would have to be given up, unless the Captain Commandant wishes to decimate his corps.

We can boast of a tonsorial artist who has been taking a lesson from Dogberry, as he sent out an express lately announcing that his "champoo" would be found most "ennervating" this hot weather. He got twitted about this, but was not to be done out of a good word, so sent round another express informing the community that his champoo had become "nervating." "But to read and write comes by nature."

Another of the Mitsui Bishi Co.'s steamers has met with an accident, by which we were deprived of the opportunity of the usual mail to Japan last week. The *Tokio Maru* arrived outside Wouong about 9 p.m., on the 21st August, and anchored there until she could proceed to Shanghai in the early morning. She was thus at anchor when the China Merchants' steamer *Hae-an* arrived about 4 a.m. on the 22nd, from Foochow, a strong flood tide then running. By some mistake or another the *Hae-an* ran into the *Tokio Maru*, damaging the bow of that vessel so considerably that she has been over a week in dock repairing. The *Hae-an* damaged herself to even a greater extent, though the force of the blow when she struck the *Tokio Maru* was received on her guard. Of course the China Merchants will have to pay all damages, which will amount to fully Tls. 30,000. It is much to the credit of the Mitsui Bishi Co. that they waived all claim for demurrage, though they must be considerably losers by the detention of their steamer. All our papers reported this accident incorrectly, as they wrote of a collision between the two steamers, implying that the *Tokio Maru* had some active participation in the smash, but as she was fast at anchor it does not appear that she had the chance given her of ramming her opponent if she had wished to do so.

On Monday the Race Course was officially opened for training, and coffee provided in the Stand for members. For some time past a goodly string of ponies have been exercised every morning, and training in earnest will now begin. Twenty griffins arrived from the north by steamer a few days ago, and have been put up at auction, the highest price realized being Tls. 210. There is already promise of a good Autumn Meeting, and we are all anxious for plenty of griffins to arrive, as from the rejected racers paper hunters hope to pick up some likely animals.

When the July Magazines were reviewed in the *North China Daily News* lately, the writer found occasion to differ from Matthew Arnold's estimate as expressed in an article in *Macmillan*, of Wordsworth's merits as a poet, and stated: "There is a test, rude,

but effective in its way, which at once proves whether a poet has or has not obtained a hold on men's minds and affections. That is the test of quotation. There is, we believe, no single passage in the great mass of poetry and cadenced prose which, under the name of poetry. Wordsworth wrote within the sixty years of his literary activity, that would if quoted among a group of twenty cultivated Englishmen be at once recognized by all or by half of them." This assertion naturally enough gave rise to letters from those of a contrary opinion, which bristled with the best known quotations from the poet now so little read, and yet one was conspicuous by its absence, which the thirst induced by a thermometer far above ninety ought at least to have suggested, viz:

"Drink, pretty creature, drink."

This question of Wordsworth's power as a poet formed for some short time a change of theme for conversation here at dinner, and if any reference to it affords a similar change at any Yokohama dinner table and allows the poor weather to go scot free for a day or two, I shall have earned somebody's thanks. For myself I don't altogether agree with the writer in the *North China Daily News* that quotation is always a test of merit, as people often use a quotation without having the faintest idea where it came from. One man confessed to me that he had often heard and used the words "We are seven," but never knew until this discussion arose that Wordsworth had written them. Perhaps if the poor poet were alive now he would quote from his own writings to silence his detractors:—

"Minds that have nothing to confer
Find little to perceive."

The Russian steamer *Nikolai Vorogod*, of Nihilist fame, arrived here from Vladivostok on the 28th ultimo, and has been chartered to carry tea to London, having been put on the berth at £2 10s. per ton. At present there is no lack of steamer freight, and rates will probably come down again.

YOKOHAMA LOCAL BOARD OF HEALTH.

The tenth meeting was held on the 29th August, 1879, at the Machigisho, at 10.30 a.m.

President: the Governor of Kanagawa Ken.

The following subjects were on the order of the day:

I.—Report on the closets by Dr. Gutchow.

II.—Report on the cremation grounds of Kuboyama and Aizawa by Dr. Geerts.

III.—Résumé of the minutes of the fifth meeting.

I.—The President requested the foreign Secretary to read the report of Dr. Gutchow on the closets. The Board, after some discussion, unanimously adopted the report, of which the following is a short résumé:

1.—Every house erected hereafter must be provided with a closet of its own.

In larger houses, where several families are living (so-called *Nagayus*), and where the above rule is not practicable, there shall be a special building for the common closet.

2.—In old houses the above rule is to be carried out as far as possible.

3.—No closets are allowed, except such as are built after one of the following two systems:—

a.—No wooden tubs allowed; instead of these, large pots of earthenware, glazed inside and outside, must be employed. The pots are to be buried in the earth and to be surrounded by concrete; the surface of soil round the pots is to be covered with concrete or brick, with a good covering of cement; the surrounding part must be laid in a slope so that water and dirt may easily fall into the pot. The hole for emptying and cleaning the pot must be on the outside of the building.

b.—The closet may be built by those who can and will afford it in such a manner that the excreta are collected in pails which can be removed. In such cases the surface whereupon the pail stands is to be covered with concrete or cement on a platform of brick, so that it may be cleaned easily. The pails are to be made of galvanized iron or earthenware, glazed inside and outside. The hole of the closet is to be surrounded under the seat by a sheet of galvanized iron. Two pails must be at hand; there must be room for both in the closets and neither of them is to be permitted to remain outside the closet, when not used. A well fitting cover (lid) of galvanized iron or hard wood is to be provided for the transport of the excreta. On the platform above mentioned an arrangement is to be made by brick covered with cement or by concrete, so that the pail fits only straight under the seat.

All closets in public places, streets, and public buildings, as schools, prisons etc., shall be built hereafter as described under B.

4.—Urinals shall be established only on the same or similar places as the closets. The common Japanese system of receiving the urine in tubes of glazed earthenware is a proper one, but the urine must run either into the same pot with the other excreta or where a special urinal exists into pots or pails made of the above mentioned materials, and which can be removed.

In special urinals the surface under the pot is to be protected as above. Well fitting lids for the pots during transport are necessary.

5.—Removal of the excreta is allowed in all towns only from 12 p.m. till 6 a.m. In villages they may be removed at any time.

6.—The local sanitary inspectors shall superintend the building of closets and urinals, the cleanliness of the same and the removal of the excreta. Places where the excreta are collected by contractors, farmers, etc. shall never be permitted in towns. The local Police in these places shall provide for a proper place which must be situated at least one kilometer (8 chō) from any inhabited building.

7.—Exceptions to the above rules are allowed only by special permission granted by the local Sanitary Inspectors for reasons for which the latter will be held responsible.

In consideration of the many difficulties which arise in adopting the above proposals, the Board cannot name a term within which the change should take place, but as this question is a very important one, thinks it to be its duty to advise that this proposal be considered and carried out as early as possible.

II.—Dr. Geerts then read his report on the cremation ground at Kuboyama and Aizawa, of which the following is a short résumé.

1.—The cremation ground of Kuboyama is situated at a better isolated place than the Aizawa ground, but for the eastern and south-eastern part of Yokohama, the Kuboyama ground is rather too far away.

2.—The Aizawa ground situated between Negishi, Ishikawa and the end of the Bluff, is about in the middle of these inhabited places and could scarcely be removed farther from the Bluff, without coming nearer to Ishikawa or Negishi.

3.—The distance between the Aizawa ground and the end of the Bluff, is more than one kilometre and not dangerous to the health of the inhabitants of the Bluff, or Ishikawa, or Negishi.

4.—I have attended in the evening at the burning of the bodies, which process gives a disagreeable smell, because the burning takes place on open fires, merely in the open air, as only a shed is erected above the row of cremation stones. With fine weather, the cremation actually takes place in the open air.

5.—In order to diminish the smell and to make the process of burning more complete, it is desirable to erect cremation furnaces.

6.—If cremation furnaces are made at Aizawa, there will not only be no danger, but also no nuisance to the inhabitants of the neighbourhood, as the distance is great enough.

7.—The distance of both cremation grounds could with difficulty be increased without causing other serious disadvantages.

8.—The burning of the alvine discharge and vomited matter, is effected in a proper way in a deep hole with branches of resinous wood, humectated with kerosene oil, but the smell is very disagreeable, although not directly dangerous as the contagion is already destroyed by heat before the products of combustion come into the air.

9.—There is much less danger for the health of the Yokohama inhabitants from both the burial and cremation places of Aizawa and Kuboyama, than there is from the foreign cemetery, which is close to the very densely populated parts of the town, (Honmura).

10.—The burning of cholera-corpses is far less dangerous to the health of the living than the burial of the same. The conclusions from these observations are:

I.—That both the burial and cremation places of Aizawa and Kuboyama can remain there, without causing any danger to the health of the inhabitants of the surrounding places.

II.—That it is desirable to prevent the smell as much as possible, by erecting proper cremation furnaces at these grounds.

III.—That the bottom and sides of the holes in which the discharges of the patients are burnt, shall be covered with freshly burnt lime.

After some discussion between the President, Messrs. Kawano, Kawai and Dr. Geerts; Dr. Gütschow proposed, and the President seconded, that Dr. Geerts should draw up a plan for cremation furnaces, whilst Dr. Wheeler observed that the priests who burn the dead and receive payment for this, could afterwards pay some rent for the use of the ovens.

III.—The résumé of the minutes of the fifth meeting was read and adopted.

Eleventh meeting on the 1st September, 1879, held at the Machignisho at 10.30 A.M.

President: The Governor of Kanagawa Ken.

The following subjects were put on the order of the day:—

1.—Proposal for a sanitary visitation of the town by the members of the Board.

2.—Outbreak of the epidemic at Odawara and discussion of the measures to be taken there.

3.—Plans and drawings of three cremation furnaces by Dr. Geerts.

4.—Résumés of the minutes of the 6th, 7th and 8th meetings.

I.—Dr. Simmons remarked that experience in 1877 had proved the extension of the disease after a sudden rainfall.

As there had been no rain for a considerable time, he proposed an immediate inspection and cleaning of the closets, before rainy weather would set in. Dr. Geerts observed that an inspection of closets was very advisable, but that this ought to be combined with other sanitary supervision, as for instance the removal of filth from the premises, the wells of drinking water, the drains etc. A house to house visitation would therefore be preferable, whilst the register of the inspection of the wells in 1877 could be made use of.

Dr. Miyajima also was of opinion that, such an inspection would now be useful, as since 1877 no systematic visitation was made.

Dr. Gütschow, although recognizing that we cannot possibly change every bad condition at once, thought it advisable to inspect as well the closets, as the wells, drains and premises. If we cannot carry out everything, still we ought to do what is possible to be done.

Mr. Kawano observed that the local sanitary police officers take care of the cleaning of the closets and look after the removal of filth; the Kencho might address them in order to further their energy in the matter.

Dr. Gütschow wished that the Board should ascertain whether it was done effectually and for that reason he deemed a house to house visitation useful and very necessary.

Dr. Geerts expressed the same opinion and stated that the duty of the Board was to consider and advise means of prevention against the spread of the disease. As a house to house visitation had proved in Europe to act excellently and to promote the removal of any filth, had drinking water etc., he thought it the duty of the Board to recommend this measure strongly. The executive government might decide if it would adopt the views of the Board or not.

Mr. Inanishi wished to know whether this house to house visitation should be made only in Yokohama or in the whole Ken. In the first case he deemed the measure not necessary, as the local Sanitary office provides for it, because the year before all the wells throughout Yokohama were examined, therefore it would hardly be necessary to appoint a committee to do so now.

Dr. Gütschow stated that the Board only wants to aid and advise the Sanitary officers and does not doubt their capability.

Dr. Simmons remarked that these visitations were the most necessary in large towns; in the villages the Japanese physicians might take measures for informing the people to observe more care and cleanliness.

The President deemed the subject sufficiently discussed. After having put the proposals to the vote, the Board decided:

1.—That there shall be made a house to house visitation in Yokohama by members of the Board.

2.—That four Committees shall be nominated by the President, each Committee consisting of:—

One Foreign physician.

One Japanese physician.

One Officer of the Kencho.

One Sanitary Chemist of the Laboratory, each with the necessary assistants.

II.—The President observed that during the last few days about 40 persons had been attacked by cholera at Odawara. This number was still increasing and the local physicians wanted assistance. He wished to ask the opinion of the Board whether it would be advisable to send some members of the Board to Odawara.

Several members thought it was a wise plan to send aid at once.

After some further discussion it was resolved that a Committee of three members, viz: one Japanese physician, one officer of the Kencho and Mr. T. Ninomiya should go to Odawara, aided by Mr. Ikuta of the Laboratory and some assistants.

III.—Dr. Geerts submitted to the Board his plans and drawings of three different kinds of cremation-furnaces. The following is a résumé of his report:

1.—Siemens' gas furnace although excellent in the result of cremation could not be adopted here, because this oven was too costly, too complicated in construction, only fit for places where a large supply of gas could be had and adopted for burning only one body at a time.

2.—The furnaces proposed were:

a.—Furnace of brick and iron in which five coffins could be burnt at the same time, without the ashes of one body being mixed with the ashes of another corpse.

b. Flame furnace for one person only, to be used by the better classes.

c. Shaft-furnace for one person only, to be used by the middle class.

3. The furnaces could be used either with wood or coal as fuel; although they would not take away the smell entirely, this would be for less than with the present system of open fires.

4.—The whole arrangements can easily be made in a very decent way, so that the family does not see even the fireplace.

5.—The time necessary for burning a body effectually would be about three hours.

6.—Not the slightest danger would be attached to the system

as regards the health of living people; in fact the danger would be less than by burying the dead in the ordinary way. It was resolved that the erection of three furnaces should be commenced, after the Kenrei had received the consent of the priests and the cost was accurately ascertained.

IV.—The *résumés* of the 6th, 7th and 8th meetings were sent in by the reduction Committee and approved of.

Twelfth meeting held on the 5th September, 1879, at the Machigaisho, at 10.30 a.m.

President: The Governor of Kanagawa Ken.

The following subjects were to be discussed:—

I.—Appointment of four Committees for sanitary visitation in the town.

II.—Determination of the time within which the new system of closets must be carried out.

III.—The quality of the water of the Yokohama aqueduct, and desirability of inspecting the reservoir at the *prise d'eau* in Kashimada-mura.

IV.—Report of 9th meeting.

1.—The President informed the members that, in compliance with the resolution of last meeting, the following distribution of committees had been made for the purpose of house to house visitation. For that part of the town situated north of the Okagawa and Sakuragawa, Dr. Wheeler, Dr. Kondo, Mr. Kawano, Mr. T. T. Niunomiya and five assistants. For that part of Yokohama situated west of the Nakamura-river and east of the Okagawa, Dr. Geerts, Dr. Nagashima, Mr. Isogai, Mr. Matsusaka of the Laboratory and 7 assistants. That part of the town situated south of the Sakuragawa and west of the Okagawa, Dr. Simmons, Dr. Miyashima, Mr. Imanishi, Mr. Yamashina of the Laboratory and five assistants. Finally the district situated east of the Horikawa and Nakamura-gawa, by Dr. Gütschow, Dr. Kinoshita, Mr. Kawai, Mr. Koiso of the Laboratory and five assistants.

As to the visitation of the foreign settlement, it was recommended by the members, that the Governor should address the Consular Board and request their cooperation in the matter. Plans of the town and forms of registering the results of the visitation were handed to the Committee.

2.—The President informed the Meeting that he had addressed the Naimusho about the necessary funds for changing the closets, at Yokohama. For providing the 20,000 houses of this town with proper closets there would be required about 200,000 yen at the rate of 10 yen per closet. Of this amount about 5,000 yen must be procured in some way or other for the poor, who are unable to defray the expenses themselves.

Dr. Geerts proposed that a loan might be raised for the purpose, to be paid off gradually from the municipal taxes.

Dr. Gütschow was of opinion that the cost could not be discussed by the Board, and ought to be left to the *Kencho* for arrangement.

As to the question whether the measure should be enforced, all the members agreed to make it compulsory within a certain fixed time.

Mr. Kawano observed that this time ought not be too short, as it would cause serious difficulties and perhaps discontent if it was determined to carry out the measure at once.

After some discussion between Mr. Shimada, Drs. Miyajima, Kondo, Geerts, Gütschow, and the President, it was decided by vote:

a.—That the measure shall be compulsory.

b.—That the new closets must be erected six months after the date of issue of the Order.

3.—Dr. Geerts communicated the results of the analysis of the water of the Aqueduct, since the repairs of the tubes up to Sakuragi-bashi have been finished. The water as it flows now through the tubes, is not clear, on account of small red clay and sand-particles suspended in the same. But these clay-particles excepted, the water had proved to be of an excellent quality, very pure, without any trace of pollution. The water wanted only to stand still for a certain time, or to be filtered in order to remove the suspended clay-particles. Then it becomes perfectly clear.

As the water in the aqueduct is not now clear, but turbid, people are thinking unjustly that it is not fit to drink, whilst it is even in its present unfiltered state, much better than any well-water of lower Yokohama. As it is much to be regretted, that such pure water as that of the Tamagawa, should not be filtered before entering the tubes, Dr. Geerts proposed to remedy the matter, especially as it could easily be done and as it is of great importance. He wished to inspect the canal, the reservoir and the water at the *prise d'eau* of Kashimada, in Tachibanasōri, in order to draw up a more exact plan for filtering the water before it enters the tubes.

Resolved that Dr. Geerts should go to Kashimada next day, in company with officers of the building department of the *Kencho*.

4.—The report of the 9th meeting held on the 27th August was read and adopted.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

NOTIFICATION.

It is hereby notified that the Infant Prince has been named Yoshi Hito and will be known to the public by the name of Haru-no-Miya.

(Signed)

SANJŌ SANEYOSHI,
Prime Minister.

September, 6th, 1879.

COURT, POLITICAL AND OFFICIAL.

After the conclusion of the ceremony of naming the Infant Prince at the Palace, on the 6th instant, H. M. the Emperor gave an entertainment to the Imperial Princes, Prime Ministers, Councillors of State, &c. to celebrate the event. After the banquet, these latter repaired to the Awoyama Palace, where the birth took place, to offer their congratulations to the Prince.

The fortieth anniversary of the death of Kōkaku Teauō will occur on the 19th instant, when a grand memorial ceremony will take place at the temple of Senyūji, in Kioto.

On the 5th instant, Mr. Godai Tomoatsu, the well-known proprietor of the indigo factory at Osaka, was appointed a member of the Genrō-In (Senate).

H. E. Yamada, the new Minister for Public Works, attended at the Judicial Department on the 11th instant, to hand over the business which he had been transacting whilst filling the office of the Senior Vice-Minister of that Department.

The Police Department, on the 11th instant, assigned four police officers and thirty two policemen, to act as the guard of H. E. Yamada, the new Minister for Public Works.

We reported the other day that Mr. Shimadzu Saburo has been ordered to come to Tokio at once. It seems that this order has crossed his application to remain for 150 days more, or up to the 10th February 1880, in Kagoshima for the benefit of his health.

H. E. Hayashi, the Junior Vice Minister for Home Affairs, accompanied by a subordinate officer of the Department, will proceed to the Northern provinces about the 14th instant, to inspect the districts which suffered from flood, in order to enable the Government to judge of the expediency of granting several applications which have been made by the local authorities for a special grant to cover the expense of repairing the roads, embankments, &c. which were damaged by the floods.

A special meeting of the Prime Ministers, and the nine Councillors of State, took place on the 18th instant, at the private residence of H. E. Sanjo. The object and result of the meeting is at present unknown.

It is extremely improbable that Russia expects to learn anything from Japan as to the best method of constructing harbours, roads, &c., but to judge from a statement in the *Hochi Shimbu*, the Russian Government are desirous of paying the Japanese a delicate compliment. The *Hochi* informs its readers that, "the Russian Minister for Public Works having requested the Japanese Government, through the Russian Chargé d'Affaires, at Tokio, to furnish an account of the plans adopted in the construction of harbours, roads, canals, &c., in Japan, the Government will furnish the required information as soon as it can be compiled, in exchange for particulars respecting similar undertakings in Russia."

The Dutch Minister entertained the representatives of all the foreign powers and also the leading officials of the Japanese Government, at the Grand Hotel, on the evening of the 10th instant.

The Chinese Minister in Tokio is to change his residence to the Chinese Consulate in Yokohama. He is said to have commenced removing his furniture, &c. on the 10th instant.

Amongst the arrivals in Yokohama, on the 10th instant, by the French Mail steamer *Volga*, we observe the name of Mr. Nakashima, the Japanese Consul at Rome.

Mr. Ichikawa of the Land Tax Revision Bureau, who some time ago proceeded to the province of Awa, in Kochi Ken, to make an investigation into the working of the revised tax and pacify the people who were dissatisfied with the recent revision, having now succeeded in the task, will return to Tokio shortly, leaving behind him a few of his subordinate officers.

In consequence of the great increase of cholera in Okinawa

Ken, the authorities have sent to Nagasaki for a number of doctors and supplies of medicines in order to be able to grapple more effectually with the epidemic.

NAVAL AND MILITARY.

We learn that a Chinese man-of-war always accompanied the *Nisshin Kan* when the latter was engaged lately in surveying the coast in the neighbourhood of Tientsin.

New powder factories are to be shortly erected in the premises of the Naval Arsenal, in Shirokano and Meguro.

The Military Department lately caused a return to be prepared of the number of men, between the ages of 17 and 40, capable of bearing arms and available in case of any emergency arising and their services being required. This return has now been made public, and we learn that there are 6,617,076 men who come within the required category.

For some considerable time past the arsenal at Koishikawa, Tokio, has been receiving constant attention at the hands of the military authorities. The establishment has been completely reorganized, and is now in perfect working order and capable of turning out 20,000 Snider bullets, each working day of ten hours. The manufacture of small-arms is about being commenced, after the design of Major Murata, as it has been found that rifles of the pattern invented by him, are greatly superior to the Sniders with which the army is at present furnished. As it is contemplated to issue the improved weapon to all the regiments of the line as quickly as possible, a number of extra hands have been taken on at the arsenal, and the new machinery requisite is in course of manufacture at the government workshops at Yokosuka.

The gun factory in course of construction in the compound of the Military Arsenal, in Tokio, will be finished during the present year. The estimated cost of the building is yen 150,000, and of the necessary machinery, &c., yen 130,000, making the total cost, yen 280,000.

The manufacture of gunpowder to fill up the stock which had been expended in the Satsuma rebellion, having now been completed, supplies will be shortly forwarded to the different magazines, and some additional magazines will be erected in several provinces, so that a reserve stock of gunpowder will be constantly on hand.

The old castle in Takasaki, Joshu, will hereafter be kept in repair by the Military Department, whilst that in Mayebashi in the same province, will be taken down and the ground turned into public gardens.

The annual military inspection will begin from about the 6th October next. Lieut.-Generals Nodzu, Miura and Tani, will it is said, be appointed Inspectors.

INDUSTRIES, TRADE AND FINANCE.

We learn from the native papers that the Government have determined to open the Tea section of the competitive Exhibition, to be held in the Town Hall, on the 15th instant. Much interest appears to be felt amongst the Japanese in the approaching display of one of their most important industries, and no less than 500 exhibits have already been received, representing the tea-products of every portion of the empire. The Judges, Provincial Commissioners, and Exhibitors are busily engaged in arranging the exhibits so as to have everything ready by the day fixed for the opening of the Exhibition, and in order to facilitate their operations eleven additional judges have been named to act in conjunction with those already appointed. The Commissioners appointed by the Government have issued a notification that the Exhibition will be formally opened on the day named (15th), at nine o'clock in the forenoon, by Their Excellencies the Ministers for Home Affairs and Finance.

The *Yomiuri Shimbun*, says the position of the ground (100,000 chō in extent,) in Yezo, to be let to the *Kokkaiin Kaishin Kaisha*, (Association for the development of the Hokkaido), has already been fixed upon by the authorities. The soil of the ground selected is well suited for the cultivation of hemp, which could, it is estimated, be grown to the value of yen 27 or 28 per *tan* (about $\frac{1}{4}$ of an acre). If therefore the whole extent of the above ground were planted with hemp, the annual income would be yen 27,000,000 or 28,000,000.

Only the other day we recorded the establishment of a chemical works at Osaka, and now we learn from the *Hochi Shimbun* that a Cotton Mill has been erected in Senju, Tokio,

and all the preliminary arrangements having been completed, the formal ceremony of opening the establishment will take place in a few days.

H. E. Ijichi Masaharu, is about to establish at his own expense, a school of agriculture in Kagoshima, for which purpose he has recently purchased a number of agricultural books.

The regular meeting of the Tokio Chamber of Commerce was held at their premises in Tokio, on the 9th instant. After opening the meeting in the usual way, the President announced that two members had died and one retired since their last meeting. The applications of two candidates for admission, and the accompanying certificates, were then read and it was unanimously agreed that the candidates be elected members of the Chamber.

An animated discussion took place as to the replies to be sent to the questions submitted to the Chamber by the Customs Bureau of the Finance Department. It was finally decided that the Committees for Internal Trade, and Foreign Commerce, should make the requisite enquiries and prepare a draft reply to the Government queries, for the consideration of all the members.

The Secretary, by direction of the President, then read the memorial proposed to be sent to the Government pointing out the advisability of amending the laws affecting debtors and creditors, in compliance with the wishes of the Yokohama General Chamber of Commerce. The memorial (to be found in another column) was unanimously adopted and it was decided to forward it at once to the Ministers for Home Affairs and Finance.

Mr. Hirano then addressed the meeting on the subject of the recent Shipping Regulations. He said that the regulations brought into force on the 16th ultimo, for the examination of masters, mates and engineers of merchant vessels of foreign form of construction, and also the rules affecting the engagement of officers in those vessels were extremely embarrassing and found in practice to be exceedingly injurious to commercial interests. The speaker proposed that a suggestion be made to the Government, pointing out the necessity which exists for a revision of the regulations and the desirability of simplifying them.

Messrs. Masuda and Fukuchi, supported the proposition of Mr. Hirano, and it was unanimously adopted. The Committee for Marine Affairs, was instructed to prepare a draft report of a memorial to be forwarded to the Government on the subject of the revision of these regulations and report to the President when the draft is completed, when an extraordinary meeting of the Chamber will be called to take it into consideration.

A report has been received from Osaka, announcing that an extraordinary meeting of the Osaka Chamber of Commerce was held on the 2nd instant, to consider the proposed reply to the authorities upon the subject of treaty revision. The public were excluded from the debating room. On the members taking their seats, Mr. Watanabe, the Governor of Osaka *Fu*, addressed them, and said that, "When the existing treaty was concluded by the Tokugawa Government, the negotiations were entirely in the hands of 2 or 3 officials, but now, the Government having invited the views of the Osaka citizens upon the proposed revision, I desire that every member will give his utmost attention to, and fully discuss, these questions."

The questions put by the Government are not yet known, but they will be reported as soon as they are made public.

A Japanese Chamber of Commerce has been established in Fusan, Korea, and the opening ceremony took place on the 18th ultimo. The Chamber will, for the present, consist of 14 members, out of whom a president and a vice-president are to be elected.

The authorities in Tokio have found it necessary to place some restriction upon the indiscriminate manufacture of fireworks, which has hitherto taken place in the capital and led to many disastrous fires, involving great destruction of property. On Monday last, all the pyrotechnists carrying on business in Tokio, were summoned to the *Fucho* and informed, that for the future, no fireworks will be allowed to be manufactured or stored in any of the fifteen districts of Tokio. Small quantities of the diminutive description of fireworks may however be kept for sale in the city as hitherto.

The reproach under which the Japanese have so long laboured of allowing the famous shrines of Nikko to fall into decay and

ruin, is we are glad to learn about to be removed. The *Choya Shimbu* states that, "Mr. Innan and several of the leading residents of Shimotsuke, are about to form a Society for the purpose of keeping the shrines of Nikko in repair, and have applied to the Government for the necessary permission. It is estimated that yen 300,000 will be requisite for carrying the objects of the association into effect. Of this sum, yen 4,000 has already been subscribed, and it is anticipated that at least 30,000 more will be raised amongst the inhabitants of the province of Shimotsuke alone. It is proposed to collect the balance from amongst the Government officials, Kwazoku, &c., during the next three years, and when the fund is complete it will be invested in the purchase of Government Securities and the annual revenue derived from the accruing interest devoted to carrying out the object of the Society." There ought to be little difficulty in accomplishing the preservation of these shrines, which have such peculiar interest to the people of Japan, both from their antiquity and their religious and historical associations.

Satisfactory accounts respecting the rice crops continue to be received from all parts of the country. A telegram from Miye Ken, dated the 5th instant, states that "the weather being favorable to rice cultivation, those fields which were planted early are already coming into ear, and judging from present appearances, full crops may be expected."

The prospects of the rice crop, in the districts surrounding Tokio, are said to be all that can be desired. We heard yesterday from a person in Mukojima, that the paddy-fields in his neighbourhood are expected to produce over two bags of rice per *tan*. The farmers are suffering from the depredations of robbers, who steal the plants during night-time, and are consequently now employing watchmen to protect the crops.

It is said that owing to the temporary scarcity of rice in Osaka the present selling price of 1 *sho* is over 13 sen.

A native paper states that "Mr. Hara Zenzaburo, a merchant of Yokohama, regretting that the dealers in silk worm egg cards have sustained loss for several years past, through their inability to hold their cards until they can obtain a profitable price, is now negotiating the formation of a company which will receive all the silk worm egg cards arriving from the provinces and hold them until a good price is offered."

The Board of Trade in the Finance Department, summoned the Managers of the *Kishu Kaisha*, and other companies, as well as the merchants engaged in foreign trade, to their office, on the 11th instant, and with Mr. Kawase, the Director, and other officers of the Board, held a meeting upon the subject of the export and import trade of Japan.

The following is the official return, compiled by the Customs Bureau of the Finance Department, of the value of the Imports and Exports and the Customs Revenue at all the open Ports of Japan, during the Fiscal year commencing on the first day of July, 1878, and ending on the thirtieth day of June, 1879.

Imports	Yen 29,815,353.490
Exports	" 24,614,760.241
Excess of Imports.....	5,200,593.249
Coin and Bullion Exported.....	Yen 11,052,556.735
" " Imported.....	" 2,791,405.472
Excess of Exports.....	8,261,151.263
Customs Revenue.....	Yen 2,351,634.610

MISCELLANEOUS.

Intelligence of an extremely important archaeological discovery reaches us from Yezo. It appears that the workmen employed in making the road from the head office of the Colonization Commission in Sapporo to the Hironai coal mines, found in the course of their excavations, at some considerable distance underneath the ground, a number of earthen-ware images of the God Buddha. The question naturally arises how these images came to be where they were. There is no record of either Japanese or Ainos having ever lived in the district the discovery was made, and as far as the Ainos are concerned it is considered extremely improbable that they could have had anything to do with them, as they are known neither to have worshipped Buddha, or been acquainted with the art of making earthen-ware. It is also evident that there

could have been no secreting of the images by a single individual or party as they have been found in large numbers and considerably defaced as if by age. The whole circumstances seem to point to a race of worshippers of Buddha inhabiting the locality at some remote period anterior to the Ainos, and the solution of the question raised by this discovery will certainly provide matter for discussion amongst archaeologists.

The mountains of Loochoo are so greatly infested by snakes of large size, that the inhabitants are afraid to venture near their haunts. In order to abate this nuisance, which has the effect of causing large tracts of land to remain uncultivated, Mr. Nabeshima the Governor of the *Kra* has determined to employ a number of men to hunt out and kill these poisonous reptiles.

Mr. Fukuzawa has resigned his position as a member of the Tokio Geographical Society, and Mr. Yagi has been elected in his stead. The members have, we are glad to learn, agreed upon an important and desirable change in one of the rules of the Society. It has now been decided that foreigners may in future become members.

The 17th instant being the day for the celebration of the *Tôshôgô* (or *Tokugawa Iyeyasu*) in Uyeno, Tokio, it is intended that feats of archery &c., similar to those exhibited on the occasion of the people's fête to the Emperor, will take place before the temple.

The little port of Nobiru, in Miye Ken had an unwelcome visitor in the shape of a Tidal Wave, on the 3rd instant, at about 2 o'clock in the morning. About 120 yards of the pier which was lately constructed, were washed away and other damage incurred, which will materially affect the facilities the harbour afforded to shipping.

A fire broke out in the town of Oiso, on the *Tôkaidô*, at three o'clock on the morning of the 4th instant, and lasted until about half-past four. When it was extinguished, it was found that about 40 houses had been burnt down.

A report from Korea, dated 9th August, states that about three hundred of the Koreans have already died from cholera in Senradô and Bansan-ura, and that the disease is reported to be also prevalent in Tôrai Fu and its neighbourhood. It is feared that the epidemic will shortly spread throughout the country. Fortunately, all necessary preventive measures having been taken in the Japanese settlement, only eighteen Japanese were attacked during the period from 21st July to 26th August last, of whom eight have died and three recovered. As the admission of the Koreans to the settlement is strictly prohibited and consequently no trade is transacted, commercial affairs are at a standstill.

Cholera appears to be still spreading in Yehime *Kra*, notwithstanding all the exertions of the local authorities. The former grant from the Central Government of yen 15,000 to meet the extraordinary expenses of sanitary precautionary measures &c. has been found insufficient, and the local Government has been obliged to make application for a further grant-in-aid of yen 15,000.

The public is at present prohibited from visiting the Imperial botanical gardens at Naito Shinjiku, in consequence of the prevailing sickness.

The number of cholera cases having gradually decreased in Tokio, no more cholera hospitals will be established.

The number of new cases of cholera and deaths in Tokio reported during the week, is as follows:—

DATE.	NEW PATIENTS.	DEATHS.
September 4th.....	31	6
" 5th.....	23	9
" 6th.....	25	16
" 7th.....	32	11
" 8th.....	23	17
" 9th.....	21	4
" 10th.....	35	3
" 11th.....	19	7
Total (8 days)	209	73

Return of cholera cases in Kanagawa Ken from the commencement of the epidemic up to the 12th September 1879.

Date.	No.		Under	
	Patients.	Died.	Recovered.	Treatment.
June 18th to } Sept. 5th }	1,247	864	165	236

" 10th.....	122	66	20	294
" 11th.....	43	28	13	296
" 12th.....	28	19	9	296
	1581	1068	237	

We were informed at the Kanagawa Kencho, that the deaths reported on the 6th, 8th and 10th inst., did not all actually occur on those dates, but that earlier returns from distant parts of the *ken*, which had not come in time to appear in former returns, are therein included.

In Yokohama itself, there were no new cases, six deaths and two recoveries on the 11th, and one new case, one death and two recoveries on the 12th instant.

MEMORIAL ADDRESSED TO THE GOVERNMENT BY THE TOKIO CHAMBER OF COMMERCE UPON THE NECESSITY OF AMENDING THE LAWS RELATING TO DEBTORS AND CREDITORS.

The laws in force in this country relating to debtors and creditors are not as yet sufficiently perfect to afford due protection to the mercantile community and frequent unnecessary losses are consequently sustained by persons engaged in trade. This Chamber has long been anxious that the Government would take steps to improve the bankruptcy laws and the matter has now been prominently brought under our notice by a communication we have received from the Chamber of Commerce established by some foreign merchants at Yokohama, enclosing a copy of a letter addressed to that Chamber by an English firm carrying on business in that port.

The letter of the firm referred to, contains a number of suggestions for the amendment of the forms of procedure in the law courts of this country, and the foreign Chamber desires the co-operation of this Chamber in getting the proposed amendments carried into effect.* After careful consideration of the letter in question we have come to the conclusion that both foreigners and Japanese labour under similar disadvantages, entirely attributable to the extra-territorial jurisdiction which obtains in this country; we cannot therefore coincide with the statement that foreigners alone suffer under existing conditions. There can however be no doubt that creditors, both Japanese and foreigners, frequently suffer great loss through vexatious appeals on the part of debtors, who at present have not to give security to satisfy the claim in the event of the appeal not being sustained, and are in consequence enabled to make away with their property during the interval before the appeal comes on to be heard, and thus defeat the just claims of their creditors. This Chamber has long been desirous to see an alteration in the law affecting this matter and now submits the following suggestions for the consideration of the Government:—

1.—According to the present procedure the period within which an appeal may be made after judgment is ninety (90) days. This privilege is allowed in simple actions of debt, and it frequently happens that the defendant in an action after a verdict has been given against him, lodges a notice of appeal for the sole purpose of delay, and then proceeds to dispose of his property so as to defeat the claims of his creditors who are entirely helpless to prevent him. This evil, we consider, to be

* Letter from Messrs. Jardine, Matheson and Co., to the Yokohama General Chamber of Commerce, and from the latter to the Tokio Chamber, published by us early this year.

mainly attributable to the long period during which the right of appeal is allowed and we are therefore of opinion that if this was abridged the present pernicious delay, would be materially lessened.

2.—In the event of an appeal from the judgment of a court of first instance, the appellant should be obliged either to lodge a sufficient sum of money in court or, at the discretion of the Judge, find security to satisfy the ultimate decision. A similar course should be adopted in cases of appeal from the judgment of the *Joto Saibansho* (or Superior Court) to the Supreme Court. In all cases of appeal where the appellant is unable either to make a deposit of money or find security, he should be ordered to hypothecate his property to an officer of the court, pending the appeal. If these amendments in the existing laws were made, debtors would be effectually prevented from disposing of their property to the prejudice of their creditors during the progress of an appeal.

3.—If the plaintiff in any action has just cause to consider that the defendant is disposing of his property for the purpose of evading payment of the judgment of the court, the court should have power, on the application of the plaintiff and on being satisfied as to the circumstances, to make an order restraining the defendant from all further dealings with his property. In the event of such an order being made by the court, the plaintiff should be obliged to deposit such a sum of money as the court might determine, or find security to the satisfaction of the court, to satisfy any damages which may be sustained by the defendant in consequence of such order, in the event of the plaintiff being unsuccessful in his action. This course would effectually prevent the fraudulent concealment of property by defendants, and at the same time protect them against vexatious proceedings on the part of plaintiffs.

This Chamber considers that if the foregoing amendments were made in the laws relating to debtors and creditors they would afford ample protection to traders generally, impart greater confidence in all transactions between natives and foreigners, and materially assist in promoting the prosperity of commercial pursuits. The members of this chamber are ignorant of law and unable to form an opinion upon the merits of different systems of procedure, but we hear that in France the right of appeal is limited to sixty (60) days, and that in England and other countries, when the process of a court is delayed pending appeal, security has to be lodged to abide the result, and also that in cases of bankruptcy, the property of the bankrupt is at once sequestered by the court for the benefit of the creditors of the estate. These matters are no doubt well known to the government and the amendment of our laws rests entirely at their discretion, but we have ourselves experienced the evils arising out of the existing course of procedure and venture to take the present opportunity of submitting our views on the subject for the consideration of the authorities.

THE FAMOUS PLACES OF YAMATO AND KISHIU.

(Continued.)

KAUYA-SAN.

Guides can be procured at the Teñgu-gi tea-house (3,070 ft.), who will shew the traveller the lions of Kanya-sa in one day. The path continues along the right side of a hill, winding gradually round the arc of a circle, high up above the valley out of which the 'new road' emerges. At 1 ri distance beyond Teñgu-gi we come to four cross-roads (2,750 ft.); the path on the left leads direct to the dwellings of the monks, that on the right descends to Nokaha, while straight ahead it continues to the Oku no Wiñ, or Holy of Holies (2,630 ft.). Descending through a cryptomeria wood, we come to a building where the offerings are prepared, called *Go kun shiyo*. Here are exhibited a pair of Mañdara attributed to Koubofu Daishi. The colours are too darkened by time to be any longer recognizable. Close by on the right are six images in bronze, 1°. Jizau, 2°. Fudon, 3°. Dainichi Niyorai, 4°. 5°. and 6°. Jizau. The bridge which crosses the stream on the right immediately beyond them is commonly called *mu miyau no hashi*, the Nameless Bridge, which is an error for *mi meu no hashi*, Bridge of the August Mausoleum. The planks in its floor number 37, and are marked with the names of the 37 Buddhas and Bodhisattvas of the Koñgankai. It is believed that no one who is unacceptable to Koubofu Daishi can pass this bridge. There is a tradition that Hideyoshi made a pilgrimage hither after he had risen to the highest position in the empire, and accompanied by the high priest alone came at night as far as the bridge, crossed it, and turned back again, without going as far as the tomb, having satisfied himself that the slaughter he had been

compelled to make of his enemies in order to seize the supreme power and restore peace to the nation was approved by Koubofū Daishi, and that he might now pay his formal visits on the morrow in full state accompanied by all the princes, without fear of being put to shame before them. On the left is a small enclosure containing monuments of the Mikado Reigeki (1663-1686), Naka-no-Mikado (1710-1735), Sakura-machi (1736-1747), Momozono (1747-1762), Go-Momozono (1771-1779) and Go-Sakura-machi (1763-1770), besides two of the Imperial Princely House of Kāfūfū. The erection of these monuments was purely formal, the sovereigns whose names they bear having been buried at Schinzihi near Kiyauto like most of their predecessors in modern times. Beyond these are a row of wooden posts called *sotoba* (stūpa) to the memory of the successive heads of the Tokugawa family. One of these posts, of huge size, has been put up on the right in honour of Saigan Kichinosuke and those who fell on his side in the Satsuma rebellion of 1877. The Mafroudau, or Hall of Ten Thousand Lamps, originally called the Haidefi (oratory) is a wooden building 100 feet long, and somewhat less than half that in depth, with closed grated shutters. Inside are countless brass lamps ranged in rows as far as the eye can penetrate the darkness. Of these about a hundred are kept constantly lighted. "As they are emblematic of the Wisdom of Vairochana (Dainichi) and Amitābha (Amida), and it is in virtue of wisdom chiefly that the believer attains to Buddhahood, no sacrifice can be more acceptable than burning lamps. Whoever has lighted a lamp in the honour of Koubofū Daishi has no fear of being driven back to the gloomy darkness of the Sañdu River (the Buddhist Styx), but is caught up by the effulgence of those two Beings, and conveyed into the Pure Land where Intelligence reigns." Shiōzei Sonzhiyau, nephew and successor of Koubofū Daishi, first erected a memorial chapel here, which was rebuilt about the beginning of the 11th century by the ex-Kuwaibaku Michinaga. A century later the Mikado Toba (1108-23) established the practice of keeping lamps perpetually lighted. Koubofū Daishi himself had once celebrated service with ten thousand lamps in honour of the great deity of his order. Sixty years after his entrance into dayāna (contemplation), the priest Kishin, who was the second founder of Kaurya-saŋ, kindled a lantern in honour of the founder, which is still shown standing in the centre of the building; it is called after him the Jikiyau tou (lamp of the repeater of prayers, that epithet having been applied to him in consequence of his spending his life in repeating prayers for the souls of his father and mother). In earlier times the Service of the Ten Thousand Lamps was held once a year. When the ex-Mikado Shirakaha visited the monastery in end of the 11th or beginning of the 12th century the number was trebled, and the Emperor-monk deigned to light one with his own hand, which is still to be seen standing opposite to the lantern of Jikiyau. Theyasu made a rule that this service should be carried on perpetually, day and night, and the contributions of the faithful have enabled the monks to keep it up without a break, though at the present day, owing to the resumption of the endowments, they cannot afford to light more than a hundred or so at one time. The priest in charge exhibits the robes which are supposed to have been worn during the previous year by Koubofū Daishi, who is said to be still living in his mausoleum behind, although in a state of profoundly silent meditation. The mausoleum is a small square building surmounted by the Niyoi hanzhiyu, Precious Jewel of Omnipotence, which represents the S'arira, or relics of Buddha's body, in the plainest style of architecture without any decorative carving or colour, surrounded by tall *sugi* and *hinoki* which cast such a gloom around that the building can hardly be distinguished. Below it on the left is an octagonal building called the Kotsu-dau, or Hall of Bones, covering a deep pit, into which the teeth and Adam's apple of cremated believers are thrown by their relatives, so that they obtain the same spiritual privileges as if they were actually entombed there, namely, of being 'born again into Tuchita or *Tosotsu-ten*, the heaven of the Bôdhisattva, or into Sukhavati or *Zhiyaulo*, the Pure Land of Absolute Bliss, by virtue of the mystic formulas repeated by him.' The pit is cleared out every three years. Corresponding to this on the other side is a small building intended to contain a complete copy of the Buddhist canon in Chinese.

Koubofū Daishi was born at Biyaubu-ga-ura in the province of Sanuki in the year 774. His mother dreamt that a holy man came flying towards her from India, who entered

her bosom, and she shortly afterwards found herself to be with child. The infant came into the world with his hands folded as if in prayer. About the age of five he had frequent dreams of sitting on a lotus-flower and conversing with all the Buddhas, but he was careful not to mention this to any one, even to his parents, who were extremely fond of him, and gave him the name of "Treasure" (*Tafuto-mono*). When he was about twelve years old, his parents, reflecting on the miraculous manner of his conception, came to the conclusion that he must have been a disciple of S'akyā in a previous state, and resolved to educate him for the priesthood. In 778 he was sent up to Kiyauto to school, and there he spent some four years, chiefly in the study of the Chinese classics. Becoming dissatisfied with the teachings of Confucius, he attached himself to a celebrated priest of Ihabuchi named Goŋzau, and devoted himself to the doctrine of Buddhism. His preceptor admitted him into the priesthood in 793. Two years later the highest degree was conferred on him by the high priest of Touzhi, and he took the vow to observe the two hundred and fifty rules prescribed to members of monastic orders. He was henceforth known by the name of Kuukai, "Space and Sea," interpreted to mean "Heaven and Earth." Various legends are told of the trials to which he was subjected by evil spirits during his novitiate. A favourite resort of his was Cape Muroto in Tosa, where dragons and other monsters appeared out of the sea and disturbed him in his prayers. These he drove away by repeating mystic formulæ called *Dhāraṇī*, and by spitting at them the rays of the evening star, which had flown from heaven into his mouth. At a temple built by him at this spot he was constantly annoyed by hob-goblins, with whom he was obliged to enter into the conversation, but he finally got rid of them by surrounding himself with a consecrated imaginary enclosure into which they were unable to enter against his will. It is very probable that a disordered nervous system, the result of exposure, fasting and intense absorption in the contemplation of abstractions, led him to believe that these visions were genuine presentations of the senses. In 804 he was appointed to visit China in the capacity of a government student. The vessel in which he embarked was driven out of its course, and instead of landing at Suchou or Yangchou, where the Japanese ships usually came to an anchor, they put into port on the coast of Fuhkeen, where he and the ambassador to whose suite he was attached were detained nearly three months before they were permitted to advance inland. On this occasion his wonderful calligraphic talent, of which so many fables are related, came into practical use, and the letters which he addressed to the Chinese authorities were the means of obtaining leave for the embassy to proceed to Chang-ngan, the capital of China at that period. During his stay Kuukai became the favourite disciple of the priest Hwuy-kuo (Keikwa) who recognized in him the fittest man to transmit to after ages the mystic doctrines of the Yôgachara school, of which he himself was the seventh in succession from the Indian Nāgārjuna, its founder. Having acquired the whole of these mysteries he caused a copies to be made of a large quantity of Buddhist doctrinal works, besides a pair of mañdara representing the hosts of the two worlds Kôfigaukai and Taizaukai, together with a stock of vajra and other furniture, and in 806 he returned to his own country. As he was on the point of embarking, he threw a golden vajra into the air in the direction of Japan, saying: "Let this precede me to a place suitable for the diffusion of the mystic doctrine." The vajra was afterwards found in a tree on the top of Kaurya-saŋ by the workmen who were employed in felling timber for the erection of the temples there. According to another account, it split into three portions, one of which went to Kaurya-saŋ, while the others found a home at Touzhi in Kiyauto and at Cape Muroto before-mentioned. In 810 he was appointed Abbot of Touzhi, which was infested by swarms of large wasps, four or five inches in length, whose sting was so venomous as to cause death in many cases. Rather than encounter this peril, the monks had fled one after the other, and the monastery became deserted. As soon as Kuukai took up his residence there the gigantic pests disappeared before the influence of his sanctity. When he first began to expound the doctrines taught to him by Hwuy-kuo, the other priests listened incredulously, but on a certain occasion when a number of them were assembled at the palace, and a dispute arose as to his dogma of incarnate Buddhahood, he turned away from the company and made the manual sign of "Wisdom," whereupon his countenance

suddenly shot forth beams of light on all sides, and appeared to have assumed the aspect of Vairochana, to the great edification of the Mikado and his courtiers, who bowed to the ground before him. Kuukai then resumed his proper form. After this none ventured to dispute his supremacy, and many eminent priests sought to become his pupils. In 816 he presented a petition to the Mikado asking for the grant of a certain plateau in Kishin, close to the boundary of Yamato, which had become known to him during his youthful wanderings among the hills, in order that he might there erect a convenient sanctuary for the practice of meditation. Having obtained the desired permission, he removed thither to superintend the construction of the necessary buildings, and on his way up the mountain fell in with the local god, who was accompanied by a black and a white dog. He promised his protection to the projected monastery, and in return for this the Shintau Temple of Nifu, dedicated to the mountain-god's mother, was afterwards built by Kuukai in one of the neighbouring valleys. This legend is the explanation given of the toleration of dogs on Kauyasani, while no other animals are permitted to enter the precincts. Other prohibitions existed in former times against women, musical instruments, the planting of bamboos or trees which could be turned to profit, archery and football, gambling and checkers (*go*), bamboo brooms, and three-pronged hay-forks. When the monastery was completed; it was named Kōngau-bu-zhi, the "monastery of the vajra summit," in memory of the miraculous flight thither of the golden vajra. During the rest of his life Kuukai resided chiefly at Kiyauto, and numerous miracles are said to have been performed by him, such as bringing fresh water out of a rock, staying the spread of pestilence, rain-making, and curing the sick without the use of medicine. His last days were passed at Kauyasani. Towards the end of the year 834 he summoned his disciples around him, and announced that he would pass away in the 3rd month of the following year. When the appointed day arrived they assembled in his presence. He pronounced a farewell address, and then appeared to sink into meditation, still sitting in his chair. Soon his eyes closed, and they knew that he was gone, but his appearance remained unaltered. They bore him to his vaulted grave in the same posture, and when they revisited him on the seventh day, they found his body undecomposed, his complexion unchanged, and his hair grown. A slab of stone was placed over the vault, with an aperture just large enough to admit one person at a time, and on it was erected a small stone pagoda. About seventy years later the reigning Mikado sent him a change of raiment. The abbot Kuwāngēn opened the tomb in order to present the new robes, but could not see its occupant. With floods of tears he confessed his sinfulness, and besought the departed saint to manifest himself. After the lapse of some minutes spent by him in ardent prayer, the form of Kōubofu Daishi appeared "like the moon issuing from the mist or like a shape reflected in a mirror?" His hair had grown down to his feet, and his priestly robes were in rags. Tears of mingled joy and grief coursed each other down the face of the abbot as he changed the saint's garments and removed his abundant hair with a razor. During the interview a disciple who was in attendance saw nothing, but the abbot guided his hand to the saint's knee, so that he might at least feel his presence. Fearing however lest others who might afterwards seek to obtain sight of Kōubofu Daishi's face should be disappointed, perhaps through some defect of grace, he commanded that the tomb should be closed up with a solid stone cover, and never be opened again. The popular belief is that Kōubofu Daishi will remain there until the coming of Maitreya (Miroku), the Buddhist Messiah, with whom he is to have an argument on matters of doctrine, in which he will be worsted. The posthumous title of Kōubofu Daishi, "Great Teacher who spreads abroad the law," was conferred upon him in 921 by the Mikado. He is generally credited having invented the *hiragana* syllabary, but there is no evidence to show that he did more than arrange in order forty-seven of the easiest signs then in use, in such a manner that they conveyed in a few lines the sense of a passage from a Sūtra, in which the mortality of man is alluded to and the doctrine of Nirvāna is obscurely suggested.

Returning from the mausoleum to the bridge, and continuing in the same direction, we pass down a long walk among the trees, between crowds of monuments on either side, raised to the memory of thousands of persons of rank, who by this

fictitious burial by the side of Kōubofu obtain the same privileges as those whose ashes are thrown into the Hall of Bones. Conspicuous amongst them are the seven-roofed stone stūpa of the famous calligraphist Hōfami (b. 1557, d. 1637,) the tablets of Hideyoshi, Nobunaga and Asano Takumi no kami, the latter of whom is so well known as the central figure in the story of the Forty-seven Faithful Retainers, and Tahara Tada, the mighty archer who shot the centipede of Mukade yama from a distance of at least five miles. The monument of the soldiers who fell in Hideyoshi's war with Korea stands on the right-hand side, close to a small stone stūpa, on the front of which are engraved the Sanskrit characters which make up the sacred syllable *Om*. On the same side is a spring called *Kuwari-ai*, the waters of which are said to have cured of a serious disease a certain envoy of the Mikado Go-Daigo. Next comes the Ase-kaki Jizau, said to be covered every morning with the perspiration which that god's sufferings in hell for the good of the human race bring out upon his body. Then a tablet to the memory of 4,000 persons who lost their lives in the great fire in Yedo in 1828, when half the city was laid in ashes. Close by on the left is the monument of the traitor Akachi Mitsuhide, split in two from top to bottom by the wrath of heaven, as a warning to faithless servants. On the right are to be seen the tablets of Kumagaya Nahozane and of the boy Atsumori whom he relentlessly slew at the battle of Ichi-no-tani, and on the same side those of the brothers Soga. The finest of all the monuments is that of the third Tokugawa Shiyangū, Ihemitsu, also on the right hand, a short way from the road. Scattered about amongst the stone monuments are several small chapels to various Shintau deities, and to the memory of great families belonging to the territorial nobility.

On issuing from this huge cemetery we arrive at a wide street lined on both sides by the residences of the monks. At the first on the right, called Daiwē-wi, are some excellent wooden carvings over the porch of lions at play; those of the gateway are also good. The large bronze standard lantern of recent make is an offering from the province of Chikuzen. Most of the priests are willing to put up strangers, but it is advisable to be provided with a recommendation from the keeper of the last inn where one has stopped. One of the largest of these houses is the Kōngau, where the abbot resides. *Wēfama-wi*, in a turning to the left out of that part of the main street called Higashi Wodahara, is a very neat and comfortable house, and the monks are very obliging. Continuing along the main street, we arrive at the main temple, called collectively the Daizhiyau. The paths which must be trodden in visiting the buildings in succession together form the Sanskrit letter "A," which is regarded as the symbol of the Taizaukai, the rest of the mountain, as far as the tomb of Kōubofu Daishi, representing the letters *am*, symbolic of the Kōngaukai. The product of these two letters is the syllable *Om*, which begins so many of the mystical formulae. Passing by the Eastern Pagoda, the Hall of Abstraction (*Saṁmaida*) and the *Aizēda*, which contains an image that once belonged to Nobunaga, we come at once to the Kōfau, or Golden Hall. This is a handsome two-storied structure, the huge beams and columns of which are all of solid *heya-ki*. At each corner are pairs of magnificent carvings of lions in high relief on single slabs of this wood, nine feet long by four feet high. The guide will procure admission into the interior. Twenty-six tall columns, 6 feet 6 inches in circumference, support the ceiling and mark off the inner chamber from the broad corridor which runs all round the building. Tall grated folding-doors complete the line of demarcation. Inside this chamber a further division is made by four pillars, a pair right and left, which cut off two side aisles, on the inner walls of which hang large *maṁdara* representing the Two Worlds. The shrine (*dzwahi*) contains an image of Yakushi carved by Kōubofu Daishi himself. In the compartments of the coffered ceiling in nave and chancel are paintings of Buddhist deities. The spaces called *ramma* above the lintels between the pillars are filled with paintings of angels brilliantly coloured, and above these again are coloured carvings of birds. On the E. side of the shrine are images of Kōngau Satsuta (Vajra Sattva), Fudau (Akchāra) and Fugen Bosatsu (Samantabhadra), on the W. Kōngau Wau (Vajra Yakcha), Ganzāze Miyauau and Kokuzau Bosatsu (Akāśagarbha). These six images stand on a raised dais, the sides of which are filled in with the peony and lion (*botan ni kara-shishi*) in gilt open-work on a large scale,

which is extremely effective. Three handsome gilt baldaquins are suspended in the nave. On the four pillars between which hang the two mañdara are depicted the Four Heavenly Kings. Round the inner wall of the building, which is of plain wood, neither painted nor varnished, are carvings of birds in the spaces over the grated windows. At the back of the wall behind the dais are four paintings of Arhan on a gold ground, executed in an extremely florid style, about 9 feet square. Tall black lacquered doors, eighteen feet high by four wide, close the entrance to the dais from the back. At the entrances on the four sides of the building dragons in wood occupy the spaces over the doors, and the brackets which support the porch-roof are decorated with bold carvings of the tree peony and chrysanthemum. This handsome building was erected about 25 years ago in place of one which had been accidentally burnt down. Up to the time of the fire a two-storied pagoda, 160 feet in height, which had been rebuilt in 1642, stood behind it on the north. Close by was the Kuwañzhiyandau, a building set apart for the reception of novices into the priesthood by the performance of a rite resembling baptism. Funds are being collected for the reconstruction of these two edifices. In a shed are shown the images saved from the large pagoda, namely the Dainichi Niyorai (Vairochana) of the Taizau-kai and the Four Buddhas of the Kōfōgau-kai, namely Ashiyuku (Akelobhya), Haushiyau (Ratna Samblava), Mida (Amitābha) and Shiyaka (Sākya). The Mi-yei-dau contains the famous portrait of Kōboku Daishi painted by his disciple prince Shōfū, the eyes of which were dotted in by the saint himself. A pine-tree enclosed by a fence in front of the Mi-yei-dau, called Saiko no matsu, pine-tree of the triple vajra, represents the original tree on which according to the legend the golden vajra alighted. The Saitafu (western pagoda) on a slightly elevated platform is dedicated to the same five Buddhas as the above. On the beam which runs round the four sides of the building above the doors and windows are large paintings of birds, and an angel (Apsara) in the space above each; the colouring of these is very fine.

Beyond the pagoda are two Shiātou chapels originally dedicated to the Gods of Nifu and Kauya, 'protector-deities of the monastery, with a long oratory in front, but the insignia of the gods have been carried away and the cross-beams of the torii removed in the process of 'purification,' or separating the worship of the two religions. Near where formerly stood the Chūmon or Inner Gate, with its image of Tamō-teñ and Kuwaumoku-teñ (Virūpakha and Vaisramana), rises the Kuzhiyakudau, dedicated to Kuzhiyaku Miyawau, the Wise Peacock King. (Mayūri Vidya rājā) which is the name for one of the transformations of Vairochana regarded as the parent of all things. Descending the steps here, and turning to the right, we shortly find ourselves at the Great Gate, occupied by the colossal statues of Narayen Kōfōgau and Kōfōgau Rikishi (Nārāyana and Vajrapāni). It was built in 1705. This is where the ascent from Wakayama ends.

SUMMARY OF FOREIGN TRADE OF JAPAN, FOR THE YEAR 1878.

The Foreign Trade of the year amounted

In Imports to.....\$33,334,392
In Exports to. \$26,259,419

The total being.....\$59,593,811

As compared with the trade of 1877, which amounted

In Imports to.....\$25,900,541
In Exports to.....\$22,866,708

Total\$48,767,249

that of 1878 shews an increase

In Imports of.....\$ 7,433,851
And in Exports of.....\$ 3,392,711

Total increase.....\$10,826,562

The trade of 1878 was the largest yet done by Japanese in any one year, the next, in the aggregate of Imports and Exports being that of 1876, which amounted to \$31,547,855. In Imports the trade of 1870, which amounted to \$31,120,641, had hitherto stood the highest on the list, but

it must be remembered that owing to the failure of crops in Japan that amount included importations of rice to the amount of \$12,755,331. In Exports those of 1878 have only been exceeded by those of 1876 which amounted to \$27,578,551, the silk season of that year having proved exceptionally favourable to Japan.

The trade of 1878 was divided between the Open Ports in the following proportions.

	Imports.	Exports.	Total.
Kanagawa	\$26,011,300	16,092,921	42,104,221
Hiogo & Osaka ...	\$ 5,838,624	6,554,890	12,393,514
Nagasaki	\$ 1,484,468	2,398,501	3,882,969
Hakodate	—	688,940	688,940
Niigata	—	524,167	524,167
Total.....	\$33,334,392	26,259,419	59,593,811

Imports.

The increase in the values of Imports appears under the following general headings to the amounts named :

Cotton Manufactures	\$4,385,544
Woollen do.	561,597
Metals	335,926
Miscellaneous Foreign	2,483,423

Other headings on the other hand exhibit the following decrease

Mixed Cottons and Woollens	\$ 146,017
Arms and Ammunition.....	164,851
Eastern Produce	21,771

The increase in Cotton Manufactures is chiefly observable in yarn which was imported in 1878 to the large amount of \$7,560,963 as against \$4,088,890 in 1877, the advance being no less than \$3,472,073. This importation exceeds by more than fifty per cent. the highest importation previously known, namely that of 1872 which amounted in value to \$5,933,342.

In other Cotton Manufactures the increase in 1878 on the importations of 1877 amounted to \$913,471 the totals for the two years being \$4,264,785 in 1877—and \$5,178,256 in 1878. It should be noted, however, that the the importations of Cotton Manufactures in 1877 as compared with those of 1876 shewed a falling off of \$684,666; and also that the value of the importations of Cotton yarn had remained stationary during the three years 1875, 1876 and 1877.

Unfortunately this great increase in Cotton yarn and Cotton Manufactures does not denote a relatively prosperous trade to the foreign importers. Owing to the depression of trade at home those goods were forced on the market, and disposed of in many instances at considerable loss, to the advantage, however, of the Japanese purchasers, who often obtained their supplies at less than cost price, and thus benefited in proportion to the loss sustained by the foreigners.

The increase in Woollen Manufactures is nearly entirely limited to Mousseline de Laine, the product of French and German looms, of which there continues to be a steady and growing request among the Japanese.

The increase in Miscellaneous Foreign goods may be mainly traced to the rapidly extending consumption of Kerosene which advanced from \$602,725 in 1877 to \$1,856,881 in 1878, or an increase of \$1,254,156.

The slight decrease observable in the Imports in 1878 under the head of Eastern produce, which consists mainly of Sugar and Raw Cotton from China, combined with the following comparison of the value of these Imports for the last three years, shew that this branch of the Import trade is not increasing.

	1876.	1877.	1878.
Sugar	\$2,743,820	2,872,148	3,073,282
Raw Cotton	724,911	424,439	289,207
Other Eastern Produce.....	959,311	846,722	759,049
Total	\$4,428,042	4,143,309	4,121,538

Exports.

In exports the increase in values is observable under these headings to the following amounts:—

Silkworms Eggs	\$335,608
Tea	3,137
Copper	38,273
Camphor	69,907
Coal	139,503
Dried Fish	195,695
Rice	2,380,717
Miscellaneous.....	1,474,919

Against which there appears the following decrease in the values of the undermentioned Articles.

Raw Silk	\$1,064,697
Tobacco	121,741
Wax (Vegetable)	58,610

The increase in the value of silkworms eggs is attributable to the higher prices realized in 1878, the number of cards exported being considerably less than those of 1877.

Tea realized lower prices in 1878 than in 1877, the increase in value being only \$3,137 while the quantity shipped was 10,676 piculs in excess of that of 1877, the total export in 1878 being 217,579 piculs, valued at \$4,412,457 as against 206,903 piculs valued at \$4,409,320 in 1877.

Copper shows an increase in quantity of 14,340 piculs, but in value of only \$38,273, the total value in 1878 being \$866,384.

An increase in Camphor of 3,568 piculs makes this year's export the largest yet known, the total value being \$309,972.

Coal shows an increase in tons of 42,083 and in value of \$139,503, the total quantity exported being 200,740 tons valued at \$857,322. It has thus recovered to the extent of the export of 1875, the value of which amounted to \$858,883.

Dried Fish for the first time exceeds a million dollars in value (\$1,031,355), the increase on 1877 being \$193,695.

Rice was exported in 1878 to the considerable sum of \$4,641,653, being an increase on the export of 1877 of \$2,380,717. The value of the rice exported this year exceeded the value of the Tea Export by \$229,196, and it therefore stands second only to silk in the Exports of 1878. This result clearly indicates the capacity of Japan to export rice in favourable seasons, and the desirability of the Government permitting perfect liberty in a trade which forms the principal industry of the country, and which would probably confer, by its free development, greater benefit on the agricultural class of Japan than the trade in any other production.

It is satisfactory to note that the same class may also profit considerably in the future by the new trade in wheat, which in 1878 was exported to the value of \$889,909, the export of 1877 having been only \$108,124. It was chiefly sent to China, but the cost of transport to England would not be greater than from San Francisco to the latter country. Experimental shipments to Great Britain have been attended with success. According to an estimate of the Government, less than two-tenths of the total area of Japan has been brought under cultivation, and there is little doubt that much of the vast upland and hill tracts which are now lying waste, and are unsuited to the growth of rice, might be profitably laid down in wheat, barley or other cereals. The great island of Yezo which is well adapted to wheat, and the area of which is larger than that of Ireland, has scarcely yet been touched by the plough. It is to her agricultural resources, which admit of much wider development, that Japan must mainly look for increased Exports and greater commercial prosperity.

The notable advance in Miscellaneous Exports from \$2,773,496 in 1877 to \$4,248,415 in 1878 being an advance of \$1,474,919 is chiefly attributable to the above mentioned trade in wheat which is included under that heading. Seaweed also shows an increase of \$102,238, but the total of \$504,946 is considerably less than the Export of 1876 which amounted to \$679,216. This shows that the trade in this article which is exported solely to China is falling off instead of increasing. The trade in minor miscellaneous articles of export as drugs, porcelain, lacquerware, fans, &c., exhibits some improvement on that of 1877, but no material advance when compared with the exports of previous years. It is probable, however, that the Custom House Returns do not correctly describe the value of these articles, as the extensive employment afforded to the Japanese manufacturers of porcelain, lacquer ware and other articles called by the general name of "Curios" is patent to the foreign residents in this country.

The export of Silk exhibits a decline in value of \$1,064,697, though the total quantity of all kinds, 25,708 piculs (including Noshi, Floss and Waste), is 1,431 piculs in excess of the exportation of 1877.

The Export of Tobacco fell to \$107,547, or less than half of the Export of 1877, and Vegetable Wax to

\$106,367. In 1872 Tobacco was exported to the value of \$669,340, and in 1873 Vegetable Wax to the value of \$377,670, these being the largest exportations of these articles in any one year.

TREASURE.

The Importation of Treasure in 1878 amounted to \$2,659,256 and the exportation to \$10,852,994, the difference against Japan being \$8,193,738. The same difference is observable in 1877, when Japan exported Treasure to the amount of \$10,079,200 and imported \$2,072,673.

TONNAGE.

The Returns exhibit a considerable increase in the general foreign tonnage of 1878 as compared with that of 1877.

	Ships.	Tons.
Shipping of all countries.....	1878 838	748,872
	1877 746	623,977

Increase in..... 1878 92 124,895
The total of 838 ships and 748,872 Tons was distributed under the following flags.

	Ships.	Tons.	Increase of tons in 1878.
British	487.....	417,691.....	102,173
American	180.....	212,266.....	12,651
			Decrease.
French	33.....	45,616.....	6,957
German	77.....	34,054.....	6,354
Swedish and Norwegian...	22.....	16,651.....	13,357
Danish	16.....	11,823.....	5,770
All other Countries	23.....	10,771.....	

French shipping showed a decline in 1878 of 6,957 tons, and Russian fell from 11,945 tons in 1877 to 3,341 tons in 1878.

Foreign Census.

The total number of European and American Residents in 1878 is returned at 2,477, being fifteen less than that of 1877. Of this number British Residents are returned at 1,067, or a decrease of 89; Americans at 479, or an increase of 112; Germans at 300, or an increase of 28; French at 230, the same number as in 1877; Dutch at 105, or a decrease of 11; Portuguese at 95, or an increase of 10; while the residents of all other countries number 209. The Chinese Residents are returned at 3,028, being an increase of 921 on 1877, and twenty per cent. more than all the European and American Residents. It is doubtful, however, whether these figures can be regarded as accurate in any instance.

In addition to the usual Tables A. B. C. D. E. F. G. H. it has been thought convenient to add to this summary the following series of Returns of the Foreign trade of Japan from the earliest dates.

I.—A Summary of Imports and Exports for the five years 1860-1864.

This return can only be regarded as an Estimate. The Custom House returns of those years were most imperfect, and as at that time all goods were notoriously and greatly undervalued, H. M.'s Consuls in compiling their Reports had to depend greatly on private mercantile statistics in order to form even an approximative computation of the real value of the transactions. There is no doubt, however, that during the first six years of the Trade the value of the Exports largely exceeded that of Imports. The Japanese people had to become gradually accustomed to the use of the latter, and to obtain means of purchasing them by the sale of their Exports. More care was given to the compilation of the Trade Returns after 1864, and the Tariff of 1866, which substituted specific for ad valorem duties on all goods other than those of a miscellaneous character, greatly benefited the Revenue, and facilitated the compilation of Customs House statistics.

II.—A similar return for thirteen years from 1865 to 1878, exclusive of 1866, the figures for which cannot be given owing to the destruction by fire in that year of the Custom House Records of Kanagawa.

III and IV.—Two synoptical Tables of the Imports and Export Trade for the same period showing the amount of trade done in each year in the principal Import and Export

Staples. It may be observed that owing to a partial rearrangement of the headings, the figures under some of them do not always agree with the amounts given under the same headings in previous annual summaries issued by this Legation.

V. and VI.—Two Returns of Treasure, one compiled from Consular, the other from Custom House Returns showing the amount of coin or bullion imported and exported by Japan for the seven years 1872-1878.

VII.—A Return of British and Foreign shipping entered at all the Ports of Japan for nineteen years from 1860 to 1878.

VIII.—A Return of British and Foreign Residents in Japan for five years from 1874-1878.

These Returns may be found of use at a time when much is said by Japanese newspaper writers about the "balance of trade" which they represent as being greatly against Japan, and as leading to the impoverishment of their country. According to these Returns Japan has sold to foreign countries since 1860 produce to the amount of \$300,109,872, and it is of course obvious that foreign trade has had the effect of increasing the wealth of the country to that amount. She has received foreign merchandize in exchange to the value of \$323,037,581, the difference in favour of Imports being \$22,927,709. The actual existence, of this difference however, depends upon the way in which the valuations have been computed. But assuming that they fairly represent the relative values of the Imports and Exports, it should be observed that the Imports include two items which cannot be regarded as ordinary merchandize, namely, arms and ammunition, and goods or articles imported by the Government. The former as shown by Return III were bought by the Government and (in early years) by Daimios to the amount of \$9,311,255; and the goods imported by the Government amounted in six years only, 1873 to 1878, (earlier Returns of these transactions being not procurable) to \$8,053,235. It will be seen that these two items, which there is good reason to believe are greatly undervalued, amount to \$17,364,490, and if returns of Government goods were obtainable for the seven years previous to 1873, it would probably be found that the above mentioned difference is fully accounted for, and that the value of merchandize imported in the ordinary course of trade since 1860 either closely equals the value of Exports, or possibly exhibits a balance in favour of the latter.

The Returns of the Import and Export of Treasure which are obtainable for seven years only (1872-1878) show a balance against Japan of rather more than forty-six millions of dollars. This computation is formed from two different sources, one compiled from Consular Estimates, the other from Custom House Returns. Considerable divergences may be observed between the two, and it is probable that the Treasure Returns are much less reliable than the Returns of Imports and Exports. But admitting that they denote a heavy money expenditure in recent years on the part of Japan it is not difficult to account for such an outlay, although it bears no connection with the course of trade. It may suffice to point to the sums paid by the Government for Railway plant, machinery and apparatus employed in their various public works and commercial establishments, for ships of war and war material, and their fleet of merchant vessels, for interest on foreign loans, the cost of Legations and Consulates, and other expenditure, abroad and for the salaries of their numerous foreign employees. On the other hand these Treasure Returns do not take note of the considerable sums in coin which are disbursed in Japan by foreign merchant vessels and ships of war in payment of supplies, or by foreign residents and visitors in meeting their cost of living or travelling expenses.

There is little doubt, however that for some years past Japan has been paying away more money than she has received, but this result is not to be attributed to disadvantageous trade but to the expenditure of the Government which has brought its own return in increased administrative power, in many praiseworthy public improvements, and in the spread of knowledge among the people. Having furnished the country with a paper currency, the Government have used her coin or bullion to meet this expenditure, and it may be concluded that the store of national specie has consequently proportionally diminished. A different result would probably have been witnessed if the Government

had pursued another policy in regard to the introduction of foreign capital. Capital is the one thing needed to develop the resources of this nation, as it has very little of its own, and its available wealth may be said to be limited to the annual yield of its soil. But the government have hitherto strictly excluded the introduction of foreign capital, and the result of this and other restrictive measures is shown in the limited increase in the exports, in the costly character of internal transport owing to the primitive condition of its roads, and the high freights of the Native Steam-ship Company which has a monopoly of the Coast carrying trade, and in the slow development of its mines, or other productive enterprises which cannot be undertaken without preliminary outlay. Thus we see that while Japan is reputed to be rich in mineral wealth, the trade returns show an increasing importation of metals in 1878 to the value of \$1,956,638, and that kerosene was imported in the same year to the value of \$1,856,881, although the country is known to be rich in springs of mineral oil.

It is evident that the growth of foreign trade, as well as the increase of national wealth, is dependent on the producing power of the country, and that in the course of trade Japan cannot buy more than she is able to sell. That this patent truth is present to the minds of some Japanese may be seen from the following passage in an article in a leading Japanese journal the "Nichi Nichi Shimbun" on "the balance of trade"; "Commerce," says the writer, "is after all reducible to an exchange of Commodities. We should therefore endeavour to increase our Exports as much as possible. If the idea of putting a decisive check upon importation is not mere folly, what is it? Rather let the people be encouraged to increase their productions, and let the Government boldly remove the present impediments to export by abolishing the Exports duties," and, as the writer might have added,—by removing those restrictions on trade which obstruct, to a far more serious extent than the export duties, its full and natural development.

Yedo. August, 1879.

THE JAPANESE PRESS.

COMMERCIAL BATTLES.

(From the *Chingai Bukka Shimpō*.)

It would be impossible to point out a country on the face of the earth which has not been the scene of warfare at some period of its history. In the dark ages, when the world was inhabited solely by savage tribes, warfare was the normal state of existence, and even in these more enlightened times, although nations enter into treaties and a code of international law has gradually grown up, still, when any dispute arises it is generally referred to the arbitrament of the sword, hence the necessity of those huge armaments, supported by all countries as essentially necessary to their very existence, and which act so prejudicially upon the development of commercial pursuits. Every nation seems without exception to follow the same policy and it is much to be desired that the "Golden Age" would set in when all the inhabitants of our globe will live together in peace and harmony like the members of one well regulated family.

Persons of the meanest capacity, even little children, understand what is meant by the battles which take place in actual warfare, but there is another struggle constantly going on in the world which we consider of vastly greater importance than the clash of contending armies, we mean the struggle for commercial supremacy, a "commercial battle" which is never concluded. Traffic in the world's productions is the most important enterprise that a nation can embark in, it is the duty of every nation to engage in it, and the country which is most successful in the competition will not only enlarge its power as an independent state but also extend its influence over the whole world, while its defeated rivals may be absorbed by other countries and totally ruined. Warfare is naturally an object of aversion to all rightminded persons, and ought never to be attempted except from actual necessity, but the injury sustained through it is only temporary and may be easily surmounted while the nation which is thoroughly defeated in the battle for commercial supremacy can never hope to regain its lost

position. An eminent American remarked "that everyone should make it his principal aim through life to increase the productions of his country, if only by one single article and sell it to a foreign country." This is an extremely sage observation and is the true secret of commercial success from a national point of view. If this is constantly borne in mind, the nation whose inhabitants practice it to the greatest extent, is certain of eventual success. England is not by any means a large country, but its citizens are astute in matters of business and possessed of an enterprising spirit. They have gradually attained success and at the present time there is not a port in the world unvisited by English ships and not a town of any commercial importance when Englishmen are not engaged in business. As England is not a fertile country, free trade principles have been adopted and manufacturing industries encouraged so that England can import the raw material from abroad cheaply and return it in a manufactured state. By following this policy England has achieved a complete victory over all other nations and is now enjoying in consequence great wealth and power. Belgium again from devoting great attention to her manufacturing industries, is, although of small extent, of great and increasing wealth and takes rank amongst the foremost nations of Europe. For an example derived from the experience of late years let us observe the present relative positions of France and Germany. France was considered in a purely military sense the stronger power, but met with signal defeat at the hands of her adversary, the French Emperor was taken prisoner, the capital occupied, and peace only obtained by the cession of two valuable provinces and the payment of the enormous indemnity of five milliards of francs! This disastrous issue of the war had only the effect of urging the French people to fresh exertions in mercantile pursuits and now they are not only more wealthy than before but they easily paid the war indemnity before the time appointed. Germany on the other hand, although victorious in war has declined in wealth, the money received from France has found its way back again in exchange for French products and with it a large quantity of German money so that at the present time Germany may be said to be in a very precarious financial position. It will thus be seen that although Germany conquered France in war the latter country has since obtained a more enduring victory over the former in what we have termed the "commercial battle." That great country, the United States of America, is another striking instance of the effect of commercial prosperity upon a nation. Originally the territory now known as the United States was settled by a heterogeneous gathering of people from all the countries of Europe. They gradually found the oppressive conduct of the British Government wholly unbearable and succeeded at last in gaining their independence after a long and fierce struggle against the might of England. The young nation, was however, without industries and as a natural result they had to depend upon importations from other lands to supply their simplest necessities, hence the wealth of the country declined year by year. Being a shrewd and enterprising community they determined to remedy the rapidly increasing evil, and therefore imposed a protective tariff with the avowed object of fostering native industries; while the Government of the country was conducted with the utmost regard to economy. The favorable results of this wise policy were soon apparent, and in an incredibly short space of time the American Nation has stepped into the first rank as regards importance and wealth. Look for example at the customs reports from China; English importations are steadily decreasing and American increasing with rapidity, the value of American goods imported into China in 1878 being nearly double what they amounted to in the previous year. This is convincing evidence that America can now manufacture and export goods at a lower rate than England, and we also find that America now supplies England with wheat, meat, cheese and other produce to the annual value of £36,000,000 against £7,000,000 some few years since. From all these facts we are constrained to arrive at the conclusion that America is rapidly becoming triumphant over England in the "commercial battle." As we have already shown, in struggles of this kind the victorious nation prospers exceedingly, while the defeated nation gradually declines in importance and finally discovers that it cannot maintain even its independence; such for example has been the fate

of Egypt, Turkey, Holland, &c. Although the reasons for such prosperity on the one hand and ruin on the other are too obvious to require any great amount of explanation we will give one example to show exactly what we mean. Suppose there are two nations, "A" and "B." We will imagine that the inhabitants of the former are busily engaged in industrial and agricultural occupations and that those of the latter, devote themselves entirely to scientific and æsthetic pursuits and affect to despise the vulgar gains of commerce. Now what will be the inevitable result in the event of these two nations engaging in commercial intercourse. It is a natural instinct with all human beings to indulge in articles of luxury, and it therefore follows that the productions of "A" will be eagerly sought for by the inhabitants of "B." The people of "B" having no products of their own must pay the people of "A" in money, the money will soon come to an end; but will "B" then desist from purchasing from "A"?—certainly not, "B" will then borrow from "A" and the latter will be only too glad to lend as the money will surely find its way back again in exchange for merchandise and the ultimate result will be that "A" will gradually interfere in the affairs of her debtor and finally deprive her of the right of independent existence as a nation. Let us now apply the case of "B" to Japan and a remarkable resemblance will be found to exist. After remaining secluded from the outside world for hundreds of years during which the people had no idea of "commercial battles" an American ship arrived here in 1853 and foreign intercourse commenced. Then our "commercial battle" began and has continued without cessation ever since, now over twenty years. The Government and people of Japan are only gradually awakening from the erroneous ideas inculcated by the doctrine of Confucius that persons engaged in commercial pursuits are unworthy of respect, and as this idea had a strong hold upon the people they were quite unprepared by previous experience to engage with foreigners on equal terms and have consequently been hitherto invariably worsted in the "commercial battle," in fact we may say that at the present time they are utterly routed and disabled and apparently no longer able to defend themselves against their commercial enemies. Amongst the public, many are to be found who consider that a revision of the existing treaties will restore "the balance of trade" in our favour, and that we will then easily regain our national wealth. How shallow must be the minds of those who believe anything of the kind! No doubt the present unreasonable treaties are extremely disadvantageous to us, but it would be foolish to depend upon treaty revision alone for aid, and not to strive to develop the natural resources of the country. We will again resort to example. Suppose cholera breaks out in China and the Government acts as ours did, establishing hospitals and taking every possible precaution to combat the disease, the people will give the authorities great praise and we would join them in doing so. The disease would then be stamped out. But the Chinese are greatly addicted to opium-smoking which exercises a fatal effect on the human frame, destroying both body and mind. The Chinese Government have taken no steps to prevent the use of opium, and although they might stamp out cholera, which at the worst is only a temporary ill, the gradual ruin of the whole nation through the use of opium would still remain. This example applies exactly to commercial matters in Japan, the disadvantageous treaties being equivalent to cholera and opium-smoking to the neglect of industrial undertakings. No matter how successful we may be in procuring a revision of the treaties, unless we vigorously strive to increase the productions of the country and undersell foreigners, the victory will still remain with them. The industrial position of Japan is not however utterly beyond redemption. Notwithstanding the many internal troubles that have occurred, our trade has exhibited a gradual improvement since the year 1868, as may be seen from the following table:—

	EXPORTS.	IMPORTS.
1868.....	Yen 15,553,472	Yen 10,693,071
1869.....	" 12,908,978	" 20,783,633
1870.....	" 14,543,012	" 33,741,637
1871.....	" 17,968,608	" 21,916,727
1872.....	" 17,026,647	" 26,174,814
1873.....	" 21,632,140	" 28,107,390
1874.....	" 19,315,064	" 23,461,814

1875.....	„	18,611,110	„	29,975,627
1876.....	„	27,711,527	„	23,964,670
1877.....	„	26,907,630	„	32,224,166
1878.....	„	24,665,905	„	30,146,188
Total.....	„	216,844,073	„	281,189,737

Although there are decreases in some years still it will be found that on the whole there has been a gradual steady increase in our exports, so we have every reason to believe that if our countrymen will only strive to increase our products, Japan will yet come off victorious in the "commercial battle." In order to accomplish this more speedily and effectually the Japanese must learn to transact business on a large scale and give up the idea of gaining profit with but little exertion. Examination into actual facts will prove what we assert is unfortunately too true, that our countrymen, although they have abandoned their old prejudices and are anxious for gain, appear only to be desirous of outside show, to the disregard of solid progress. Some of the Government measures are examples of this. An expedition was sent to Formosa because some of our subjects were cruelly massacred by the savages of that Island, and it was proposed to send another the expedition to coerce the Koreans because they ignored the rights of Japan, while in social matters the people delight to see their names figuring in newspapers as subscribing to different charities or the entertainment of foreign guests. Not that there is anything wrong in doing so, but if attention is given to these matters alone, to the exclusion of everything else can it not reasonably be considered that these persons are only desirous to act an "ornamental" and useless part in life? We may perhaps be accused of ignoring the different companies and associations which have been formed during recent years and are now in a highly prosperous condition. This accusation may at first sight appear reasonable, but it will be found that the majority of these companies are banks, (which now number nearly two hundred) whose actual object is principally the issue of notes on the deposit of government loan bonds which enables the proprietors to live in idleness and luxury on the dual interest they receive, i.e. from the notes and bonds. As far as the other associations are concerned whether they are known as rice companies, stock exchange companies, change offices, &c. they are in truth nothing more or less than media for speculation and we feel no pleasure when a rise occurs in the price of their shares. Putting aside the companies we have referred to, how many associations are there engaged on a large scale in developing the resources of the country? They will be found we regret to say about as numerous as the stars which are visible at noonday. It is very evident that if we continue to pursue our present course of action, or rather inaction, we shall most assuredly be defeated in the "commercial battle" and reduced to the pitiable condition of Turkey, Egypt, Greece and other similarly unfortunate countries without the shadow of sovereign rights. Now is the time when we should all strive to prevent so unhappy a result of our "commercial battle."

THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XV.

EMANCIPATION.

The Lord Abbot's anticipations were not ill-founded. In order to obtain the removal of the sacred car abandoned before the palace gates, the Heike Chief had no resource but an application to Yenriyaku. Thus the relative positions of the contending parties were so far reversed that subsequent negotiations resulted in the banishment of Morotsune, Vice-Governor of Kaga, and the satisfaction of all the claims advanced by the friars of the White Mountain.

So to all appearances any permanent disaffection of the Kurama cenobites was prevented, though indeed it was little likely that the haughty priests would entirely forget the indignities they had been obliged to endure before obtaining these concessions. Better calculated to conciliate was Shigemori's courtesy, who, full of admiration for the prowess of the

man whose sword he had so narrowly escaped, and not without sympathy for his sorrows, caused Friar Toyo's body to be carried with all care to Mount Hiye and buried under the tombstone that already bore his name.

But even as in physical ills the most subtle medicine is powerless to erase the memory of the pain it alleviates, so Shigemori's noble acts, though they might in part redress his father's iniquity could never remove its impress. Nay in truth the contrast men drew between the father's arrogant autocracy and the son's loyal beneficence, seemed rather to bring the former into more conspicuous prominence, so that finding he had irrevocably lost his parent's confidence and was fast losing every hope of either undoing or arresting his errors, Shigemori already began to harbour the sad design that was afterwards destined to win him a name of endless reverence.

These things, however, were as yet little anticipated, and least of all by Ushiwaka, sorrowing for the fruitless death of his friend the friar. More than a month elapsed before Shomon was sufficiently recovered to carry the particulars of that event to Kurama, but Ushiwaka had not meanwhile been left in ignorance by his new acquaintance, who indeed, as it afterwards appeared, described the dead man's honourable sepulture even before Shigemori's merciful intentions in that direction had been declared.

For the rest before the winter's rain and rime had begun to interrupt his nightly visits to the ruined fane, Ushiwaka had profited so well by his second course of instruction that his teacher pronounced him qualified to commence a higher study, the first principles of which were contained in a book of sixteen volumes called "The Six Military Canons." This manuscript recorded the chief parts of a dialogue carried on more than two thousand years before between the Chinese Emperor Bunno and the Genius Taiko. Strange devices of strategy and cunning methods of tactics were there described, but by chosen eyes alone might their mysteries be discerned, neither of those that had thoroughly mastered the contents of the scroll had any fallen short of immortal fame, from Choriyo, the "ubiquitous general," to the matchless warrior Tawara, who, fixing eight arrows in his bow, slew the eight wraiths of the sorcerer Sama at one shot. Only two copies of the manuscript existed in Japan; one was in the possession of the old man of the shrine, the other, an heir-loom of the God-Kings, had been handed down from generation to generation of the Imperial family, much treasured, but little read, for its close crabbed characters, obscured by commentary and blanched by age, were scarcely to be deciphered by a decade of study, so that, coming at last to be regarded as the history of some forgotten cabala, it had been added to the archives of the chief astrologer and was now at once inaccessible and incomprehensible.

It may well be imagined with what feverish anxiety Ushiwaka looked forward to the perusal of such a book under the guidance of so able a master as he had learned to account his new friend. He thought of nothing for many days before the appointed time, and so thinking, forgot the precautions that had hitherto secured him from observation.

On the morning of the very day that should have seen his hopes consummated, he was formally summoned to attend an extraordinary meeting of the Priestly Chapter. It was not without misgivings that he obeyed this mandate, for it reminded him suddenly of the restraint to which the friars might at any moment seek to subject him, but come what might, he was determined not to abandon his independence, and so, with his sword in his girdle, took his way boldly to the minster.

The Lord Abbot was seated in the chancel. Before him lay the lacquered coffer that contained the Canon of Consecration, and on either side the elders of the monastery were marshalled in two long ranks. The disposition of the altar furniture, the vestments of the priests, and above all the instruments of tuncure lying at the prior's side, explained at once the object of the synod.

The abbot, with downcast eyes and in a low voice, said: "It is more than time, Ushiwaka, that the intention with which you were sent to these cloisters should be consummated. Your studies are quite sufficiently advanced, and although you are still young, the circumstances of your case render any further delay inadvisable. We have therefore met to-day for the purpose of admitting you finally to the priesthood."

The crisis was then come, but had it been thus accelerated

by the abbot's anxiety alone, or by some new order from Kiyomori? It was essential to determine this.

"Am I to understand," Ushiwaka asked, "that thus happens in the ordinary routine, or has the period of my novitiate been shortened by some unforeseen event?"

The abbot must have been prepared for this question, yet he was evidently perplexed by it.

"It cannot be expedient to discuss that point now," he answered evasively. "We believe in the wisdom of the step we are taking, and you have no reason to discredit our belief nor yet to be surprised at what has been so long contemplated."

Then, as if to avoid any further discussion, he turned hastily to the prior, and bade him proceed with the ceremony.

Ushiwaka, on taking his seat, had detached his sword from his girdle and laid it beside him. He now raised it, sheathed as it was, and said very quietly and distinctly:

"My Lord Abbot, I have no intention of entering the priesthood."

The tone of these words, no less than the gesture that accompanied them shewed that they announced an unchangeable resolve. Many of the assembled friars, knowing how the abbot loved his favourite pupil and how the cherished hope of their chief's declining years had been to make this boy his successor, looked to see all the strength of supreme authority opposed to such insubordination, but the set unflinching eyes that met his own and that ominously grasped sword-hilt, taught the old man that years of care and culture had wrought no change in the child, who standing under the sacred oak one winter's morning seven seasons before, had asked whether anything but death justifies submission to disgrace.

Nevertheless the abbot had cherished his scheme too fondly to abandon it without another effort.

"Have you then forgotten," he remonstrated, "that the dedication of your life to the service of the gods, alone saved it from the hands of the executioner? You no longer belong to the world nor have you any right to enter the society of your fellow-men. Think you that your present conduct is consistent with either your own honour or the interests of those that entrusted you to our charge?"

This allusion to the boy's mother was not judicious. Ushiwaka knew her brave heart too well to doubt that his own inaction would be bitterer to her than any misfortune his enterprise might entail. Still gazing steadfastly at the abbot and still grasping his sheathed sword, he repeated his former words, not now however with so complete a mastery of passion or defiance:—

"My Lord Abbot, I have no intention of entering the priesthood."

A man of gentle heart and strong faith was the abbot, Toko. He had learned, as we have said, to love this boy more than he might have loved his own son, and had long regarded him as his successor in the sacred service. Forgetting everything but this hope and that affection, he now rose from his place, took the instruments of tonsure which the prior held, and advanced slowly but without hesitation towards Ushiwaka.

When the latter became aware of the old man's design he shuddered like one suddenly confronted by some appalling necessity. Then raising his joined hands to the altar, he said:—

"I swear by my father's name that if any seek to achieve this rite it shall be at the risk of his own life."

The abbot hesitated, deterred less by fear for himself than by reluctance to force such an alternative on one he loved. He betrayed neither anger nor astonishment, and Ushiwaka alone saw that his look of appealing entreaty was not undimmed by tears.

But this direct defiance of their chief's control and above all the threat that accompanied it, aroused even the peaceful friars' indignation. A murmur of menace and rebuke was heard on all sides, and the abbot's authority seemed on the point of receiving a vindication he little desired, when the prior, Kakuchi, interposed.

"Permit me to offer myself as a mediator in this matter," he said. "It is not so pressing that it may not be temporarily deferred, nor so trivial that it can be immediately adjusted. If Ushiwaka will consent to become my guest for a time, though I cannot promise him any very sage counsel, he will at least find opportunity for tranquil reflection."

The abbot assented to this offer with a readiness from which

Ushiwaka drew an immediate inference. The prior's house not only stood at the extremity of the cloisters most remote from the ruined fane, but was also so situated that secret ingress or egress was almost impossible. Plainly, therefore, the discovery of his nightly goings and comings had induced this sudden attempt to abridge the period of his probation, and with that knowledge Ushiwaka felt that he might not gainsay the proposed arrangement, but never to the last day of his life did he forget the look of desolate dejection that his old friend's face wore when they parted in the minster.

For many nights the consciousness that he was closely watched in his new residence deterred him from attempting to visit the Dragon God's shrine, and when a favourable opportunity at last presented itself, his journey produced nothing but a weary vigil among the ruins. Sadly disappointed at this failure—for it had never occurred to him to fancy that any irregularity in his own proceedings could embarrass his omniscient friend—and unable to devise any means of renewing their intercourse, he began to pass his idle hours at the fane of Hachiman, the God of Battles, in the vague hope of forming some friendship or gleaning some useful information among the stream of worshippers that flocked thither daily from all quarters.

Here one evening, as he was about to retrace his steps to the cloisters, he was accosted by a man dressed in the garb of a merchant, whom he remembered to have remarked two or three times before praying at the shrine. He was a timid little person, with a furtive manner but a keen eye, and so profusely polite that his most trivial statements were garnished with prefaces and appendices of conventionalities.

"Pardon my inexpressible rudeness in addressing you, Sir," he said. "I am a merchant of Kiyoto and my business takes me every year as far as the province of Oshiu. I trust you will not think me over-presumptuous in intruding myself upon your notice."

Certainly there was every reason to be surprised at this apparently purposeless announcement, but after his first movement of astonishment, Ushiwaka found his interest strongly awakened. Hidehira, Constable of the Northern Marches, one of the most powerful nobles in the empire, inherited an heirloom of staunch allegiance to the House of Gen from his ancestor the first Constable, who had received his appointment at the instance of the Earl of Harima's great-grandfather, as a recompense for assistance rendered to that chieftain in his campaign against the Rebels of the North. Often of late years had Ushiwaka turned eyes of hope towards Oshiu, but as yet he was without any reliable intelligence of Hidehira's disposition, and remembering how many a friend and liegeman of his father's house had been absorbed into the irresistible vortex of the Heike power, he could not but be doubtful on which side the Constable's forces might be found arrayed in the time of trial. This therefore seemed a favourable opportunity of obtaining some information, and so, returning the merchant's salute, he said carelessly:—

"There is a considerable trade, I suppose, between the capital and so large a province as Oshiu? It is a large province is it not?"

"It is, Sir, as you condescend to say, a very extensive province. It contains no less than fifty-four townlands, if I may be pardoned for going into particulars."

"And not a few stout soldiers are to be found in those townlands I should fancy?"

"Permit me to express the same opinion, Sir. The noble Constable's chief Seneschal has condescended to give me some information on these points, and at the risk of wearying you with numbers, I may say that if the troops forming his Lordship's body guards as well as those in the outlying camps were all mustered, they would furnish something like ten times ten thousand men."

Ushiwaka could not restrain an exclamation of astonishment at the mention of this number, for it was precisely the force his day dreams had fixed as sufficient to make head against his father's enemies. The little merchant however occupied the intervals of silence with an assiduity of bows and polite ejaculations that left him no leisure to mark the effect of his words.

"And supposing," Ushiwaka presently resumed, "that such an unlikely event were to occur as another trial of strength between the Houses of Gen and Hei, how might one look to see those forces disposed?"

"I should not venture to be so presumptuous as to express an opinion of my own on such a subject, Sir," the other re-

plied, "but I have heard it said in Oshiu that the proportion would be a hundred thousand swords for the House of Gen and their edges for its enemies."

It cost Ushiwaka no slight effort to conceal the exultation this announcement caused him, but he controlled himself, remembering the fallibility of such information.

"Possibly your business relations with Hidehira's household may have enabled you to form some estimate of the Earl's sentiments on that point?" he said, redoubling the keen vigilance of a scrutiny the other bore without flinching.

"I have had the honour to be the recipient of a confidence from the Lord Constable himself," was the answer, delivered in cautious tones, "but to my great grief the commission arising out of that confidence is still unfulfilled."

"Some insuperable obstacle no doubt prevents you from accomplishing it?"

"Pardon me, Sir, if I seem to differ from you. The obstacle is so far from being insuperable that even now I am within reach of success could I but obtain one assurance."

"Is it permitted to know what that assurance may be?"

"The assurance of your aid," said the merchant, for once divesting his speech of its wonted suavities in his anxiety to watch its reception.

This anxiety did not escape Ushiwaka. It reminded him at once that there might be more peril than profit in this confidence.

"If you have need of my aid, you have also need to be more explicit in demanding it," he said coldly.

"The justice of your rebuke is not open to the very smallest doubt, Sir," the merchant replied, his forehead bowed even to the dust. "I am confounded by the impossibility of excusing myself. With your gracious permission therefore I will at once proceed to particulars. On the occasion of my last visit to Oshiu I had the honour to be summoned to the presence of the noble Constable who condescended to address me as nearly as I can remember in these words. 'Kichiji, if you were disposed to be useful you might bring from the capital something that were worth more to both of us than all the goods you have ever entered in your ledger.' 'My Lord,' I replied, 'I await your commands.' 'Among that long train of horses that I saw on the road yesterday,' continued the noble Constable, is there not, by some possibility, one that could carry a gentleman's trappings as well as a pack saddle?' 'Surely, my Lord, not one but many,' I ventured to reply. 'Not vainly, Sir, I assure you,' the merchant explained in parenthesis, 'for none but a fool would trust his valuables to unsound cattle on a road where to be belated is to be robbed.'"

"No doubt," Ushiwaka assented, seeing that the other paused. "But you do not want my aid to establish the character of your pack-horses, I presume?"

"A thousand excuses, Sir. My digression is unpardonable, but in truth it had reference to his Lordship's admonition, for on hearing my perhaps too presumptions reply, he was pleased to say:—'See that you speak not lightly, Kichiji. The gentleman you may have the honour of escorting, would come here to be Hidehira's friend and ally even as his ancestor was the friend and ally of mine. I have men and arms to spare for a good purpose, and two sons to govern these lands while I march to its accomplishment, but all this is useless without the presence of that friend. Knowing these things, do you think you can undertake to be his escort?' 'I dare not promise to succeed, my Lord, I replied but I am ready to risk all that I possess in the venture.' 'And this avowal which I made then in all sincerity, I desire to repeat now, Sir, if indeed I seem in anything worthy of your confidence.'"

The earnest honesty of the look that accompanied these words was not lost upon their hearer, but the occasion counselled mistrust. Plainly disappointed by the other's silence, the little merchant hastened to conclude.

"I know, Sir," he said humbly, "that nothing is more unreasonable than to expect your confidence, and the Lord constable, though he was graciously pleased to accord me his, assuredly foresaw that I should not always be equally fortunate, for he entrusted me with this token as a credential."

The token was a dirk, resembling in its minutest details of chasing and ornamentation the sword Ushiwaka carried in his girdle. He examined it carefully, struck not less by the exquisite workmanship of its hilt and scabbard than by a likeness too marvellous to be accidental; so marvellous indeed

that it was impossible to doubt the common origin of the two weapons. Neither did this similarity escape the merchant's keen eyes, who now for the first time understood the full value of the token.

"His Lordship was pleased to add," he remarked significantly, while Ushiwaka was engaged in comparing the two swords, "that if a certain gentleman accepted that dirk, I might consider it a sign of his consent to accompany me to Oshiu. Shall I have the happiness of receiving that sign?"

Ushiwaka's only answer was to place the dirk in his girdle beside his father's sword, whereupon Kichiji, hastily drawing back two or three paces, kneeled down, and made an obeisance if possible more profound than any that had preceded it.

"May I be permitted to ask when it will suit Your Lordship to set out?" he asked, now shewing by his form of address that he was acquainted with Ushiwaka's lineage.

"If possible, to-day: at latest, to-morrow," was the eager reply.

"I am overwhelmed with shame to think that my preparations cannot be completed before this evening," said Kichiji. "But if your Lordship will condescend to name a time and place, I can undertake to be ready at sunrise to-morrow."

"At sunrise to-morrow then let it be," Ushiwaka assented. "I will meet you a furlong beyond the North Gate of the cloisters."

Kichiji lingered a moment, as though he doubted the reality of so quick and unquestioning an assent, but while he still hesitated, he found himself alone before the shrine. In truth, Ushiwaka's determination was simultaneous with his conviction of the merchant's sincerity, and without having ever been in a position to command, he instinctively possessed the experienced captain's well founded aversion to frivolous interference. Abandoning therefore to Kichiji all the details of the arrangements for their journey, he hastened back to the cloisters, anxious only to avoid any accident that might prevent him from fulfilling his part of contract.

He had few preparations himself to make, and even these he abridged in the fear of attracting observation. Shomon alone might not be left in ignorance of his movements, and to this end he wrote a letter, explaining that he had availed himself of an exceptionally favourable opportunity for leaving Kurama, and promising to describe his plans in detail so soon as he could do so with safety.

This letter he carried in the evening to the hollow oak at their old trysting-place, where however, to his great happiness, he found Shomon himself waiting; a coincidence so fortunate that it completed his confidence in the prospects of the future. Neither was Shomon less enthusiastic. To his eyes every link in the chain of events by which the present result had been reached, bore the marks of providential forging. The Friar's accidental selection of Kurama as a refuge had provided an exceptionally able master of fence, while the misfortune that removed him from the cloisters had introduced his pupil to a still abler substitute: the discovery of Ushiwaka's nightly expeditions to the ruined shrine had brought about a change of residence, which in its turn had suggested his visits to the fane of Hachiman, where alone he could have encountered Kichiji, and that too on the very day when Shomon's presence at the hollow oak enabled them to arrange their plans after separation and part without the pain of uncertainty.

Not indeed that Shomon consented readily to this parting. His first impulse was to follow Ushiwaka to Oshiu, but he was soon persuaded to remain, on the grounds that his presence at the head-quarters of the Heiki would be much more serviceable to his young master's interests. So the two bade each other farewell with good cheer, and the fates willed that no ominous dreams disquieted the repose of the Heiki chiefs, while the man whom of all others they had reason to fear, watched for the dawning of the day that should witness his emancipation from the bonds his enemies fondly deemed indissolubly riveted.

(To be continued.)

DOUBLE ACROSTIC.

Thou art one 'mongst the many of long ago
Though in accents imploring it's oft heard below.

2 lights.

By many I'm thought of a high degree,
In farm-yards and cricket you oft may us see.

OWEN.

DOUBLE ACROSTIC.

To swells, you'll find this epithet applied,
Which, best of all, expresses their vocation ;
Their minds are always with their neckties occupied ;
Their coats must fit, or cause them much vexation,
To them, the least crease on their shirt-front's "frightful,"
"Most snobbish" to think anything delightful ;
"Not bad" 's the loudest praise we ever hear,
As they take their pleasure with a languid sneer !

1.

This might be an island, a cape, or a town ;
It might be a city, peninsula, or down ;
It might be a marsh, or it might be a plain,
It might be a forest, yet 'twould be just the same !

2.

"Behold ! how brightly breaks the morning ;"
Beneath its beams our hearts are gay ;
We rise betimes our pillows scornning,
And gladly greet the dawn of day !

3.

A saddle, a horse, and a bridle we need
We must have a man, also, to hold in the steed.

4.

How I should hate to be a lawyer's wight,
For'd to sit up, and copy laws all night :
"Heir, administrator, and assign,"
Repeated time, and time again in ev'ry line !

5.

To guess this light, you need not be too wise,
Look straight before you,—there the solution lies !

METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 5TH, 1879.
Observatory of Daigaku, Moto-Fujimicho, Hongô, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.
Light Continuous line—max. & min. Thermometers.
.....represents velocity of wind
.....percentage of Humidity
Max. velocity of wind 15 miles per hour on Friday, 6 p.m.
The barometer is reduced to the freezing point and to the level of the sea.
As will be observed there has been considerable fluctuation of the barometer during the week, the last two days indicating a change for the better. There is also a continuous and considerable fall of temperature, the maximum temperature for Thursday being only 68° which is the lowest point reached since June 4th. A total of 1.4 inches of rain fell during the week.

COMMERCIAL INTELLIGENCE.

IMPORTS.—A large business chiefly for arrival, has been done in YARNS during the past week. Medium qualities of English 16/24s. and 28/32s. have been in most request and show improved values. The movement has no doubt been stimulated, in a great measure, by the reported loss of the *Argyll* (str.) with large supplies of contract goods, but the supposed improved prospects for the future of *kinsatsu* have also influenced dealers to a certain extent. The sales reported include about 1,500 bales 16/24s., 1,400 bales 28/32s., also 300 bales 38/42s. of English spinning, besides some 600 bales Bombay 20s. GREY SHIRTINGS have been in fair request at better rates and transactions include about 15,000 piculs, each 8½ and 9 lbs. for arrival at the end of the year. In other descriptions of PIECE GOODS, business generally has been restricted; the following sales may, however, be noted, viz:—1,200 pieces INDIGO SHIRTINGS, 2,800 pieces TURKEY REDS, 1,000 pieces PRINTS, 2,600 pieces MOUSSELINE DE LAINES, 500 pieces ITALIAN CLOTHS, and 1,000 pieces FIGURED (Fret) ORLEANS.

COTTON YARNS:—

Daitong ...	"	\$4.10 to \$4.50
Japan Rice ...	"	\$2.75 to \$3.20
Kerosene Oil ...	"	\$1.90 to
Newchwang Peas ...	"	\$2.30

KEROSENE OIL.—Since the arrival of the *Erie the Red*, our market has shown signs of weakness and demand has fallen off. We quote the market weak at \$1.90. Advices from Shanghai show a decline there.

EXPORTS.

SILK.—Business has been at a stand still during the past week; some few transactions have been reported, but the silk has mostly gone into foreign godowns under advances only, whilst a great portion of former settlements have been rejected. Prices remain entirely nominal, as dealers, on the one hand, do not like to face the loss, which they are put to by a serious decline in the yen exchange, and buyers, on the other, offer lower prices, especially for Filature silk.

The weather has been very bad and may also have had something to do with the general dullness.

Arrivals:—670 bales, Stocks 4,500 bales; total export to date 2,528 bales, against 3,180 bales, last year.

We give former quotations, but they are nothing but nominal.

	In London at 3s. 9d.	In Lyons at fr.		In London at 3s. 9d.	In Lyons at fr.

Oshius,—Good ...			" Good ...		
" Medium ...			" Med. & C'on ...	\$700 to 740 23/3 to 24/6	fra. 64½ to 68

TEA.—Business during the past week has been greatly limited by diminished stocks and scanty supplies, yet since the 6th instant, settlements amount to piculs 3,200. Prices have daily hardened, and \$28 @ 29 per picul is about the quotation for anything approaching standard Good Medium Tea. The recent rise in value of paper currency, will tend to make holders firm and we look forward to a strong market for the balance of the current month.

Stocks to hand in Yokohama, almost nominal.

Common ...	\$19 & under
Good Common ...	\$20 to 23
Medium ...	\$24 to 27
Good Medium ...	\$28 to 29

Fine ...	\$31 to 33
Finest ...	\$34 to 36
Choice ...	\$38 and upwards.

EXCHANGE AND BULLION.

EXCHANGE.—There has been little fluctuation in Sterling Rates since the departure of the American mail on the 3rd instant, and a moderate business transacted in both Bank and private paper until yesterday, when a fair amount of Bank was taken at 3/8½ for 4 m's, being a decline of ¼ on previous quotations. There is very little private offering in the absence of silk operations, and the market closes with a downward tendency.

Rates close as follows:—

STERLING—Bank 4 months' sight ...	3 8½
" Bank Bills on demand ...	3 7½
" Private 6 months' sight ...	3 8½ @ 3 8½
" 4 " " " ...	3 8½ @ 3 8½

KEATING'S COUGH LOZENGES,

COUGHS,
ASTHMA,
BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., I.S.A., L.M.

Mr. T. KEATING,

Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraven on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL** or **THREAD WORMS**. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Faky that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

THE SUMMARY OF TRADE.

THE British Minister's Summary of the Foreign trade during 1878 completes the records from the various Consulates which have already been published, and it affords so clear an analysis of the points of difference between the trade of 1877 and 1878, that it is unnecessary for us to do more than direct attention to it. Those who are at all curious to see the special items of trade in the past two years, which have shown either increase or decrease, will here find every detail most carefully noted. As a rule it is difficult to revive interest in matters that are past and gone, and most people are too much engrossed in transactions of the moment, or in speculations as to the immediate future, to care much about statistics of the past. But such records are absolutely necessary for occasional reference; they are invaluable to the political economist and to the diplomatist, whilst the general reader can also find in the Consular Reports many interesting particulars of the industries, manners and customs of the people. The Summary now issued by H. M. Legation deals naturally with figures principally, but it will also be found to contain some interesting observations on the past trade of Japan and on the future which should be in store for it. The Reports which have been published in these columns, since April last, have gradually given the records from each treaty port, and the first portion of the present Summary is confined to a recapitulation of those figures. This is done in so complete a manner that we purposely refrain from repeating, in this column, information which is exhaustively given in the Summary itself; but, before proceeding to the second portion of the Legation returns, we would say one word as to the general value of the Trade Reports furnished by the British Consulates—in the hope that, if possible, the suggestion we would make may be considered before the time comes for compiling the statistics of the present year. The Consular Trade Reports may be said to consist of two features; one a collection of figures, the

other descriptive remarks of the country or of an industry. The value of the former is great or little according to the time when they are published, whilst the latter are interesting at any time. Of late years the value of these reports has been greatly increased by their publication in Japan before being sent to England—a boon for which our thanks are due to the British Minister; but still a new year is generally half completed before the statistics of a past one are made public. Would it not be possible to increase the boon we already possess by giving it to us a little earlier in the year? Of course we cannot expect that here the same promptitude can be shown in collecting figures as is the case at home, where the Quarterly Trade Returns are published within a few days of the expiry of each three months; but we cannot help thinking that if the work of obtaining statistics from the Custom House were commenced before the termination of any given year, it would be quite possible to have completed returns very early in the new one. And at such a time their value would be far greater than it now is.

The most important feature in the British Minister's Summary for this year is the compilation of the Tables of Trade for the past eighteen years, and these returns alone make the present contribution from H. M. Legation most valuable for future reference, and especially valuable at the present time when treaty revision occupies general attention. The first table consists of a Summary of the trade for the five years from 1860 to 1864, which shows that, according to the returns then available, the total foreign trade rose from \$9,204,013 to \$18,661,794 in that period. But we are justly reminded that these figures can only be accepted as an estimate, owing to the imperfect manner in which statistics were then collected, and we should therefore not feel justified in establishing any standard from these earlier tables. And, as regards the figures given in the succeeding table, for thirteen years up to 1878, we are also disposed to take for our average a less number of years than the whole thirteen, for the reason that we believe each year has shown greater accuracy in the returns, and also that it would be hardly fair to strike an average over such a long period in a trade which is barely yet out of its infancy. The average of the thirteen years shows a total annual trade of \$42,845,200; of which \$23,107,065 consisted of imports and \$19,738,220 of exports; thus giving an annual excess of imports amounting to \$3,368,845. But, if we divide this period and take our average from the trade of the past six years we arrive at the standard of \$49,733,221 as the annual total foreign trade, of which \$27,158,472 consists of imports and \$22,574,749 of exports, showing an annual deficiency of \$4,583,723. And we think that such an average is fairer than the one taken over the longer period.

Before touching on the subject of the 'balance of trade' it will be of interest to compare the figures presented by the Consular Reports for the past eleven years with those given from Japanese returns, as lately printed in the *Chiugai Bukka Shimpō* (of which a translation appeared in our last *Weekly Mail*). These figures show a considerable difference in the relative values of Imports and Exports, although the aggre-

gate of trade does not differ so materially. In the past eleven years the total foreign trade, as given by these two sources of information differs only by less than two million yen; but whereas the Legation returns show an excess of imports during that period of somewhat over forty-four millions of dollars, the Japanese statistics would place that excess at over sixty-four millions of yen. Thus (accepting the dollar and yen as synonymous terms) a discrepancy arises of twenty millions between the two statements in the apportionment of imports and exports during the eleven years we are enabled to bring them into comparison. But before going further we will give the figures themselves:—

IMPORTS.		EXPORTS.

Which of these returns are we to consider as correct? If those presented by the Consular Reports, even then the cause of the excess in imports becomes difficult to account for upon the basis laid down in the Legation Summary—namely the Government expenditure; but if we are to accept the figures of the *Bukka Shimpō* it is still more difficult to attribute to that source only the larger difference of sixty-four millions in eleven years. We know that the Consular returns are derived from the figures obtained from the Custom House, and we presume that the *Bukka Shimpō* has taken its information from the same source; therefore we must confess to some uncertainty of mind when seeing such a large discrepancy between the two. In any case we feel a difficulty in accepting the 'balance of trade' against Japan during her intercourse with foreigners since 1860 (the date when the present Summary commences) in the precise figures shown by the Legation Report, for the reason that these figures include the statistics of five years during which it is admitted that all imports into Japan were greatly under-valued. Including the returns of these five years (1860-1864) the Legation statement makes a total excess of Imports into Japan, for eighteen years, of only twenty-three millions, and these figures are not unjustly disposed of by the values given of the expenditure of the Daimios and the Government for their own purposes. But if we deduct the result of the first five years' trade, which we are told can only be regarded as an estimate, we have at once a much more formidable deficiency to account for, namely a difference—during the succeeding thirteen years—of nearly forty-four millions according to the Consular Returns, to say nothing of the sixty-four millions difference which the *Chingai Bukka Shimpō* would make out to have existed in the last eleven years of that period.

The record of the movement of treasure is doubtless open to greater uncertainty than that of merchandize, and we are not surprised to notice that a considerable divergence is shown in the two tables now published, the one from the Consular returns and the other from the Custom House—although, strange to say, the net result during the last seven years is almost identical. Both returns show an excess in the export of treasure to the extent of forty-six millions. During the same period the excess (in merchandize) of imports over exports amounted to a little over twenty-nine millions; so that, if both returns are correct, Japan exported about seventeen millions more treasure than was absolutely necessary. Of course, many reasons exist to make it impossible that, in any given

period, the deficiency in a country's produce exports should be balanced by the value of its treasure shipments, but the difference here shown is too great to allow us to think that some considerable error does not exist—and this error, we should imagine, lays in the returns of treasure and not in those of merchandize. We know that Japan does not remit treasure to other countries for simple investment there, and that what she sends must be in payment of debts incurred in a foreign land. And, as the greater part of these debts is for imports which appear in her Trade Returns, we must feel convinced that the treasure statistics now given are indeed very faulty.

But, whichever figures we take as representing the actual deficit so far incurred by Japan in her foreign trade, we think that the British Minister's estimate of twenty-three millions is too low; whilst for the present, we cannot look upon it as being less than four and a half millions per annum. Even these figures are not such as to cause any alarm, although they undoubtedly point to the absolute necessity which exists for economy in 'unproductive' expenditure and for the development of the resources of the country. Due stress is laid upon these points in the Minister's report and the oft repeated cry of increased cultivation of the land, the opening of mines, the improvement of the roads, and the introduction of foreign capital is now again urged upon Japan. We can but trust that these reiterated appeals from every source, all to the same purpose, will in time bear fruit. The Japanese press does not fail to give equally good advice to its Government, and the article of the *Chingai Bukka Shimpō*, from which we have already quoted, points in stronger language than that used by the British Minister to the errors Japan has made in her "Commercial Battles." This paper refers to measures of the Government which have been aimed for outward show and not for real progress, its Formosan expedition and its projects against the Corea. It shows that the Japanese, after giving up their prejudices against trade, now seek to make profit without exertion or enterprise; that they seek an 'ornamental' and not a useful part in life; that the rice companies, the stock exchange and other combinations are merely media for speculation and not trade; that the Banks (now 200 in number) make their profits not by legitimate business, but by their double interest on the notes they issue and on the bonds they deposit against them; and it pertinently asks, how many associations really exist for developing the resources of the country on a large scale?

The return of foreign shipping is given for nineteen years, ending with 1878, and shows that, although the past year falls far short of the tonnage entered from 1869 to 1875, still a gradual increase is again apparent. British shipping has shown a steady increase for the past five years, whilst that of other foreign countries has diminished.

The last table is one which is of considerable general interest, and in a few figures it gives us the history of our intercourse with this country. It shows the delusion of many hopes and the change which has come over many a sanguine expectation as to Japan proving the El Dorado of the East. During the past five years there has been no increase in the number of British residents, whilst the number of 'firms' has been reduced from 155 in 1874 to 92 in 1878. Other foreign residents have increased slightly, but the number of their 'firms' is also reduced from 215 to 151. Excluding the Chinese there are now 2,477 foreign residents in Japan and 243 firms; whilst of the Chinese there are 3,028 residents and 40 firms. But the mere figures of the foreign census do not altogether describe the change which we all know has taken place. Ten years ago nearly every resident was a merchant or merchant's assistant, and now we have at least 500 foreigners in the country who are in Gov-

ernment employ, missionaries or otherwise unconnected with business; ten years ago the number of ladies was very limited and now they form a considerable addition to the list of residents. These changes show that our life in Japan has taken a new phase; it is no longer one of a short domicile, of a speedy fortune and a quick return home; it can no longer attract others to swell our ranks. Those that are here must feel themselves bound—for better or worse—to the fortunes of the country they have adopted. This new life cannot fail to give foreigners a higher interest in the welfare of Japan than they formerly had; it cannot fail to improve their acquaintance and sympathy with the people, and it cannot fail to make them realize that the progress of the country is their progress also.

EXTRA-TERRITORIALITY IN JAPAN.

VI.

OUR inquiries have brought us to this result, that Consuls in Japan, are to be governed in deciding causes of an international character arising upon contracts: 1st. In everything relating to the merits or rights of the action, by the *lex loci*, the laws of the nation in which they originated, and 2nd. In whatever relates to the remedy, or manner of proceeding, to enforce the obligation, by the *lex fori*, the laws of the nation to which the Court belongs. We have also seen that contracts against good morals or opposed to the policy of a nation, will not be enforced in the Courts of that nation, although valid by the laws of the state in which they were made. "This exception" says Chief Justice Story "results from the consideration, that the authority of the acts and contracts done in other States, as well as the laws by which they are regulated, are not *proprio rigore*, of any efficacy beyond that State; and whatever effect is attributed to them elsewhere is from comity, and not of strict legal right. And every independent community will, and ought to judge for itself how far that comity ought to extend. The reasonable limitation is, that it should not suffer prejudice by its comity."¹

This wholesome exception to the general rule should not however be carried too far. The rule itself, that the form, validity, and interpretation of contracts are to be determined by the laws of the place, is founded, not upon the conformity, but upon the known repugnancy of the laws of different nations. When it is said therefore, that contracts opposed to good morals or to the national policy are excepted from the general rule, it is manifestly not meant, that all contracts unauthorized by, or opposed to, the laws of a state, are thus excepted. Such a sweeping exception would be to destroy entirely the general rule. The exception, it is said, should be so strictly limited as not to affect the general principle, which is recognized and established by the rule. It has been frequently decided both in England and the United States, that no action could be maintained, in the courts of those countries, on a contract made in a foreign state, with a prostitute for the wages of her prostitution, although such contract was lawful in the place where it was entered into. The consideration being confessedly immoral, a judgment in its support would be pernicious from its example. On the other hand, it has been ruled that a contract made and to be performed beyond the state of New York, in relation to a foreign lottery, will be enforced in the Courts of New York, though if made within the State, such a contract would be unlawful.² And so also

in Massachusetts it has been held that a contract for the sale and delivery of slaves, in a foreign state where such a contract was lawful may be sued on in another state where the sale of slaves is unlawful. But it was held, if the delivery was to be made in a state where such contracts were unlawful, the contract could not be sued on, because the giving of lawful effect to such a contract would be repugnant to the rights and interests of the state.³ It is to be observed, with regard to the exercise of Consular jurisdictions in Japan, that the question of applying Japanese laws in determining the merits of private international actions, is not wholly one of comity. It is largely a question of positive treaty obligation. This significant fact should never be lost sight of. It must be remembered that the Jurisdiction conferred by treaty upon Consular Courts, belonged originally to the Courts of Japan, and that they stand precisely in the place of the Japanese Courts; and that Consular Courts have no territorial Jurisdiction in Japan but only a Jurisdiction over persons. All the essential legal rights of the parties therefore, remain precisely as they would be, if the action were tried by a Japanese Judge instead of a Consul. The laws of Japan affecting the contracts, acts and dealings of the parties to the suit so far as relates to the rights acquired, or the obligations incurred, whether of foreigners or natives, remain the same; the only difference being, that whatever relates to the remedy and the mode of procedure to ascertain and enforce such rights, or obligations, is to be governed by the laws of the country to which the Court belongs. Undoubtedly many difficult questions must arise as to what are, and what are not, matters properly belonging to the remedy, and what are, and what are not, matters properly belonging to the merits of actions. To undertake to define these would occupy a volume. It may be said generally that the name in which a suit shall be brought, so far as it can be separated from that of the title sued on must be governed by the *lex fori*.⁴ Also, questions of the admissibility of set-off, liens, and privities belong to the remedy, and depend on the *lex fori*.⁵ As to questions in regard to statutes of limitation or prescription of suits, and lapse of time, "there can be no doubt," says a distinguished jurist, "that they are questions affecting the remedy, and not questions upon the merit."⁶

The question of arrest of the body of the debtor, it is now well settled, is a question of remedy solely and must be determined by the *lex fori*.⁷ So also the admissibility of any particular kind of evidence, and the kind of evidence necessary to establish a given fact must be governed by the *lex fori*. The time within which actions shall be instituted, the rules of pleading and the time and manner of appeals are also governed by the *lex fori*.⁸

It has been justly observed by a distinguished jurist that the policy of each nation must determine whether it will give judicial remedies for breaches of obligation committed abroad, and what is called comity may enter into that question; but if the remedies are allowed, the courts must necessarily learn and apply the laws of the foreign

3 In the great case of *Consequa, v. Fanning*, Chancellor Kent decided that the laws of China should govern the courts of America in determining the rate of interest on debts arising upon contracts entered into, and to be performed in China, notwithstanding the extra-territorial treaty provisions with that country. The Judgment in this case was subsequently reversed on other grounds: but the principle asserted by the Great Chancellor has never been questioned by the courts of the United States.

country, in order to understand the rights and duties of the parties. This is not comity, but necessity.⁹ Now, in the case of Consular Courts in Japan, it is settled by positive treaty stipulation that they shall give judicial remedy for breaches of obligation in certain specified cases. It is not therefore, in the case of Consular Courts, a question of comity whether they shall apply the laws of Japan, wherever they are applicable in determining the question of right between litigants of the different nationalities, but a question of positive duty, imposed by treaty stipulation.

In adjudicating causes therefore, between Japanese and foreign litigants, under existing treaty arrangements, the Consular Courts of America and Great Britain are as much bound, in all duty, to recognize and apply the laws of Japan, as far as they relate to the merits and rights of actions if originating in Japan, as if they were Japanese and not foreign Courts. It would be superfluous to add that the same general rules, which we have shown apply to American and British Consular Courts, should govern Japanese Courts equally, in the adjudication of causes in which Americans or English subjects are parties. We know of no better formula for the guidance of Consular and Japanese Courts, in determining the merits and rights of private international causes, than that laid down by Lord Stowell. Speaking of the validity of Scotch marriage,—illegal by the laws of England,—His Lordship said:—"The cause being entertained in an English Court must be adjudicated according to the principles of English law applicable to such a case. But the only principle applicable to such a case by the law of England is, that the validity of the marriage rights must be tried by reference to the law of the country where, if they existed at all, they had their origin. Having furnished this principle, the law of England withdraws altogether, and leaves the legal question to the exclusive judgment of the law of Scotland."¹⁰

Lord Brougham has pointed out, in the most felicitous manner the reasoning upon which the doctrine enunciated by Lord Stowell rests. His Lordship's reasoning was in substance as follows:—

"The general principle is denied by no one that the *lex loci*, is to be the governing rule in deciding upon the validity or invalidity of all personal contracts. This is sometimes expressed, and I take leave to say, inaccurately expressed, by saying, that there is a *comitas* shown by the tribunals of one country towards the laws of another country. Such a thing as *comitas* may be said to exist in certain cases; but when the courts of one country consider the laws of another in which any contract has been made, or alleged to have been made, in construing its meaning, or ascertaining its existence, they can hardly be said to act from courtesy *ex comitate*, for it is of the essence of the subject matter to ascertain the meaning of the parties and that they did solemnly bind themselves, and it is clear that you must presume them to have intended what the law of the country sanctions or supposes. Nay more, it is the only safe criterion of their having entertained such an intention. Therefore, the Courts of the country where the question arises, resort to the laws of the country where the contract was made, not *ex comitate*, but *ex debito Justitiæ*; and in order to explicate their own jurisdiction by discovering that which they are in quest of, the meaning and intent of the parties. But whatever may be the foundation of the principle, its acceptance in all systems of jurisprudence is unquestionable."

Thus we see that Consular Courts in the adjudication of private International suits must be governed, not *ex comi-*

tate, but *ex debito Justitiæ*,—by the laws of Japan, in determining the rights and merits of every obligation, which originated in Japan. How then, we may inquire do American and British subjects living in Japan, differ from American and British subjects living in Germany, in respect to the laws of the country affecting their acts, contracts and dealings?

Does the privilege which they enjoy in Japan, of having their rights adjudicated in their own Consular Courts, instead of in the local Courts, exempt them in any way from the general obligations and burthens of Japanese law? May they plead in their Consular Courts, that their acts or contracts, though valid by the laws of Japan where they were to be performed or were entered into, can not be enforced against them, because forsooth, such acts or contracts are prohibited or unauthorized by the laws of their own country? Surely not. Americans and Englishmen in Japan differ from Americans or Englishmen in Germany in this only, that in Japan they have the right to be tried in their own Consular Courts, whilst in Germany, they are obliged to submit their controversies to the adjudication of the Courts of that country. In each of these countries, Americans and Englishmen are alike bound, in all their acts, contracts and dealings, by the laws of the territory, so far at least as those laws are by general enactment made applicable to them. In other words, the power to legislate generally over Americans and Englishmen living within the territorial limits of the nation, in respect to all their acts, contracts and dealings, is just as clearly within the competency of Japan, as it is within the power of Germany. Let us suppose for instance that the government of Japan should declare by general law, that no contract for personal services, entered into and to be performed in Japan should be valid, if made for a longer period than one year; and suppose that a Japanese engages his services to an American in Japan, or vice versa, for a longer period than one year, would an American Consular Court be justified in holding such a contract to be valid? or in denying the power of Japan to enact such a law? Assuredly not. Is it not perfectly apparent then, that the right of jurisdiction conferred upon American Consuls by treaty, has nothing whatever to do with the higher sovereign power of Japan to declare by law what validity shall be given to any particular act or contract, entered into or to be performed in the country? It is worthy of remark that the rulings of the Japanese courts have been generally in accord with the rules of international law, which we have before named. The final decision of the Supreme Court of Japan, in the celebrated case of Messrs. Jardine, Matheson & Co. v. Goto Shojiro, affirming the doctrine that the validity of a contract entered into in Japan should be governed by the laws of Japan, is historical. Since that judgment was rendered we have not heard the complaint, either that it was in violation of the rules of private international law, or that it was a "substantial denial of justice" by Japanese Courts.

We cannot do better, in closing our remarks on the subject of Consular Jurisdiction in civil causes, and the rules of international law and comity applicable thereto, than give the words of a Japanese Court. In delivering his judgment in the celebrated case of the *Maria Luz* tried in the Kanagawa Kencho, September 10, 1872, His Honour Judge Oye Taku said:—

"In the consideration of these actions I have been very much assisted by the books and authorities produced by the Consul both for the plaintiff and defendant: for it has been my desire to be guided by the generally approved maxims of International Law, and the practice of Courts

9. Wheatons Elements of International Law, Part II, S. 81, P. 45.
10. Darymple v. Darymple, 2. Haag. Consist. 59. and decisions and authorities referred to.

"of other states, whenever such maxims and practice have been found to apply, as well as by the somewhat broad principles of natural Justice and Equity, which are of universal application."

"Japan by her treaties with other states has entered the comity of nations, and has thus accepted the system of international law, as it is found to be practiced by independent and sovereign states. On all powers by whom that system is recognized and accepted it imposes obligations and confers benefits; and Japan while she will endeavor to meet the obligations which thus rest upon her in good faith, as she is able to learn and understand them, desires and expects also, to avail herself of the rights and privileges which are at the same time conferred."

We commend these admirable words so fitly spoken to the attentive consideration of western Jurists and Diplomats,—if any such there be,—who seriously doubt the propriety of extending to Japan the full benefits of those principles of Christian ethics embodied in the positive Law of Nations.

THE RETROSPECTIVE RAMBLER.

III.

COLERIDGE has left us his "Aids to Reflection"; but in how singular a form! He added his own remarks to the comments of Archbishop Leighton on the Epistles of St. Peter! Was this a mere intellectual freak of the poet-philosopher? or was it an illustration of his own favorite idea about the value of being a student of one book? "In argument" he used to say, "I am afraid of the man of one book;" and the elder D'Israeli, in his "Curiosities of Literature," gives us the same thought, with its explanation:—

"He who has long been intimate with one great author will always be found to be a formidable antagonist; he has saturated his mind with the excellencies of genius; he has shaped his faculties insensibly to himself by his model, and he is like a man who ever sleeps in armour—ready at a moment! The old latin proverb reminds us of this fact *cave ab homine unius libri*: be cautious of the man of one book."

If, now, in place of Argument, we propose to ourselves Observation. What one book affords so good a training as our shrewd but amiable friend, the *Spectator*? Who better combines the faculty of seeing, and making others see? Who more happy in avoiding all malice, while making folly ridiculous; in repressing all rancour, while stigmatizing rascality or worthlessness? And then, his portraits are so truthful,—so truly representative, typical, permanent! They are the frescoes of character-painting; their outlines are graceful as the figures on an Etruscan vase; the coloring as fresh as when first laid on in a tableau at Herculaneum. Shakespeare himself, though more powerful, is not more accurate; while the very air of commonplace which forbids any stir of the passions, brings his sketches nearer home to an every-day, common-place life. Take, as an instance, this description:—

"After having treated of these false zealots in religion. I cannot forbear mentioning a monstrous species of men, who one would not think had any existence in nature, were they not to be met with in ordinary conversation; I mean, the zealous in atheism. One would fancy that these men, though they fall short in every other respect of those who make a profession of religion, would at least outshine them in this particular, and be exempt from that single fault which seems to grow out of the imprudent fervours of religion: but so it is, that infidelity is propagated with as much fierceness and contention, wrath and indignation, as if the safety of mankind depended upon it. There is something so ridiculous and perverse in this kind of zealots that one does not know how to set them out in their proper colours. They are a sort of gamblers who are eternally upon the fret, though they play for nothing. They are perpetually teasing their friends to come over to them, though at the same time they allow, that

neither of them shall get anything by the bargain. In short, the zeal of spreading atheism, is, if possible, more absurd than atheism itself."—*Spectator*, No. 185.

Now, the *Saturday Review* might give us a more trenchant—let us say at once, a more savage—description, but no sketch could well be more thoroughly distinctive, more accurately characteristic. And an observant Rambler meets with such men everywhere in these days. Tom Paine's blackguardism is pretty well discredited now, among all decent people; and the flimsy fallacy of selecting a phase of religious profession which is evidently—almost, avowedly—a departure from the principles of its founder, and then assailing this travesty as if it were the essence of religion itself, in this way endeavouring to disparage all that the heart of humanity holds sacred as binding earth to heaven in devotion, and man to his fellow in benevolence—this fallacy, we say, though not yet obsolete, has half learned to be ashamed of itself. But the more refined atheism that takes for its rallying cry, force, or nature, or fate, or protoplasm, or monad, or evolution, or chance, or platitude, or something else.—*anything* in fact so long as it involves the negation of a Personal Deity—this phase of the old credulity of noscience is met with now in every quarter of the globe which has become the *trottoir* of travellers. For instance:—

Here is a cluster of passengers under the lee of a Cunard steamer's smoke-stack, during a rough winter passage across the Atlantic. Ulsters with their collars standing up very stiffly; fur caps pulled down well over the forehead; cigars undergoing vigorous suction; Scotch plaids wrapped round and round in that artistic way which only a Highlander can fully attain to:—these are the elements of the *tableau*, which is certainly *avant*, by reason of the lurches which send all hands to port and starboard alternately, or the splashes of spray which give a sportive *douche* to as many as fail to dodge successfully. There they are, on a cold, dark night, having a friendly talk together before turning in. And what is the conversation about? Everything by turns and nothing long; but among other topics, civilization: how shall it be extended; by what agencies; relying on what forces? Is there a Providence in such things; any guiding, ever-ruling hand; any constructing, controlling mind? Then up speaks one of the company with the voice of a boatswain and the style of an engineer:—"I will tell you what it is gentlemen. All your fine notions about these things don't count. When the world's civilized, it is going to be done by *steam*. That's what makes things go. All your literature and philosophy and religion ain't worth sixpence. Steam will do the work. Steam is almighty"—&c., &c., &c. No fancy sketch this; but a veritable Rambler's reminiscence.

Long years before, when sailing-ships made pleasant voyages, both across the Atlantic and around the Cape, an uneasy, restless passenger might be seen pacing the deck incessantly; but every now and then stopping short to remonstrate with a youthful companion on the folly of his believing in anything but chance. "The Mosaic account of things is all a myth; the temptation of Eve only means"—(explanation such as might be expected from one who was "a filthy dreamer")—"the deluge was only the result of an unusually heavy rainfall; everything happens by the law of chance: let us eat and drink, for to-morrow we die." And drink he did, poor fellow, to such a degree that he could hardly eat at all, and it only remained for him—to die!

Time and scene changed. A widowed woman is consoled by being assured that her husband is no longer a conscious being: all that constituted his identity is decaying in the grave, or has become evaporated into the atmosphere. A mother watching anxiously over her sick infant is told "the little one had better be allowed to die"; if not actually assisted out of life by a sleeping potion, just as poor, unpromising fruit is removed from a tree. Even finished writers of

plausible books do not hesitate to show their leaning towards that part of the stoical philosophy which extenuates the cowardice of suicide—it being implied that there is no Divine Governor who will call such a one to account for having “deserted his post”—as Plato puts it. In fact, the atheist who does not hesitate to avow himself as such—nay, who often obtrudes his leading idea on the notice of others in a manner most unmannerly—is to be met with everywhere; in the billiard-room; at the club dinner-table; in the weekly newspaper and the monthly review; in the scientific magazines, and at the *salons* of learned societies; in political stump-orations and at social-science gatherings. Even in the Freemasons' camp there is trouble on this score, and the programme of public instruction is embarrassed with the question—shall children be taught that there is, or is not—

“A Divinity that shapes our ends,
Rough hew them as we may.”

These are specimens of what a Rambler sees in this our nineteenth century, and they prove that there has been an effective transmission to our day of that “monstrous species of men who one would not think had any existence in nature were they not to be met with in ordinary conversation.”

But perhaps the most pronounced specimen of those whom Addison called “the zealous in atheism” is the popular lecturer—facile, animated, fluent, propitious, having an interesting subject for his discourse, and “well up” on that subject, he being, *par excellence*, a “Specialist.” Indeed, in many—perhaps most—cases, he is a mere specialist, not knowing, and not caring to know, much beyond his chosen topic; but in his own department, and within the limits of his proper sphere, admirable. He illustrates his facts and principles with a charming clearness and aptitude; he allures the aspiring hearer to the more thorough pursuit of knowledge on his special subject; he fascinates him by striking an occasional chord which suggests the harmonies that may be detected in the circle of the sciences; and then, he either maintains an ominous, unnatural silence as to the existence of any great originating mind that has ordered all such things; or, he throws out a sneer at those who see anything more than mere “Law” in such matters; or, if he be of a naturally irritable temperament, (for scientists do show themselves irritable sometimes), he annoys his audience by an outburst of pent-up antipathy to bigotry, orthodoxy, religion and theism in general. Such are the phenomena—then, in Queen Anne's day; and now, in our own—of the restless and irrepressible atheism which seems to possess some men's souls in an almost supernatural manner. And if we take a mid-way glance at the reign of “Philanthropists,” commencing in 1789, we are struck by the singular anomaly of a *fraternité* without a *paternité*—brotherhood without a father—ending in such an exhibition of “brotherly love” as the world will never, we trust, be called upon to witness a second time. And yet against the recurrence of such scenes there is no security, if the same negation of Divinity paralyzes the religious affections of mankind; and the same temerity of logical hardihood, impels a finite intellect to insist on proving an Infinite Negative! Has history no lessons? Or, are we incapable of learning them? “None,” replies the Nihilist, or, “none for us. We determine to break with the past utterly. We recognize only Force, especially that form of it which is called Will.” And so the new revolutionist of Russia unites with the old pantheist of China in declaring that, “Man is the highest form of the spiritual energy.”

TAXATION IN INDIA.

THE recent debates in the House of Commons on the financial position of our Indian Empire, and the official acknowledgment of the large annual deficit in the

Indian revenues, coupled with the widespread poverty and wretchedness of a population already overburdened with taxation, has caused particular attention to be directed to all measures affecting the prosperity of British India. It has been abundantly proved by English journalists, with an unanimity as pleasing as it is unusual, that the startling announcement made by Mr. John Bright, that “it would be almost better to surrender—to confess our failure—and to say that the government of a great empire in Asia by persons sent out as rulers from this small island in the Atlantic is impossible and ought never to have existed,” is founded entirely upon a gross misapprehension of actual facts and is to be regarded as one of the most extraordinary fallacies in which that orator has ever indulged. Indeed it has been aptly remarked that, “this idea, (of Mr. Bright's), is developed in a speech of which it is sufficient condemnation to say that it will probably be an instrument of Indian disloyalty for years to come.” It should not be forgotten however, that now nearly one hundred years ago the greatest English orator of that age, as Mr. Bright is unquestionably of this, expressed himself, in one of his most eloquent speeches, in language as condemnatory of British rule in India as did Mr. Bright recently in Willis' Rooms; at a meeting assembled to hear an address from a native of India, on the grievances and aspirations of his countrymen. “Were we to be driven out of India to-morrow” (*i.e.*, 2nd, December, 1783), said Edmund Burke “nothing would remain to tell that it had been possessed, during the inglorious period of our dominion, by anything better than the ourang-outang or the tiger.” This reproach has, we are glad to believe, now passed away for ever, but the stern fact still confronts us that dire poverty constantly, and famines of the most appalling intensity occasionally, are experienced in our Indian Empire. The exigencies of a system of taxation which leaving little to the tax-payers, precludes the possibility of their providing for periods of scarcity, is answerable in a great measure for this unhappy condition of affairs and any course of policy which, by lightening the burdens of taxation and thus increasing the wealth of the people would conduce to the prosperity of the empire, will be joyfully welcomed by politicians of all parties and by all sections of the community. It is an unanswerable fact, that as the revenue of India is non-elastic and the people are already taxed to the uttermost extent of endurance, the only course which remains open is to reduce the expenditure by strict economy and vigorous retrenchment. A glance at the Indian estimates for some years past shows, that every year the charges on account of the military establishments have been gradually increasing and the conviction therefore forces itself upon every reflecting mind, that the remedy for the existing and rapidly growing evils must be sought in a reduction of the present huge armaments, which everywhere are maintained throughout the British possessions in the Indian Peninsula. We have then to consider how this object is to be accomplished without endangering our supremacy and the remedy is, we consider, pointed out in an able and instructive article which appeared in the London Mail of the 30th July last. After tracing the gradual rise of English domination and recalling to memory that up to the year 1857 when the great Mutiny swept like a tornado over the plains of India 30,000 British soldiers were considered sufficient to garrison the country and hold in check the native levies, the writer says.—“The tale of those days needs no repetition. The suppression of the Mutiny saw us with 70,000 British troops on the plains of Hindostan and a strong native army modelled on what is called the irregular system.”

“The events of 1857 naturally engendered a feeling of

distrust of these native troops in the minds of many of our Indian administrators. They deemed it necessary to keep up a large native army for the purpose of acting, as it were, as a police over the more warlike of the population, and at the same time insisted on retaining 60,000 English soldiers in India to overawe the native forces. It may be objected that this does not represent a faithful view of the case. We maintain that it does. If 30,000 British troops were sufficient to guard India prior to 1857, surely that number is enough now? The physical features of our boundaries have not changed, and those few spots on the coasts open to attack have been protected by fortifications of modern construction. "Torpedo corps have been organized, ironclads purchased for harbour defence, and two sides of our triangular island rendered virtually impregnable." The writer then finds an explanation of the present abnormal armaments in the vast conglomeration of Native States in subsidiary alliance with the British Empire who are allowed to maintain large and, having regard to their population, wholly disproportionate armies, which are nothing more or less than a standing menace to British rule and a constant source of uneasiness to the authorities. An idea of the number of troops supported by these States may be gathered from the table given, from which it appears that these quasi-independent countries, with a gross population of slightly over forty-four millions, and an aggregate revenue of £12,173,614, have an enrolled force consisting of 64,172 cavalry, and 241,063 infantry; in all 305,235 men, to which must be added an artillery force of 5,252 guns. The disastrous effect which this state of affairs exercises upon the finances of British India is thus shown. "The net revenue of British India amounts to £37,417,569; that of the Native States, as far as it is possible to ascertain, to about £12,173,614; giving a total for the Empire of £49,591,183. Our own military expenditure amounts to close on £18,500,000. We may safely assume that the forces belonging to the Native States cost the country in one way or another at least three millions sterling, so that three-sevenths of the net revenue of the country is swallowed up in army charges. So far from any attempt being made to reduce this enormous expenditure, we find that Sir John Strachey, the present Finance Minister, has increased it by upwards of four millions since he assumed office, and the recent measures adopted at the outbreak of the Afghan war, by which our native forces were increased by 15,000 men, adds, according to Mr. Fawcett, a full million to the ordinary expenditure. This, then, increases the proportion expended on military affairs to 40 per cent. of the revenue—an alarming and extravagant burden."

Numerous examples are given in support of these assertions, which it certainly seems impossible to contradict, or at any rate to refute, and it is made abundantly manifest that, if the disarmament of the whole of these native forces, for whose maintenance no reason satisfactory to England can be shewn to exist, is insisted upon, the present costly and cumbersome machinery of three British Commanders-in-chief in India discontinued, and some other lesser reforms carried out, "a vast saving might be effected in money, a uniform military system introduced, and an improved state of efficiency obtained," while at the same time the incubus of taxation, which now crushes the vitality out of the population of British India, will be very materially lightened.

THE sudden and unexpected activity displayed by China in connection with her naval and military forces has directed attention to a danger which is supposed to threaten India from the "Middle Kingdom" in the event of hostilities again arising between England and China. Although at present there seems little likelihood of any

rupture between the two nations, still we are gravely warned that it should be borne in mind that the possibility of such an eventuality is always existent, and now perhaps more so than ever, as the movement to exclude opium is gradually growing in intensity in China, and England cannot afford to tamely submit to lose a trade which annually returns to the revenues of India no less than £6,000,000 sterling, a vast sum, the loss of which we are told would have a most disastrous effect upon India finance. The influence of China on India is said to consist in the wide spread awe, dating back to remote ages, with which the might of the Mongol Empire is regarded by the inhabitants of the countries lying between China and our own India possessions. It is asserted that a few years ago a Chinese army swept away the strongest barrier between Burma and herself, the Mussulman Kingdom of the Panthays, which, though almost unknown to Englishmen, acted as a buffer between China and India. We are assured by these alarmists that it is only the fear of a war which would inevitably bring about a collision with European Powers that prevents a Chinese army from descending into Burma as far as Pegu. The Nepaulesse Government, which keeps the British Resident in a kind of honorable imprisonment limiting his movements to less than ten miles from Katmandoo, professes itself the humble servant of Peking and has, we learn from the same authorities, just sent an Embassy to renew its periodic declaration of vassalage. The *Peking Gazette* is quoted to shew that the terms in which an audience was demanded by the Nepaulesse were abject enough in all conscience:—"The king of the Ghoorkas, a dweller in a remote corner of the earth, in a distant and barren land, the King turns with longing towards the civilisation of the Middle Kingdom. It has been his practice to gain glory to himself by the despatch of an Envoy, who was admitted to the presence; and he has been entirely dependent upon the rays of his August Majesty's awe-inspiring influence and prosperity for securing peace and tranquillity in his borders." A humble request is then made that his Envoy may be admitted to a personal audience of the Emperor. And this, we are told to remember, comes from a potentate who could admit at will a Chinese army into the heart of Bengal "where we are utterly defenceless, and where the Chinese General would find himself less than 350 miles from Calcutta, in a wealthy country, full of open towns." The Maharaja of Nepal has no doubt a very wholesome dread of China, and well he may when he recollects that although the Panthays fought desperately and with the courage of despair, the Chinese army only stopped when the Sultan of Panthay, his soldiers and his people were not only overwhelmed, but as utterly obliterated as if a lava-flood had passed over the land. The Maharaja knows also that the Government of Peking has swept the kingdom of Kashgar, its cities and its male population into infinite space, and having the same objection to being exterminated as other people, will at all times prove the humble and accommodating vassal of his huge neighbour. But for ourselves we have no apprehension of his acting with China against England. We are strongly of opinion that as far as British India is concerned there is nothing to fear from Chinese aggression. Peking is comparatively easy of access from the sea. Long before China could have her preparations for attack on India completed, Peking would be in the possession of an English army and that city, once seized, the unwieldy Empire might without much difficulty be dissolved by internal insurrection. The materials are always ready at hand, and by the least effort the smouldering flame could be fanned into a conflagration which would sweep away the dynasty of the Tartar Emperors for ever.

THE very general feeling of exultation which pervaded England at the successful termination of the costly campaign in Afghanistan, by the conclusion of a treaty of peace with Yakoub Khan, seems to have been mingled with a foreboding (since unhappily realized), that although the British armies had succeeded in bearing down all combined resistance, it would be found in a short time that operations would have to be undertaken against the warlike and turbulent tribes who acknowledge but scant fealty to their almost nominal sovereign the Amir. We are informed that amongst politicians in India considerable misgivings were felt as to the result of the Envoy's mission and it was thought not improbable that he would fall a victim of some *element* amongst the fierce and warlike populace of Cabul, who regard all foreigners with a deep-rooted feeling of hatred and naturally enough, above all others, the English who have just conquered them. It is well known that Yakoub Khan, knowing how little control he could exercise over his subjects, frequently expressed himself apprehensive of the safety of an Envoy, if one was sent to Cabul so soon after the termination of a war which had exasperated to frenzy the Afghan feeling against Europeans. But, unfortunately, the Amir's opinion was either passed over lightly by the authorities or treated as the mere device of an astute Asiatic to evade one of the principal obligations imposed upon him by the treaty. Many Europeans, including those best able to judge of the safety of the step by their previous knowledge of the Afghan character and temperament, were strongly opposed to the visit, but political considerations appear to have counterbalanced every feeling of prudence. The Viceroy sanctioned the trip, Sir Louis Cavagnari, burning to add further to the renown he had already gained in the war, gladly embraced the opportunity which presented itself; and the sad result of his journey has since abundantly justified the gloomy anticipations of the opponents of the scheme. He himself we have reason to hope has escaped, as no mention has yet been made of his name, but the destruction of the residency guard is more than enough to make us regret the risk which was undertaken. It is satisfactory that, so far, we have no news that any murders have been committed at Candahar, and that no worse news has yet followed the first telegrams which reached us last week. It is fortunate that the British troops had retained their advanced positions and the latest telegram makes it probable that ere this, swift retribution has overtaken the assailants of the Cabul Residency.

EXTRA-TERRITORIALITY, has lately cropped up in England in a manner which, although it can hardly be accurately termed altogether novel, is as far as we can recollect without precedent for many years past. A recent number of the *Pall Mall Gazette* states that:—

"Several of the French Ambassador's servants were charged at the Westminster police-court the other day with stealing or receiving with a guilty knowledge, among other things, a fan and a pair of gold earrings, the property of the committee of the late French bazaar. Two of the prisoners confessed the theft, and the guilt of the third was also pretty fully established; but Mr. Ellison decided to let them all out upon bail," as a question might arise as to the privilege of ambassadors' servants. As the French Ambassador himself is the prosecutor in the present charge, there is but a very faint risk of our jurisdiction in the matter being challenged; but as the point has been made for ambassadors' servants before, the magistrate was only exercising proper prudence in waiting before locking up the prisoners to see whether it might not be raised again. It is a part of the doctrine of extraterritoriality which hardly admits dispute that an ambassador's domestic servants enjoy the same exemption from local jurisdiction in civil and criminal matters as their master himself enjoys. It was once the custom of most countries to call upon ambassadors to supply the Government to which they were accredited with a list of their servants, so that they might be entitled to exemption should they require it; and it was a moot point with some of the earlier text-writers whether if an ambassador took a criminal into his service in order to protect him the country whose justice was cheated could properly complain. In the present case, one of the prisoners being an Englishman, there is a double dif-

ficulty. By some of the older authorities it seems to have been thought that while an ambassador should not give up his control over the domestic servants he had brought with him, he might do so in regard to domestic servants he had hired in the country he was resident in; and custom is in favour of a distinction between a native and a foreigner in an ambassador's suite.

It will be interesting to watch the further development of the questions involved in the proceedings against these offenders, as it is possible that the flood of legal knowledge which will be poured out upon the subject, may furnish many valuable suggestions applicable to extra-territoriality in Japan.

TOKIO BANQUET TO PROFESSOR NORDENSKJOLD.

It was a happy thought of the Asiatic Society of Japan and of the Deutsche Ostasien Gesellschaft, to act in concert with their sister association, the Japanese Tokio Geographical Society, in entertaining last Monday night, the members of the *Vega* expedition. The result was worthy of the occasion, far better than could have been attained by either society alone and, thanks to the co-operation of the Japanese Society, it assumed an official character which it would otherwise have lost. The Grand Hall of the Engineering College is certainly the finest building in the Far East for any large social gathering, and the arrangements made last Monday showed how well it could be turned to account. Upwards of 140 people assembled to do honour to the guests of the evening and sat down to an excellent dinner, well served, and all the more appreciated from not being too long. His Imperial Highness Kita Shirakawa no Miya occupied the chair, having Professor Nordenskjold on his right and the Swedish Minister on his left. Three tables extended down the Hall, the centres of which were occupied by the chiefs of the three Societies, their guests being on either side. Appropriate centre dishes of confectionery ornamented the tables, doing credit to the artist who, out of sugar and pastry, gave us an idea of the arctic regions, the four quarters of the globe, the *Vega* herself or a polar bear. One very pretty conceit must also be mentioned—the fans placed beside each plate. On one side was portrayed the *Vega*, ice bound in her winter quarters, and on the other a chart of her track from Sweden to Japan, the divisions of latitude and longitude giving us the menu of the dinner, and the rivers the names of our wines. The initials C. N. enable us to thank Mr. Netto for a very pretty and original design.

After the dinner the chairman, who spoke in German, gave the toast of His Majesty the Emperor of Japan, and then proposed the health of Professor Nordenskjold in a speech of which the following is a translation:—

Ladies and Gentlemen:—Our guests of this evening, the discoverers of the North-East passage, have with indefatigable zeal, with an iron energy, and with a rare knowledge embarked on and successfully realized a project which, for centuries, had been before them in vain attempted by numerous able mariners and scientists.

Professor Nordenskjold, Captain Pallander, and their companions have succeeded in circumnavigating the ice-bound coasts of northern Siberia, and in proving that those septentrional regions may also, at least partially, be thrown open to trade and civilization; the expedition has not only obtained most important and at all times remarkable results for geography and science, it has also for the first time shown a practicable route for the opening of northern Siberia, and of the large rivers that flow from the heart of Asia.

If we consider the *Vega's* route and winter sojourn, and the innumerable fatigues and difficulties of such a voyage, and compare the same with other polar voyages, then we cannot but in the first place admire the perspicacity and energy of the leader of the expedition; to him the world owes the success with which the *Vega*, without sickness or want among the crew, without damage to the ship, and still with coals to spare in her bunkers, arrived in Japan after a voyage of one and a half year's duration. Let us therefore congratulate our worthy guests on their success, and let us drink to the health of Professor Nordenskjold, Captain Pallander and the members of the expedition! May they all return safe to their homes, with the proud consciousness that they have done great things for science and for the world's means of communication.

Professor Nordenskjold returned thanks in a speech which was received with loud applause and the next toast "the Captain and Officers of the *Vega*" was proposed by Sir Harry Parkes, H. B. M.'s Minister, in the following felicitous terms:—

Your Imperial Highness, your Excellencies, Ladies, and Gentlemen,—I have been asked to propose one of the toasts of the evening and although sensible that I may fail to do it justice, I feel I should not relinquish an honor which cannot occur twice in a man's

life. The discovery of the North-East passage will doubtless be regarded as one of the events of the age; it is an achievement which has taken three centuries to accomplish, and in which I believe eighteen previous expeditions have failed; and the health which I have to give is that of the distinguished navigators of the *Vrya* who have now at last succeeded in this great undertaking. Doubtless they have entered to some extent into other men's labours, which they themselves will be the first to acknowledge, but they have added so much new and sterling work, which promises to be attended with so much practical result, that each one of them, I do not doubt, will hereafter take a front rank in the noble roll of arctic explorers. When a small band of men achieve great deeds, all honor to the leading spirit who guides and directs them, but every member of the band is a hero! For the sake of our common humanity it may be hoped that in these days the most glorious achievements are not necessarily held to be those of war; those of science and discovery are placed at least on as high a pedestal, for they injure no one, and contribute to the good of all. All civilized nations unite in promoting them, and the explorer, no matter under what flag he serves,—no matter what contests may divide nations while he is pursuing his task, is regarded as the friend and fellow citizen of all.

The honorable country which gives a national character to the expedition of the *Vrya* may claim to be among the earliest in the field of nautical exploration. The country which I have the honor to represent is not disposed to take inferior rank in that field, and I believe that we are prepared to maintain that our good King Alfred sent out the first arctic expedition, now only eleven years short of a thousand years ago (laughter). I think it might be shown that the Vikings took an active part in nautical enterprise before that date, though, if I remember rightly, their adventures led them in a southerly and westerly direction in the course of which they were prone to favor the British Isles, instead of travelling in a north-easterly course, as our guests, their descendants, have done, and that their researches were not strictly of a scientific character (laughter). But to be serious, may not similar objection be taken to the objects of the enterprises of other nations for many subsequent centuries? Self interest, doubtless, swayed more or less, all the early discoverers, but the boldness and hardihood of the ancient Viking sowed the seed which animated the spirit of all these adventurers, and enabled the early navigators to display a degree of courage, fortitude and endurance, which has never been excelled in the martial field whether by land or sea. Even our solemn Milton, speaking of those early enterprises, said that they "might have seemed almost heroic, if any higher end than excessive love of gain had animated the design." Had Milton lived until our day, he would have found the world so far improved as to admit of the great work of discovery being diligently prosecuted without any such sordid aim, and he would have been the first to recognize as entirely freed from that taint this noble Swedish enterprise, which, through the ability of Professor Nordenfjöld and the skill of the officers of the *Vrya*, has been attended with such happy results. (Cheers.) I am afraid, ladies and gentlemen, you will think I am speaking to you too in too general terms, and that I ought to refer more particularly to the work of Captain Pallander and his officers, but I submit that I should not be justified in alluding in detail, even if I were able to do so, to labours which have extended over fifteen months, and which must be regarded as a grand whole. Any one of us, however faintly acquainted, by reading or otherwise, with the vicissitudes of arctic exploration must know that each day brings with it its trials and toils,—its dangers and privations,—which have to be met with indefatigable effort, unflinching resolution, and the most watchful care. Captain Pallander, like his distinguished chief, is known to the world by previous arctic exploration, even in higher latitudes than those he has lately penetrated, but his previous expeditions could not have afforded him the high satisfaction which he and everyone on board the *Vrya* must have felt when he steered his vessel,—the first vessel,—round Cape Tscheljuskin, the northernmost buttress of a continent and a hemisphere, against interminable wastes of ice. That Cape had only been visited once before by any known man, and then, 137 years ago, by the intrepid Russian officer whose name, as its discoverer, it justly bears; but Tscheljuskin reached it from the land by sledge, and as a fitting and lasting tribute to navigation generally, as well as to the subjects of my toast, I trust, that as the north-east passage will doubtless be identified with the name of Nordenfjöld, so some physical feature in the vicinity of Cape Tscheljuskin,—some rock or cliff, some islet or inlet, will hereafter bear the name of Pallander. The toast given me is the health of "The Captain and Officers of the *Vrya*," but I trust your Highness will permit me to add to its scope, and to include in it the crew of that good ship. Nothing can be more gratifying to those who have guided and commanded the expedition, or to us who have the great privilege of being the first to welcome them after their success, than to know that no casualty has occurred during the voyage, and that every man who left Sweden in the *Vrya* is still safe and sound on board the vessel. It is a fact which speaks volumes to the care and foresight which planned the expedition,—to the skill and ability which conducted it,—and to the excellent character of the men. I am sure it is the earnest wish of all here present that the Tropics, which our friends have now to traverse, may not prove more detrimental to their health than the Arctic Zone, and that Professor Nordenfjöld and Captain Pallander may add to their great scientific triumph another success,—equally unexampled, I believe, in the annals of prolonged arctic exploration, that of taking back to their country and their homes every man,—even to the humblest,—who started with them on this memorable expedition. Ladies and Gentlemen, I give you "The health of Captain Pallander, the Officers, and the Crew of the *Vrya*." (Hear, hear)

Captain Pallander made a suitable acknowledgment on behalf

of himself and his officers and men. Herr Von Bismarck proposed the health of the chief supporters of the expedition as follows:—

Ladies and Gentlemen—I entreat your attention one moment more. There are two names which have a close and important connection with the *Vrya* expedition, and which have not yet been mentioned. I allude to Mr. Dickson in Gothenburg and Mr. Silbriakoff in Moscow, who—as is well known to most of us—have in the most generous manner placed large funds at the disposal of the expedition. You will agree with me that these gentlemen, to whom no small part of the success of the undertaking is due, ought not to be forgotten to night. I therefore request that you will empty your glasses to the health of Messrs. Dickson and Silbriakoff the promoters of the *Vrya* expedition!

Admiral Enomoto (who spoke in English) proposed "the prosperity and union of the three societies" to which the Rev. Dr. Syle, the President of the Asiatic Society of Japan responded thus:—

We count ourselves happy in having this opportunity of welcoming the *Vrya* and all its ship's company, from the Chief of the expedition, down to the youngest boy on board. In former years, we had the gratification of receiving the *Nucara*, under the able and accomplished Chevalier Wollenstorf. After that came the *Tuvarora* whose commander, Captain Belknap, told us some of the wonders connected with deep-sea soundings in the Pacific. Then we welcomed the *Challenger*, and learned from Sir Wyville Thompson's lecture the result of dredging the ocean-bed; and now we have the happiness and honor of receiving the Expedition which has accomplished the feat of making the North-Eastern Passage. In reading such accounts of this achievement as have been made public, one of the matters which struck us as of most interest was that "Easterly Current" from which so much was expected, and which seems to have been so serviceable. If it were suitable on this occasion we should like to ask for some fuller information on this point. But we must refrain, and remind ourselves that there are other "Easterly Currents" than that which flows along the northern shores of Russia. The poet says:—

"There is a tide in the affairs of men, which, taken at the flood, leads on to fortune."

And many are the currents of influence which have set in an easterly direction. From the shores of Portugal, long ago, a strong current swept round the Cape, and has left its marks at Goa and Macao. From France the current flowed eastward (though not, as now, through the Suez Canal), and we find traces of it at Pondicherry and Saigon. Holland's influence also tended eastward, and left its traces in Java and at Desima. From Batavia we have lately received the centennial number of the oldest scientific society established here in the extreme east. England too has her easterly current, as India testifies, and Singapore and Hongkong. Russia likewise is said to have eastward tendencies; but of these we will not undertake to speak: her *agents* in our midst speak for her. And now Sweden comes this way, increasing our indebtedness to that land which has taught us, by Linnaeus, to arrange our plants and flowers, and by her nightingale,—sweet Jenny Lind,—to realize the most exquisite delights of song. Latest in time, and highest in achievement, to-day she sends Nordenfjöld with trophies of resolution and science. There was one land, however, whose current took a westerly direction, and sweeping first across the Atlantic, disclosed the New World and then, still westerly, across the Pacific, reached Manila, which with Cuba, are its mementoes. Thus did grand old Spain give us America, and surely America has made her influence felt upon these shores. Another poet—not less a poet, because he was a bishop,—has sung:—

"Westward, the Star of Empire takes its way."

However that may be, the various currents of civilizing influence chiefly tend eastward now; and here, in Japan, they all make themselves felt, as is shown by our own presence in this Hall to-night. Here are we—Germans, Dutch, English, Americans, Russians, Swedes (it is to be regretted that China is not represented)—all uniting with our Japanese friends in harmonious co-operation. And it is the especial charm of these societies that they unite, not only all nationalities, but all classes of the community. We have the diplomat, the merchant, the professional man, the scientist, and the missionary,—all meeting together under circumstances more favourable, perhaps, than is afforded by any other association. We trust, therefore, as our toast suggests, there will be continual prosperity and unity among these societies, and that their transactions will manifest a laudable effort to increase knowledge in its most valuable form—that of true scientific statement; always avoiding that most reprehensible idea, that any form of truth can possibly contradict, or conflict with any other form of truth. We sincerely trust this will be the determined effort of those who, in years to come, will constitute the membership of these societies; and we have to thank our gallant *conférencier*, Admiral Enomoto, for the cordial sentiments he has expressed, and especially for the announcement that foreigners are eligible to become members of the Japanese Geographical Society.

Mr. E. Knipping, Vice President, replied on behalf of the German Society, and pointed out that although the two foreign societies were not nominally geographical in their pursuits, as was the case with the Japanese one, still geography was one of their chief aims, as without it other knowledge must remain only partly intelligible.

The Hon. J. A. Bingham, in proposing the health of the ladies, said:—

Mr. Chairman: This afternoon a gentleman of the honorable committee of arrangement, notified me that I would be expected on this occasion to speak to the sentiment proposed by the committee in honor of "the ladies." As I speak without a note of preparation, I beg leave to make my grateful acknowledgments that the pleasant duty thus assigned to me requires no elaborate speech, inasmuch as the ladies without uttering a word speak for themselves more eloquently than anyone can speak of them or for them. By the grace which adorns and the virtue which ennobles human life, they have in all ages and through all human story spoken for themselves, and associated the name of woman with the greatest and noblest of the trials and triumphs of the human race. The grand achievement of your honored guests and of the men of the *Toga* in making the passage of the north-east channel, which connects the two oceans of the world, and the divine art and tireless energy by which they overcame, amid the darkness of an arctic night, the obstacles which for centuries had circumvented and baffled the heroic efforts of mariners, suggest the name of a noble woman by whose imperial munificence the world-seeking Genoaese, sustained by Providence and guided by the tiny magnet twinkling on its earl like a beam of light, gave to men and nations the western continent, that new heaven and new earth. I cannot speak of this latest maritime triumph in hitherto unknown and unexplored waters without suggesting that the men of the *Toga* who achieved it and thereby acquired a title to a place in history and to the lasting gratitude of mankind, were largely inspired to persist in their perilous adventure by the gentle memories and approving words of mother, wife and daughter. After all that has been said, and so well said, by those who have preceded me it only remains for me to propose the health of the mothers, wives and daughters of your distinguished guests and of their comrades, and also to propose the health of the ladies who have graced this entertainment by their presence.

Mr. de Struxa then proposed the health of the Chairman, after which the guests rose from table. The Marine Band played a most excellent selection of music during the evening.

REUTERS TELEGRAMS.

LONDON, September 15th, 1879.

The staff of the British Mission have left Mandalay (Burmah).

The mutineers of Cabul are inciting the Hill tribes to attack the British at Shitargarden.

The Indian Government are distrustful of the Ameer.

LONDON, September 16th, 1879.

The Telegram referring to British Mission leaving Mandalay is contradicted.

LONDON, September 17th, 1879.

Cetewayo was captured on the 28th August.

[SUPPLIED TO THE "DAILY PRESS."]

Bombay, 8th September.

An immediate advance of troops is ordered to Shitargarden. General Roberts is to advance upon Cabul. General Stewart is ordered to hold Kandahar, and the Khyber forces will operate against Jellalabad.

Bombay, 9th September.

Natives from Cabul, whose testimony is considered reliable, state that they saw the bodies of British officers in the capital, but that nine of the escort of Embassy escaped.

NOTES OF THE WEEK.

Late on Saturday night last the O. & O. steamer *Guelic* arrived in harbour from San Francisco, bringing European dates to 22nd August, and American up to day of sailing (23rd). The P. & O. steamer *China* arrived from Hongkong on Monday,

with the English Mail of August 1st. The O. & O. S. S. *Belgie* arrived from Hongkong, on Friday, and is circulated to leave for San Francisco to-morrow at 3 p.m. The *Garlic* left for Hongkong on Wednesday morning. The homeward mails, were despatched by the M.M. steamer *Tanaka*, this morning. The Shanghai and way-port steamers have arrived and departed on schedule time.

The O. and O. steamship *Gaelic*, Capt. Kidley, which left San Francisco at noon on the 23rd August, reports having light variable winds with fine weather to the 11th instant, when she experienced a heavy gale from the North-East. At 6 p.m. on the 12th, hove ship to; in bringing her up to sea, the ship was thrown on her beam ends. At 2 a.m., on the 13th, the gale moderated.

The O. & O. steamer *Oceanic* left San Francisco on Saturday, the 13th instant, and may be expected here about the 2nd October.

We are informed that the *Mouongahela*, will leave for San Francisco, about the 25th instant.

We learn that H. M. S. *Pegasus* will leave for Hakodate as soon as she has completed coaling, returning here in about three weeks to winter. H. M. S. *Hart* left on Thursday, for a cruise, with Sir Harry Parkes on board. After her return here she will proceed to Tientsin.

We are informed that the passengers of S.S. *City of Peking*, during her last trip San Francisco, have forwarded to the Honorary Secretary of the Yokohama General Hospital, through Mr. Reynell, the sum of \$51.50 as a contribution to the funds of the hospital. This handsome sum was the proceeds of an entertainment given on board for the purpose of assisting the hospital.

The notifications in reference to the silver yen came into force yesterday, but the expectations of many people that an immediate rise would take place in the value of paper-money have not been realized. Instead of being at par, or at a small discount only, Kinsatsu, (after touching 8 per cent. discount during the week) have to-day fallen to 17 per cent. discount! The fluctuations during the week have been considerable and have been almost hourly, giving many opportunities of heavy losses or profits. A great scarcity of coin had lately existed and native merchants have had the utmost difficulty in providing dollars for their purchases; but it was hoped that with the 19th, this scarcity would have changed into plenty. But strange to say such has not been the case and silver yen are said to be as scarce now as dollars were a few days ago. The *Nichi Nichi* of to-day informs us that the Finance Department have distributed 800,000 silver yen amongst the three principal banks in Tokio, and have sent 500,000 to each of the two foreign banks in Yokohama, but for some unaccountable cause the sight of these tokens has not gladdened the eyes of the native merchant and improved the value of the paper currency. As one of the supposed objects of the introduction of silver yen was to provide such a supply that the great fluctuations in paper should cease, we trust that with the assistance of the native banks, some steps will be taken to relieve the present scarcity.

We have frequently called attention to the want of Municipal and Police control throughout this badly managed settlement, and nowhere is this want more apparent than in our narrow but principal business thoroughfares, Main and Water Streets. The drayage system in Yokohama is apparently a profitable as well as useful one, but it is decidedly inconvenient to passers-by, whether in jinrikishas or on foot. There is barely room in many parts of Water Street for two of these enormous drays to pass one another, and yet we see them trying to go in all directions, the Japanese coolies, placed as drivers, galloping their horses when they have no loads. We are ready to admit the necessity of such means of transport, but would suggest that some measures be taken for the security of our fellow residents. Could not the drays be made to pass up Water and Main streets coming from the Customs wharf and down the Bund on their return? This would avoid many frequent blocks. It is during the past week that a light carriage was run into by a dray and completely smashed.

Cholera has evidently been very bad in the neighbourhood of Odawara, and to that cause must be attributed the continued mortality in the Kanagawa Ken. In Yokohama alone the disease seems to have nearly abated, but still we cannot yet

congratulate ourselves or being quit of it. The Board of Health continues to work energetically for the good of the public, and we are glad to see, from the minutes of the last meeting, that attention has been drawn to the unhealthy proximity of the Foreign Cemetery to habitations, wells, &c., also to its present overcrowded condition. We hope that a more distant site will shortly be obtained, and the present Cemetery be entirely closed. The cholera return for the whole country up to September 13th, comprises patients 135,852; died 74,250; and at that time under treatment 40,235.

We hear that Lieutenant Baillie, R.N., formerly of the English Naval Mission in Tokio, has been engaged by the Chinese Government for service in their Navy Department and that his appointment will be at Foochow.

Tuesday next, the 23rd instant, will be observed as a general Japanese holiday, it being the occasion on which the Emperor performs the Autumn religious services in memory of his ancestors.

Some excitement has been caused in Osaka by the arrest of the well known merchant, Mr. Fugita, who, with his chief clerks, has been imprisoned at Sakai. In addition to the particulars given in our Japanese news of this event, we hear to-day, from the *Nichi Nichi Shinbun*, that the most credible of the rumours as to the cause of this arrest is the one that Mr. Fugita has had something to do with the forged two yen notes which have lately been discovered.

On Tuesday evening, 16th instant, a pleasant gathering took place at the Masonic Hall, to inaugurate the "Star in the East" Lodge of Free Masons, No. 640, on the roll of the Grand Lodge of Scotland. The R.W.M. designate, Edward Fischer, P.M., was installed by W. & W. Bro. A. S. Forbes, Past Master of Iliogo and Osaka Lodge. After the ceremonies the newly installed officers with their guests and visitors adjourned to a banquet. After doing ample justice to the good things provided, the R.W.M. gave the first toast of the evening, "The Rulers of our respective countries and the Craft," which was duly honoured; after which the Masonic toasts usual on such occasions were proposed and received most enthusiastically. Over sixty of the fraternity were present, and the meeting was one of the most successful that has taken place at Yokohama.

The following is a list of officers for the present year:—

Edward Fischer.....	R.W.M.
Charles John Strome.....	D.M.
Durham White Stevens.....	S.M.
Joseph Freeman Gorham.....	S.W.
Honore Mason Perkins.....	J.W.
James Rolland More.....	Treasurer.
Isaac Willard Beauchamp.....	Secretary.
Richard Austin Robertson.....	S.D.
John Douglas.....	J.D.
George Booth.....	I.G.
Arthur Hearn.....	Tyler.

We are informed by the *Nichi Nichi Shinbun* that a serious disturbance, accompanied by loss of life, has taken place at Miyakojima, an island in Okinawa ken. From the particulars already to hand, we learn that a man named Shimochi Niya, employed as a servant in the local Police Station, committed some outrage upon the natives, on which Kinjō *Shin-unjo* and some other officials of the former *Han*, at the head of a body of five or six hundred of the islanders, succeeded in capturing and killing Shimochi. On the following day, the 23rd July, Mr. Auraku the Inspector in charge of the central Police Station at Napa, arrived at the island on a tour of inspection in the *Taiyū Maru*, and learned what had occurred. He immediately left again for Napa to obtain reinforcements, and returned on the 3rd ultimo, with forty-five police in charge of Mr. Sonoda. The leaders of the rioters were at once arrested and a strict investigation was made on the spot. The enquiry was completed on the 27th August, and the whole party returned to Napa on the 29th.

We extract from the same paper the following account of the circumstances which led to the murder of Shimochi Niya, the servant in the police station at Miyakojima, and which is now attributed to his having accepted employment under the Japanese Government. The island of Miyakojima is about 100 ri, distant from Shuri (the capital of the main island), and the islanders have, from time immemorial, been accustomed to send a junk once a year to Napa, with tribute to the Loochoan monarch. This was their only communication with the outside

world, and although some rumours had reached them of the absorption of their country by Japan they gave no credence to the story. Last April, however, Japanese officials visited the island and gave them authoritative information on the subject. Subsequently most of the local officials, natives of the island, were discharged. This caused the utmost dissatisfaction and coupled with the feelings of loyalty which the islanders preserved for the King of Loochoo, resulted in a league being formed by which the islanders bound themselves, under the penalty of death, and the banishment of their parents, wives and children to another island, not to recognize the Japanese Government in anyway, or to accept service under it. Shimochi Niya had joined the league, but afterwards became a servant in the police station. The islanders then seized the parents and brother of Shimochi and sent them out of the island, disregarding the protests and orders of the Japanese local authorities, and ultimately crowned their outrageous proceedings by assaulting the police station and murdering Shimochi in cold blood. A strict investigation has been held on the matter and one of the islanders confessed that he was the actual perpetrator of the crime. Further inquiry, however, elicited the fact that the leaders in the outrage promised this man that if he would take upon himself the whole burden of guilt, they would build a house for his son, and supply the son annually with one hundred bags of millet for his maintenance. The father appears to have felt some natural apprehension that after his self-sacrifice the promise would not be carried out, retracted his confession and disclosed the names of all the real murderers, who were at once arrested and are now waiting trial.

The Commissioners appointed to carry out the Competitive Exhibition, at the Yokohama Town Hall, the first section of which was opened to the public on the 13th, have much cause for congratulation on the manner in which they have carried out the task entrusted to their care and discrimination. The proceedings were commenced at 9 o'clock, by the assembling of the Directors of the Agricultural Bureau and Board of Trade, the Commissioners and Judges of the Exhibition, and the Exhibitors or their Representatives.

Their Excellencies Ito, the Minister for Home Affairs, and Okuma, the Minister for Finance, arrived at the Town Hall from Tokio at half-past nine o'clock and were received by the Director of the Board of Trade, who conducted them to the large room devoted to the exhibits, where they were met by the Director of the Agricultural Bureau, who handed them a catalogue of the exhibits. The following address was then read to the assembled company on behalf of their Excellencies:—

"No product of Japan has increased more rapidly than the tea-trade, but tea is not grown in Japan alone, China, India, and other countries are producing it in large quantities and India especially is increasing her annual exports to such an extent, that it would seem probable that in a short time few countries will be in a position to successfully compete with it. The question to which we wish more particularly to draw your attention on the present occasion is this.—Although the tea-trade has undoubtedly increased of late years it can hardly be said that the mode of cultivation, manufacture, and preparation for sale, is by any means as perfect as it might be made, and consequently complaints are frequently heard that quantities of tea are unmarketable. To remedy this unsatisfactory state of matters, this competitive exhibition has been established with the object of encouraging the growth of improvement in the article, and thus lead to an increased consumption. We wish you all to bear this continually in mind and to earnestly strive to increase the national wealth by extending the important industry you represent."

Mr. Nakagawa Mohei, on behalf of the exhibitors replied to their Excellencies as follows:—

"Although a gradual increase has arisen in the export of tea, and our business is in a prosperous condition, yet we confess that we are still deficient in the skill necessary to extend the culture and manufacture of tea to as great an extent as the demands of the trade will admit. We are therefore sometimes unsuccessful in competition with other countries and consider that the time has now arrived to make a determined effort to defeat all opposition. It is fortunate for us that the Government has established this Exhibition for our special encouragement, and we feel correspondingly grateful. We can assure your Excellencies that we shall strive to the utmost of our power to perfect the culture and manufacture of tea and thus endeavour in some slight degree to show our appreciation of the kind consideration displayed towards us by His Gracious Majesty the Emperor."

Their Excellencies then inspected the exhibits with marked attention and cordially congratulated the Commissioners upon the success which had attended their labours. The official forms had thus simply and unostentatiously been gone through, and at noon the general public were admitted.

The Exhibition now being held is only the Tea-Section of the competition which to be held of the two prominent industries of Japan, and was opened in advance on account of the approaching termination of the tea season. The exhibits are on view in a large, well lighted and well ventilated apartment on the upstairs floor of the Town Hall, approached from the main entrance in Honcho dori; and the visitor will find in jars, in bottles, in boxes, and in chests every conceivable variety of the chief ingredient in the "cup that cheers, &c." The exhibits are arranged as tastefully as is possible, taking into consideration the rather unpromising materials to be dealt with, and a ticket on each gives in Japanese and English, the name of the exhibitor, place of production, name and fancy name, of the particular kind of tea, &c. We noticed what appeared to be an excellent sample of tea, compressed into cakes after the manner of the "brick tea" so well known to all travellers in Russia: the sample seems to be excellent of the kind and if the Japanese can successfully compete with China in the Russian trade, a considerable impetus will be given to the industry. Over this compressed tea, there are a series of sketches, beautifully painted on silk, descriptive of the different stages of the tea manufacture, from the first gathering of the leaves in the plantation until the final process is reached. We noticed also close to the head of the stairs a valuable collection of articles used by the Japanese in tea-making, consisting of a beautiful bronze fire-pot, tea-pot, charcoal burners, &c. Altogether the exhibition is well worthy of a visit, and if the other section is equally successful, of which there can be little doubt, a most useful and instructive exposition of the two principal industrial products of Japan will be seen in the Town Hall. The judges commenced their inspection on the 16th instant. The tea section of the Exhibition will remain open daily from 12 noon to 4.30 p.m., until the 15th October, and the silk section will open on the 1st November next. It has been arranged to present the medals to the tea exhibitors on the 11th October. We are informed by the *Choya Shinbun* that the compressed tea we have alluded to "was manufactured by one Kamibayashi Kumaaji; who, regretting the waste of black tea dust, invented this process in 1870. The tea has since then been sold to the Chinese and Russians, who liked it so much that the demand has increased by degrees, until this year he has received orders for over 100 piculs of it." Mr. Kamibayashi must congratulate himself that "Patent Laws" do not exist in Japan, or he would probably find several people ready to contest his claim to the invention of making "brick-tea." It is bad enough for people to copy the inventions of others, but it becomes a shade worse when they claim the invention itself.

Players of Lawn Tennis (and who in Yokohama is not a player and a lover of the game?) will be interested in reading the following account of the Wimbledon matches, which we extract from a late number of the *Friend of India*:—

I went down to Wimbledon (July 18) to see the matches played for the Lawn Tennis Championship, and I would strongly urge upon all lovers of this fascinating game at present in India not to miss these matches when they revisit England. The ground at Wimbledon is of a kind to excite, in the heart of a lawn tennis player, who is also a stranger, feelings of most unchristian envy towards the denizens of Wimbledon. The levelling is perfect, the turf springy to the feet and delightful to the eye. A man must be a "duffer" indeed who, having such a ground on which to play habitually, failed to become an artist. There are, however, plenty of "duffers" even in Wimbledon, as was abundantly to be seen in the handicap matches, enthusiasts who love lawn tennis not wisely but too well, and whose persistent devotion is but rarely rewarded by getting a ball over the net. There is nothing which so clearly shows the fascination residing in this game as the self-sacrificing ardour of these expertless devotees. They rarely hit the ball, but hope, as we all know, springs eternal in the human breast, and summer after summer these enthusiasts are to be seen on the ground smiting the air with unprofitable racquets. They come, however, to the Champion Match. Mr. Hudson, the winner of the cup last year, was unluckily absent from England, and thus deprived the lovers of the game of what would have been a most exciting struggle. On the other hand, Ireland had sent over the winner, and the second in the struggle there for the championship—Mr. St. Leger and Mr. Barry—so that the contest at Wimbledon assumed something of a national character,—England against Ireland. The best English players

were Mr. Erskine, a Londoner, and Mr. Hartley, a gentleman who had come to town from Yorkshire with a great reputation—a reputation which he more than sustained. And yet, though he beat Mr. Erskine, I incline to think the latter is the stronger player of the two. The match between them stood two sets all, five games all, and deuce; Mr. Hartley then won, but twenty-six games in all were scored to the credit of Mr. Erskine, and only twenty-three to Mr. Hartley. On the last two days of the contest—Monday and Tuesday—the first contest was between Mr. Parr and Mr. Hartley, the second between Mr. Hartley and Mr. St. Leger. The first match excited but little interest. Though Mr. Parr won the first set, it was apparent he did so only because Mr. Hartley permitted him. Mr. Hartley then put forth his play, and won the next three sets with perfect ease. On Tuesday was the real tug of war. Eleven hundred people were on the ground, and the sight was one which amply repaid the time and trouble of going to see it. I never saw such play. I did not imagine that the game could be played with such marvellous skill. Both Mr. Hartley and Mr. St. Leger are young men of about five or six and twenty, lightly and sparsely built, active, and without an ounce of superfluous flesh,—in a word, in admirable condition in every way. Mr. Hartley won the three sets right off—the first by six games to two, the next by six games to four, and the third by six games to two, and this seemingly easy victory looks as if he must be much the better player of the two. This conclusion would, however, be a mistake. If the match were to be played again, I think I would back the Irishman. Not only were a large number of the games "forty all," but it was evident that something had put St. Leger out, and that he was not playing up to his proper form. The play, however, of both gentlemen was beautiful to behold. St. Leger's being the most brilliant, that of Hartley's the stendiest. The rallies were, many of them, of extraordinary duration; St. Leger being capable of putting a greater amount of twist and spin in his balls than I ever witnessed in any other player, while Mr. Hartley's back-handed play, and his power of placing the ball precisely where he wanted are simply marvellous. In the final rally, which decided the match in Mr. Hartley's favour, the ball was struck forty-nine times over the net, and many of the returns were made with a skill so striking and unexpected, that the whole ground rung with the plaudits of the spectators. At last Mr. St. Leger sent a low "twister" from the extreme end of his court which fell an inch or two beyond the line, and the game was over. Mr. Hartley now becomes the holder of the Champion Cup, but it does not pass into his private possession until he has been victorious for three successive years. Twice again, therefore, he will have to play at Wimbledon, and that player will have to play well indeed who wrests the prize from him.

PARIS LETTER.

PARIS, August 2nd, 1879.

M. Thiers owed three-fourths of his success in life to his mother-in-law and wife; he is perhaps the only notable example of a man, who allocated one room in his mansion to as collection of souvenirs of his mother-in-law; his wife is as much devoted to his memory as she was to him when in life; she practically is editing his speeches and correspondence, and is the chief organiser of all the statues to be erected in memory of his patriotism and of which the first is now about to be inaugurated in Nancy—the prettiest town in France; other chief cities will also raise monuments to the Liberator of France, the last of them will be in Paris; though M. Thiers will soon be two years dead, his widow visits his tomb in Pere Lachaise three times a week, to pray and deposit flowers on it, and her conservatory may be said to exist for no other end than to supply the choicest flowers for his resting place; the poor people do not forget the eminent statesman, as humble wreaths and bouquets of wild flowers figure among more pretensions tributes; I observe also that foreign visitors commence to scribble their names on the walls of the Mausoleum; if this practice continues, it will be soon as much disfigured as the column that surmounts the grave of the three despatched Sergeants of Rochelle in Mont Parnasse cemetery.

In the Senate, a member of the reactionary party claimed the pre-eminence for wives holding monarchical politics: a republican member asserted that the fair sex of his party are as good as their rivals—which of course nobody can deny. When the mob stopped, Lord Castlereagh I think it was, and compelled him to cheer for Queen Caroline, he proposed "Three cheers for Her Majesty, and may all your wives be like her."

The industrial situation of Paris is relatively good: the majority of trades give a steady ten hours a day work: some industries are slack, the consequence of the season: but on the whole there is a tendency towards briskness, rather than the contrary: However, in any case it is not what it has been, and what it will, it is hoped soon again be. People feel, that we are drifting into better times.

The Municipal Council is believed, even by its friends, to have made rather sweeping alterations in changing the names of our streets. Indeed some of the designations are not happy, and a few unnecessary. The government is recommended to exercise its veto of revision—but it is dangerous to provoke a collision with a body that administers the city's finances so well. It is a little curious, that

even many of his political opponents, object to depriving Baron Haussmann, the great demolisher, of the honor of continuing to give his name to a *creek* boulevard. The Baron attempted the Augustine feat of leaving Paris marble after finding it brick; he ran up a tremendous bill, and paid off the moiety of it, concluding rather rationally, that Parisians of the future ought to pay a little for the glories they would inherit. Personally, the Baron is a man of pleasing manners, and is perhaps the only Bonapartist after Luchand the famous "old Bailey lawyer" of this country, who constantly mixes in republican circles. One region of Paris, le Quartier de l'Europe, has all the branch streets named after the capitals of the Continent; now at Bercy, where the central wine depot is situated and supported by sixty pumps, the radiating streets are to be baptised after the famous brands of France. A promenade here for the future may be as agreeable for a *gourmet* as the odors from the Kitchen of the Café Anglais for a hungry man. One citizen opened a street at his own expense and called it after his daughters, Marie and Louise, and practically, to perpetuate his name, the building a house or planting of a tree is as good a means to hand down one's name, as endowing a college or cat: well, the municipality has let the name remain; but in revenge, it has superseded half a dozen saints, and lopped off a queen and obliterated a dauphin into the bargain.

The telegraphic agency Havas has issued shares, in view of becoming a joint-stock company; it wanted capital, as it has been made to feel the effects of the severe competition of the age. It is not certain that it will receive special advantageous support from the government. Private firms are opposed to this idea.

It must not be concluded, that because the Scientific and Industrial Exhibition in the Champs Elysées remains rather quiet after being opened, that it will be forgotten. On the contrary when the exhibits will be in place it is destined to attract attention, and promises to be pregnant with valuable lessons. It is the result of private enterprise, a principle yet new to France, accustomed for centuries to lean on the government crutch. It will be a capital centre for purchasers and sellers to meet for the despatch of business.

Society is "up" at last; the fine weather was after all at the bottom of Pandora's box; the city has yielded its thousands to the seaside, where the number of "dry" bathers, as lookers-on are called, will now grow beautifully less. The usual tour is to put a month in among the Swiss mountains, another on the coast of Normandy, and a third either in the provinces or a run through England.

A committee of ladies with Bonapartist sympathies has been found to collect funds to build a commemorative chapel to the ex-Prince Imperial; it is expected that the political difficulty will be thus turned, for when maidens implore, men give like gods; however a very ungallant journal suggests, that these ladies ought to find a more suitable occupation for their leisure hours—a difficulty still greater. I know nothing more deplorable than the idle lives led by French ladies generally, gossip, shopping, balls, theatres, supper parties, and late rising as a natural consequence make up their existence, and this in a sense indolent life, is about being increased, as the habit grows of a lady hiring a companion by the hour, to read to her the latest novel and retail the most piquant scandal; no wonder M. Naquet complains of the number of married homes rendered unhappy, owing to the neglected, rather than perverted, education of girls. It was expected that travelling, and intercourse with foreigners, would rectify glaring defects; on the contrary the presumed remedies seem to have only made ladies more frivolous; it has often been observed, that the wife will be just as the husband makes her, but so long as Frenchmen only look for "ready cash" with their brides, and parents are only too anxious to settle their daughters so as better to enjoy life themselves, so long will matters continue, with a tendency to grow worse. The sun having really appeared arrayed in all his glory, has been forgiven for all the drear moments he has been absent; we hope now to obtain compensation by a long and brilliant autumn; within the last few days, Paris presents the proof of familiar faces being out of town; the races are left to the "horsey" people of both sexes, for as certain old female cooks and superannuated housemaids speculate in "bulls and bears" on change, so a younger division of them have betaken themselves to dabbling in bets, and manage to escape the police better than men; the great test of the dead season is, when the chairs on the club balconies are empty: only the very old members, who by a liberal interpretation of the rules, are allowed to sleep in the club, are to be seen, and as they are in the same position at all hours, the passing public believe they are paralytics: it is worthwhile noting their attitude; they are as mute as mice, have generally three or four newspapers before them, which they never look at, and a glass of sugar and water, and it is said that they mark the flying hours by the evaporation of the liquid. The ordinary cafés have their vacant places, no chairs are turned down against the hat-

crow tables, and the passing stranger may count upon being recognised by the head waiter; no "lady" ever sits in front of these cafés, and very rarely inside them, and if ever they require refreshments, there are the drapery establishments, and the co-operative stores, to afford either a "free lunch," or a tiffin at a nominal charge. The co-operative principle of shopping does not appear to be in marked favour in Paris; the few stores that exist, labour under the disadvantage of not being able to deliver purchases; now France, that is Paris, being a real nation of shop-keepers, where the *bentique* is a family loom, a machine worked by all the members of the family, where time and labour count for very little, the co-operative people can be undersold, and as the inspection of provisions is very perfect, the chances of being imposed upon are very slender; in many of the side-streets, there are rows of costermongers' carts, who sell all the necessaries of life, cooked or unprepared; one trundler is reported to be making his fortune, by buying up the unconsumed bread rations in the barracks, and with American beef from tins, fabricating sandwiches; early in the morning before the sun has time to warm the contents of the carts, excellent fruit and vegetables can be bought for half the price that rules at the green-grocers' shops; I will not say much for fish—in the humid and warm season, still less for meat; but the poultry is good, and the people are so obliging that they will "kill for you before your eyes," as do the native butchers in Algeria. Another street profession coming into favour is the selling of mercery, or soft goods: provided with a permit to hawk, a man or woman hires a hand-cart for a day, and if known to a haberdasher, can easily secure a supply of his old stock; this I have been told pays better than grinding a barrel organ, and is more respectable into the bargain: that is by comparison; cooked provisions are being extensively hawked in the streets, in cans on charcoal fires, the vendor has a peculiar cry, invariably concluding, to bring down your plates and not forget the money: soup, tripe, vegetables, and fried fish, are the regular luxuries: In the way of other aids to living for nothing, there is a large increase in the number of societies that supply clothing, furniture, and work necessaries, on credit: any person of good character can receive very valuable assistance through these agencies which put on no extras, and make house to house collections weekly without additional charge: they are well looked after by the authorities. Now the moral of this sketch of how thousands—not merely the pinched or the necessitous—live in Paris, is to show, that the co-operative stores of the open streets, are assuming vast proportions and within the last few years there is proof that diminished incomes find a relief in this plan, and at the same time it affords facilities for the maintenance of that correct *tenue* in dress, so characteristic of French women especially. Gambetta's ball has been such a success, that his letter-bag is reported to be filled every morning with pink notes and epistolary penmanship, imploring him to give another, and to admit ladies among his mirthful crew: upwards of five hundred ladies volunteer to come forward to receive the fair sex for him; he has decided to give no soiree till December next: indeed the season for balls is over, save at the sea-side, where they flourish at the casinos: and these establishments being public, are uncomfortable, and ought not to be patronized, save by a made-up party who will keep quite to themselves, and form a ball within a ball, there is no "who's who?" to guide the visitor: it is worth attending one of these gatherings, you will easily recognise the character of the company: you will see the most extraordinary collection of fashions here, as the society is cosmopolitan; but fashions for the moment have this peculiarity, that they have no peculiarity at all: our upholsterers, not the drapers, apparently dress our ladies, and all the museums are ransacked for a pattern that is ancient, and for a color that has nearly disappeared; observing these two traits, ladies may select the material suited to the temperature, and with a suitable expenditure of lace, and a prodigal indulgence in ribbon, they will be the mirrors of fashion. In the scientific-industrial exhibition, just opened in the Palace of Industry, the dress-makers as a class have been the first to be ready; what odd materials one sees, but all well cut and well fitting; the dresses are short, the hat large and with falling brims, with a gold cord border and dark feathers lapping round; this love or weakness for the antique, is the consequence of the prevailing taste for old furniture: the more it is inconvenient and approaching dissolution, the more it is prized. For the sea-side, cool linen materials, with large Indian designs, are most worn; the large black bonnet, with falling feathers on the border, are exclusively appropriated by the blondes, and deservedly so, Black is much worn: ladies conclude that this is complimentary to the late Prince Imperial: but in nine cases out of ten, the sable weeds have been selected for economy's sake, they are eminently respectable, and every wardrobe has them in stock. A word for the babies, their costumes this year are in bright colors and covered with embroidery. For toilettes in general, the short Grouse kind, is to be preferred.

A curious feature in society is at present to be noted: the working classes marry, and those in easy circumstances abstain from so doing: a writer who can do anything with figures concludes, that if this anomaly continues for a generation, all power and influence will pass into the hands of the populace—all this regards posterity; what I know is, that nurses and servant girls are delighted with the newly accorded privilege to travel on the top of the monster omnibuses; at certain hours of the day, the roofs of the busses flying up; and down the Champs Elysées, are occupied by nurses with infants in their arms; mothers find that this is a very cheap and effective way for giving babies a carriage drive, and above all, prevents the nurses idling away their hours with the soldiers; fortunately the invasion is limited to hours when gentlemen do not want to ride on the busses.

YOKOHAMA LOCAL BOARD OF HEALTH.

The Thirteenth Meeting was held on the 8th September, 1879, at the Machigisho, at 10.30 a.m.

President: the Governor of Kanagawa Ken.

The following subjects were on the order of the day.

1.—Draft of a letter to the Consular Board at Yokohama, by which their co-operation is requested in the carrying out of the sanitary measures, advised by the Local Board of Health.

2.—Reports about the spread of the disease in the districts of Aiko-gori, Osumi-gori, etc. (near Odawara) and proposal to send another member of the Board besides the three physicians who have gone already to those districts.

3.—Proposal to alter article V. of the provisional rules for the meetings and to fix the number of nine members as a quorum.

4.—The question whether some uninhabited place near the canal at Hiranuma may be safely used for burning the excreta &c. of cholera patients.

5.—The question whether the present site of the normal school at Nogeyama is a healthy one or not, especially in regard to the disease "kakke."

6.—Report of Dr. Geerts respecting the aqueduct and the reservoir at Kashimada.

7.—Résumé of the 10th meeting.

I.—The President informed the meeting that a draft had been made of a letter to be sent to the Consular Board. The Governor in this letter informs the Consuls of the establishment of a District Board of Health at Yokohama, and requests their co-operation in the carrying out of the Sanitary measures advised by the Board.

The letter being unanimously approved of, the Governor resolved that he would send the same to the Senior Consul.

II.—The President observed that the disease was spreading more and more in the districts of Aiko-gori, Osumi-gori and others near Odawara and stated that medical aid was much wanted there. He suggested that Dr. Shima, of the Board, should go to aid and advise the local physicians in those places.

The Board unanimously agreed that Dr. Shima should be requested to go as soon as possible.

III.—The President remarked that in consequence of many members of the Board being unable to attend the meeting, because they were actually engaged at Odawara and neighbourhood, the number of two-thirds fixed for regular meetings was found too large and had already caused one meeting to be delayed. After some discussion it was agreed to fix the number of nine members as a minimum for regular meetings.

IV.—The President stated that some spot in the swamp at Hiranuma, near the canal, was used formerly for burning the excreta of patients from Kanagawa and neighbourhood. He wished to know whether this place was a convenient one for this purpose and would not endanger the neighbouring canal. Drs. Kondo and Miyajima deemed it necessary that the place should be inspected beforehand. The President requested Dr. Geerts to visit the spot and report at the next meeting.

V.—The President informed the meeting that the normal school at Nogeyama was now found too small and had to be enlarged by additional buildings. Before, however, deciding upon enlarging the present school, he very much wished an inspection to be made of the site by a committee of the Board. It was a very important matter, because about seventy-five of the more advanced students were there located, and if the place should be found unhealthy or unsuitable, another site ought to be chosen for this school.

Dr. Simmons stated that he had inspected the place often, that the prevailing disease amongst the students of this school was *kakke*, and that the location of the school seemed bad for *kakke* only.

Dr. Miyajima proposed an inspection being made at the earliest moment. Consequently, Drs. Gütschow, Miyajima and Geerts, were appointed to inspect the school on the 9th September and report the results at a following meeting.

VI.—Dr. Geerts then read his report upon the Yokohama aqueduct and reservoir at Kashimada, near Kawasaki, of which the following is a short résumé.

1.—The present arrangement at the *prise d'eau* in Kashimadamura is defective, as it does not allow the water to become clear before entering the tubes.

2.—There is one single large reservoir, 174 *shaku* in length 24 *shaku* in breadth and 10 *shaku* in depth, which is able to contain 41,760 cubic *shaku* of water.

3.—The water never stands still in this reservoir; it is constantly in movement and unable to get rid of the small particles of red clay and sand, which is carried along from the river bed.

4.—The analysis has proved that the water is very pure as to dissolved matter; it does not show any pollution with sewage, but it is not clear on account of the small particles of suspended clay.

5.—It is a very simple and easy matter to remove these suspended clay-particles at Kashimada, either by filter-beds or by allowing the water to subside during 24-36 hours.

6.—After having been in rest or filtered, the water is of an excellent quality and far better for drinking purposes than the water of most wells of Yokohama.

The conclusions from these observations are:—

a. That it is highly desirable to make at Kashimada an arrangement for purifying or filtering the water before it enters the tubes of the aqueduct

b.—To remove on the road and in Yokohama, all causes which might allow the entrance of dust or sand into the tubes.

A plan for a system of filter-beds and reservoirs was submitted with this report. It was resolved that the Kencho should examine the cost of the project and communicate the result at a future meeting of the Board.

VII.—The reduction committee handed in the résumé of the 10th meeting, which was read and adopted.

The Fourteenth Meeting was held on the 10th September, 1879, at the Machigisho, at 10.30 a.m.

President: the Governor of Kanagawa Ken.

The following subjects were discussed:

1st. The burial of a foreigner (Mr. Rose), who had died of cholera.

2nd. Report of the members of the Board, who had just returned from their visit to Odawara and neighbourhood.

3rd. Report of the Committee for the inspection of the normal school at Nogeyama.

4th. Résumé of the minutes of the 11th meeting.

I.—The President observed that on the 9th September a foreigner, Mr. Rose by name, who had fallen a victim to cholera, had been buried in the foreign cemetery. The governor had sent beforehand a despatch to H. B. M.'s Consul at this place, requesting him to order the necessary precautions being observed by the undertaker and sexton. An answer was received from the Consul stating his approval and promising his co-operation in the carrying out of the necessary precautionary measures, which had been given to the undertaker in writing by Dr. Wheeler. An officer of the Kencho was sent with police-constable Schultz to the cemetery and they reported that the grave, instead of being 12 feet deep, was only 9 feet 4 inches in depth, whilst only four bags of lime had been used for the grave. As the report showed the burial was not in accordance with the rules followed in the burial of Japanese cholera-patients, and was contrary to the orders and instructions given both by H. B. M.'s Consul and by the Kencho, the President now wished to ascertain the opinion of the Board as to the question whether the burial of this cholera corpse had been carried out in a proper manner or not.

Dr. Wheeler stated that he had ordered the undertaker in writing to dig a very deep grave, with a thick layer of fresh lime at the bottom and on the top of the coffin. H. B. M.'s Consul besides sent a Consular officer to the cemetery to supervise the matter. The coffin had double sides, between which cotton wool, saturated with pure carbolic acid, had been placed. In the coffin, all the space had been also filled up with cotton impregnated by carbolic acid.

Dr. Simmons was of opinion that the same rule ought to be observed both in the burial of Foreign and Japanese cholera patients.

Dr. Geerts wished to make use of this opportunity, in stating that the foreign cemetery in Yokohama, as a whole, is badly situated from a sanitary point of view; it is far too near to the Motomachi, and by that reason alone is a constant danger to the health of the living. It is especially dangerous to bury cholera corpses so near to inhabited places and wells of drinking water. He did not wish to consider this single case of the burial of Mr. Rose, without at the same time strongly urging the necessity of providing for another and more distant burial place for foreigners in Yokohama. Especially, he felt it his duty to disapprove of the burial of cholera corpses whether foreign or Japanese in such close proximity to densely populated streets. He observed that the part of the bluff situated near to the graves is becoming now more and more populated, that the present cemetery was, during the 20 years of its existence, already filled for the greater part, and he wished therefore to propose, that the necessary steps be taken to address the Consuls on this important subject in order to come to an understanding as to the desirability of pro-

viding for a second, more distant and less dangerous foreign cemetery.

Dra. Miyajima, Wheeler, Gütschow and others were also of opinion that the present foreign cemetery is situated in such close proximity to dwellings as to become dangerous for the health of the people, that it would be very wise to shut up the cemetery altogether, and to provide for a second one at a greater distance from houses.

Mr. Ninomiya wished that the grave of Mr. Rose should be surrounded in the same manner as had been done formerly at Kanagawa by a ditch of lime, one foot in thickness, because the orders of Dr. Wheeler had evidently been disregarded.

The President asked the police-constable Schultz, who had been ordered to attend the meeting, to give his report. The constable reported that he had measured the grave and had found it to be 9 feet 4 inches deep, that he had seen only four flat straw bags with lime, and that he had not seen lime put above the coffin.

After some further discussion, Dr. Gütschow proposed and all the members agreed to the following resolution: that the Board does not consider the mode adopted in burying the last cholera corpse in the foreign cemetery of Yokohama a proper one and advises—as the depth of the grave was not sufficient—to remove part of the earth over and round the coffin and to replace it by a layer of lime of 1½ feet in thickness.

II.—Messrs. Imanishi, Ninomiya and Nagashima, who had just returned from Odawara, were requested to give their report. The following is a *résumé* of the same.

1. When we came to Odawara, there were about 100 cholera cases and about 20 new cases each day. There was no Government hospital for infectious diseases and the private hospital there was so small that all patients were treated in their own houses.

2. We erected at once a special hospital in a temple, with additional arrangements for 40 patients.

3. The inhabitants of Odawara drink water from an open water conduit of the Hayakawa, an outlet of Hakone lake; the water runs into wooden tubs. Several of these tubs were very dirty and had bad water. All suspicious tubs were stopped and people ordered to take water from good places. It is recommended to make a closed aqueduct at Odawara for preventing pollution.

4. There was no special burial or cremation ground for the cholera corpses; the dead were brought to the ordinary graves near the temple. We established at once a special burial and cremation place at a spot named Oihara.

5. Disinfection was not sufficient. We arranged a proper system of disinfection on the same footing as in Yokohama.

6. After the hospital was in working order, nurses from Yokohama were provided, all bad water tubs closed and measures of disinfection were better observed, and there was a marked improvement.

7. At the village of Uchijima (near Odawara) in Ashigara Kami-gōri there were, on the 4th Sept., 10 cholera cases.

8. The inhabitants of this village used the water supply (intended for the rice-fields) for drinking purposes. We stopped this practice at once and procured them pure water.

9. In other villages of the same district (Ashigara Kami-gōri) the disease had also appeared. In all there were 43 cases in this district when we left.

10. In the village of Soya-mura, of the district Osumi-gōri, cholera was very bad. Here the people used water from two aqueducts, the one open, the other in closed tubes. In the open conduits people wash their dresses and vegetables often. Only one person who used the water of the closed aqueduct had been attacked; all other persons attacked by the disease were in the habit of drinking the water of the open conduit which was proved to be bad at the outlet. We strictly forbade them the use of the water of the open conduit.

11.—In both districts of Osumi-gōri and Yurigi-gōri there were 40 cases at the time we left.

12.—A cottage hospital for these districts has been erected at Hamatsuké, well qualified nurses from Yokohama were ordered and came over.

13. In the villages the disease is very much concealed and does not often come to the knowledge of the authorities; this naturally causes disinfection to be wholly neglected.

14. The nature of the disease was very malignant. The mortality was not less than 60 of the 110 patients. In the lower situated districts about 66 *per cent* of the patients have died; in the higher or upper parts about half of the cases are mortal. In Osumigori, for instance, 21 had died of the 43 cases there.

III.—Dra. Geerts, Gütschow and Miyajima handed in their report of the inspection of the normal school at Nogiyama, of which the following is a *résumé*.

A. The place for the new buildings to be erected.

B. The old building now used as dormitories.

C. The old class-rooms.

A 1. The site; the quality of the ground, we consider to be good. The place is high, dry and with a solid rocky substratum and well accessible to the prevailing winds.

2. The square space intended for the two new buildings, which are to serve as dormitories for a hundred students, was found 26

by 7 metres. Two of these buildings, each with two stories (each story being 3½ by 4 metres high, will comprise therefore a cubic space of 2,912 cubic metres. After the subtraction of 912 cubic metres for dining-room, lavatory, cloak-room, etc., there remains about 2,000 cubic metres space for the dormitories, or 20 cubic metres for each student, which space is a proper one.

3.—In erecting the new building for dormitories a height of not less than 3½ to 4 metres for each room ought to be observed, and not less than 15 cubic metres space for each student must be allowed in the dormitory.

A proper lavatory, a number of not less than five well-built closets, a double set of stone-paved urinals, a spacious staircase, a well ventilated cloak-room near the entrance, and a separate room for keeping the futons are necessary in each of these new buildings.

4.—The dining room must not be united with the kitchen, as in the old buildings, but ought to be kept separate and free from smoke.

5.—A large water-filter must be kept in each building and all drinking water be filtered.

B 1.—As to the present buildings used as dormitories, and afterwards to be changed into class-rooms, there are several faults:

1. The unpleasant stuffy smell of the air in the dormitories of the upper story. The dormitories No. 2 and 3 on the left upper story had only 11 cubic metres space for each student.

2. The mattresses or "futons" were kept in the same room with the students and were not enough ventilated by sun and open air.

3. The mats were only removed once or twice a year. They ought to be beaten once a month.

C.—Class-rooms.

1. The walls and ceilings of all class-rooms were not high enough. The height was only 2½ metres. This height ought to be 4 metres.

2. Warming in winter time and ventilation of the class-rooms is defective.

3. The windows in all the class-rooms are too low. An arrangement ought also to be made so as to turn the upper parts of the windows for ventilation. During the intervals between the class-hours the class rooms must be opened and ventilated.

4.—The cubic space in the class-rooms may not be less than 10 cubic metres for each student.

5.—Distribution of class hours, recreation-hours etc., is good, provided the scholars are not overburdened with labour at their rooms, after they have finished the class-hours.

6.—It is desirable to augment gymnastic exercises and common playing on the play-ground, before the buildings.

7.—The play-ground near the school is good.

General Medical Observations.

1.—The only severe disease of which some students of this school suffer is *Kakke*; with our defective knowledge of the primary causes of *Kakke*, we have no right to attribute this to the locality, especially so when this spot answers all sanitary conditions. We can do no more than bring the students under the best hygienic conditions.

2. The system of nourishing the students is in our opinion not sufficient. They want more animal food. They receive rice, tea, a little fish once a day, some spices and vegetables, but meat is very rarely distributed. Although this style of feeding may be sufficient for workmen and others who possess a rapid assimilation and display much mechanical energy and eat large quantities and often, still it is insufficient for students who lead a more sedentary life.

IV.—The President read the *résumé* of the 11th meeting, which was approved.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

COURT, POLITICAL AND OFFICIAL.

The friendly feeling which exists between Russia and Japan has been further instanced by H. M. the Emperor of Russia forwarding to the Mikado the decoration of the Order of Saint Andrew as a token of friendship. This is, we believe, the most distinguished Order in the Russian Empire. We understand that Their Excellencies Sanjo and Iwakura have also received from the same potentate the decoration of the "White Eagle."

Professor Nordenskjöld, the chief of the Swedish Expedition, was admitted to an audience of His Majesty the Emperor, at 2 p.m. Wednesday.

On the 12th instant, H. E. Terashima, the Minister for Public Education, was appointed President of the Legislative Bureau.

His Excellency Inouye formally handed over charge of the Legislative Bureau to the new Vice-President, His Excellency Terashima, on the 17th instant.

His Excellency Matsukata, the Senior Vice-Minister for

Finance, recently received from His Majesty the King of Italy the Order of "St. Maurice and St. Lazare," and the Emperor has now granted him permission to wear it.

His Excellency Yamao, the Senior Vice Minister for Public Works, accompanied by Mr. Yasukawa, the 1st Secretary of the Department, will leave Tokio on the 19th instant, on a tour of inspection of several mines in Joshu, &c.

The *Nichi Nichi Shinbun* states that, His Excellency Hayashi the Junior Vice-Minister for Home Affairs, accompanied by three officers of the Department, left Tokio on the 16th instant to inspect the roads, embankments, &c., damaged by the recent floods in Miyagi Ken, in order to obtain information to enable the Department to deal with the application of the local authorities for a grant of money to defray the expense of repairing the injury which has been done.

The floods which occurred in Yamagata Ken, about the 11th July last, having been heavier than any experienced for the past 100 years, two or three officers of the Ken arrived in Tokio on the 17th instant, in order to make a full report as to the damages sustained.

Messrs. Hanabusa, the Japanese Envoy, and Mayeda, the Consul for Korea, left Fusan some days ago, in the *Takum Maru*, to proceed to Motoyamatsu, (the port in Korea to be opened for Japanese trade), but many people on board being ill, the ship returned to Nagasaki, for medical assistance. The vessel will leave again as soon as the patients are better and the necessary preparations are complete.

Japan seems determined to create a favourable impression at the forthcoming Sydney Exhibition. We learn that Mr. Sakata, the Japanese Commissioner to the Exhibition, is now busily engaged in arranging the Japanese Section. It is said that a space of 3,750 square feet has been allotted for the Japanese exhibits, and it is intended to erect a small shop outside the Exhibition-building, where Japanese products will be sold.

It is rumoured that one of the Prime Ministers will shortly proceed to the provinces in the south-west, and also to the island of Loochoo, to inspect the condition of those localities.

Their Excellencies, Uyeno and Awoki, the Japanese Ministers for England and Germany, attended at the Council of State on the 16th instant, to discuss certain important business the nature of which has not yet been made public.

The building in Nagata-cho Tokio, belonging to the Foreign office, has been lent to His Excellency Awoki for a residence during his stay in Tokio.

His Excellency Okuma, the Minister of Finance, entertained at a banquet in the Seiyoken Hotel, in Uyeno, on the 17th instant, the officers of the Finance and Foreign Affairs Departments, who were on the reception committee of Governor Muenomiy.

This evening, H. E. Terajima will entertain the professors and officials, etc., of the Tokio University, in the Shimbunkan Hall of the Education Department, Tokio.

General Grant at the time of his departure from Japan, left with the Japanese officers appointed to entertain him, the sum of yen 300 to be given to the authorities of Tokio and applied towards sanitary measures. The money has lately been forwarded to the Tokio *Fucho*.

The Sanitary Department in connection with the Tokio *Fu*, was closed on the 15th instant, and it is rumoured that the Tokio District Board of Health will be closed at the end of the month.

Mr. Isogai, 1st class clerk of the Kanagawa Ken was, on the 11th instant, appointed Under Secretary of the *Ken*.

H. I. G. M. corvette the *Prinz Adalbert* arrived on Wednesday from Vladivostock, by way of Hakodate. The recent heavy weather caused some apprehension to be felt for her safety.

General Kawaji, the Chief Superintendent of Police, who is now in France, was to have been honored with presentation to Her Majesty Queen Victoria, but the ceremony had to be postponed as the General is suffering from a severe attack of disease of the lungs. He has been recommended by a surgeon of the French army to return home for a time for the benefit of his health and is expected to arrive here in a few days.

Mr. Andô, the Japanese Consul for Hongkong, will leave here for his post in the steamer which sails for Hongkong on the 19th instant.

On the 18th instant, Mr. Matsudaira Taro was appointed to be an official of 7th rank in the Foreign Affairs Department, and

ordered to proceed to Vladivostock, to act as Japanese Consul there.

It is said that eight hundred policemen are to be shortly enlisted for service in the Okinawa Ken. Five hundred will be raised in Osaka and three hundred in Hiogo.

On the 15th instant, twenty students of the Tokio Female Normal School received certificates of competency on the completion of their studies in that institution.

NAVAL AND MILITARY.

It is reported that the Japanese man-of-war *Adzuma Kan*, will shortly proceed to China, in order to make a survey of a portion of the coast.

The naval cadets who were on board the *Tsukuba Kan*, during her recent cruise to Singapore, have been considered sufficiently advanced in the practical and theoretical knowledge of their profession to warrant taking their places in the navy. Fifteen of them were accordingly appointed sub-lieutenants, on the 12th instant.

The provisioning of the Japanese man-of-war *Tsukuba Kan* having been completed, she will leave for a cruise on the 25th instant. The *Teibo Kan* has returned to Nagasaki from Korea. She arrived at the last named port on the 17th instant.

The Japanese man-of-war *Nishin Kan*, which was lately recalled from the Chinese Sea, arrived in port on the 16th inst. A native contemporary learns from an officer on board of her, that whenever the vessel anchored in a Chinese port, during her last trip, two or three Chinese men-of-war always surrounded her, and that when the naval review took place off Woosung, in which about 15 Chinese men-of-war took part, the *Nishin Kan's* presence gave offence to the Chinese.

The extraordinary meeting of the Senate, which lasted from the 9th to the 13th instant, was to consider the revision of the laws regulating enlistment in the army.

The Government Arsenal in Kagoshima has lately been closed.

INDUSTRIES, TRADE AND FINANCE.

The Home Department intends to establish a cattle market in Mita, Tokio, on the plan adopted in Europe and America. The estimated expense is yen 80,000 or 90,000.

It is intended to open an Agricultural Exhibition in Mita, Tokio, for which purpose the authorities lately purchased about 3,000 tsubo of ground, and are now about to erect the necessary buildings thereon.

A report has been received from Kiyoto that the tunnel through Oankayama on the Kiyoto-Otsu Railway was completed on the 11th instant, and that the opening of the entire line to Otsu may now be expected to take place shortly.

Last year, Fushimi Tadachichi and several others applied to the authorities for permission to construct a carriage-road, through the mountains known as Sayonohakayama, lying between the towns of Kanaya and Nisaka, on the Tôkaidô. This application was allowed on the 13th instant, and the Government granted the sum of Yen 8,000 towards the cost of the undertaking. The total amount required is estimated at Yen 20,000.

Mr. Hida Hamagoro, lately director of the government arsenal at Yokosuka, has been requested by the colonization commission to superintend the establishment of iron works at Yezo. He recently left for the island to carry on the preparatory work.

The total number of silkworm-egg cards, which have arrived in Yokohama from the provinces of Joshu, Iwashi, &c., from the 23rd ultimo up to the 15th instant, is 14,783.

Some Chinese lately commenced the manufacture of scent from the expressed oil of the nuts of the *shikimi* tree. The article has met with such success that the price has gradually risen until it now fetches \$6 per 100 *kin*.

The American schooner *Corean* (134 tons) has lately been sold to Kikuchi Chûchichi, of Iwate *ken*, for \$6,300, and she will be known as the *Tôchû Maru*.

The Japanese merchants seem to be fully alive to the advantages derived by mercantile men from Chambers of Commerce. We learn from the *Nichi Nichi Shinbun*, that the native merchants of Hiogo and Kobe have applied to the Government for the permission necessary to enable them to establish a Chamber at Hiogo, and that as they are supported by the local authorities there can be little doubt as to the request being granted.

It is rumoured that the Mint at Osaka will commence coining about Yen 5,000,000 worth of silver and copper coins, about the 19th instant.

The following is the official return of Imports and Exports in all the open ports in Japan during the month of July last, as prepared by the Customs Bureau of the Finance Department:—

Total value of Imports ... Yen 2,836,759.716
" " Exports ... " 2,061,948.393

Excess of Imp'ts over Exports...Yen 774,811.323
Total Customs revenue ... " 205,751.570
Imports of gold and silver coin
and bullion ... Yen 621,853.840
Exports do. ... " 410,517.570

Excess of Imp'ts over Exports...Yen 211,336.310

MISCELLANEOUS.

The farmers in Kasugaigori, Aichi Ken, lately presented a memorial to the Home Department on the subject of the revision of the land tax; this document was not favourably entertained at the time, and thinking probably that they would fare better now that a change of Ministers has taken place, Horio Moosuke and five others, representing the farmers of sixty villages in Kasugaigori, presented another petition at the Home Department, on the 17th instant. The officials fully explained to the deputation the course they ought to pursue when forwarding the document, and requested them to return to their homes; this they positively declined to do and refused to leave the office until their petition was accepted. The consequence was that they were handed over to the police.

It has, we hear, been reported by telegraph that Messrs. Fujita Denzaburo and Nakano Guichi, the well known merchants of Osaka were, on the 15th instant, arrested by police officers who were specially sent there for the purpose from Tokio. The crime they are charged with is unknown.

The Osaka correspondent of the *Yomi Shimbun* states that "at about 5 a.m. on the 15th instant, an assistant-superintendent, 5 inspectors of police and 50 policemen from Tokio, accompanied by a number of policemen stationed in Sakai Ken, suddenly entered the house of the well known merchant Mr. Fujita Denzaburo, in Kōraibashi, and arrested him. They also arrested his brother, Mr. Nakano Goichi (the late Governor of Yamaguchi Ken), and Sayeki, as well as all the *Danto*, etc. in the house. Usually, all arrests are made by the local police authorities, acting under instructions from Tokio, but on this occasion, the local police were simply informed by the Tokio officers that these men have been arrested for "particular reasons," so that even the local authorities know nothing respecting the cause of the arrests.

The office of Fujita & Co. has been closed and is strictly guarded by the police from Tokio. On the same day, the same officers visited the office of the 34th National Bank in this city and examined all the documents &c. therein. It is also said that another man has been arrested in Dōjima. Some account for these arrests by saying that these men have had some connection with the recent rise in the value of rice, whilst others state that there must be something much more serious the matter. I shall make careful inquiries and write further in due course."

Mr. Fujita is one of the leading merchants in Osaka and has extensive business relations with Corea.

We understand from the *Nichi Nichi Shimbun*, that Ogasawara Masayoshi, a reporter on the staff of the *Asahi Shimbun*, attempted to extort money from the relatives of one Usui Takehide, who was in the custody of the police, by threatening to make public his misconduct unless the demand was complied with. Instead of submitting to this extortion Ogasawara was promptly handed over to the authorities, and on Friday last, was sentenced by the Tokio Saibansho to be imprisoned for forty days, and degraded from the rank of *Shizoku*.

Dr. Mogami, of Minami-Katsushikagori, Tokio, was on the 16th instant fined yen 20 and prohibited from practicing for 100 days, in accordance with article 22 of the Cholera Regulations, for having in his report of a death, wilfully stated that the patient had died of another disease, when in fact the death was caused by cholera.

We learn that horse races will take place at Shimosa Farm, for three days, commencing on the 23rd instant.

It is said that the Postal Authorities will shortly make a change in the colour of the one and two *sen* stamps.

The following return of Cholera cases in Okinawa Ken, during the month of August last, has been forwarded by the Governor of the Ken to the Home Department in Tokio.

Under treatment on 31st July.	New patients.	Recoveries.	Deaths.	Under treatment on 31st August.
152	87	175	18	46

The number of new cases of cholera and deaths in Tokio reported during the week, is as follows:—

Date.	New Patients.	Deaths.
Sept. 12th.....	14	5
" 13th.....	14	7
" 14th.....	15	4
" 15th.....	10	4
" 16th.....	11	5
" 17th.....	9	3
" 18th.....	15	3
	88	31

Return of cholera cases in Kanagawa Ken from the commencement of the epidemic up to the 19th September, 1879:—

Date	New Patients.	Recoveries.	Died.	Treatment.
June 18th to } September 12th }	1,581	1,068	237	296
" 13th.....	25	29	14	278
" 14th.....	14	21	2	269

ARRIVAL OF THE AMERICAN MAIL.

GREAT BRITAIN.

Edward Strathearn, Lord Gordon, one of the Judges of Appeal, died at Brussels, aged 66.

London, August 22nd.—Lord Dufferin, it is said, will succeed Sir Edward Bulwer Lytton as Viceroy of India.

Dublin, August 22nd.—The Home Rule League had a demonstration at the Rounda last night. Only four members of Parliament were present. Parnell was the most notable. The body of the hall was crowded with workmen. The proceedings throughout were riotous and remarkable for hostility towards the more moderate section of the Home Rule members of Parliament. The meeting passed a resolution in favour of an obstructive policy in the House of Commons, and expressing the necessity of purging the party of members showing lukewarmness. Several fights occurred. Dissenters from the resolutions, after receiving very rough usage in the hall, were thrust out to encounter another mob in waiting.

London, August 22nd.—Heavy thunder-storms have caused rivers to overflow in the north and north-eastern parts of Lancashire, doing much damage to crops. Some of the cotton mills on the banks of the Blackwater at Darwen suspended on account of water.

The Grand Cross of the Order of the Bath has been conferred upon Lord Chelmsford.

London, August 21st.—A *Standard* Paris dispatch says: The Edison Company have obtained permission from the Government to establish telegraphic communication between various quarters of Paris. The same dispatch states that M. Philiphant, a financier, has bought the Grand Hotel, paying over a million pounds.

London, August 21st.—The rains in England continue and there is a renewal of the overflow of rivers in Somersetshire, Derbyshire, Warwickshire, Leicestershire and Staffordshire.

London, August 21st.—In the Vale of Clwydd, Wales, thousands of acres of crops are still submerged, and hundreds of cattle and sheep are drowned.

Bullion in the Bank of England decreased £24,000 the past week. The proportion of bank reserve to liability is 58 7-16 per cent.

Sir Rowland Hill, founder of the penny postage system, is dying, aged 85.

London, August 21st.—John Baldwin Buckstone, the comedian and dramatic author, is on his death-bed and in destitute circumstances.

London, August 21st.—The *Times* says: United States bonds are steady, in response to a demand for investment securities. It is stated that a very large amount in bonds was made up for transmission to New York yesterday.

London, August 21st.—Joseph Octave De Lipierro, the Belgian historian and antiquarian, is dead, aged 76 years.

London, August 21st.—The last communication through the cable from the steamer *Faraday*, which is laying the new French cable, was received the 14th of August. The *Faraday* was then experiencing heavy weather. The cable is supposed cut, and it is hoped buoyed. The steamer *Weser* spoke the *Faraday* on the 18th in latitude 49° 18', north longitude 140° 30' but the only words of signals decipherable were "lifted 1,700 cable."

London, August 21st.—Telegrams to Lloyds report that a steamer grounded in the Suez Canal yesterday, and that traffic through the canal has been stopped.

The British Post office Department announces that, in consequence of damage by floods on Welsh railways, it is not advisable to send letters by way of Holyhead to catch the supplementary American mails at Queenstown.

England is the only Power not invited to send officers to witness the great Russian military manoeuvres commencing on the 25th instant. The Russian Government is on the point of signing a contract with American firms for the construction of a number of cruisers, at a cost of twenty-five million roubles.

New York, August 19th.—A special from Plymouth, England, says: Lieutenant Carey is expected here to-day. He will be met by a Committee, presenting the following address: "We the undersigned men of Plymouth, in welcoming you back to your native country, desire to express our entire confidence in your valor as a British officer and honour as a gentleman, and our sincere sympathy in the trying circumstances in which you are placed." The address is signed by 1,000 names, obtained within a day or two.

The address to Lieutenant Carey, in charge of the expedition in which the Prince Imperial lost his life in South Africa, declaring that he has been unwarrantably censured, has received 3,000 signatures in Plymouth since Monday.

It is stated that after the court-martial's sentence of death had been set aside, the Duke of Cambridge urged the Queen to dismiss Carey, but she declined, and has been resolute in his favour.

A recent Liverpool paper has the following on the movements of Henry A. Stanley, whose arrival in Africa was recently noticed: He has steamed direct to the Congo, intending to open that river to commerce from the west coast. A steamer laden with goods has been dispatched from Antwerp within the last month, under the patronage of the King of the Belgians. This steamer will remain at the Congo till Stanley's arrival, and has on board two or three steam barges in sections. Stanley is intending to ascend the Congo, carrying these sections piecemeal round the Gellalla Falls.

Dublin, August 20th.—A movement is on foot for the enrollment of unarmed volunteers in Ireland.

London, August 19th.—Regarding the accident to Wm. O. Mosely Jr., the young physician of Boston, whose death, while descending the Matterhorn, was announced on the 15th inst., a Geneva correspondent writes as follows: Dr. Mosely had safely accomplished the ascent of the Matterhorn. On returning and when near the cabin, which is used as a resting place, he loosened himself from the rope uniting him to his companions. He had hardly done so when he made a false step, lost his footing, and glided rapidly down the steep ice slope, making frantic efforts to stop himself by grasping at the projecting rocks. The next moment he disappeared over the precipice, falling on a glacier opposite the Riffle, between the Hoernli and Saint Toudle Pass, where the body lies, completely stripped of clothing by the rapidity of its descent. The body can be distinctly seen from below, lying on a projecting ledge of ice. An expedition for the recovery of the body was to start Saturday morning.

London, Aug. 19th.—The Stock Exchange will close for repairs Friday afternoon, and remain closed till the 25th.

London, August 19th.—Silver, 51½; 4½s, 108½; new 5s, 105½; Erie, 28½.

London, August 18th.—At Lurgan, Ireland, on Saturday, two hundred police charged on a mob with fixed bayonets. The police were beaten back and twenty of their number injured. Rival mobs fired at each other with rifles. One leader of the Catholic party had some dynamite, which exploded, injuring him fatally.

London, August 18th.—In consequence of storms, traffic is

suspended on the railway between Chester and Holyhead. A viaduct at Llandudulas, Wales has been washed away; also some of the bridges. Several sewers were burst by the freshets, on the lines of Liverpool railways. Birkenhead is flooded. There has been thirteen hours of continuous rain at Chester. In Derbyshire, Trent and Derwent the river overflowed all the low-lying lands. Wheat is gradually rotting, and any crops left standing will not pay for cutting. The rain at Sheffield was so violent as to wash away the foundations of houses in the course of construction.

Calcutta, August 11th.—Affairs in the Bampa district of the Madras Presidency, growing out of the levying of a tax on palm trees, are so serious that the Duke of Buckingham has decided to proceed in person to the scene of the disturbances. This step is much criticised, as it is considered great harm has already been done by the conflict of authorities.

London, Aug. 18th.—The Brazilian Embassy have published a telegram announcing that the new Brazilian loan is more than twice covered by subscriptions.

London, August 18th.—A more cheerful feeling and other signs of improvement are noted in the iron trade.

London, Aug. 16th.—A Receiver has been appointed for the estate of James McHenry. The assets, £1,000,000, consist of shares and leasehold, one leasehold and one freehold property. It is possible that the judgment of the Master of the Rolls requiring McHenry to deposit instalments in Court of the sum recovered by the Erie Railway Company in its recent action against him, has been the means of bringing matters to a climax.

London, August 16th.—The *Economist* says: Scarcely anything is being taken from the Bank of England for the United States. For instance, on Friday the remittance was chiefly for sums received from the Continent.

London, August 16th.—The death of Mrs. Sartoris, daughter of ex-President Grant, occurred on the 6th instant, at Warmah House, Titchfield, Hampshire. Her death was sudden.

London, August 15th.—The Porte has appointed Plenipotentiaries to arrange the Greek frontier.

London, August 15th.—Parliament was prorogued to-day. The speech from the throne was delivered by Royal Commission. The Queen, after announcing that the relations of the Government with other Powers continue cordial, refers to the faithful execution of the principal clauses of the treaty of Berlin and the near realization of the remainder.

On the subject of reforms in Turkey, the Queen speaks of the calamities of war as explaining the delay, but declares her purpose to insist upon the Porte's compliance with its engagements.

The South African war next engages the attention of the Queen, and while expressing pleasure at the recent important successes of British arms in that quarter, Her Majesty expresses her sorrow at the sacrifice of precious lives occasioned by the war. An early peace on an enduring basis is predicted as the result of events in South Africa.

The Queen expresses her thanks to the House of Commons, as is customary for voting supplies. The Queen calls attention to the change for the better that has already taken place in Egypt. In alluding to the successful termination of the contest in Afghanistan, Her Majesty speaks warmly of the gallantry displayed by the British commanders and the courage and endurance of the troops.

Her Majesty refers in commendatory terms to the passage of certain measures, including the Army Discipline bill, the Act for the appointment of public prosecutors, amending the law relating to summary jurisdiction of Magistrates and alterations of laws relating to banking and joint stock companies. The speech concludes as follows: "I have had much pleasure in complying with your request to appoint a commission to inquire into the causes of the depression in agriculture. I observe with satisfaction that you have agreed to measures relative to education in Ireland which afford a firm and fitting supplement to the Intermediate Education act. In bidding you farewell I pray that the blessings of Providence may rest on your labor."

The Chancellor of the Exchequer confirmed the report of the existence of considerable excitement on the frontier of Epirus and Thessaly, and stated that both Greece and Turkey in consequence thereof have considered it necessary to strengthen their forces in that quarter. The British Government, however, had not considered it necessary to take notice of the matter.

London, August 15th.—The miners at Manchester yesterday resolved to establish a National Emigration Fund Association.

New York, August 15th.—A London dispatch says Jas. McHenry has failed, with liabilities of \$970,000.

London, August 13th.—The steamer *Cornica* from Cardiff for New York, and the steamer *Semiramide* from Boston for Liverpool, came in collision 100 miles off Fastnet, and the *Semiramide* went down. The crew was saved. Both vessels were iron.

BELGIUM.

Brussels, August 18th.—The Socialist federation here has posted placards, calling a meeting of workmen to protest against the expulsion of the foreign Socialist agitators, John Most and Herr Brousse.

GREECE.

Athens, August 21st.—Eight thousand men of the second class of the Territorial Army has been called out. The King has postponed his autumn tour.

SWEDEN.

Christiana, August 21st.—Two Russian students, Nihilists, have been arrested at the Walden the Russian Government having demanded their extradition.

PORTUGAL.

Lisbon, August 22d.—A German traveler named Otto Shult, addressing the Lisbon Geographical Society, says he has made a pretty exact survey of the region between the Quango and Cassairivers of Africa.

GERMANY.

Berlin, August 19th.—The Sultan has yielded to the demands of Great Britain for reforms in the administration of Asia Minor.

Berlin, August 18th.—The third court martial on the *Grosser Kurfurst* disaster will assemble on 20th instant.

EGYPT.

Cairo, August 19th.—The Khedive has informed the English and French Consuls that he will not answer for the consequences if Rivers Wilson and De Bligniers return to Egypt.

Cairo, August 18th.—The Egyptian Ministry, formed by Cheriff Pasha on the accession of the present Khedive, has resigned, and another Ministry, composed of various Pashas, of whom little is known, has been formed, the Khedive heading the Presidency of the Council.

Cairo, August 15th.—The firman of the investiture of Prince Tewfik was read to-day. The ceremonies were very impressive.

SOUTH AFRICA.

Cape Town, August 5th.—The President of Pondoland telegraphs that hostilities are inevitable. It is stated from Pretori that Sir Garnet Wolseley is convinced that the campaign against Chief Secocoeni in the north must be vigorously renewed.

Petermoritzburg, August 5th.—The Boers are determined to fight unless their independence is restored.

New York, August 31st.—Latest London dispatches present a rather discouraging prospect of a speedy or satisfactory termination of the Zulu war. Sir Garnet is straining every nerve and employing all means to lay hands on Cetewayo. Archibald Forbes's views, shared by most intelligent observers, are: Obviously Cetewayo is still King of the Zulus, and has a large following of fighting men with him. The details of the regiments present in the last engagement prove this. If he holds out, the trouble and expenditure will continue. It is useless to think of putting up puppets in his stead. British bayonets must support these for an indefinite period, and British bayonets mean British taxation wasted in futility. Cetewayo alone can sway Zululand, and no peace is worth having unless he be dead or consenting.

Correspondent Russell writes: There is much sympathy for the King amongst the Zulus, and it is doubted whether our ultimatum was ever delivered to him, or that he understood our demands. The savage monarch has at least the art of making others feel for him. It is a sorry business all round. No war of ours has ever wrecked more reputations, and all feel they are under a cloud in spite of their duty so gallantly performed. It is also said that leading Zulus hold aloof from Sir Garnet; that even John Dunn has failed in his efforts to communicate with the King, and it is calculated that some four and twenty thousand fighting men are still afoot, while arms given up do not include many serviceable rifles.

A *Tribune* correspondent says: "Sir Garnet went out with one hand tied. The other he has since tied himself in his over-zeal to comply with the exigencies of those who sent him. He was to smooth the path to an autumn dissolution, and it looks at this moment as if the dissolution must, after all, be postponed."

London, August 15th.—A Durkan dispatch says the Zulus generally acquiesce in the deposition of Cetewayo.

Capetown, July 29th.—Some Zulu prisoners report King Cetewayo, with his army, in the marshes of Umvolosi river, where he intends fighting. The two British columns will re-advance on the 3rd of August, and meet at Magnibonium on the 6th of August.

London, August 12th.—From a full examination of South African advices since the victory at Ulundi, the *Times* draws the conclusion that King Cetewayo risked all on the battle, and, therefore, that a conclusion of the war has been virtually reached.

London, August 22nd.—Sir Garnet Wolseley telegraphs: Five thousand Swazies are ready to attack King Cetewayo, and this number will be increased to ten thousand before entering Zulu-

land. The British operations with these or other composite forces coming from the direction of Lunenburg should either capture Cetewayo or drive him towards Colonel Clark's and the column which is moving from the southward. There has been a further submission of Zulu.

A special dispatch says: A successful Zulu raid is reported from Utrecht.

AUSTRO-HUNGARY.

Vienna, August 21st.—The Russian and English Commissioners have seriously differed relative to the determination of the Russo-Turkish frontier in Asia, each disputing the accuracy of the other's map. Lord Dufferin has suspended negotiations at St. Petersburg on the subject.

Vienna, August 20th.—Russia intends to take possession of the Kopet Mountains to cut off the retreat of the Tekke Turcomans if they invade the territory of the Jomude Turcomans. Russia can easily induce the Gokles Turcomans in the Kopet Mountains to acknowledge her sovereignty. Thus Russia thinks that by ruling the Jomude and the Gokles Turcomans, and by forming an alliance with Khiva, she could easily force the Tekkes to make peace.

Pesth, August 20th.—Count Corolji will probably succeed Andrássy as the Austro-Hungarian Premier. It is stated that Count Deszell, the present Hungarian Minister of Finance, will be elected leader of the Deak party. Count Andrássy having informed his friends that he does not intend to participate in politics for some years.

Vienna, August 16th.—The Commission appointed to inquire into the danger at Wieliczka from subterranean disturbances, declare there is no fear of an immediate catastrophe.

It is said that Count Andrássy greatly regrets the Emperor's acceptance of his resignation, as he really wished to remain in office.

Serajeva, August 13th.—The recent great fire postpones the inquiry of the Austrian Commission into the occupation of Novi Bazar.

RUSSIA.

Warsaw, August 22nd.—A Court-martial has condemned two peasants to four years hard labor in the Siberian mines for opposing the demarcation of their plots of land, and six others to various terms of exile or imprisonment for the same offence.

St. Petersburg, August 22nd.—Three of the five male Nihilists sentenced by the military tribunal at Odessa to be hanged, were to be executed at 10 o'clock this morning. The woman sentenced to exile in Siberia is only fifteen years old.

St. Petersburg, August 22nd.—Very serious signs of disturbance are observed among the peasantry. The recent proclamation affirming the permanence of the present disposition of land was designed to meet grave and increasing danger.

St. Petersburg, August 16th.—It is said that General Ignatieff will shortly replace General Todleben as Governor-General of Odessa, and General Todleben will become Governor-General of Poland.

St. Petersburg, August 18th.—The volunteer fleet subscription has closed. Two million roubles have been collected.

St. Petersburg, August 13th.—Russia has formed an alliance with Persia.

London, August 13th.—The *Post's* St. Petersburg correspondent reports that in order to colonize the Central Asian provinces, Russia has promised all her subjects residing therein unlimited land grants and exemption from military service and payment of taxes.

General Kauffmann will not return to Turkistan as Governor-General. Prince Dondokoff Karsackoff will probably succeed him in that position.

FRANCE.

Paris, August 22nd.—A disturbance was caused last night by the band at the Palais Royal refusing to respond to a call from the crowd for the *Marseillaise*. A number of arrests were made.

Paris, August 22nd.—The *Republique Française* states that the powers have sent something like an ultimatum to the Porte, giving forty-eight hours to fix the date of the first meeting of the Ottoman and Greek plenipotentiaries.

Paris, August 20th.—De Lesseps has sent to Central America several expert engineers, including Dononeaux, whose work on the Danube and at Antwerp are well known, to examine the plans of the Panama Canal, and to ascertain the probable expense of building it.

De Lesseps is preparing for his journey to the United States. His wife will accompany him.

Count De Chambord, the Legitimist pretender, has started for England.

Paris, August 18th.—M. Perron, Sub-Lieutenant of Hussars, and M. Rivere, editor of the *Progress de Lyons*, yesterday fought a duel with swords at Lyons. The latter was wounded in the lungs.

Paris, August 15th.—Saugeon, President of the Council General of Bordeaux, has become a candidate against Blanqui for member of the Chamber of Deputies.

Paris, August 13th.—Quelfissi, Republican, has been elected a member of the Council-General of Corsica, replacing a Bonapartist.

* Incomplete Returns.

Note.—The absence of Returns for 1866 is due to the destruction of the Custom House Records at Kanagawa by fire in that year.
Mouseline de Laine.—These Returns are based upon the Custom House Statistics;—the actual importation in the year 1874 and succeeding years was much larger.
Metals.—The quantities of *Metals* imported in 1873 and following years on account of the Japanese Government have been included under the Head of *Government Goods*.
Government Goods.—These Figures are exclusive of Foreign Merchant vessels purchased by the Japanese Government.

Total... .. \$300,391,851.

THE JAPANESE PRESS.

THE RECENT MINISTERIAL CHANGES.

(From the *Kinji Hiron.*)

THE weather on the 10th day of the 9th month of the present year of Meiji, was as dispiriting as can well be imagined, and yet the day should have been celebrated throughout the length and breadth of the land with rejoicings, for a notification then issued announced that His Excellency Terashima Munenori, (the former Minister for Foreign Affairs), was appointed Minister for Public Education, His Excellency Inouye Kaworu, (formerly Minister for Public Works), Minister for Foreign Affairs, His Excellency Yamada Akiyoshi, (formerly Senior Vice-Minister of Justice) to be a Councillor of State and Minister for Public Works, and His Excellency Yenomoto Takenki, to be an Official of the 2nd rank in the Department of Foreign Affairs, still holding office as Envoy Extraordinary and Minister Plenipotentiary. We cannot imagine how any objection can possibly be taken to these appointments. For ourselves, we consider the changes made will prove most beneficial to the efficient working of the Government and that the complaints of dilatoriness on the part of the authorities will soon cease. Although the temperate and forbearing policy pursued by His Excellency Terashima may have been productive of benefit to the nation in the past, yet he seemed to be incapable of taking a firm stand in the matter of the revision of the unrighteous treaties by virtue of which we have for many years been suffering loss and injury at the hands of such cunning and selfish nations as Russia, England, &c. Out of sympathy for His Excellency Terashima, he has been made Minister for Public Education, an office which is generally considered a stepping-stone to further and higher promotion, but we can hardly regard it as such in his case; it is probable however, that his innate humility will induce him to retain the position. The ability and determination which His Excellency Inouye displays in the conduct of public business is well known to the country and needs no mention by us; the only regret we feel is, that he should have so long been left in the comparatively unimportant Department of Public Works. It may be asked why was he not appointed Finance Minister, seeing that this Department is in so complicated a state? But then it must be recollected that although the Finance Department made much more progress under his guidance than it has under the present Minister, there were numerous complaints that the business was carried on in an unsatisfactory manner. In foreign affairs however, His Excellency Inouye has always given the greatest satisfaction to the country; he acted as Vice ambassador to Kurama and succeeded in concluding an advantageous treaty with that country, and has gained much experience of foreign nations during a lengthened residence in London. It will therefore be seen that although His Excellency Ito, the Home Minister, may be otherwise equally suitable, yet the exceptional advantages he has enjoyed make His Excellency Inouye at the present juncture the most desirable Minister for Foreign Affairs amongst the members of the Cabinet. What Japan now wants, is a courageous and resolute man to carry on the negotiations with other countries and therefore the present appointment must in all respects be considered excellent. We are rather dissatisfied at the appointment of His Excellency Yamada to the Public Works Department, but we have often urged his fitness to be a Councillor of State in consequence of his popularity and skill in the conduct of public affairs, and consider the action of the Government in now making him a Councillor will be one of the best steps taken by the Government for some considerable time. It is a well recognized fact, that His Excellency Yenomoto, is well acquainted with foreign politics and therefore his appointment to assist His Excellency Inouye, will be hailed with general satisfaction. Altogether the recent Ministerial changes may be considered very beneficial, but like all other men "the more we have the more we want" and we hope that the Government will not stop at the present alterations in the Ministry, but will promote such men as Lient-General Tornio and His Excellency Kōno, to the rank of Councillors of State in the place of some who now occupy that position and thus effect a complete change in the personnel of the Cabinet, so that in the history of the 12th year of Meiji it may be said, that all the members of the Government were "good men and true."

THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XVI.

THE ROAD TO USHIWA.

A fair dawning heralded that anxiously expected day of departure: a dawning bright with hoar-frost and brisk with the voice of a merry breeze that made a plaything of every withered leaf or broken spray it encountered in its path. Even the mists that inhabited the recesses of the glen behind the ruined fane, hid their heads at the approach of this boisterous visitor, who coming merrily along, brushed brittle icicles from the network of the Demon Kings, and piped a fitful accompaniment to the plaintive notes of a flute that echoed through the solitude.

For Ushiwaka had come to take his last farewell of scenes and associations no future hazard might erase from his memory. It was well perhaps that he had little time to consider the circumstances of this parting, else could he scarcely have endured to accomplish it without some word of farewell to his second father, the abbot; but though the sounds of the flute he had always loved to hear and which his pupil played with exceptional skill, might not reach the old man's ears, he had at least the consolation of knowing afterwards that for two long hours in the bitter cold before sunrise on that February morning, the boy had sat with tearful eyes, yearning to follow the notes his tremulous lips wafted towards the home of his never-to-be-forgotten friend.

When Ushiwaka reached the appointed place of meeting beyond the North Gate, he found Shomon waiting to see him off, and presently Kichiji also arrived, followed by a long train of heavily laden pack-horses. At the head of so goodly a cavalcade, bearing the proceeds of innumerable broad pieces and the earnest of many more, the little merchant suffered the least possible ray of self-congratulation to pierce his wonted envelope of humility, and when two of his attendants led forward a handsomely caparisoned chestnut horse, of rare strength and symmetry, he even ventured to meet Ushiwaka's glance of pleased approval with out any deprecatory obeisance or apology.

Anxious to escape from the neighbourhood of Kurama with the least possible delay, they set forward rapidly, leaving the pack-horses to follow as best they might, but though Kichiji's dread of pursuit reconciled him for a time to this separation from his valuables, his anxiety on their behalf finally became so apparent that Ushiwaka was constrained to propose a halt until the rest of the cavalcade joined them. Indeed the merry jingle of the bells attached to the pack-saddles seemed to be a music without which the little merchant's thoughts were ever out of tune, and for his companion's sake Ushiwaka soon grew tolerant of the delays entailed by such a following: the shifting of ill-adjusted loads; the changing of the horses' straw-shoes; the snail-like ascent and still tardier descent of steep inclines, and the long halts at way-side hostels, where ruddy-checked dandies handed out to the insatiable drivers cups of steaming barley-water, or oftener still beakers of mulled saké.

The brief light of a winter's day putting a speedy period to their progress, they halted for the night at a little village some twenty miles from the capital. It was a village consisting of one long street with uniform lines of thatched houses on either side, and conspicuous above all, a fire-bell with a lofty ladder raised beside it. Under the shadow of this ladder stood the inn; a comfortable building, its roof a thought loftier and its gables a shade ampler than those of its neighbours, but for the rest only distinguishable by its festoons of chequered curtains and lines of mock pennoncelles, whereon were inscribed innumerable destinations of pilgrims for whom the hostel professed to be the only recognized and respectable resting place.

Ushiwaka had with some difficulty persuaded his companion to treat him as a dependant during the early stages of their journey, and in pursuance of this arrangement—the expediency of which he most reluctantly acknowledged—Kichiji assumed the direction of affairs, giving his orders with whatever semblance of prerogative he might simulate. But whether the imitation was sensibly inexact, or whether its errors were made salient by the contrast of Ushiwaka's natural dignity, it failed altogether to deceive the shrewd landlord, who from

the first ignored the little merchant, ushering his companion to the place of honour before the alcove, and obstinately referring to him in terms that left no doubt his rank was appreciated.

This was a source of grievous perturbation to the timid tradesman. He refused to believe that such treatment could signify anything but identification, and though Ushiwaka strove hard to reassure him, he had reason afterwards to be very thankful that he failed.

For Kichiji, too much disturbed to sleep, having passed the early watches of the night listening to every sound and fancying that every footstep was that of a pursuer, had just sunk into a fitful dose, when he was suddenly aroused by the crash of a broken shutter. His first impulse was to warn Ushiwaka, who slept in the next room, but looking down as he passed the head of the steps leading to the ground floor, he saw a party of armed men on the point of commencing the ascent.

Kichiji had too just a perception of the principles of loss and profit to stake anything more on a venture he now regarded as hopeless. Turning back at once, he ran to the window of his room, and climbed into a balcony overlooking the street. Any vague hope he had entertained of making his escape in that direction was however immediately dispelled by the sound of voices at the inn door, and scarcely knowing what he did, he crept along the balcony, grasped the ladder that stood beside the fire-bell, and clambering to the top, clung there in an agony of fear.

The object of the attack seemed to be as certain as the impossibility of eluding it. Nevertheless the horror that Kichiji looked to see momentarily perpetrated, was from some cause or other averted for a time, and it presently began to dawn upon the palpitating little merchant in his airy perch, that a very determined conflict was being waged within the inn. He heard sundry ejaculations, first of surprise, afterwards of anger, followed by the clash of weapons, groans, the falling of heavy bodies, and—yes! there could be no mistake about it—the precipitate retreat of men who seemed content to descend the stairs head-foremost in their anxiety to escape.

However much his capabilities of delicate ratiocination were impaired by terror, Kichiji could not mistake the import of these sounds, nor forget that in his present position it would be difficult to profit by the fruits of victory. He therefore crept down the ladder and peeped cautiously into the room.

The aspect of the scene below would assuredly have driven him back forthwith, had not the attention of the actors been obviously engrossed beyond all chance of diversion. In the corridor lay two dead bodies; the one headless, the other cleft down from shoulder to waist, while half-way down the stairs some four or five men were huddled together, as though they feared to advance and were ashamed to retreat. Three of these carried long pine torches, whose smoky, flickering glare falling on the ghostly corpses and the loathsome pool that gradually widened around them, seemed to prolong the tremor of their death agony.

Ushiwaka was standing within the threshold of the room beyond the corridor. He had bound a kerchief tightly round his temples and the long sleeves of his silk doublet were confined by a cord crossed over his chest, but for the rest he looked so careless and tranquil that without the evidence of the dripping sword he held in his hand, it would have been difficult to suppose him at all concerned in this deadly drama. Yet there was something in the relative positions of the combatants that even the timid Kichiji could not approve. By advancing two or three paces Ushiwaka might have held his enemies at a great advantage, for the staircase was so narrow that more than one could not ascend at a time, and so steep that to defend oneself in ascending was well nigh impossible; whereas by leaving the corridor unobstructed, he offered his assailants the chance of securing certain footing by a determined rush.

Surely here was either fool-hardy recklessness or a most unfortunate want of perception! In his eagerness to correct such a profitless expenditure of opportunity, Kichiji actually overcame his fear so far as to steal into the room with a vague idea of directing Ushiwaka's attention to his error, but he had no sooner entered than the true cause of the position became apparent.

Behind an angle of the wall at the far end of the corridor stood an enemy so formidable in appearance that one might almost have chosen to encounter the four men upon the stairs

rather than come within reach of his single arm. His size and strength—both of which were far beyond the common—were not so remarkable as the savage ferocity of his aspect and something of a crouching malignity in his demeanour that reminded one of a virulent reptile, nothing human might approach without loathing. A pair of heavy swords were thrust into his girdle, but when Kichiji saw him, he was passing the haft of a long glaive backwards and forwards through his hands and blowing on his numbed fingers, not apparently by way of precaution against defeat, but rather with hungry fear of failing to utilize the whole cruel capabilities of his weapon.

It resulted from this disposition of his assailants that Ushiwaka was prevented not only from assuming a position of vantage at the head of the stairs, since by doing so he would have exposed his flank to the occupant of the corridor, but also from advancing to dislodge the latter since he would then have been open to an attack from behind by those on the steps.

Mingled with Kichiji's appreciation of these difficulties was a very poignant regret for his own rashness in venturing within range of the fray. He had almost determined to return to his hiding-place, though he saw that he was already observed by Ushiwaka, when words embodying a new cause of alarm arrested him.

The speaker was the ferocious glaive-bearer. Advancing from his corner, he called out, as though he feared his very aspect might put Ushiwaka to flight and so defer the moment of revenge:—

"Stand your ground, boy: stand your ground if you dare look Kumasaka Chohan in the face. You have killed two of my men, who forgot that a sword is dangerous even in the hands of a child, but Kichiji's gold will be all the sweeter bought with your blood."

The unfortunate merchant trembled so violently at this announcement that he attracted the attention of the men on the stairs, one of whom, raising his torch, directed its rays full into the corner where he knelt cowering. But discovery had lost its terrors for Kichiji. The name of that most notorious of all highway-men, Kumasaka Chohan, no sooner reached his ears than he abandoned every hope of concealment. He knew that this implacable villain would not suffer the destruction of the inn, ay, or of the whole village, to interfere with the consummation of his designs, and indeed to the little merchant's honour it must be confessed that the certain loss of his goods, perhaps of his life, was not at that moment so bitter to him as the reflection that the brave boy he had undertaken to escort was about to die an ignominious death. How could he excuse himself to his patron, the Lord Constable, or how persuade his own conscience that Kumasaka's glaive had not contributed more to the lad's murder than Kichiji's miserable cowardice. Seized by a desperate desire to offer some atonement however tardy, he rushed forward, calling out that he was ready to surrender all his possessions if Kumasaka would spare Ushiwaka's life, but the robber's only answer was to poise his glaive and spring upon the boy with a yell that his men echoed as they followed his example.

Then it appeared that though Ushiwaka was debarred from occupying the most favourable position for defence, he had not been unmindful of the advantages that remained, for he had so posted himself beyond one of the wooden pillars separating the sliding doors, that when he leaped aside to avoid Kumasaka's thrust, the latter, necessarily embarrassed by the difficulty of shifting his long weapon from side to side of the intervening obstacle, had scarcely half accomplished a change of front, before his nimble adversary's sword, descending full on his neck, shore his swarthy head from his shoulders, even as one might strike a ripe egg-fruit from its stalk.

At the sight of this unexpected victory, Kichiji became bolder than he had latterly been fearful. Snatching away one of the robber's torches, he thrust its glancing point so deftly into their faces as they attempted to fly, that only two of the whole number finally succeeded in escaping Ushiwaka's blade.

All this time the landlord and his servants had remained perfectly passive below. The announcement of Kumasaka's name and his promise of death to any who resisted or interfered, had sufficed not only to paralyze their action, but also to prevent them from making any attempt to rouse Kichiji's men, who slept in the back rooms of the inn. The merchant would fain have upraised this craven conduct, but Ushiwaka affected to

think that all had acted with a wise discretion, "for" said he looking significantly at Kichiji, "nothing justifies the sacrifice of life but the salvation of honour, and to gentlemen alone the alternative is not permitted."

This was the only allusion he made to his companion's recalcitrant retreat at the first apparition of the robbers, but Kichiji was not more grateful for this forbearance than humiliated by the evident unconcern that prompted it.

Before setting out on the following morning, they fixed the five robbers' heads on a gibbet at the entrance of the village, with this inscription, written in large letters, beneath:—

"Ye, to whose ears Kumasaka Chohan's notoriety has come, but whose eyes have not yet been troubled by his aspect, may now look on his face with impunity. These heads have fallen to the maiden essay of a lad of sixteen, now the ward of Kichiji, a merchant of the Third Avenue in Kiyoto. Those who seek particulars are referred to Toko, the Lord Abbot of Kurama."

Though the merchant had objected stoutly to the insertion of his name in this notice, deeming it rather a mockery than a distinction, he was none the less willing to profit by its effects, and as they rode away through crowds of admiring rustics, the little man's heart swelled with pride at the reflection that he should hereafter be associated with such a deed as the destruction of one who for ten years had been a curse to half Japan, and on whose account his own yearly journeys to Oshiu had been a constant succession of alarms and precautions.

On the evening of the second day after these events they reached Atta, a seaside village in the county of Owari. The suffragan of this district, being a kinsman of the Earl of Harima's first wife, received the travellers with all hospitality, and persuaded them to remain with him for three days. Ushiwaka availed himself of this prelate's ministrations to perform the rites prescribed on attaining majority, solemnly donning the ceremonial caloto before the altar and changing his name* to Kuro Yoshitsune.

From thence they continued their journey without incident through the grassy plains at the foot of Mount Fuji and across the neck of the sea-girt land of Idzu, in one of whose islands Yoshitsune's step brother, Yoritomo, was confined. Following the coast route as far as possible, they avoided the steep passes of the Hakone range, and struck the main road again at Odawara, where was a castle that had originally belonged to the Earl of Harima.

After this their progress was at once easy and secure, for the further they travelled north the more certain were they of succour and friendship. The wolds of Musashi, afterwards the site of the eastern capital but then sparsely dotted by an occasional hamlet, did not invite a long delay, and pushing rapidly forward, they soon reached the county of Shimotsuke, and stopped at a village called Takano.

They had scarcely taken up their quarters at the little inn, when the arrival of a nobleman's outriders caused the houses to be hastily shut and the roads cleared in anticipation of the approaching procession. Before the shutters of the hostel windows were put up, Yoshitsune, catching a distant glimpse of the escort, observed that its numbers and appointments were not particularly imposing. Nevertheless, impelled by an apparently purposeless curiosity, he went down, and joining the crowd of villagers who knelt respectfully on either side of the street was surprised to recognize in the passing nobleman, Misasagi, cousin of the titular bishop, Shinzei, who had been put to death by the orders of the Earl of Harima's friend, Nobuyori, some fifteen years before.

Here therefore was more cause for enmity than friendship to the House of Gen, and Yoshitsune might well have been disposed to avoid a meeting with this nobleman but for a circumstance which had occurred during the second year of his residence at Kurama.

It happened that Misasagi, coming to worship at the fane and resting at the Lord Abbot's house, had observed the child Ushiwaka and enquired who he was. On learning the boy's lineage he had expressed much surprise at the Heike chief's imprudence in suffering a rebel's offspring to live: an imprudence which he compared to letting a savage tiger loose in an open plain where men passed backwards and forwards

* This change of name on coming of age was a universal habit among the upper classes. On the occasion of refusing the touseu and going to live with the prior at Kurama, Ushiwaka had already changed his name to Shanso, but to avoid confusion this alteration has not been noticed in the text.

on moonless nights. Then turning to Ushiwaka, he had said laughingly:—"When you begin to carry out the designs which you will inevitably harbour hereafter, remember that I am always to be heard of at Shimosaye in Shimotsuke."

Ushiwaka had not attached any particular importance to this equivocal statement at the time, but recalling it now, he determined to give Misasagi an opportunity of explaining his words. He was not forgetful of the grave danger to which he might thus expose himself, but he reflected that since the county of Shimotsuke had formerly been governed by his father, the embers of an old allegiance might easily be fanned into flame if Misasagi were really disposed to assist. On the other hand, if his offer had been intended to deceive or deride, it seemed hard to pass by without making some attempt to punish such an insult. With a little more experience Yoshitsune would certainly have been less reckless, but he had not yet served that best of all masters, adversity.

The next morning he desired the merchant to ride forward without him, promising to follow with all speed so soon as he should have achieved the purpose for which he remained behind, and Kichiji, a little surprised but seeing no just cause for apprehension, readily complied.

Ushiwaka remained at the inn until the evening. A few hours delay mattered little if his reception were favourable; if otherwise, daylight could only be useful to his enemy and dangerous to himself.

Misasagi's residence stood between two wooded knolls some three miles east of the village. Ample estates and the command of one of the Palace Gate Guards gave him large local influence, of which he had availed himself unsparingly in the construction of his house and grounds. Dismounting at the outer gate and looking into the wide court-yard with its massive guard-houses and environment of well kept barracks, Yoshitsune was visited by an uncertain recollection of the magnificence among which the days of his early childhood had been passed. He remembered how his mother's voluntary isolation from the splendours of Kiyomori's palace had guided his first perception of her life-long sorrow, and how his youngest sympathies had been the offspring of a knowledge that the Heike prosperity was nurtured on the blood of his father's liegemen.

If this transient retrospect had strength enough to beget the mood he afterwards obeyed, he was himself unconscious of its power, believing that he regarded these tokens of well-being rather as heralds of strong aid than incentives to envy.

Misasagi's greeting, though too cordial to repel confidence, was tempered by an astonishment that showed how completely the Earl of Harima's sons had been consigned to the oblivion of exile or the cloister. Probably divining the object of Yoshitsune's visit, he was careful to give him no opportunity of explaining it, postponing the disclosure by hospitable devices or preventing it by timely digressions. Yoshitsune grew more and more impatient at the multiplication of these evasions, and though not unconscious that it would have been wiser to accept the inference his host's policy suggested than to ask for its interpretation, he took advantage of a moment when Misasagi, confident in the presence of two other guests, had ceased to direct the conversation, and addressed him plainly thus:—

"The changes in the fortunes of my family, Misasagi, since your last visit to Kurama, have not been so many as to make me forget your kind words on that occasion, yet I think you will easily understand how gladly I would hear them repeated now."

"You have a good memory," replied Misasagi, with smiling surprise. "The idle remarks of such an one as I seldom receive or merit much attention."

Despite his determination to restrain himself, Yoshitsune's face flushed at the careless insolence of these words.

"Am I to understand then that the promise upon which I relied in coming to Shimotsuke was an idle one?" he asked abruptly.

"I confess that I find it difficult to comprehend you," Misasagi answered in the same same light tone. "Your memory is evidently so much better than my own. Yet I think," he added with a pretence of reflection, "that when I saw you at Kurama you were a child of some seven or eight years."

"A child who had nevertheless already learned that a gentleman's word is irrevocable," Yoshitsune said, the remnant of his patience fastebbing away.

"No doubt, no doubt," the other assented. "The abbot

Toko was a careful teacher. But let me see. Surely the infant I saw then was not less liable to arrive at a false conclusion than the child I address now?"

"It is true that the infant came of a race not always practised to distinguish traitors," Yoshitsune retorted, "but the child carries a sword not powerless to punish treachery."

"And possesses an attribute new to that race, you might have added," the other interposed with a sneer. "The men of Gen, they say, have hitherto been readier of blow than of boast."

A quick perception of Misasagi's desire to provoke him had the effect of immediately calming Yoshitsune. He looked very steadfastly at his host and, softening his voice, said:

"I had relied on your aid to support that character, being, as you say, but a child. Is my suit rejected or received?"

Misasagi, unprepared for this calm pertinacity, now deemed it expedient to temporize.

"Should I not be treating this matter with discourteous levity," he suggested, "were I to answer forthwith? Rather let us discuss it presently at our leisure. You will accept my hospitality for one night at least I hope."

"I thank you," replied Yoshitsune, "but it is absolutely necessary that I should return to Takano this evening."

"You are stopping there to-night then?"

"Yes at the inn beyond the bridge."

"Where I may find you, I presume, to communicate my reply?"

"Where you may find me to communicate your reply at any time until noon to-morrow."

It would have been difficult indeed to conjecture from the manner in which these questions were proposed and answered, whether they concealed a design on this side or betrayed a suspicion on that, yet Yoshitsune had no sooner taken his leave, than Misasagi, turning to one of his guests, said:

"Think you he saw reason to mislead us?"

"Surely not," was the reply. "But we can easily satisfy ourselves of his immediate destination at least."

"True," Misasagi assented, "there is light enough still for that." And so saying, the two men ascended to a sort of battizan, that projected from the upper story, and commanded a view of the valley in both directions.

Yoshitsune was just issuing from the court-yard. They saw him slide slowly down the road leading to the village, never once turning back or changing his pace until they lost sight of him at a point where the path passed round a clump of bamboos.

Then Misasagi, looking significantly at his companion, said:—

"If he has time to learn prudence, he may be a troublesome foe to the House of Hei."

"Let him learn it for the first and last time to-night," the other answered with a savage laugh.

"So be it," Misasagi assented eagerly. "His head will be a welcome gift and worthy of a goodly guerdon, if I mistake not."

A few minutes later, seven men, well mounted and fully armed, emerging from the court-yard, rode westward, at a rate that promised to bring them speedily within reach of the object of their pursuit.

(To be Continued.)

DOUBLE ACROSTIC.

My mind's in a jumble,—'tis needless to say,
I've given as broad a hint as I may.
I'll tell you, however, that some term it "chow,"
While others define it as a "mess" or a "row."

1.
"Come, lasses and lads, get leave of your dads,
And haste to our may pole gay;
We'll form in a ring, and we'll jump and we'll sing,
And we'll dance all the livelong day."

2.
An exclamation here's, the "proper ticket,"
Yet 't must be twice repeated, ere you guess it.

3.
A priest, one of a set, of ancient days,
Whose names are celebrated, both in tales and lays.

4.
As we sit by the fire, on a cold winter night,
There's nothing so jolly, as this, my fourth light!

5.
Before you guess, just stop, and think a minute,
A word's before you with the meaning in it!

METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 12TH, 1879.

Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.

Light Continuous line—max. & min. Thermometers.

.....represents velocity of wind

.....percentage of Humidity

Max. velocity of wind 30 miles per hour on Saturday, 5 p.m.

The barometer is reduced to the freezing point and to the level of the sea.

An inspection of this week's chart suggests the idea that the season has arrived during which any kind of weather may be expected. The barometer began falling on Friday and reached its lowest point for the week on Sunday. The fall in the barometer was accompanied by high and quite steady winds during Saturday. An extraordinary change in maximum temperature will be observed in comparing the records of Saturday and Sunday. From a maximum of 66.5° on Saturday, it rose to one of 84° on Sunday. A total of 2.88 inches of rain fell on Friday and Saturday, and of 3.3 inches during the week.

SHIPPING INTELLIGENCE.

INWARDS.

 Per British steamer *China*, from Hongkong:—
 Sugar 2,789 pkgs.
 General 3,415 ..
 Total 6,204 pkgs.

COMMERCIAL INTELLIGENCE.

IMPORTS.—Cotton Yarn.—The market has been much quieter during the past week, as was to be expected after the heavy operations recorded in our last. Dealers, moreover, have been occupied with the arrival of contract cargo, and much exercised about the scarcity of *hard cash*, the anticipated permanent improvement in the value of *kinsatsu* being still in *futuro*. Sales reported include about 500 bales 16/24s; 400, 28/32s, and 25, 38/42s in English Spinnings, chiefly for arrival, and 400 bales Bombay 16/20s. on the spot. Prices of English remain unchanged, but Bombay's close rather weaker. **Grey Shirtings.**—A considerable business has been done mostly in cargo for arrival. The transactions reported are as follows, viz: about 27,000 pieces 8½ lbs., and 30,000 pieces 9 lbs. 45 inch. Prices show little change. **Indigo Shirtings** have been asked for; also common qualities of *Italian Cloth*, and there is apparently a somewhat better feeling in the market for other kinds of piece goods generally, although the actual business transpiring has not amounted to much. Sales include the following, viz: 5,200 pieces *Prints*, 1,000 pieces *Taffachelass*, 1,000 pieces *Cotton Satteens*, 2,100 pieces *Mousseline de Laine*, 900 pieces *Plain Orleans*, and 500 pieces *Figured Orleans*.

Blankets, green 6 to 8 lbs	per lb ...	0.35 to 0.40

SUGAR.—The advances in all values continues and stocks are becoming reduced to a very small point.

Sugar:—Tahoe in bag ...	per picul...	\$5.40 to \$5.50
" " in basket ...	"	\$5.10 to \$5.20
Taiwanfoo in bag...	"	\$5.55
do. in basket...	"	\$5.25
Ching-pak and Ke-pak ...	"	\$8.00 to \$9.25
China No. 4-5 Kongfun & Kook-fah...	per picul...	\$6.00 to \$8.00
Daitong ...	"	\$4.10 to \$4.50
Japan Rice ...	"	\$2.75 to \$3.40
Kerosene Oil ...	"	\$1.90
Newchwang Peas ...	"	\$2.30

KEROSENE OIL.—Demand has fallen off and stocks being heavy, small sales only have been possible at our quotation.

EXPORTS.

SILK.—Great stagnation has prevailed since the last report was compiled, mostly on account of constant fluctuations of the native currency, preventing dealers from accepting buyers' offers which have generally been considerably lower.

The chief demand has been for Kakedas and Filatures for America, and some purchases of Hanks have been made at quotations, rejections of former settlement of Hanks have however been larger by about 40 bales.

150 bales of Kakedas and Oshius and 100 bales of Filatures have been bought.

Arrivals: 1,900 bales. Stocks 5,200 bales. Total Export to date 2,571 bales against 3,709 bales, last year.

At the close there seems to be a little more disposition to sell.

	In London at 3s. 9d. per lb.	In Lyons at fr. 4.75. per kilo.		In London at 3s. 9d. per lb.	In Lyons at fr. 4.75. per kilo.

" Medium			" Med. & Con. ...	\$700 to 740 23½ to 24½ fra. 64½ to 68	

TEA.—The advance in prices reported in our last issue has continued, and Good Medium Grades are now firm at \$30, other Grades participating in the movement. Business done during the past fortnight amounts to 7,000 piculs and arrivals barely reach that figure. Total export from Japan for current season still remains an open question, but the well-informed anticipate a total of 30,000,000 lbs. from all parts, for season 1879-80.

Common ...	\$19 and under	Fine ...	\$33 to 35

MISCELLANEOUS.

**W. & A. GILBEY'S
WINES AND SPIRITS.**

W. & A. GILBEY have special facilities for carrying
on an extensive Foreign Trade, having held for
many years in their Excise Bonded Stores, for the purpose
of their Home Trade, a stock of not less than 12,000
Casks of Wines and Spirits, which are equally
available for Export. These stores are by far the largest
private Duty Free Warehouses in the World, and are under
the supervision of a staff of Excise Officers specially at-
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them
to give the best VALUE to the public, as a twentieth part of
the Foreign Wines consumed in the United Kingdom is
supplied from their stock. In the year 1876 W. & A.
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,
and the average quantity bottled and sent out by them
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same
whether the Wines or Spirits are obtained direct from their
Head Establishments or from any of their Agents. The
purity and genuineness of every article in this list are
guaranteed in accordance with Act of Parliament, 38 and
39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of
Bottle Measure recently recognised by the Government,
namely—

6 bottles contain one gallon; 12 half-bottles contain
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing
W. & A. Gilbey's seal and label guaranteeing quality and
measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;
(Warehouses, Duty Paid) Oval Road, Camden
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;
(Warehouses, Duty Paid) Upper Sackville St.,
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;
(Warehouses, Duty Paid) Haymarket, West
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-
Western Goods Station, and Bunny Street,
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,
London.

**IMPERIAL
GOVERNMENT TELEGRAPHS.**

ANY information required regarding the conditions
for forwarding LOCAL TELEGRAMS which were
slightly altered on the 1st day of the 7th Month (July)
can be obtained at the principal Telegraph Offices, where
also copies of the Regulations may be had at the price of
5 sen per copy.

KODO NO SIMA BUOY.

AOGI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby give notice that a Buoy has been moored to mark the sunken rock north of Kodono Sima in the Aogi Seto, the northern passage between Misima Nada and Bingo Nada.

The Buoy is moored immediately to the northward of the rock, in $4\frac{1}{2}$ fathoms of water at low water; on the highest point of the rock, which is of very small area, there is only 10 feet of water at low water of lowest spring tides.

The Buoy is painted Black and white horizontal bands, and surmounted by a cage which stands 10 feet above the water.

The following bearings are taken from the Buoy.

Centre of Karasima (Single tree)...N. $41^{\circ} 15'$ W.

Eastern extreme of Matsu Sima.....N. $37^{\circ} 45'$ E.

Eastern extreme of Kodono Sima....S. $1^{\circ} 15'$ E.

Bearings true. On the English Admiralty chart No. 132, $2\frac{1}{2}$ fathoms is given as the shallowest water on the rock.

INOUE KAORU.

Minister of Public Works.

IN THE

“JAPAN WEEKLY MAIL,”

OF

THE 12TH INSTANT,

Appeared the opening Chapters of the

“TIMES OF THE TAIRA,”

BY CAPT. F. BRINKLEY, R.A.,

AUTHOR OF THE “TIMES OF TAIKO.”

Yokohama, July 14, 1879,

MISCELLANEOUS.

SARGENT, FARSAI & CO.,

No. 77-A., Main Street.

HAVE JUST OPENED a very choice assortment of

GOLD PENS, HOLDERS, CHARM PENCILS,
POCKET PENCILS, PENCIL LEADS, &c., &c.
NEW BOOKS, NEW MUSIC.

“Erie” and “Metropolitan” CIGAR LIGHTERS.
MEERSCHAUM LINED CORN COB PIPES,
only 20 cents.

HAVANA CIGARS,

Thirteen varieties, all in prime condition.

MANILA CIGARS—Arroceros.

AMERICAN PLAYING CARDS.

WHITE METAL KEY RINGS,

with any name stamped to order, supplied at once.

SARGENT, FARSAI & CO.,

No. 77-A, Main Street.

Yokohama, August 5th, 1879.

MATSUZAKA HOTEL, KIGA,

(HAKONE HOT SPRINGS.)

PPRIVATE APARTMENTS of 1st, 2nd and 3rd Class, let at the rate of from 50 sen to 80 sen per day, and from 12 yen to 20 yen per month.

BOARD AT THE FOLLOWING RATES:—

1st class.....	According to order.
2nd class	1.50 yen per day, or 40.00 “ “ month.
3rd class	1.00 yen per day, or 28.00 “ “ month.

All kinds of Wines and Spirits supplied in large or small quantities.

GUIDES, HORSES and KAGOS supplied at fixed rates, for FUJIYAMA and other places in the neighbourhood of HAKONE.

Experienced Cooks, Waiters, etc., engaged from this year.

KEATING'S COUGH LOZENGES,

COUGHS,

ASTHMA,

BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailling family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Indian Medical Service.

Mr. T. KEATING,

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraven on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS.** It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London,

Export Chemist and Druggist.

THE GREATEST

**WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.**

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

In his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

**SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

In his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873.

THE CURRENCY CRISIS.

THE week which was expected to inaugurate a time of steady exchanges and confidence in the currency has passed, but with a far different result to the anticipated one. Legitimate trade has been paralysed by a panic in the exchange market; neither silver yen nor dollars have been procurable except at fabulous rates of interest, and for the time being gambling on 'change has taken the place of proper business. And as a climax to the situation it has been rumoured that counterfeit *satsu* are in circulation to an extent given as three millions of yen! We have every reason to believe that the extent of these forgeries has been greatly exaggerated; but we have, so far, only the figures to deal with as given in the native papers whose statements require as early an official contradiction as possible.

The causes which have led to this lamentable state of affairs may be stated to have originated in the general belief that, upon the introduction of silver yen upon a parity with and in replacement of the Mexican Dollar, a sufficiency of the native coin would have been placed upon the market to meet the requirements of trade; also that the Government would have applied some of its metallic reserves towards purchases of paper money; thereby increase the value of the latter, and, by judicious management, succeed in keeping it at an even quotation. This belief led to heavy operations in paper money, in anticipation of the event, until its value rose to about 8 per cent. discount. But the new silver coin was not forthcoming, or at least was not procurable from the sources which had heretofore furnished coin for foreign trade purposes to those wanting it; and thus, through daily and hourly fluctuations, it has now reached 21 per cent. discount. The scarcity of coin has not been the sole cause of this depreciation, which has been greatly in-

tensified by excessive gambling in time bargains, and less so by the reported issue of six millions convertible paper currency, and the alleged forgeries of some of the existing two yen *satsu*. Such, briefly stated, are the causes which have led to the present commercial dilemma; let us now enquire where the blame for this panic lies, and what should be the remedies to prevent its getting worse.

In introducing the silver yen, the Government undoubtedly accepted the responsibility of supplying sufficient coin to facilitate trade; and for ordinary times this would have been attained by placing say one million in hands where it was known to be available. Has this been done? The answer is No; or, if done, it has been effected in such a way that the coin has been practically unavailable. A statement, by a native paper supposed to speak with authority, was published last week to the effect that 1,800,000 yen had been distributed between the native and foreign banks: this statement we questioned at the time as it was not borne out by the result and, yesterday, it was contradicted altogether. On this point, therefore, the public has not been satisfied and they still look to the authorities to see that sufficient coin is put upon the market to meet the requirements of the local native traders who deal largely in foreign goods. That the Government should devote part of its money to buy up paper was more a presumption on the part of the public, more the fact of "wish being father to the thought" than any actual promise made. No positive grounds existed to expect official purchases of *Kinsatsu*, and speculators in time bargains who have lost for having acted under such an expectation cannot, we think, blame anyone but themselves. The next cause to consider is the gambling on the Exchange which, during the past fortnight, is known to have been enormous,—far worse than prevailed before the present Exchange office was instituted by Government permission. It is admitted that these operations have assisted, probably more than any other causes, to bring about the present crisis, and whilst those who have lost by them cannot expect, and certainly cannot receive, any sympathy or remedy, it is of the utmost importance that all practicable steps should be taken to stop them. Of course no legislation will prevent private gambling, but something might be done to divest the present institution, started with the object of assisting local traders, of any suspicion of encouraging it. And as the Government by its Notifications (repeated during the past week) shows its control over these Exchange Offices we have the right to ask its control over their management. It would surely be in their power to insist that all time bargains be declared illegal, to require that all transaction entered into one day should be closed on the next, that transactions at the official Exchange should require a deposit of say ten per cent. cash, instead of the present four per cent., which does not now cover a morning's fluctuations, and to insist

upon regular hours being kept and thereby avoid the sudden stoppage of business whenever a defaulter is declared. These remedies would not eradicate gambling or speculation, but they would at least remove suspicion of countenancing transactions which ruin legitimate trade and bring discredit on the currency. Another, but less serious, cause of the present state of affairs has been the uncontradicted statement of the native press that the Government intend to issue convertible paper to the extent of six millions yen. The only fault to find with this measure is its reported extent, and the certainty that if carried out, it might lead to fresh and now unseen complications. The Treasury has, in our opinion, no necessity to issue these notes at all, and it would do much better to leave that matter entirely in the hands of the native Banks, whose note circulation should be under the control of the Government, and whose facilities for cashing the notes would be far greater than those of the Treasury.

We cannot conclude without alluding to the reported forgeries of 2 yen satsumi; and here the duty which devolves upon the Government is, to our mind, quite clear. It is more than probable that the extent of those forgeries has been greatly exaggerated; but it is admitted that some counterfeit paper exists, so well imitated that the forgery cannot be ascertained without a powerful magnifying glass. The question as to whether these counterfeit notes will be repudiated or not is one which the Government cannot allow to remain unanswered, and it is difficult to think it will do otherwise than declare that innocent holders of this paper shall not suffer. The loss, whatever it may be, must fall upon the country and not upon individuals. But, it appears to us incumbent upon the authorities to restore confidence by making their intentions known without delay, and we would appeal to the Finance Minister, as the trustee of the national credit, thus to assist in checking a harm which is being caused to legitimate trade.

EXTRA-TERRITORIALITY IN JAPAN.

VII.

EVERY Sovereign State being independent of every other, in the exercise of its legislative and judicial powers, it follows as a necessary consequence that, with certain exceptions, it may punish all offences against its municipal laws, by whomsoever committed, within its territory. Whoever enters this territory, says a recent German jurist, speaking of the territorial bounds of penal jurisdiction, "juridically binds himself to submit to the laws of this territory." And so also, Mr. Phillimore, contends that, "It is not only the right, but the duty of each sovereign state to protect the order and safety of society committed to its charge, equally against the offences of the foreigner and against the native." It must be remembered, says he, that every individual upon entering the territory of a foreign state, binds himself by a tacit agreement to obey the laws enacted in it for the maintenance of order and the tranquillity of the realm.*

It is an essential element of the independence of nations, that each one is the exclusive vindicator of its own penal laws. Each sovereign has his own penal policy, which it is essential to his dignity and authority, that he should work out in his own way. The State, like the father of a family, lays down its own domestic laws,

whose violation it is its sole prerogative to punish, to overlook, or to pardon. No other state has any right to interfere in the administration of the penal laws of another; for to do so would be to destroy entirely the home authority. The Penal legislation of each state almost necessarily differs from that of every other. An act which one state may deem it necessary to prohibit by severe penalties, may justly be regarded by another nation as a very harmless offence, or no offence at all. And so an act which all nations alike may agree in regarding as harmful or criminal, may be visited by them severally, with greater or lesser degrees of punishment, according to the particular domestic or public policy of each. No state, however, questions or can question the right of another to impose such penalties for offences against its laws, as it may deem proper to enact. Thus, for instance, by the laws of Scotland, at least until very recently, sheep-stealing was made a felony, and punishable with death. Had an American living in Scotland, been convicted of sheep-stealing, nobody would ever have supposed that the American Government could justly complain of the British Government, if the culprit suffered the extreme penalty which the law of Scotland imposed. The only way that the American Government could obtain a less rigorous punishment of its citizens living in Scotland, for violating the laws of the territory would be by some treaty arrangement with Great Britain for that purpose.

The same is also true with regard to the mode of administering criminal law. Each State may prescribe the mode of procedure of its courts, and the method of executing sentence. By the laws of Great Britain and America there are certain rights and privileges guaranteed to every subject and citizen, charged with the commission of crime; such as the right of trial by a jury of peers; the right to be defended by counsel; the right to confront the accusing witnesses; the right to demand the attendance of witnesses for the defence; the right to bail; the privilege of the writ of Habeas Corpus and many other rights and privileges, prized by every Briton and American as the palladium of their liberties. It was not supposed at the time of the negotiation of the treaties with Japan, that any of these rights or privileges were known to the laws of the country. On the contrary it was understood that the whole system of criminal adjudication in Japan was cruel and oppressive, that torture was commonly resorted to extort confessions both from witnesses and criminals and that the penalties inflicted were extremely severe if not absolutely inhuman. Montesquieu, speaking of the penal laws of Japan says:—"Here almost all crimes are punished with death, because disobedience to so great an emperor as that of Japan, is reckoned an enormous crime. The question is not so much to correct the delinquent, as to vindicate the authority of the prince. They punish with death, lies spoken before the magistrates; a proceeding contrary to natural defence. Even things which have not the appearance of a crime are severely punished; for instance a man that ventures his money at play, is put to death."†

Whether the learned President's information concerning the condition of criminal jurisprudence in Japan was reliable or his conclusion as to the Spirit of Japanese Laws were correct or not, we need not stop now to inquire, we have given his exact words, because as we think, they afford

* Wheaton's Elements Int. Law, vol. 1, p. 2, ch. 2, p. 137-8: Papers presented to Parliament respecting foreign refugees, 1852: Vattel I, ch. 8, 101: Klüber, s. 99: Wolff, Jus. Gent. s. 301: Phillimore Int. Law, p. 2 ch. XVIII, Tit "Jurisdiction."

† Spirit of Laws, vol. 1, ch. XIII, p. 107, 1748. The learned author's information concerning the laws of Japan was derived, as he himself acknowledges, from the writings of Kempfer and Purchas. It is scarcely necessary to say that Gaming is not punishable capitally by the laws of Japan. The offence is punishable here, as it is in England and America by fine and imprisonment.

the correct key to criminal extra-territoriality in Japan. It can scarcely be questioned that the sole and only object which the governments of the United States and Great Britain had in view in securing criminal jurisdiction over their subjects and citizens in Japan was, to exempt them from the harsh and cruel punishments which President Montesquieu had so vividly portrayed, and to secure to them the rights and privileges which the laws of their own countries guarantee to every individual charged with the commission of any criminal act. To secure this it was not necessary to exempt them from the laws of Japan, enacted for the government and order of society; and it was never the intention of the Japanese Government so to exempt them. Moreover we do not think that the extra-territorial provisions of the treaties do so exempt them. It is however a very commonly received notion that the extra-territorial provisions of the existing treaties entirely exempts Americans and British subjects from all Japanese laws, and that the Government of Japan can enact no law or police or municipal regulation that will bind or affect them. In other words, that they may with impunity defy and disobey any police or municipal regulation or general law of Japan, unless such law or regulation has first received the "sanction" or "approval" of their Minister or Government. This absurd and most mischievous notion, as we have before shown, has arisen more from the use of the vague word "Extra-territoriality," to define the general treaty rights of foreigners in the country, than from any other single cause. It is almost needless to say that the Government of Japan flatly and unequivocally denies and repudiates such an absurd and unjust interpretation of the treaties. Let us see what the treaties provide. The first clause of Article VI. of the American treaty says:—"Americans committing offences against Japanese, shall be tried in American Consular Courts, and when found guilty, shall be punished according to American law."

And the second clause of Article V. of the British treaty provides that:—

"British subjects who commit any crime against Japanese subjects, or subjects or citizens of any other country shall be tried and punished by the Consul, or other public functionary, authorized thereto, according to the laws of Great Britain."

Now, what is the extent of the criminal jurisdiction here conferred? In the first place it will be observed, that by the American article, jurisdiction is conferred over "offences;" while, by the British article, jurisdiction is conferred over "crimes." It will scarcely be necessary to inquire as to the different technical meanings, which the law attaches to these two terms; for taken together in connection with the subject matter, it seems fair enough to presume that neither of them was intended to be employed in their strict technical sense. They were evidently used as synonymous terms, and each alike intended to include every unlawful act,—whether *malum in se* or *malum prohibitum*,—as contra-distinguished from civil acts, such as contracts and the like. But upon an attentive perusal of both articles it will be seen, that jurisdiction is not conferred over *all* crimes or offences committed by Americans or British subjects in Japan. In the absence of any qualifying words this would be so; but here the jurisdiction is expressly limited to crimes and offences "committed against Japanese subjects or the citizens or subjects of any other country." This express limitation upon the criminal jurisdiction of consuls is very significant, and it is so marked and obvious that it could never be presumed to have occurred by mere inadvertance. It

must have been intended, or at any rate can only be presumed to have been intended. It could never be presumed that the high contracting parties meant to agree to a jurisdiction over *all* offences, when they expressly limited it to those of a *particular class*. We shall have something more to say at another time respecting that class of crimes and offences, which in our opinion are excluded from the jurisdiction of consuls. For the present we will confine ourselves to crimes and offences which undoubtedly fall within the express provisions of the treaties, viz:—those "committed against Japanese subjects, or the subjects or citizens of any other country."

In the first place then, it is indisputable that consuls may "try" their nationals for all crimes and offences committed by them, within the limitation above named; and secondly, that they may "punish" them therefor, "according to the laws of their own country." Thus far the treaties are explicit enough. But here arises a much more difficult question: by the laws of what country are the consuls to be governed in determining what acts *are*, and what acts are *not* "crimes" or "offences?" It is perfectly apparent that the first thing to be determined is, whether the particular act complained of is a crime or an offence, or whether it is not.

It is quite conceivable, for instance, that an American might be charged with the commission of an offence against Japanese law, and that the particular act which constituted that offence might be no offence at all by American law. Now in such a case which national law should govern in determining the question whether the act complained of was an "offence" or not? The law of Japan or the law of the United States? We think it clear, that the law of Japan should govern the consul in the determination of that question. In giving our reasons for this conclusion, it may not be amiss to notice at the same time an objection frequently put forward to the conclusion which we have stated. It is said that it can make no practical difference which national law governs in determining what acts shall be deemed crimes or offences, so long as the treaties provide that the offender is to be punished according to the laws of his own country; for if the act complained of, is not an offence by the laws of his own country, he can not be punished for it in accordance therewith by his own courts. This is simply begging the whole question, and moreover, as we shall presently show, it *does* make all the difference which national law shall govern in defining crimes and offences. Nobody need be reminded of the principle, that every treaty is a part of the private law of each country that enters into it and is just as binding upon those governments and all their subjects as any part of their municipal laws.† Now, to assume that the Consular Courts of Great Britain and America cannot punish an act in violation of Japanese law because that act is no offence against British or American law, is to presuppose and take for granted the very thing about which question is made. Everybody is agreed that the crimes and offences of Americans and British subjects when they are once defined, are to be tried and punished according to the laws of those countries respectively, for the treaties distinctly say so. Everybody knows equally well that the Governments of Great Britain and America may also provide by law how their subjects and citizens shall be tried and what measure of punishment they will mete out to them for infractions of law committed by them in Japan. But that is not the question which we are now considering. The question to be deter-

† Lord Stowell: In The *Enferom*. 2. Rob. 6: Westlake, *Private International Law*. Ch. VII. § 201. P. P. 136.

mined first is, by what authority or what law, is any given act, committed in Japan by an American or British subject, made punishable? It requires no great amount of legal acumen to perceive, that the power to declare by law what acts shall be wrongful, is entirely separate and distinct from the right to try and punish individuals for the commission of such acts: and no one questions or can question the original sovereign right of Japan to define by law what acts shall be criminal, by whomsoever committed within her territory. The only question then is, has Japan surrendered that power?

In our next paper we will endeavour to demonstrate, that neither the terms of the treaties themselves, nor the reasons for which criminal extra-territoriality was sought, require or justify the assumption that Japan has surrendered her original inherent sovereign power to define by general law, what acts shall be prohibited, by whomsoever committed, within her territorial domain.

EDUCATION IN EUROPE AND JAPAN.

IV.

THE history of Education from the time of Aristotle downwards is fraught with the greatest interest. With a view to show what that great philosopher aimed at in his tutoring of Alexander, we may be allowed to quote a passage from the writings of one of the coadjutors of the late Judge Goodwin in the publication of "Essays and Reviews." He says: "the great object of Aristotle was to impress deeply upon his (Alexander's) mind the truths of moral philosophy, to habituate him to practise its precepts, to store his mind with historical facts, and to teach him how to draw useful inferences from them." * * * "As in ancient so in modern times great differences of opinion prevailed on the subjects of education. Some devoted their attention to the conduct of the intellect, others to the formation of moral feelings and habits, and a third party was more anxious to improve the carriage and strengthen the body than to enlighten the mind. Aristotle's plan was to unite the three systems and to make them co-operate in the formation of the perfect character, called in Greek, *καλὸς καὶ ἀγαθός*, the Beautiful and the Good. * * * He expressly states that the liberally-educated man should not be profoundly scientific, because a course of general knowledge, and what we call polite literature is more beneficial to the mind than a complete proficiency in one or more sciences. One of his maxims was, that the education should vary according to the destination of the pupil in future life,"*

These opinions and judgments of one of the greatest thinkers of the ancient world, commend themselves to all well-wishers of the cause of education. There are indeed some one-sided persons who still think that mere scholastic proficiency is education, without regarding physical health and morality; others would divert the student's course too soon to some special branch of study, and following their hobby, supported by certain vulgar maxims, force the young mind into one groove, before it has had time to take a discursive view of knowledge in general and to discover the necessary connexion between the multiplicity and unity of knowledge. They are in unseemly haste lest the mind should be warped into a wrong direction, and being scared with the fear of making their pupils encyclopaedists, they overlook the fact that general information on many subjects is a necessary preliminary to a perfect knowledge of most of the other special subjects to be learnt. What those general subjects are we shall have to enquire.

* The Life of Alexander the Great, by Rev. John Williams, Vicar of Lambeter. (Murray's Family Library No. III.) p. 13 et seq.

The old system of mediæval times was the seven steps of knowledge which led up to Theology—first the *Trivium*, which included Grammar, Rhetoric and Logic, and this amounted to the study of language, the study of the uses of good language, and the study of the laws of thought. By this means correctness and elegance of expression were combined with fullness and clearness of thought. Secondly the *Quadrivium*, which comprised Arithmetic, Geometry, Music and Astronomy—in a word the mathematical sciences. The monks of the 12th century were busily engaged in copying as well as learning the best treatises they could obtain of these subjects. After a five or seven years course in these studies, the student could turn his attention to Theology, Law or Medicine as he wished, or as his talents and feelings indicated. Such a course was deemed indispensable to the student of the higher and speculative subjects. After this he was in a position to grasp the parts as well as the whole of the particular subject he selected. The curriculum here indicated was a sort of mental gymnastics which it was no child's-play to go through and to obtain practical skill in, and although the scholastic system fell into disrepute owing to the misleading of mendicant monks and others in later ages, it is easy to see that in itself the system was a good one, for without correct language, just thought and expression, as well as mathematical exactitude, how can education proceed with any degree of success?

But there is a tendency in the present age to depreciate these studies and to call them antiquated. Science, they say, is sufficient to develop the mind of itself, but though it is certainly true that the reasoning faculties, the judgment, the taste, &c., are called forth in the study of science, when we consider that the great faculty of imagination, to which even science is so much indebted (for nearly every great invention has arisen from the exercise of this power in the first instance) is most efficiently cultivated by these very studies, so strongly insisted upon by the ancients, we cannot help thinking that it is wisdom not to neglect these keys of knowledge which open up to us the stores of the Beautiful as well as the Useful.

The tedious processes of memorizing words and indeed, the wasteful expenditure of time in mere versifying are to be condemned. Let the reasoning powers begin to act in the earliest stages in education, and let the pupil be taught to think, to compare, to infer and to observe closely, and not merely to receive instruction and to copy from his teacher. Imitation is of course an important thing, but it must not be carried too far.

Mannerism is a habit easily induced and difficult to get rid of. Originality, is the true mark of genius, but culture may produce it to some extent, and this is to be aimed at. In these modern times bundles of facts are accumulated and committed to memory—mere names and dates and rules of grammar are supposed to constitute the major part of education, while the connecting links which should combine the whole, and the necessary inferences which naturally follow, if the reasoning faculties are used aright, are either quite neglected or their value overlooked. By such processes we may almost mechanically produce prodigies of learning to astonish the world, but wise men will be scarce. Cardinal Mezzofanti is said to have spoken correctly some fifty languages, he devoted his life to this useless attainment, but he added not one iota to the general knowledge of the world. Had he produced a comparative grammar of a family of languages, or evolved a system by which a language might be surely and rapidly acquired, he would have been useful in his generation.

The history of National Education naturally divides itself into two lines of investigation. The Education of the masses,—the culture of the people as a whole, and

the higher education, carried on in the Universities, High schools, Gymnasias, &c.

The instruction of the mass of the people is of comparatively modern origin. In most countries it is distinct from the higher education. In Germany the Universities represent the highest form of education for the upper and the ruling classes, the peoples' schools the plainest system for those ruled.

In England the case is not much different, the quality of the instruction being the chief element of difference, but there is a decided tendency of late years to open the way from the lower to the higher form of education. The misapplied revenues of the Universities and the endowed schools are getting to be looked upon as the property of the whole nation, and the people are becoming more commonly the recipients of the advantages to be derived from University teaching. Adult teaching by Mechanics Institutions has been almost superseded by evening classes in colleges, and working men's colleges, in which some of the ablest scientific men deliver lectures, thus bringing University teaching within the reach of the lower orders when they can avail themselves of it. These are advantages for the people, but the distinction between National, Primary schools and High schools must of necessity be kept up. Hence it is desirable to consider the best methods first of National Education.

Assuming that in all primary teaching such subjects only should be taught as tend to make useful citizens and to produce men of peaceable disposition and common sense, it should not close the way to those who by superior abilities and remarkable industry are capable of advancing to a higher course. In elementary instruction, good reading, good writing and simple arithmetic are indispensable. The History of his native country and the geography of the world are perhaps the next in importance, whilst such an amount of science as will open the mind to observe and reflect upon the world of nature and the world of art should then follow. The cultivation of drawing will improve the observing power and render the pupil much service, and practice in vocal music will refine his manners, while it still leads to a habit of concentrating his attention. This is a mere outline of what we conceive to be *desiderata* in National Education. The cultivation of a foreign language rarely forms part of popular Education. If in any case this is added, as it is here in Japan, the gain is very great provided the subject is well proceeded with. Here comes in a question of the best manner of carrying out a system of instruction in a foreign language. Some people seem to think that the best way is to "pick it up" in the country itself, as the secretary of a great society in London once recommended. Foreign children certainly do "pick up" the Japanese in a marvellous manner, but do adults acquire the language of this country so? Rarely. To learn a foreign language we must compare it with our own, we must discover its starting point, we must resolve its idioms, we must know the marks of difference between its forms and ours. We must cultivate it in connection with our present knowledge of languages, just as English and American boys learn French or Latin, by critically transforming passages in it into their own tongue, and *vice versa*. Then does the pupil not only acquire a power which, here in Japanese schools especially, is indispensable to him, but also all the advantages arising from the study of language become his. He becomes perspicuous, exact, attentive to slight differences, and the vicious habit of blundering, with the painful consciousness of only half knowing the meaning of what he says or what he reads, is done away with.

The Educational Department in Japan has made most laudable efforts to overcome the difficulty of obtaining

students who shall speak English fluently and correctly. If we consider the circumstances of the case it is no matter of surprise that the schools which are the feeders of the two greatest seats of learning in Japan, the *Daigaku* (or University of Tokio) and the *Kobu Dai-gaku* (or Imperial College of Engineering) have been deficient in supplying pupils in sufficient numbers who know the English language so as to make it a ready instrument in their further and advanced studies. This language being the key to almost all the knowledge which is required under the new system, it is a matter of urgent importance that instruction in it should be most judiciously communicated and should be of the best kind. No books of an inferior quality should be presented to the pupil's eye, no defective examples of colloquial English should fall on his ear. Exact translations should be required of native texts into English, and idiomatic English should be turned into idiomatic Japanese. The use of fine words should be carefully avoided, though they may happen to correspond exactly with an elegant form of expression in Japanese,—until the plain English of everyday life and of such men as Faraday, Huxley and a host of other able men have been mastered. If it be a matter of some difficulty even for an English scholar to use proper derivatives from the classical languages, how much more arduous a task is it for a Japanese, who can count his years study upon his fingers, to attain to an adequate use of such terms.

The precise faults attributed to Mrs. Malaprop are not to be charged against Japanese, but there are other faults of a not less remarkable character.

This subject has been dwelt upon because it lies at the basis of Japanese National Education. Every intelligent native is anxious to learn English, because through English his other subjects are to be studied. In every form he attacks it, and by his diligence he very soon acquires sufficient knowledge to read Peter Parley's Universal History, or to dabble in Mr. Quackenbos' works on English Grammar and Natural Philosophy. As he advances he ventures upon the same gentleman's Elements of Rhetoric, with a view to becoming an elegant speaker. All this is admirable, and with thoroughly revised editions of some of these books much good might come of it. Japanese youths like coming over their lessons so that the very words of the books they use become part of their minds. They educate their *te* in this manner, just as a violinist cultivates his wrist. This is all very well, and if the books they used were the *divi* of philosophers and grammarians like the Indian *sutras*, it would be better, but still something more is required. We want them to think and reflect and compare and use taste and judgment in addition to all this. Our opinion is that with every act of imitation or repetition, a judgment, an inference, or a contrast and comparison should be made by the pupil under the guidance of his master.

“THE cunning schemes of foreigners” has for some time been a pet phrase with the Japanese press and it is again produced in an article of the *Mai Nichi Shinbun* upon the Silk-worms' egg trade, which we translate in another column. Constant use of the phrase may perhaps have led the Japanese to think that it is a truthful one, but they must allow foreigners to feel that more proof should be brought forward to substantiate it before they can plead guilty to the epithet. What term would the writer in the *Mai Nichi* apply to his own recommendation of a combination amongst the silk-worms' egg merchants? Not the word ‘cunning’ we imagine, for that clearly is only intended for foreign and not native application; and yet, were such a suggestion to emanate from foreigners we may be sure that the term would not be omitted. The attempted combination of

merchants engaged in a certain trade is a favorite scheme of the Japanese financier or trader, and the Government have not hitherto failed to promote or assist the movement. The plan has been tried in silk and tea, and the article we now translate shows how it has also been done in silk worm's eggs. But its duration has been short lived and the present suggestion is not likely to have any greater success. It is impossible for such an association to give satisfaction to all its clients, and quarrels as to the division of the proceeds of the cards would soon end in the combination being broken up; whilst the money necessities of many smaller dealers would keep a number of them aloof from the arrangement at its commencement.

The whole economic question of the trade in silk-worm's eggs is one of great importance to Japan, and it is one which should be carefully considered by the Government. The subject has frequently been discussed in this Review, and we can but reiterate the opinion already expressed, that the trade is one which should be prohibited altogether. The export of eggs cuts directly at the throat of Japan's trade in raw silk; the latter is the staple of her exporting wealth and yet, with her own hand, does Japan now give to other countries the very means of competing with it. Instead of arguing for trade combinations, the *Mai Nichi* would do greater service to the country by urging the abolition of the export of eggs altogether; the former, if successful, can but bring small profit to a few dealers, if unsuccessful, as would probably be the case, still less profit; whilst the latter would increase both the demand and the value of Japan's principal export.

The *Mai Nichi* has tabulated the number and value of egg-cards exported during the past eleven years; in figures which show some divergence from those of the British Consular Returns, but not to any very great extent, whilst they are nearly similar during the last five years. This trade was at its highest from 1868 to 1873, during which period the annual export amounted to about one million and a half in number and two and a half millions of yen in value. For the five years ending with 1878, the annual export averaged one million in number and 800,000 yen in value—showing that, although the quantity exported has only been reduced by one third—the value of the trade has been reduced more than double that extent. Again, looking at the value of the export of raw silk during the five years, (which averaged nine millions of dollars per annum), we find that the proportion borne to it by the business in silk-worm's eggs does not exceed nine per cent. It is true that during the six years from 1868 to 1873, that proportion stood at twenty-one per cent, but it will be admitted that such years were exceptional and that the present time forms a better criterion of the trade. It is not, indeed, improbable that—from natural causes—this business will continue to decrease, as Italy appears to have succeeded, thanks to the *système Pasteur*, in checking the disease which has caused her so much loss in late years. By this system the eggs are carefully watched under the microscope, and each one showing signs of disease is at once destroyed, so that none but healthy moths are produced, and the succeeding progeny of eggs is thus ensured to be equally healthy. But to a certain extent Italy is still desirous of drawing her supplies from Japan, and although her actual requirements may only be half what is now offered for sale, it would, undoubtedly, be to the interests of this country to abandon that trade altogether in the certainty that it would materially increase the business done in raw silk—a business which, large as it is,—must be capable of still further expansion.

WE have elsewhere referred to the duty which, we consider, devolves upon the Government in connection with the reported forgeries of Kinsatsu, but some further matters of detail may here be mentioned. The loss, whatever it may be, must in justice—if not in law—be borne by

the whole country; but that the extent of the loss may be ascertained, and in order that any forged paper still unissued may be kept from circulation, we can see no other course than that all the Treasury notes of the denominations known to have been counterfeited should at once be called in and exchanged for notes against which no suspicion exists; or, should these be insufficient for the purpose, that vouchers be given to the holders until time admits of the Treasury making a new issue. By the aid of the native Banks this course could be pursued promptly throughout the country, the full extent of the forgeries would be ascertained, and any further extension of them be prevented.

WE have searched the native papers in vain for any sensible or practical articles upon the subject of the late Notification referring to silver yen, or upon the present currency crisis. We reproduce one from the *Hochi Shimbun*, which confines itself to generalities and to the statement, which all papers have joined in, that now the fluctuation in paper money would cease. The last number of the *Chingai Bukka Shimpō*, to which we naturally turn for commercial news, recapitulates the action of the Government since it commenced its new coinage in 1871; and points out that, although suspicions were raised as to the possible policy of the mint after the Foreign Directorate was removed in 1875, these suspicions have been changed into complete confidence by the annual assays made by foreign mints on the Japanese coin. The *Bukka* further indulges in the expectation that the Japanese yen will, in time, form the currency of the whole of Asia, and that silver from America will be sent to this country for coinage, to supply the wants of commerce in the East. Such a result would indeed be a triumph to Japan, but we fear that it will not be so easy to get accomplished as our contemporary hopes; however, we wish every success to the attempt. The editor of the *Bukka* trusts that the report is true that the Government intend to establish a branch office of the Mint in Tokio, where bullion will be received from the public for coinage, assayed and at once exchanged for yen, after deducting the cost of mintage and freight to Osaka, thus saving delay and interest. He then proceeds to remind his countrymen that the present deficit of trade against Japan amounts to four or five millions per annum, which will have to be paid to foreigners in silver yen; and that if the present state of trade continues for many years, no money will remain in the country to make up the deficiency. He therefore urges every body to do their utmost to increase the national productions, so that the tables may be reversed and bullion be imported to pay foreign debts towards Japan.

TREATY Revision discussion has, for some time, languished for want of any new element to revive it; but the *Fuso Shinchi* takes the occasion of the late ministerial changes to state that fresh energy having now been imparted to the negotiations, some hope should exist that they will yet be carried through, and the country be thus saved from being "a disgrace before the world." We agree with our contemporary that it is high time some practical results were seen or heard of from the Commission which is supposed to have been sitting for several months in Tokio, and we would add that foreigners, as well as Japanese, are heartily tired at the delay which has occurred. Treaty revision has been so long talked about and written about, that both the negotiators and the public must be sick of the subject.

WHEN Admiral Fitzroy first instituted his system of storm-signals, his ideas met with a good deal of unfavourable criticism and ridicule. Being based upon strictly scientific principles the plan proved eminently successful; it was gradually introduced in most countries, and has been the means of effecting enormous saving of life and property. An

example of the truth of the predictions made under the system occurred recently in England, when intelligence was sent from America, that a great storm might be expected to occur in the United Kingdom. The verification of the announcement is thus related in the *Whitehall Review*. "The storm which the Yankees prophesied, though somewhat post-dated, lost none of its force in its delay. The Orleans Club suffered perhaps the greatest damage. The conservatory has died a *paneless* death, not one square of glass remaining; the ball-room, with its beautiful parquet floor, is completely disfigured, the *débris* lying in heaps of broken glass and iron. Injury to the extent of over £600 was inflicted, and the card-players were appalled by the deafening uproar of the elements and the noise of the hail on the zinc roof, which entirely drowned their voices. Vegetable marrows were cut in half in the garden, and the smooth stretch of lawn was perforated to the depth of two inches with clean-cut indentations an inch in diameter. On the Monday, notwithstanding, numbers came down to avoid the bank holidayites: *inter alios*, a Royal party, composed of the Crown Prince and Princess of Baden and their suite. Great sympathy is felt for a giant strawberry-grower, who suffered most severely by the ravages of the storm, glass to the amount of over £500 being broken. At Kew, nearly 700 squares of twenty-one ounce glass were broken. In the Temperate House there were 3,000 broken squares; in the New Range nearly 2,600; in No. 4 House, 1,000; and in Succulent House 800. Altogether about 16,000 squares were broken, of which 5,000 were from 2 feet to $2\frac{1}{2}$ feet by 9 inches. The hailstones as a rule were not more than an inch and a quarter in diameter; six of them were found to weigh four and a half ounces."

THE BALL TO PROFESSOR NORDENSKJÖLD.

The achievement of the *Vega* expedition cannot fail to command enthusiasm in every part of the world, and it will remain an honor to Japan to have been the first country to welcome the successful explorers after their adventurous and tedious voyage. Last week we recorded the particulars of a banquet given in Tokio to the members of the expedition, and this week we have to chronicle the entertainment in their honour, last Tuesday night, at the Yokohama United Club. It must be open to question whether a dancing party formed the most appropriate entertainment that could have been offered to the learned professor and his scientific companions, but there can be no doubt that it was the most enjoyable amusement the community could have selected for their own pleasure, and we were glad to notice that one or two of the guests of the evening were also able to share in it. We cannot question, however, that all the guests will have accepted the compliment that was intended and if, perhaps, somewhat *ennuyés* by being spectators only of a Yokohama Ball, they will have goodnaturedly derived their pleasure from seeing the enjoyment of so many people assembled to do them honor.

Towards midnight the company sat down to supper, which was presided over by Dr. A. J. C. Geerts, who acted as the representative of the reception committee, Mr. Keswick being vice-chairman. The toast of the evening was proposed by the chairman in the following terms:—

MESDAMES ET MESSIEURS,

Permettez-moi de vous proposer un toast au Professeur Nordenskjöld, l'infatigable navigateur, le grand explorateur des régions arctiques, et aux membres de l'Expedition scientifique suédoise de la *Véga*.

Le Japon a eu la bonne fortune de recevoir le premier l'expédition, après le brillant succès par lequel elle vient de se rendre à jamais mémorable, en trouvant, au travers des glaces, un passage au Nord-Est.

Qui de nous ne se sent pas le cœur plein d'admiration pour ces hommes illustres qui ont réussi, les premiers, à jeter, au Nord, un pont entre les deux grands Océans du monde; qui, en disant adieu à leur patrie, à leurs enfants, à leur famille, ont renouvelé une entreprise qui avait échoué seize fois avant eux; qui ont déployé dans cette longue et périlleuse navigation une énergie et un courage sans pareil; qui, après avoir vécu plus d'une année au milieu des nuits et des froids arctiques, ont amené cet heureux navire, la *Véga*, la brillante étoile de la *Lyre*, et les hardis marins qui la montent, en bonne santé à Yokohama; qui ont montré, dans l'accomplissement de leur immortelle mission un zèle si ardent que les frimas des glacières les plus formidables n'ont pu le refroidir; qui enfin ont prouvé

une fois de plus la vérité du proverbe: "C'est dans les grands dangers qu'on voit les grands courages."

Honneur donc à ces hôtes illustres! Honneur surtout à l'homme éminent qui a dirigé avec tant de succès cette magnifique expédition, au Professeur Nordenskjöld!

La nation Suédoise est connue de tous pour être l'un de ces nobles peuples du Nord qui cultivent avec un zèle ardent les sciences et les arts; elle a été le berceau de beaucoup de savants illustres, les Berzelius, les Linné, les Thunberg, les Fries et bien d'autres dont la réputation est universelle. Mais ce sont surtout les voyages d'exploration arctique qui ont attiré son attention et ses efforts.

Le Professeur Nordenskjöld et le commandant Pallander ont une réputation dans le monde entier comme navigateurs expérimentés à travers les régions polaires. Et cependant, lorsque la *Véga* a quitté la Suède, ces vaillants marins n'en ont pas moins entendu, au milieu des nombreux et chaleureux adieux de leurs familles, de leurs compatriotes, retentir, comme un écho de fâcheux augures, ces paroles décourageantes: "Vous ne passerez jamais le Cap Tchélouskin."

Et pourtant, Mesdames et Messieurs, ce terrible Cap, la *Véga* l'a franchi! Et depuis que le monde existe, c'est la première fois qu'un navire triomphe de cet obstacle, considéré comme insurmontable.

Je suis heureux de constater que la population étrangère de Yokohama, qui compte dans son sein représentants de tant de nationalités diverses, a accueilli avec un chaleureux empressement l'idée de féliciter les membres de l'expédition suédoise et de leur souhaiter cordialement la bienvenue dans ce port.

Professeur Nordenskjöld et membres de l'expédition de la *Véga*, au nom de la communauté de Yokohama, je vous félicite de tout cœur de votre succès; je suis heureux d'être son interprète, dans ce pays qui forme la limite de l'extrême Orient civilisé, où à vécun, il y a un siècle (1775-76) un de vos compatriotes, le professeur Thunberg, qui y a été, avec les Hollandais de l'ancienne Décima, l'un des premiers pionniers de la science et de la civilisation.

Au professeur Nordenskjöld! A l'expédition Suédoise!

The toast, it is needless to say, was received with enthusiasm, only to be renewed after Professor Nordenskjöld finished his reply, which was as follows:—

Mesdames et Messieurs!—Il me faudrait une éloquence bien supérieure à celle que je possède, pour répondre dignement au toast enthousiaste et savant que le Président vient de porter à l'expédition suédoise de la *Véga*.

Je constate que les deux nations qui sont représentées ici à mes côtés se sont occupées, depuis plusieurs siècles, des explorations arctiques: les Hollandais en tâchant de voyager de l'Océan Atlantique à la Chine par le passage de l'Est et les Russes en allant, tant par terre que par mer, explorer les côtes de l'Océan arctique. Nous savons tous, qu'ils ont apporté bien des découvertes importantes, et facilité le voyage que nous venons d'accomplir, quoiqu'ils n'eussent pas réussi à résoudre le problème entièrement. Ceci est dû principalement à la circonstance, que dans ce temps-là on ne se servait pas encore de la navigation à vapeur. Vous faire un exposé un peu complet de tous les voyages arctiques antérieurs, faits par différentes nations dont nous voyons ici les représentants, serait impossible ce moment.

Je veux donc me borner, mesdames et messieurs, à vous exprimer mes chaleureux remerciements pour la réception cordiale que l'expédition suédoise a reçue au Japon en général, et surtout de la communauté de ce port, qui nous a offert la splendide fête d'aujourd'hui. —A la communauté de Yokohama!

Mr. Keswick then rose and said:—

Mr. Chairman, your Excellencies, Ladies, and Gentlemen,—It has fallen to my lot to have the honour to propose a toast which, I am sure, will at your hands meet with no less cordial a response than the one which preceded it. I need not to say that it is that of Captain Pallander and the Officers of the *Véga*. (Hear hear.)

The expedition which has proved so brilliant a success was a two-fold achievement, being a triumph of science, which initiated it, and of navigation, which brought it to a grand conclusion.

Captain Pallander (whom we all regret to learn is absent to-night in consequence of indisposition), when he embarked on the enterprise which has brought the *Véga* to Yokohama by paths hitherto unknown, did not do so, aided alone by courage, skill, and hope, but he carried with him into the project a wide experience, gained in many a previous Arctic expedition, for it is a long time since, to Captain Pallander, those uttermost parts of the earth were wholly unfamiliar.

But, Ladies and Gentlemen, while we congratulate Captain Pallander and the country from which he springs upon the successful termination of an unique undertaking, we must not forget the other officers of the now famous little vessel, each of whom will during all his life be able to look back, with a pride which we might envy, upon his participation in the discovery of the North-East Passage. The nationality of Sweden is not alone represented in the officers of the *Véga*, but Russia, Italy, and Denmark each contributed to the number of those intrepid explorers, and there is not a member of one of those nationalities here present who will not be justly proud of the fact. From Captain Pallander to the humblest on board, each demands to be remembered by us to-night, as having supplied his share to the grand achievement.

There is nothing more that it is necessary for me to say on a subject so eloquent in itself, and I conclude by asking you to drink to the health of all those gallant men, and long may they live to pursue the pacific paths of science, forgetting those of war.

The toast, having been received with applause was acknowledged by Lieutenant BRUSWITZ, who spoke as follows:—

"Ladies and Gentlemen:—I regret that my too limited acquaintance with the English language, forces me to confine myself to only

a few words in thanking you for your kindness towards Captain Pallander and the officers and crew of the *Yega*. The captain will highly appreciate the flattering words in which you have rendered homage to his nautical abilities and to his success. I am extremely grieved that illness has prevented him from accepting to-day your flattering invitation, and it is an agreeable duty to me to utter a few cordial words. Permit me to express to you my warmest thanks in the name of the captain, the officers, and the crew of the *Yega*, and be assured of our profound gratitude for the brilliant reception which you have given us to-day."—(Cheers).

The concluding toast of the evening was proposed by General T. B. Van Buren in the following characteristic speech:—

"It has just been announced to me that I am expected to propose the toast of the evening, which, I need not say, is 'The Ladies'; and I appeal to the ladies themselves to decide whether it is a fair thing that this most important and delicate subject should be thus committed to me without the slightest opportunity to prepare fitting phrases to do it justice. Elaborate, eloquent and carefully prepared tributes have been rendered this evening to the scientists and heroes who have brought to a successful issue one of the most marvellous voyages of the world; but this toast, to which science and bravery always bow down, is to be draped only in the poor words that may spring to my lips on the moment, and I am left to chance phrases in which to express my admiration for this most admirable sex. (Laughter). The fact is some of the committee are bachelors, and I fear confirmed ones! (Laughter). I hesitate to say that they did not appreciate the sacredness of the subject, because I am going home alone, and it is a dark night. (Laughter.) I think it may perhaps be charged that the idea was entertained by them, that, upon such a topic, one should be always prepared to speak; and perhaps they also hoped by taking me thus unawares to get at the real sentiments of my heart before I had time to conceal them in ambiguous phrases. Well, they shall have them. Many persons reverence science in its varied forms. Most people worship bravery, but show me the man who does not love woman and I will point you to one. 'That hath no music in his soul.' 'Who is fit for treason, stratagems, and spoil,' and who, in the words of a distinguished American officer, should 'be shot on the spot.' (Great laughter and applause). I think I detect in your responses to this sentiment several grades of assent. The ladies of course agree with it. The good round laughter of the married men evidences their approval, although I would there were a little more enthusiasm about; but that is the real thing—that joyous, full-hearted 'Amen,' that is heard in the laughter (it must be) of the lovers who thus eagerly give voice to their approval. There is a thin unmelodious cackling, however, that I detected in the general hilarity, which I am sure must have proceeded from those crusty old fellows who know their duty but do it not. (Laughter.) Ever since Adam opened his dazed and delighted eyes upon the fairest creation of the Divine hand—(Here the band in the hall-room struck up a loud air which it took a half dozen gentlemen some minutes to put a stop to.) The speaker remarked that he did not think the band should be blamed for their enthusiasm over the toast, but he did not like to receive quite so long-unstained applause until his remarks were finished. Reassuming, he said:—'Where was I when the applause began? Oh, I think at Adam. (Laughter). Well, ever since Adam was in that state of mind, all down through rolling ages until now, woman has, under Heaven, been the moving spirit of the world. She has been the inspiration of the poet, the writer, the orator, the statesman, the soldier. Wars have been fought on her account, great enterprises have been brought to successful issues through her influence; the noblest deeds of valour have been dedicated to her service; the sublimest sacrifices have been made by her; homes have been created and beautified by her presence; her smiles have irradiated the dismal abodes of poverty and the cells of the imprisoned. Senates have been controlled by her, and she has reigned, and even now reigns over great empires. What more shall I say? She is not the equal of man, any more of the sterner sex. True, she writes well, she toils well, she endures well, she speaks well, she thinks well. As wife, mother, sister, sweetheart, friend, she is everything; but for climbing poles she is not a success. (Laughter). In some such highly intellectual and refined pursuits man is doubtless her superior; but enough.—The man, I have said, who does not love her should be carried out—he but cumber the ground. Fill your glasses then, my friends, and drink to the ladies and especially the ladies of Yokohama and Tokio.' (Thunders of applause.)

After supper, dancing was kept up until nearly 3 a.m., when the company separated. By kind permission of the Captain and Officers of the *Richmond*, the band of that vessel played its usual excellent music during the evening.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertion or for the deductions they may choose to draw therefrom.)

TO THE EDITOR, "JAPAN WEEKLY MAIL."

DEAR SIR,—Letters have appeared in your columns, under the signatures of "X" and "Y," which dealt with a subject so momentous that one feels justified in offering some additional testimony from other sources, calculated to make clearer the two points under consideration. Those points appear to be:—

1.—The general question—Ought the course of education provided by a Government to embrace teachings which are chiefly speculative, to the virtual disregard of what is practically useful.

2.—Are the seeds of Nihilism being sown here, as has been done in Russia—the fruits being social disorganization and revolutionary peril?

On the first point, Prof. Virchow has been quoted as depreciating the expenditure of public resources in teaching, as truths, scientific hypotheses not yet established. And it is well worthwhile to note that in his preface to the English edition of Haeckel's "Freedom of Science and Teaching," (which is a reply to Virchow), Prof. Huxley says; "I doubt whether it is the business of a teacher to plunge the young mind into the difficult problems concerning the origin of the existing condition of things. I am disposed to think, that the brief period of school-life would be better spent in obtaining an acquaintance with nature, as it is; in fact for laying a firm foundation in the further knowledge which is needed for the critical examination of the dogmas, whether scientific or anti-scientific, which are presented to the adult mind."

To the same effect writes Herbert Spencer (among other good remarks) in the first chapter of his book on *Education*: "Not only ought we to cease from the more unthinking adoption of the current fashion in education, which has no better warrant than any other fashion; but we must also rise above that rude, empirical style of judging displayed by those more intelligent people who do bestow some care in overseeing the cultivation of their children's minds. It must not suffice simply to think that such information will be useful in after life, or that this kind of knowledge is of more practical value than that; but we must seek out some process of estimating their respective values, so that as far as possible we may positively know which are most deserving of attention." p. 31.

Here is the pith of the whole matter:—*During the brief period of school and college life, what is most deserving of attention?*

As to the second question—the spread of Nihilism—there are perhaps no better sources of information than the two novels "Fathers and Sons," and "Virgin Soil," written by Turgénieff—a litterateur who, when himself at the University, sympathized with the then proposed political changes; so much so, as to be called "The American." In "Fathers and Sons," which exhibits Nihilism as it was in 1861, we observe that the book opens with an account of the return home of Aroudi, a young graduate of the University. Bazarof, another prominent character, had also been "sent to the University," thus showing what manner of seed-sowing it was that led to such results as are indicated by these recent telegrams:—

"ONESSA, July 23.—The Karkhoff Military Tribunal has just tried — and —, students of the Karkhoff Veterinary College."

"CHRISTIANA, August 21.—Two Russian students, Nihilists, have been arrested at the Wadson—the Russian Government having demanded their extradition."

The significance of these things is plain enough, and painful enough; and after reading such tragic brevities, it seems like an anti-climax to inquire into the probable origin and force of this strange term which, under the guise of a negation, "connotes" a terrific power for mischief.

It may, however, conveniently close the warning which has been given, as to the possible—nay, probable—effects of this demoralizing element upon the rising generation of Japan, if one more quotation is added: it is from the "Leisure Hour."

"Nihilism.—About the origin of this word there is some discussion. Its adoption in Russia is certainly due to its being used by M. Ivan de Tourgenieff, in one of his romances. But the word was already familiar in the works of metaphysicians; as where M. Royer Collard speaks of 'the scepticism, or Nihilism, which characterizes the philosophy of these last times.' M. Victor Hugo also uses the word in saying 'The denial of the Infinite leads straight to Nihilism! The political Nihilists are supposed to make practical annihilation of all accepted beliefs and authorities. The leaders may propose to reconstruct society after the destruction of existing social order; but the usual end of a political chaos is a despotism and military rule.'

If the dispensers of state education "sow the wind" of reckless speculation now, the generation that is coming on the stage of action may be expected to "reap the whirlwind" of disorganization and terrorism in a few years; and it should never be forgotten that each generation is trustee for the well-being of its immediate successor.

Yours, &c.,

Z.

TO THE EDITOR, "JAPAN WEEKLY MAIL."

SIR:—With reference to your note in last Saturday's paper, on the danger and obstructions caused by drays in Main Street, however useful and pertinent your suggestion may be, that these ponderous carts should be made to "go the round," I beg to assure you that such a consummation, however devoutly to be wished, is impossible of attainment under our present municipal system. What you, and other journalists, if you will allow me to say so, as well as all other foreign residents in Yokohama, have to do, is to work towards the institution of a better plan of local government. At present carters, coolies,

policemen, and robbers, all do what seems good in their own eyes.

You allude to a carriage accident occurring out of the selfishness or carelessness of a drayman. Of the selfishness of these irresponsible individuals, in making either side of the road occupied by their vehicles impassable, I could cite innumerable instances. Of their carelessness, for the moment, I will only mention one. Not two months ago I was passing up Water Street, in a jinrikisha drawn by a skillful and experienced coolie, who endeavoured to pass where there was as much room as ordinarily can be found between two ponderous drays. The movement of an unwatched horse, brought the near fore wheel of the first cart, into so obtuse an angle with the near hind wheel of the rear one, that the hand carriage in which I was riding was literally squeezed to pieces. Neither myself nor my driver being blind, or lame, or gouty, we both escaped without personal injury.

I appreciate your efforts to make dray-owners and their vulgar Jehus understand that they are not the lords in fee-simple of the streets of the Yokohama Settlement; but you must go deeper than the skin which can only be scarred by mere remonstrance, before you can ameliorate this and even worse abuses.

Yours truly,

B.

Yokohama, Sept. 22, 1879.

REUTER'S TELEGRAMS.

London, 16th September.

The *Times* publishes a telegram from Kandahar stating that the Ameer has summoned the troops at Herat and Balkh and the Gilzai tribes to Cabul for a jihad (holy war).

LONDON, September 23rd, 1879.

The Zulu Chiefs have signed conditions of peace.

From the *North China Daily News*.

Bombay, 14th September.

The mutineers at Cabul are leaderless, but they are endeavouring to incite the neighbouring tribes to attack the flank of the column at Shutar Garden Pass, which the British have occupied.

In a letter from the Ameer, after the outbreak, he declares his sincere friendship; but the Indian Government are somewhat distrustful of the sincerity of his protestations, and General Roberts has asked him to prove his friendship.

The frontier is quiet, and Candahar remains tranquil.

Bombay, 15th September.

The *Daily News* publishes a telegram from Simla stating that the complicity of the Ameer of Afghanistan in the late outbreak is undoubted, that a large army is covering Cabul and communication is cut off.

J'ai la douleur d'annoncer la mort subite de mon bien-aimé cousin MONSIEUR MAURICE VERHAEGE DE NAYER, Consul de Belgique.

MAURICE DE HEMPTINNE.

NOTES OF THE WEEK.

The M. M. steamer *Tibre* arrived from Hongkong this morning, bringing the London mail of 8th August, and Marseilles' dates two days later. The O. & O. steamer *Belgie*, left for San Francisco, last Sunday afternoon. There has been no homeward mail despatched via Hongkong, this week, owing to the

alteration in the sailing day of the steamers, necessitated by the change of monsoon. The P. & O. S.S. *China* will, however, leave on Thursday next, at daylight. The Shanghai and way port steamers have arrived and departed as usual.

The P. & O. S. S. *Malacca*, with the London mails of 15th August, left Hongkong for this port at 5 p.m., on Monday, the 22nd instant.

The other hunting schooner *Lottie* arrived in Mississippi Bay last night. She has 64 skins on board, and reports the *Mary Bohm*, with over 70 skins, and the schooner *Otago*, with 69 skins. Only one of the four men who left by the *Jupiter*, Auguste Nobly, now survives, two were drowned and one died.

The U. S. man-of-war *Ashuelot*, left this morning for Kobe, en route for Shanghai. The *Mowagahela* also left for San Francisco to-day.

We have to call attention to the alteration in the hour of the departure of the steamers for Shanghai and way-ports. They will in future leave at four p.m. instead of six, and no cargo will be received after two o'clock.

It was reported in town, on Wednesday, that the S.S. *Egean*, which left here at the end of last July for New York, has put into Gallo for repairs. The vessel had over one million pounds of tea as cargo.

We call attention to the announcement which has appeared in the daily papers that Mr. Vernon will take a farewell benefit at the Gaiety Theatre, on Monday evening next, the 29th instant. The Opera chosen for the occasion, *Ginevieve de Brabant*, is such a general favourite, and the Vernon Opera Company have already shown themselves so capable of producing it satisfactorily, that Mr. Vernon should secure a crowded audience for his benefit, altogether apart from his own claims upon the patronage of the Yokohama public.

The first assay of Base Ball, after the hot weather, was had on last Tuesday, when the Yokohama Club met the U. S. Navy. The weather was threatening all day, but in the afternoon it cleared up and was even more favourable than if the sun had been shining. The Navy won the toss and sent their opponents to the bat, but they were unable to take any advantage of it and retired for a cypher. The Navy were evidently in better order, and made things lively by running up 3 runs in three innings; the B. B. C. at the 3rd even innings had failed to break their melancholy list of cyphers. The Navy continued to add steadily to their score, until, at the close of the 7th inning, they were 16, while Yokohama had a rather weak looking 3. In the two last innings, matters were somewhat reversed and Yokohama ran up 11 more runs, mainly obtained through Mr. Halsey's change in pitching. The play of both clubs in the field showed lack of practice, but the Navy had the game in their hands from the start. Their catcher is a wonder and the way he disposes of the ball, is a play in itself. The hot weather seemed to have played sad havoc with the B. B. C's. They had frequent akiers, but as frequently refused them. They threw wide, high and everywhere but in the right direction, while their opponents never refused a good offer, and generally threw straight and to the right place. We hope to see another match before long, but it will take Yokohama a lot of hard practice before they can face such a team as won yesterday.

The following is the score:—

NAVY.		YOKOHAMA B. B. C.	
	O. R.		O. R.
Barber. 1B.	5 1	Merriman. LF.	2 3
McCrae. LF.	3 3	Mudgett. C.	2 3
Whiting. 3B.	2 2	Knox. 1B.	3 2

We are in receipt of a copy of a Calcutta paper called the *Asian Sporting Newspaper*, which contains a full and detailed account of our Race Meeting of May last, and the following original remarks in relation thereto:—"We call the attention of our readers to our account of the Yokohama Races, furnished

"us by the gentleman who races and rides there as Mr. Mori-sou. He is a brother of a well-known Tirthoot sportsman."

Indiscreet journalism is one of the mildest epithets that can be applied to the Japanese press. Statements are constantly being given which require contradiction, and the merest rumors are at once retailed by our native contemporaries as facts. We give in our Japanese column some of these latest contradictions, and we feel sure that many others have yet to follow. The Osaka arrests have naturally formed a grand occasion for the wildest reports, and it would not be very astonishing to find that the whole history of the reported forgeries and their extent turns out to be imaginary. In the meantime, we hear that the Osaka editors have been forbidden to publish any more reports in connection with Mr. Fujita Denzaburo.

The *Osaka Shimpō* gave what appears to be the most probable reason for the arrest of Mr. Fujita, a step on the part of the police authorities which has excited much speculation as to the actual cause. The *Osaka Shimpō* stated, that the arrest was made in consequence of Fujita being implicated in a fraud upon the Government in connection with some counterfeit paper money. It appears that this counterfeit money was made some years ago in Germany, and brought to Japan by one of Fujita's accomplices. During the south-western rebellion in 1877, the Government deposited with Fujita temporarily, yen 3,000,000 and he managed to substitute for it counterfeit money to the same amount. Thus the Government were made the means of distributing the false kinsatsu throughout the country, when they withdrew their deposit from Fujita. Although the Tokio papers are silent on the subject, it seems that simultaneously with the arrest of Fujita in Osaka, the premises of his firms branches in Yamaguchi, Nagasaki and Tokio, were visited by the local police at those places and a careful examination made of all the books, documents, money, etc., found in the main buildings and godowns. Commenting upon the arrest and the peculiar circumstances attending it the *Nichiichi Shimbun* of yesterday remarks, that "although the counterfeiting of the paper money may be made the ostensible cause of Fujita's apprehension, still we cannot positively assert that such is the only and immediate reason for it." Our contemporary points out that while counterfeiting is no doubt a very grave offence still it is by no means a rare one, and that ordinarily the duty of investigating crimes of the kind and arresting the offenders falls upon the local police and not those of the capital, except in cases when the crime is committed in Tokio. It seems that it has been the invariable practice hitherto, when the Tokio police hear of an offence being committed in any of the provinces, to instruct the local authorities, who then take action. In this instance, however, Fujita was arrested before the Osaka police knew anything about it. It also appears that the Tokio officers put up a notice on the gate of the temple of Manshuji, at Sakai, that a branch office of the Tokio police Bureau, was established there. From all the circumstances the inference is drawn that something has occurred of considerably more importance than counterfeiting *sansu*. Indeed, some go so far as to assert that Fujita was the leading spirit in a formidable conspiracy against the Government.

We learn that permission has now been given to Fujita & Co., in Osaka, to carry on their business as before, and that all the members of the firm remaining in Osaka held a meeting on the 19th instant, and decided to appoint Hisahara Ikutaro, a nephew of Fujita Denzaburo, Acting Manager of the firm during the detention of Fujita in prison.

The native papers mention that the number of persons who have been arrested on the charge of being accomplices of Fujita, since the date of his arrest, up to the 20th instant, amounts to over sixty. The charge against them has now been definitely stated to be the forgery of Kinsatsu, as previously rumoured. It is also said, that all the prisoners will be brought up to Tokio in the beginning of next month, for trial.

To-day has been a Bank holiday in honor of the Tir Nationale of our Swiss fellow residents, who have had a splendid afternoon for their favourite annual gathering. For those who do not care about rifle shooting, the opportunity has been a good one to take a two days' holiday in the country.

The following is a list of the winners at the shooting matches:—

5th	" G. Giussani.

The Japanese have had another port opened to their trade in Corea, the treaty about which will be found in another column, but Gensan is not the place they are so anxious to get as the town of Nikawa, said to be the most important place after the capital, from which it is only separated by a broad level road of about 18 miles. The Coreans have, however, so far objected to its being opened to foreign trade, and some further time must elapse before Japan can gain this next concession.

The Y. A. R. C. have arranged their programme for the Autumn Regatta, to take place on Thursday, the 16th October, and there is good promise for some well contested races. We are glad to see that Tokio enters the list against Yokohama and that some of our best men are evidently preparing themselves for a severe struggle. The Y. A. R. C. look to Messrs. Gaspar, Fraser, Hamilton and Litchfield to bring their colours to the front, whilst Tokio's hopes, we understand, rest upon a very formidable crew composed of Messrs. Strange, Trevithick, Morris and Whitney. The following crews have been selected for the "Club Fours":—The *Old White Boat*:—Gordon, Walstab, J. Walter and F. Walker. The *American*:—Harris, Uloth, Boag and Hunt. The *Black Boat*:—Maxwell, Grosser, Hawkins and Whitmore. All crews are now practising daily, and by next Saturday they will probably have settled down to work sufficiently to enable us to make another note of their prospects. In addition to the Club events, a prize has also been reserved for men-of-war's cutters.

The *Osaka Shōkū Nippo* reports a speech delivered by Mr. Godai, as President of the Chamber of Commerce, on the 20th instant, which we take the liberty of condensing. He stated that he considered forgery was not the cause of the arrests, basing his belief "on the way in which Fujita & Co. paid the money and upon the characters of Fujita and Nakano, who would be incapable of committing such an offence." He disbelieved the report that 3,000,000 yen had been counterfeited upon the grounds that such a quantity could not have been imported secretly into the country, that the machinery to make them here could also not have been imported, and that out of 100,000 yen examined at the 1st National Bank, not a single spurious one was discovered, which would show that the proportion of bad notes could not be as stated in the newspapers. Mr. Godai concluded by saying that the Chamber believed there was not so much forged paper in circulation as reported, and added "I can confidently say that in case any merchants in the city should sustain loss by the forged 2 yen paper money, this Chamber will hold itself responsible for their loss and make it good." On being asked how he proposed that the Chamber should take that responsibility, Mr. Godai replied that the Government had not yet notified the existence of any forged paper, and that as it has been the custom of both the Government and the people to examine the *sansu* by the eye only and without the use of a magnifying glass, no blame could attach to persons who unknowingly accepted forged paper from their neglect to use a glass capable of magnifying 400 diameters! The Government could not therefore see them punished. The members

of the Osaka Chamber were satisfied with Mr. Godai's statement, and the bankers are said to have agreed that they would continue to accept the two yen satsu without question.

In H. B. M.'s Court for Japan, judgment was given this morning in the case of *Pagdon v. Cope*, in which the plaintiff claimed to recover the sum of \$175.50, the estimated value of some second-hand sails entrusted by him to the defendant, an auctioneer, for sale. There were considerable contradictions in the evidence, but His Honour found for the defendant on the principal issues, allowing the plaintiff the sum of \$3.50, being the amount of commission charged by the defendant. No costs were allowed. The case was reported *in extenso* in the *Daily Mail* and the judgment will appear in full on Monday.

We have much pleasure in directing the attention of our readers to the advertisement which appears in another column, announcing that Mdme. and Maestro Hirlemann, will give a musical entertainment in the Gaiety Theatre, on Wednesday evening next, when they will be assisted by several amateurs. From the notices which have appeared in the journals of the different places already visited by Mdme. and Maestro Hirlemann, the musical portion of the Yokohama public may look forward to an evening's amusement of no ordinary kind. Mdme. Hirlemann's rendition of the title role in the opera chosen for her introduction to us, *Les Noces de Jeannette*, has been mentioned in the following highly commendatory manner by one of our Shanghai contemporaries:—"The performance was of unvaried excellence throughout, and showed how fully entitled Mdme. Hirlemann is to the high position awarded her in the musical and dramatic world. She possesses a splendid soprano voice, rich and full in tone, pure throughout, and of considerable compass—as was amply shown by her wonderful interpretation of the 'Nightingale song,' in the opera with piano and flute accompaniment." Maestro Hirlemann has everywhere won golden opinions for the finish, brilliancy and expression of his pianoforte performances, while his compositions are spoken of as exhibiting remarkable musical ability.

YOKOHAMA LOCAL BOARD OF HEALTH.

The fifteenth meeting was held on the 12th Sept., 1879, at the Machigaischo, at 10.30 a.m.

President the Governor of Kanagawa Ken.

The points on the order of the day were fixed as follows:

1. Whether the festival *Nioka-odori* could safely take place.
2. Report by the President about the answer received from H. B. M.'s Consul to the letter addressed by the Kenrei to him, about the burial of Mr. Rose.
3. The situation of the foreign cemetery of Yokohama and its relation to public health.
4. The question whether for large hotels tea-houses etc., a certain number of closets shall be enforced or the reservoirs are to be enlarged.
5. Dr. Geerts' report upon the place at Hiranuma, where cholera-discharges are burnt.
6. *Résumé* of the 14th Meeting of 5th September.

I.—The President wished to ask the opinion of the Members whether the festival *Nioka-odori* (dancing and procession with high cars), which had been postponed by the *Kencho*, on account of the cholera and the hot weather, could now be permitted.

The people living at Takashimacho had collectively asked for permission to celebrate this festival. As the disease was now so much abated in Yokohama and the temperature was no longer excessively high, several members did not think it wise to prohibit the festival any longer upon sanitary grounds, if the people wished to celebrate it.

Consequently it was resolved to grant the permission.

II.—The President reported that the Kenrei had received an answer from H. B. M.'s Consul to the letter addressed to him about the burial of Mr. Rose. In the letter of the Kenrei it was stated that the depth of the grave was by the Board not considered to be sufficient, whilst H. B. M.'s Consul was requested to investigate the matter also. On the proposal of the Board, the Kenrei had suggested in this letter that a ditch filled with lime 1½ feet in thickness, should be made round the grave.

The Kenrei had received an answer from the British Consul, stating that after the police constable Schultz had left the cemetery, the grave of Mr. Rose had been deepened more and that not four but ten bags of lime had been used in the grave. The President wished to ask the members whether they thought it necessary to investigate the matter further, after the statement of H. B. M.'s Consul?

Drs. Kondo, Ninomiya, Geerts, Wheeler and others did not think it necessary to carry out the first proposal of the Board, after the explanation and statement given by H. B. M.'s Consul, but Dr. Geerts, although recognizing that the body, coffin and grave had in this case been disinfected and properly

treated, repeated his statement, made at the former meeting, that the foreign cemetery is badly situated from a sanitary point of view and formed a constant danger for the health of the population of the neighbourhood.

The President observed that the Board had thus resolved to finish the question of the burial of Mr. Rose, after the statement made by the British Consul.

III.—The President remarked that, with reference to the danger of the present situation of the foreign cemetery, as pointed out by Dr. Geerts, he should propose to the Board to investigate the matter fully and to decide first the question whether the foreign cemetery is dangerous for health or not. The Kenrei should then afterwards ask the co-operation of the Consul, select with them another piece of ground for a second cemetery and address the Central Government about the matter.

Dr. Miyajima thought it wise to remove the foreign cemetery considering that the *Kencho* had some years ago already forbidden the people to bury the dead in the immediate vicinity of inhabited places and that the local government had removed all the Japanese graveyards to Kubyama, Aizawa and Negishi.

Dr. Gütchlow remarked that we all agree, that the distance between the village of Nomura and the cemetery is far too small. Before the Kenrei commenced to correspond about this matter with the Consul, it would be necessary for the Board to prove by reports and observation, that the present situation is in fact dangerous to health.

After some discussion between various members, it was agreed upon—in case any alteration should eventually take place—that the old cemetery should remain as it was and that no exhumation of old graves should take place.

The President wished now to appoint a Committee for giving a report upon the foreign cemetery at one of the following meetings of the Board and proposed Drs. Geerts, Wheeler, Ninomiya and one officer of the *Kencho* to form this Committee, which was carried.

The Kenrei should inform the Senior Consul that a Committee for inspection of the foreign cemetery had been appointed, whilst the Committee of the Board should address the cemetery directors, requesting their aid in drawing up the necessary statistics.

IV.—The President asked, with reference to the former decision of the Board upon the closets, whether for large hotels, tea-houses, &c., a certain number of closets shall be enforced, or the reservoirs or pails be enlarged.

Dr. Geerts proposed that for such large houses the rule ought to be observed of having at least one closet for every 20 inhabitants. Thus for instance for a tea-house, intended for 100 guests, there ought to be at least 5 closets.

Resolved that this rule shall be enforced.

V.—The report of Dr. Geerts upon the place at Hiranuma where cholera discharges are burnt, was, then read. This report is as follows:—

Considering that liquid cholera-discharges may easily be absorbed by a porous swampy ground and that experience everywhere proves lower alluvial grounds to be especially liable to the rapid and great progress of the disease, I do not approve of the place at Hiranuma for the purpose of burning discharges because this spot is situated in a swamp or very porous and wet ground, near to the canal, and I especially object to it because there are many other places on the neighbouring hills fit for the purpose.

Consequently I advise:

a. Not to bring cholera-discharges down to low, marshy or porous ground.

b. To choose three or four different spots on the neighbouring hills for the purpose of burning the discharges in holes properly covered with lime.

VI.—The *résumé* of the meeting of the 5th Sept. was read and adopted.

The sixteenth meeting was held on the 17th September, 1879, at the Machigaischo, at 10.30 a.m.

President the Governor of Kanagawa Ken.

The following subjects were on the order of the day:—

- 1.—Communications of the President.
- 2.—Want of a health officer for supervising disinfection and examining drinking water at several villages near Odawara.
- 3.—Report of certain events which had happened at Sobimura and Yoshidajima-mura.
- 4.—Suggestions about the house to house visitation, which has been in progress for several days.
- 5.—How to act with regard to wells the water of which may be found bad after inspection?
- 6.—*Résumé* of the minutes of the 13th meeting held on the 7th September.

I.—The President stated to the Board, that the Governor had received an answer from the Senior Consul, stating that all Consuls (with the exception of the Chinese Consul) had highly approved of the measure of a house to house visitation by the members of the Board and that they had notified the same to their respective countrymen, residing at this place.

The President further stated that Mr. Isogai, a member of the Board and formerly chief officer of the Sanitary Bureau at

the Kencho, had been appointed by the Government, under Secretary of Kanagawa Ken. Mr. Tsunagi being nominated chief officer of the local Sanitary Bureau, the President proposed to appoint the latter gentleman also a member of the Board and to request him to attend at the next meeting. The Board unanimously approved this nomination.

II.—The President informed the meeting that the aid of a professional officer for conducting disinfections, water-inspection &c., was much wanted in several of the villages near Odawara. He proposed that Dr. Geerts should request one of the Sanitary Chemists of the Laboratory to give the required assistance.

Resolved that Mr. J. T. R. Onaka of the Laboratory shall be asked to depart as early as possible.

III.—The President stated that in several villages in the neighbourhood of Odawara (Sobimura, Yoshida-jima mura, etc.) where the ground is very low and swampy, it had been recommended to burn the cholera corpses instead of burying them. As the people there are not accustomed to the practice of cremation, they objected on religious grounds against the burning of the dead, the coolies even refusing to work or to bring wood to the cremation place.

After Mr. Kawano of the Kencho had gone there, for the purpose of explaining the matter to the villagers, and after a suitable place had been found either for burial or burning of the dead, the people became satisfied and quiet.

IV.—As the house to house visitation was now in progress, some members of the Inspection Committee wished to make some suggestions.

Dr. Simmons objected to the inspection being a house to house visitation, because most parts of the town are so bad that the same remarks repeat themselves everywhere. He wished to make only a rough inspection and he remarked, that the sanitary inspection was properly the task of a special staff of officers at the Kencho. He did not see what could be gained by the members of the Board inspecting each house and deemed this consequently unnecessary. He did not wish moreover to treat the sanitary officers at the Kencho as children.

Dr. Geerts could not share the opinion of Dr. Simmons about the signification and utility of a house to house visitation by the members of the Board. He wished to know *with exactitude* and not roughly what is the state of each house and this he could not know without carefully inspecting each house and registering the results in the tables. He considered it the first duty of the members of the Board to look to everything that affected the health of the people and to urge the removal of filth, of bad drinking water, etc. wherever it was found. He proposed that the inhabitants should be *forced* to keep their closets and premises in a clean state and he deemed it necessary that the members of the Board, should show by the strict performance of this rather fatiguing and nauseous duty and by their own example, the great importance they attach to the observance of cleanliness. He did not wish, any more than Dr. Simmons, to treat the officers of the local Sanitary Bureau as children, but as he had found so much dirt and filth in so many places he could not testify to the efficacy of the former measures and still remained fully convinced of the necessity of a thorough inspection as resolved upon at the 11th meeting, even in case it should take two months labour.

Dr. Gütschow requested to be supplied with a map on a larger scale, so that he could mark on it the places inspected. Although he admitted that we cannot change everything at once, nor provide at once for new drains, still he was of opinion that very much good could be done by the house to house visitation. He had seen in the village of Kitagata, for instance, heaps of dirt, fouling the water of many wells which originally contained pure water.

In other cases closets overflowing with excreta had evidently—as was proved by analysis—polluted the water of the neighbouring wells. By removing the filth the good quality of water might be restored.

He deemed it very useful, that the officers of the sanitary police learn now from us how to inspect and treat the matter. And therefore he wished to perform the visitation in an exact manner. Although Dr. Simmons had said that the sanitary police had performed this duty, he stated that this was not done. Consequently he should go on in the same manner as was resolved upon at the 11th meeting and not deviate from the right path.

Dr. Wheeler thought, that if a house to house visitation was carried out it should be performed in a substantial way. And if we desire to have it done properly, then we must commence to do it ourselves. He was also of opinion that in doing it now ourselves the officers of the local Sanitary Bureau would learn how to do it afterwards. The Board had to advise and control the local sanitary officers and if the latter do not follow the rules, the Kencho could dismiss them.

The President remarked, that at the 11th meeting it had been decided by the Board, that a house to house visitation should be made in Yokohama by members of the Board. At the 12th meeting, the four Committees for visitation were elected and now this measure was in due course of execution. He felt greatly astonished that Dr. Simmons now came forward

with a proposal, intending to cancel a recent resolution of the Board. He pointed out the absurdity of such a proceeding and should not wish to bring as President such a proposal forward to the vote.

Dr. Wheeler and several other members maintained that the original plan must be carried out, this was resolved upon accordingly.

V.—As to the question how to act with wells which were found to give bad water, it was, after some discussion between various members and the President, decided, that each inspecting Committee shall report to the Kencho, after due consideration of the circumstances, what measures ought to be taken in each case, whilst the Kencho shall be charged with carrying the recommendations of the committee into effect.

VI.—The report of the thirteenth meeting, held on the 7th September, was read and adopted.

Meeting closed at 1 p.m.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

GOVERNMENT NOTIFICATIONS.

NOTIFICATION No. 37.

It is hereby notified that the Stock Exchange offices in Tokio and Osaka have been authorized to transact the exchange &c. of gold and silver coins, for the time being.

(Signed) SANJŌ SANEYOSHI,
Prime Minister.

Sept. 22nd, 1879.

NOTIFICATION No. 38.

It is hereby notified that the 'Yokohama Mexican Dollar Exchange Office,' established in accordance with the Notification No. 8 issued in February of this year, will henceforth be known as the 'Yokohama Exchange Office' and that it has been authorized to transact the exchange &c. of gold and silver coins, for the time being.

(Signed) SANJŌ SANEYOSHI,
Prime Minister.

Sept. 22nd, 1879.

COURT, POLITICAL AND OFFICIAL.

We learn that it has at length been determined to proceed with the erection of the new Imperial Palace on the site of the former, one burnt down some five years since. The building will now be pushed on vigorously under the direction of the Public Works Department to whom the erection of the Palace has been entrusted.

The *Fuso Shinichi* contains a report that Mr. Hayashi, the Junior Vice Minister for Home Affairs, will shortly be appointed to the Senate, and that the vacancy thus caused will be filled by Mr. Kusumoto, at present the Governor of the Tokio Fu.

We learn from the native papers that H. B. M.'s Minister Sir Harry Parkes, who left here on September. 11th, in H. M. S. *Hart*, will during his absence visit the towns of Iahinomaki, Sendai, &c.

A report from Sendai states, "His Excellency Hayashi, the Junior Vice Minister for Home Affairs, who left Tokio lately to inspect the northern provinces, arrived here on the 20th." Sir Harry Parkes was also expected to arrive there on the 21st instant.

It was originally proposed that the building formerly used for the French Legation, in Nagatschō, Tokio, should be placed at the disposal of H. I. H. the Duke of Genoa, on his arrival in Tokio. But now as General Grant has returned home and the Yenriokwan is unoccupied, it will be used for the reception of the Italian Prince.

The native papers state, that H. I. H. Prince Henry will visit Nikko, leaving here about the 29th instant, and will stay there about week. Mr. Hachisuka and other officers of the Foreign Office will accompany him. On the 25th instant, H. I. H. Prince Kita Shirakawa came up from Tokio, to visit Prince Henry on board the *Prinz Adalbert*.

Two Judges and a Secretary of the British Court in Shanghai, accompanied by H. E. Oki the Minister of Justice, and Mr. Watanabe the 1st Secretary of that Department, paid a visit to the Tokio *Saibansho*, on the afternoon of the 22nd inst. There they witnessed a criminal being sentenced to punishment; and afterwards visited the Supreme and the Superior Courts.

The erection of the new penal establishment in Miyagi Ken, having been lately completed, it was formally opened on the 13th instant. It appears rather a novel idea to associate a building intended for such a purpose with festivities, but we are informed that a grand banquet was given in the new prison to celebrate its opening, and that 150 guests were present, including the provincial officers, the officials of the local court, the leading merchants of the district and the newspaper editors. The building was thrown open during the five succeeding days, to enable such of the public who felt curious in the matter to inspect the establishment. The new prison will be used for the accommodation of all prisoners who are sentenced to terms of penal servitude, of from 18 months to five years, in the eight prefectures of Ibaraki, Fukushima, Miyagi, Iwate, Awamori, Akita, Yamagata, and Niigata.

NAVAL AND MILITARY.

Captain Tsuboi has been appointed to the command of the Japanese man-of-war *Izaki Kan*, which was built recently. The other officers will be appointed, and she will placed in commission, in four or five days.

The Japanese man-of-war *Tsukuba Kan*, left Shinagawa at 9 a.m., on Thursday, for a cruise round the whole of the Islands of Japan. Her first port of call will be Mororan, in Yezo.

A hospital for the accommodation of the officers and men of the Imperial Japanese Navy, has been established by the Naval Department at Minragōri, Sōshin. This hospital will be known officially as "the Yokosuka Naval Hospital."

The Japanese Government have decided to appropriate the following amounts out of the revenue to the service of the Naval Department during the present fiscal year viz:—for the ordinary expenditure of the navy, yen 2,636,300, for new works &c., yen 70,200, in all yen 2,706,500.

The organization of the Japanese Navy having been almost perfected, the services of the three foreign officers, who now remain in the service, will be dispensed with after October next.

On the 20th instant, Lieut-General Tani was appointed to be the Military Inspector for the Eastern Division, Lieut-General Nodzu for the Central Division and Lieut-General Miura for the Western Division. These Generals will carry out the forthcoming inspection of the Army.

The 2nd regiment of the line, in garrison at Tokio, will shortly march out to Kōfu; from thence to Sidsnoka round the base of Fujiyama, and then by way of Yenosima back to barracks. The expedition will, it is supposed, occupy about three weeks, and is undertaken for the purpose of exercising the regiment in field duties.

INDUSTRIES, TRADE AND FINANCE.

An English officer of the Railway Department, accompanied by a number of Japanese officers, left here on the 20th instant, for Hakodate, to survey the route for the proposed railway in the Island of Yezo.

The Osakayama tunnel for the Kiyoto-Otsu Railway having been successfully pierced on the 13th instant, the Railway Authorities gave the sum of yen 2,000 to be distributed among the coolies engaged on the work. In consequence of this, the two following days, the 14th and 15th instant, were observed as holidays by the men, who, attired in new suits of clothes of uniform pattern, visited the different temples to return thanks for their success.

It is stated that all the exhibits for the Tea Section of the Competitive Exhibition in Yokohama have arrived. The total number of exhibitors is 107 and there are 1,129 exhibits, of which 13 are powdered tea; 1,001 ordinary tea: 114 black tea and 1 brick tea. The tea sales which have taken place from the date of the opening of the Exhibition up to the 20th instant comprise 226 different kinds, mostly from the provinces of Yamashiro, Tōtōmi, Suruga, Musashi and Omi.

The Woollen factory recently established in Minami-gumi Senji, Tokio, will be formally opened by His Excellency Ito, the Minister for Home Affairs, on the 27th instant. Mr. Inouye, an officer of the Agricultural Bureau, has been appointed Director of the Factory.

Mr. Motoda, the Manager of the Branch Office of the Mitsui Bishi S.S. Co. in this port, proceeded to Hongkong in the French Mail Steamer *Tanis* on the 20th instant, to make

arrangements for the branch office &c. in that port, preparatory to the opening of regular communication with Hongkong by the Mitsui Bishi Steamers.

An old project has, we see, been again revived. Sometime ago an endeavour was made to get up a company with the object of purchasing from the Government the railway between Tokio and Yokohama, but from one cause and another the idea was abandoned. The proposition has again been brought forward, and we notice that on the 20th instant, Mr. Mōri, (the Managing Director of the Japanese Marine Insurance Company,) and about fifty others of the *Kiwazoku*, (nobles), held a meeting in the Seiyōken Hotel at Ueno, to discuss the desirability of resuscitating the scheme. His Excellency Inouye was present at the meeting in an unofficial capacity.

A Chamber of Commerce with ninety members has lately been established in the town of Sakai, the Government having granted the necessary permission.

A report from the authorities of Ibaraki Ken to the Agricultural Bureau in Tokio, states, that the weather having been most favourable, this year's rice crop in that prefecture will in some localities be about fifty per cent. more than in ordinary years, and in other places about double the usual yield.

It is reported that the Government will shortly issue *yen* notes to the value of yen 6,000,000.

At about 10 a.m. on the 20th instant, 115 boxes, each containing 2,000 Silver Yen, arrived at the Hongkong and Shanghai Bank, from the Mitsui Bank in Tokio.

MISCELLANEOUS.

It is rumoured, says the *Asi* *Nippo*, that when the news reached Kasugai-gori that the representatives of the farmers in the sixty villages in that locality, who presented the memorial to the Home Department on the subject of the revision of the land tax had been handed over to the police authorities in Tokio, about 40 representatives of the farmers in 160 villages in that Province, assembled in the temple of Joanzai in Toyohashimura, and agreed to send two more parties of representatives each consisting of about 300 men, to Tokio, to again present the memorial, and raised yen 35,000 to cover their travelling expenses.

A daring attempt at robbery was made on Saturday morning at about 2.30 a.m. A policeman noticed two men in foreign clothes in the grounds of No. 122, which he had been specially detailed to watch. The constable challenged them, but without making any reply they each drew swords and attacked him. The policeman had only his staff and in the affray which ensued had one of his fingers cut off and received another slight wound. The constable however succeeded in putting the two men to flight and followed them for some distance. They managed to make good their escape and no trace has up to the present been obtained which might lead to their arrest. The pluck of the constable deserves recognition from the authorities.

The unoccupied lots of ground in the foreign settlement of Tsukiji, are sold by public auction, once in every four years, and as this is the fourth year from the last sale, an auction will take place in the settlement shortly. The reserve is said to be fixed at Yen 1.50 per tsubo.

The great gas case having been recently settled by mutual agreement, Messrs. Hara, Maki and others, who acted as mediators in the settlement, will give a banquet on the 28th instant, in the Branch Palace in Nōgō (which has been lent for the occasion), to the parties in the case as well as to the leading merchants of Tokio and Yokohama. About 300 or 400 guests are expected to be present and the preparations for the banquet are now being pushed forward.

In order to guard against one of the most frequent causes of the conflagrations which are constantly occurring in the capital, it has been decided to make a periodical inspection of the chimneys, &c., connected with the numerous bath-houses existing in Tokio.

A fire broke out at 4 a.m. on the 25th instant, in the branch prison of Yamagata Ken, in Kasumicho, Yamagata, and destroyed the whole building.

A lighthouse is about to be erected at the port of Kuchino-tsu, in Hiizen.

Mr. Nagano, an official of the Government Silk Filature at Tamioka Joshiu, was murdered by some person at present un-

known, about midnight on the 18th instant. No trace of the murderer has as yet been discovered.

The following are the particulars of the damage caused by the floods which have occurred since July last, in Yamagata Ken:—

Bridges destroyed	1,035
Embankments destroyed	in 1,130 places
Roads	8 "
Vegetable Gardens, Paddy-fields &c. injured to the extent of	18112 cho.

A telegraphic report dated 17th instant, from the Authorities of Miyagi Ken to the Government in Tokio, states, that rain fell there incessantly from the 14th instant. The Kitakami-gawa rose about 18 feet above its usual level and its banks were burst through in several places. The Hazamigawa rose about 12 feet, the damage to its banks are yet unknown. The Abukumagawa rose about 16 feet at the upper part and about 20 feet at its mouth. The banks were destroyed in four or five places. Reports upon the damage inflicted upon the paddy-fields, inhabitants, &c., will follow by post.

We understand that a *fête champêtre* was held on Tuesday in front of the temple of Tōshōgū, at Uzeno. There were, amongst other attractions, an exhibition of archery, fencing &c., similar to what took place, on the occasion of the peoples *fête* to the Mikado, in the public gardens. The general public will be admitted to the grounds to witness the amusement.

The religious festival in memory of those killed in the south-western war in 1877, took place at the Negi hill on the 23rd and 24th instant. The hill and the streets in its neighbourhood were brilliantly decorated with flags and lanterns and some very fine fireworks were let off during the two evenings. Dancing, &c. took place in the buildings on the hill.

The Government have come to the conclusion that the memorial services at the Yasukuni temple, in Tokio, will for the future be held only twice a year instead of four times as hitherto. This action on the part of the government effects an annual saving of about yen 3,000, which will be applied in the erection of a bridge over the river at Ichigaya, which will prove a great boon to the public.

It is reported that the Branch office of the Tokio Sanitary Bureau, in the compound of the Shinbashi Railway Station, will be closed about the 10th proximo.

The number of Cholera cases in Kanagawa Ken having much decreased lately, meetings of the District Board of Health will, hereafter, be held only once a week.

Some of the native papers are occupied just now in contradicting some of their former assertions. The *Nichi Nichi Shinbun* says it made a mistake when it announced that the Finance Department had distributed 1,800,000 silver yen amongst the native and foreign banks of Tokio and Yokohama: the *Choya Shinbun* contradicts, on the authority of the Printing Bureau, the assertion that 30,000 yen had been advanced by the Bureau to a company to manufacture Gampi paper: and the *Mainichi Shinbun* now denies the death of General Kawaji which it mentioned a few days since.

The number of new cases of cholera and deaths in Tokio reported during the week, is as follows:—

DATE.	NEW PATIENTS. DEATHS.	
September 19th.....	9	2
" 20th.....	9	6
" 21st.....	4	6
" 22nd.....	8	1
" 23rd.....	8	—
" 24th.....	3	—
" 25th.....	7	2
Total (8 days)	48	17

Return of cholera cases in Kanagawa Ken from the commencement of the epidemic up to the 26th September 1879.

Date.	No.	Patients.	Died.	Recovered.	Treatment.
June 18th (to)	1,770	1,216	301	273	
Sept. 19th.....	20	10	36	217	
" 21st.....	31	26	18	231	
" 22nd.....	10	5	17	222	
" 23rd.....	9	8	11	212	
" 24th.....	37	24	26	199	
" 25th.....	15	10	5	199	
" 26th.....	31	22	8	203	
Total.....	1,926	1,321	422		

In Yokohama alone, there were 1 new case, 6 deaths and 1 recovery on the 26th instant.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 21st September, 1879.

Passengers, Parcels, &c.	\$8,605.13
Merchandise, &c.	\$1,491.61
Total.....	\$10,096.77

Miles Open 18.

* Corresponding week last year.

Passengers, Parcels, &c.	\$4,966.67
Merchandise, &c.	\$ 859.61
Total.....	\$5,826.61

Miles Open 18.

* Traffic suspended for two days.

THE FAMOUS PLACES OF YAMATO AND KISHIU.

FROM KAUYA-SAN ACROSS THE MOUNTAINS TO KUMANO.

(Continued.)

The most ordinary route to Kanya-san is from Obozaka, over the Kiimi tange, crossing the river at Hashimoto, and ascending by way of Kamuro 21 ri, to the Fudon-zaka-guchi. From the baths of Riuzhiin in Hidaka department, province of Kishiu, it is 13 ri to the Great Gate. This route is usually taken by travellers from Kumano and Tanabe in the south of Kishiu. There is also a short cut from Hashimoto up to the Kuroko-guchi, which leads into the street called Senzhiyu-Win dani, a turning out of the main street of Kanya-san. Then there is also the Ohotaki entrance, which is used by persons coming from the Totsu-kaha valley.

Leaving Kanya-san by the last, we ascend to a height of 3,250 feet, and after walking for nearly an hour through a wood composed of hardly any other trees but the beautiful dark-green Kanya maki (*Scindopitys verticillata*), suddenly descend into the village of Ohotaki, near the source of the Arita-gaha in Kishiu, famous for ayu trout (*Salmo altivalis*). Crossing this stream, the path climbs again to a level ridge in 40 minutes, and continues along it for a considerable distance, with splendid beech-woods below, to Midzu-ga-mine (3700 feet), where there is a single hut for the accommodation of travellers. This district of Yoshino department goes by the name of Zhifu-ni mura gau, Twelve Hamlets. From the hut none of the higher peaks are visible, Ohomine being cut off from view by the Totsu-kaha hills. About ten minutes from the ascent on to the ridge stands a *torii*, by the side of which a path turns off left to the Kuwanzhiin peak, and a short distance further on it rejoins the main path. From Midzu-ga-mine the path continues along the ridge for a considerable distance, and then descends through woods gay in spring with bright crimson azalea blossoms. The commonest trees are beech and oak, with a sprinkling of Magnolia hypoleuca and white horsechestnut; lower down occur conifers, principally *toya* (*Abies polita*). A series of steep zigzags brings us down to the stream, which flows E. to join the Totsu-kaha, past the hamlet of Ohomata (2,290 ft.) At this place there are two small inns on the right bank, a few yards beyond the bridge. The path reascends by a long and stiff hill to the Kaya-goya hut (3,170 ft.) in about half an hour. Looking back we can see the path on the opposite side of the valley ascending from Ohomata, and stretching away along the Midzu-ga-mine ridge. Here begins the ascent of the Wobako tange (4000) which is covered with trees, chiefly deciduous. At an open space just beyond the top stands a post to mark the boundary of the Totsu-kaha valley. A gate formerly stood here, to separate the district more distinctly from the outer world. The peasants who inhabit this district have the rank of *Shizoku*, and in former days might be seen cultivating their fields or carrying baggage in the usual garb of the *sumurahi*, with a pair of wide trousers and two swords stuck in the belt. At Uhenishi (3330 feet) there is a single hut for travellers, with one large room in which all must sleep. Very good potatoes (here called Teusen imo, Korean potatoes) are raised by its occupants. Leaving this place after a short rest we descend through the wood to Matsudabira (2140 ft.) in 55

At Yakiwodani the best plan is to engage a boat to go down the river to Shiŋguu on the coast of Kishiū calling for half an hour at the Hoŋguu temple, which is situated in a grove on the right bank, close to the water's edge. When the river has plenty of water in it, the whole voyage can be accomplished easily in six hours. The stream makes a wide curve round the village of Ohowi, and in one hour from Yakiwodani the Hoŋguu is reached. Passing in through the grove, the visitor arrives in front of the wardens' office, and application will be readily furnished with a guide. On the left is a stage for the performance of the mediæval drama called *non*. The temple enclosure has been artificially raised several feet above the original level, in order to escape the floods which prevail at certain seasons. A roofed gateway gives access to the courtyard, at the back of which stand the seven chapels of the gods in a long row, surrounded by a wooden fence, with a small gate to each chapel. The buildings were re-erected about seventy years ago, when the influence of the "Pure Shiŋtan" school was beginning to make itself felt, and a reversion to the primitive style of architecture in unpainted wood took place. The only remaining trace of the influence of Buddhism is the mirror on the blind which hangs down over the door of each chapel. There is a good deal of uncertainty with regard to the identity of the gods to whom the temple is dedicated. The ordinary account is as follows, beginning from the extreme left, which in Shiŋtan temples is usually the place of honour: 1st, a single chapel dedicated to Haya-tama-no-wo and Yomo-tsu-koto-saka-no-wo, two gods who, according to one of the ancient books quoted in the Nihongi, were formed when Izanagi spat on the ground after returning from his visit to Izanami in the lower regions, the first symbolizing the relief felt by his son on thus getting rid of the nausea produced by the sight of corruption, and the second the act of instruction subsequently performed by which he cleared himself of the pollution contracted by contact with the dead. 2nd, the covered platform for *kugura* dances, fronting towards 3rd, the principal chapel or Ichi-no-miya, dedicated to Izanagi and Izanami, the progenitors of the world and all that is contained in it. 4th, single chapel of the Sun-goddess and Kuni-toko-tachi-no-mikoto, the Earth-god. 5th, long building dedicated to Ama-no-Oshi-ho-nimi no mikoto (adopted son of the Sun-goddess), Ama-no-Ninigi no mikoto (son of the last, usually called the "Sovran grand-child," i.e. of the Sun-goddess), Ho-ho-demi no mikoto (son of the last) and U-kaya-fuki-abezu no mikoto (son of the last and father of Zhuŋnu Teŋwan). 6th, long building dedicated to Kagutsuchi no mikoto (god of summer heat), Haniyama-hime no mikoto (goddess of clay), Mitsu-hu-no-me no mikoto (goddess of water) and Waku-musubi no mikoto (personification of the growth of plants) and lastly, 7th, a small chapel standing a little way back, dedicated to all the gods of heaven and earth (Teŋzhiŋ Chigi ya-ho yorodzu no kami). This is the modern account framed by the Shiŋtan priests after they had been successful in expelling the Buddhist influences which had been all-powerful from a very early period down to the beginning of the present century. The ancient arrangement was as follows: 1, Izanami and Haya-tama-no-wo, 2, *Kugura* stage, 3, Kumano-ke-tsu-mi-ko no kami, another name for Susanowo no mikoto, to whom is attributed in the Nihongi the planting of timber and fruit-trees. He is the chief god worshipped at the Hoŋguu, and the temple on Tanaki-saŋ is also dedicated to him; 4, the Sun-goddess, 5, long building to Tsuki-yomi (the moon-god), Susanowo, Hiru-ko (the mis-shapen first-born offspring of Izanagi and Izanami) and Kagutsuchi, 5, the Goŋgeŋ of Nizhiyau-zaŋ in Yamato, in reality Nigi-haya-bi no mikoto, the fifteen children of Oho-namujii and Sukuna-namujii (the same as Sukuna-biko-na), Iito-koto-nushi (god of Katsuragi in Yamato) and Uka-no-me no kami (the Seed-corn-goddess) and lastly, in the chapel standing a little to the rear of the others, Maŋzaŋ Go-hoŋ Teŋzhiŋ, i.e. the good gods who protect the law (of Buddha) in the whole of this temple, namely the Komori and Katsute Miyazhiŋ of Yoshino. Besides these chapels there are some smaller ones outside the enclosure, one of which is dedicated to the memory of the original ground-lord, Ji-nushi no kami, reputed ancestor of the chief priest of the temple. On the left of the entrance gate is the Reiden, where services are held on the 7th January, and on the 3rd of February at night, and *kugura* dances are performed.

Original from
UNIVERSITY OF CALIFORNIA

stage, and two godowns in which the documents and ancient treasures used to be kept. Between the temple and the town flows a little stream called the Otonashi-gaha, across which a fine high-arched wooden bridge has recently been thrown. The best inn is Yorozu-ya.

Nothing can be said with certainty as to the date at which this temple was founded. It is ascribed to the reign of Shiyuzhi Teiwan, who belonged to a period anterior to the beginning of trustworthy chronology. The difference of statement as to the identity of the gods worshipped here is partly owing to the Buddhists having bracketted them all together under the title of the Gongen or "Temporary Manifestation" of Kumano, and partly to the changes made about the beginning of this century when the influence of pure Shintau became prevalent. It is by no means certain, indeed, that some of the chapels were not founded by the leaders of the so-called Riyanbu Shintau, which partook far more of Buddhism than of the native worship. The name Hoangu, Original Palace, is given to this temple, to distinguish it from a new series of chapels were erected by Keikon Teiwan, at the mouth of the river, also in the prehistoric age, to which the name of Shingun, or New Palace, is given. Formerly the Hoangu possessed lands assessed at 300 *koku*, which yielded very little, and its income was derived from money lent out at interest. It now ranks as a provincial temple of the second class, which means that the warden and his assistants get but scanty pay, and cannot afford to keep the place in a proper state of repair. The great wooden *torii* on the side next the Otonashi-gaha has completely decayed and fallen to the ground, but there are no funds for its restoration. Probably the doubtful history of the temple, and the name Gongen which stuck to its deities so long, have been the causes of no allowance being made to it by the state. In the middle ages it was frequently visited by the sovereigns of Japan, and the ex-Mikado Go-Shirakawa is said to have made thirty-four pilgrimages hither. Opposite the temple on the left bank of the river, is a spot where Weñ no Seukaku is said to have spent a hundred days when first exploring the mountainous region between the sea-coast and Ohomine. About 1 ri W. of Hoangu are some hot baths at a place called Yu-no-mine, close by the Buddhist temple of Tonkuran-zhi, dedicated to Yakushi Niyorai, and said to have been founded by Weñ no Seukaku. It is usual to take this place on the way back from Nachi.

Re-embarking at the junction of the Otonashi-gaha with the Kumano-gaha, which forms a tiny estuary, called Tomohe no fuchi, from its resemblance in shape to that emblem in Japanese heraldry, we drift down the stream. The view of the grove and bridge looking back is very picturesque. In ten minutes the boat passes the mouth of the Uke-gaha, where the path over from Nachi issues from the hills. Tamaki-saŋ, which forms the most southerly peak of the Ohomine chain in Yamato, comes into sight near here. We pass by rocks on which the scarlet azalea grows close to the water's edge, between steep hills covered with cryptomeria, the sweet-acorn oak and other wild trees. Boats are usually towed up-stream by a couple of men, who catch hold of the boulders on the shore to help themselves along, thus becoming a sort of human quadrupeds, while the steersman watches their efforts from his position in the stern. To judge from the dark green colour of the water the river must be very deep. Some of the placid reaches lying at the bottom of rocky cliffs closely resemble parts of the Wye below Monmouth. Even in May the woods resound already with the varied music of the cicada and its tribe. Coal is being mined just above the confluence of this river with the Kitayama-gaha. Just opposite to the junction of the two rivers is an abandoned coal-mine. Half a mile further down on the left bank is the chapel of the Yauzhi no Yakushi. The image of this god is said to have been carved out a branch of a willow-tree, the trunk of which was taken hence to form the ridge-pole of the Saŋzhiŋ-saŋ-geŋ-dau, or Sixty-six Yard Hall at Kiyauto. There is a ferry between this place and Shiko on the right bank. Next comes Wake mura on the left bank, and then the Koguchi-gaha flowing in on the right. Opposite to it is a charming bit of mountain pasture, steep rocky summits above and evergreen-oak woods below. The lower part of the river passes between precipitous rocks, down which tumble numerous cascades. Amongst these the boatman will point out Tenshi no kuchi no taki, "bottle-mouth fall," Zhiya no Wada no taki, the "snake's coil fall" (left), Nuno-biki no taki, "unrolled-cloth fall" (right), Fubuki no taki, "Drifting snow fall" (left),

and various remarkable rocks. As we approach the town of Shingun the hills become smaller, and the stony bed of the river widens rapidly. Soon the grove which surrounds the temple appears at the upper end of the town, and the remains of the castle are seen crowning a hill lower down near the mouth. The landing place is near the temple, which stands in the middle of a walled enclosure, with a fine two-storied gate on the south side. Directly opposite to this are four small chapels dedicated to Haya-tama-no-wo, Izanami, Ketsu-mi-ko and the sun-goddess, beginning from the west. Behind them is the chief chapel dedicated to an unknown god. This was the old arrangement. The priests now say that the four chapels are dedicated to Izanami, Izanagi, Kunitoko-tachi, and the sun-goddess, and the larger one behind to Haya-tama-no-wo. Two larger buildings on the E. side are dedicated to a larger number of gods, namely the first to Ame-no-woshi-ho-mimi, Ninigi, Ho-ho-de-ni, U-ka-ya-fuki-ahazu, (the four ancestors of Zhiŋ-ma Teiwan), and the second Toyokŋ-nu, Kuni-satsu-ehi, Uhi-ji-ni, Oboto-no-ji and Omo-taru, representing five of the seven generations of Heavenly Gods of the popular cosmogony. As long as the place was in the hands of the Buddhists, there were various buildings connected with that worship, including a chapel to Dainichi Niyorai, a *goma-dau* for the burnt offering called *homa* by the Indian Buddhists, a library (*hiyan-zau*) containing a copy of the Buddhist canon, and a bell-tower, besides a treasury, boat-house (*mi-fune-gura*) and an oratory. All that remain of these buildings are fast falling into ruin.

Shingun is a town of about 9,000 inhabitants, and was formerly the seat of one of the chief *karau*, or hereditary councillors, of the prince of Kishiu, surnamed Midzuno, who in 1868 was raised to the rank of *daimyan*, in virtue of his possession of lands valued at more than 10,000 *koku*. The view up the river from the site of the castle is very fine. It was sold in 1874 to a private person, and the materials which formed the walls and gateways were disposed of by tender. A finer position for a summer residence cannot well be imagined. Amongst the rice-fields south of the castle is a grassy mound with three trees on it, said by local tradition to be the tomb of Shiŋ no Jiyo-fuku. This person, whose name in Chinese is pronounced Sŋ Fah, is said to have been sent by Ts'in She Hwangti (B. c. 221-209) on an expedition in search of the elixir of immortality. After the lapse of several years he returned without having found the drug, but in order to avert the displeasure of the emperor, fabricated a story of his having met with a sea-god, who said that the price offered for it by She Hwangti was not large enough. Under the guidance of the god, he voyaged nevertheless to Haurai Zan (P'eng Lai Shan), where he was allowed to have a sight of the treasure, and was told that he could have it for a hundred noble youths or maidens. She Hwangti immediately furnished him with 3,000 young men and women, a large supply of seeds and workmen, with which he set out a second time. As he was never heard of again, the idea was started in China that he had colonized Japan, and the Japanese, reading of him in the histories of China, adopted the same notion, though without any evidence or tradition to support it. Kumano is by no means the only part of Japan where he is fabled to have landed. The island of Hachizbiyan is another of the places which without any reason have been said to have been first settled by this band of Chinese. About the middle of the 17th century the prince of Kishiu caused the stone to be put up which marks the spot. It bears the simple inscription "Tomb of Sŋ Fah of Ts'in (Shiŋ no Jiyo-fuku no haka). Seven smaller mounds overgrown with brushwood, scattered about the neighbouring rice-swamp, are said to cover the graves of his followers.

The inhabitants of Shingun are unaccustomed to see Europeans, and the innkeepers will probably object to receive them. Excellent accommodation and courteous treatment can be had at the house of Kusumoki Uneme, the chief warden (*Guzhi*), just at the back of the temple grounds.

(To be continued.)

THE JAPANESE PRESS.

THE SILK-WORMS' EGG-CARD TRADE.

(Abridged from the *Mainichi Shinbun*.)

THIS time of year is the most appropriate to deal with the subject which forms the heading of this article. Before doing so, however, let us look back upon the state of this indus-

try since the year 1868. The exports and values are shown by the following table:—

Year.	No. of Cards Exported.	Value in Yen.	Average price per card.
1868.....	1,886,320	3,712,351	1.97
1869.....	1,377,439	2,500,056	1.81
1870.....	1,397,846	2,566,759	1.83
1871.....	1,400,027	1,285,189	.91
1872.....	1,287,046	2,247,365	1.74
1873.....	1,418,809	3,063,037	2.15
1874.....	1,335,465	731,578	.54
1875.....	727,463	474,920	.65
1876.....	1,019,525	1,902,270	1.86
1877.....	1,167,502	341,467	.29
1878.....	888,367	650,160	.73

We find from these figures, that in the years 1868, '69, '70, '72, '73 and '76 both the number of cards exported and the price obtained was large; in 1871, '74 and '77 the export was great, but the price comparatively low, while in 1875, and '78, both the export and price very much declined. The cause of this great fluctuation will, we think, be found in the circumstance, that during the early portion of the period under review the seasons in Europe were very unfavorable to sericulture and a large demand consequently sprang up for our cards, but latterly, the system of producing the grain in Europe has gradually improved, while we have allowed ours to deteriorate, which has led to the European silk growers looking upon the Japanese market with less favour. The question of the export of silk-worm's egg-cards has for many years occupied the attention of our political economists. Some recommend limiting the production, others suggest that we should keep the trade entirely in our own hands and export direct without the intervention of foreigners, while a third party urge the desirability of establishing a large association which would control the whole trade. On looking back at the action of the Government at different times, we find that they have in succession advocated each of the theories propounded and endeavoured to reduce them into actual practice. At one time the production was limited, but the decree was revoked in compliance with the representations of some foreign governments. Native merchants were then induced to take the trade into their own hands and make direct consignments, a course which resulted in very heavy losses being sustained. An association was then formed, (also at the instigation of the Government) composed chiefly of residents in the silk producing provinces, but this experiment also proved a conspicuous failure. Thus no advantage has accrued from Government meddling with this particular branch of the silk trade, while the evils which have arisen are almost too numerous to mention. After a careful consideration of all the circumstances we have arrived at the conclusion, that the only remedy for the losses so constantly occurring in the trade will be to revert to the system of limiting the production, and this can easily be done by convincing the producers that these silk-worm's egg-cards are not a profitable article of export. For the last two years we have repeatedly urged, that although exports of every kind are profitable to the country generally, still the export of manufactured goods is infinitely preferable to the export of raw material, and that while it is better to export manufactured than raw silk, even raw silk is far and away more desirable than silk-worm's eggs. There can be no doubt, that our argument embodies a correct principle of political economy, the difficulty is to get it carried into practice. We observe, however, a noticeable decrease in the export of these cards, yet there are still thousands sold yearly at from 30 to 50 sen each and it is only reasonable to suppose that as long as a demand continues, the supply to meet it will continue also. It will we are afraid be found impracticable to limit the production, more especially if the trade holds out the remotest chance of being profitable, as our countrymen are thoroughly imbued with the pernicious spirit of speculation. In the next portion of this article, we will briefly describe what we consider would be the present most judicious practical remedy, under existing circumstances.

In order to restore the prosperity of the trade we must get the merchants to observe the following conditions, 1st, not to disregard the losses of the other merchants for the sake of their individual profit, and 2nd, to abstain from seeking

a present temporary profit, regardless of a future permanent one. If these preliminaries are adhered to, there will be nothing to prevent our proposal from accomplishing the desired result. Our table shows that during the last eleven years, the annual export has been about 1,000,000 cards, the lowest in any year was 700,000, so we can fairly make use of that figure as a basis of calculation when considering the probable demand. In some years the price has averaged over two yen per card, in others again, not more than thirty sen. No doubt this great difference is principally caused by the state of the crop and quality of the eggs, but it must also be admitted that the mode in which the cards are put on the market influences the price a good deal. Last year the export was 888,367 cards which fetched on an average 73 sen per card. Now if the sales had been conducted with sufficient skill to produce an average of 20 or 30 sen per card higher, the aggregate increase would have amounted to nearly 20,000 yen. This appears at first sight an almost impossible increase, but if the price per card is taken into consideration the difficulty ceases. Our experience of the last two or three years convinces us that the annual actual requirements of foreigners is from 500,000 to 600,000 cards, exclusive of what they purchase in excess of their actual wants, while the quantity sent down from the interior is from 1,000,000 to 1,600,000. There is therefore great competition amongst the sellers, and although the market may open with fair prices, it gradually declines until the price falls to 5 or 3 sen, or perhaps even less, for cards of the very best quality. Such was the case in 1877, when 1,167,502 cards only realized 341,467 yen. We think that if the sales in that year had been skilfully conducted, by first selling 5 or 600,000 cards at a fair price and holding back the remainder, the amount received would have reached 500,000 yen, or perhaps even 1,000,000. This loss is much to be regretted, but there is no benefit to be got from grieving over the past, let us rather endeavour to devise means of avoiding similar mistakes in future, and make good our former reverses. We propose that all the cards should be sold by the same person and that the profit or loss should be received or borne *pro rata*. There would be no difficulty in one person conducting all the sales, for although the cards are produced by hundreds of different persons, they are now only sold by the few export merchants in this town. In order to carry this project into operation it would be necessary:—

1. For the export merchants to form themselves into an association for the purpose.
2. That the principal producers of the cards should either become members of the association, or superintend its operations.
3. That all cards should be stored in one place, instead of in different warehouses as at present.
4. That a strict classification should be made of all the cards.
5. That all cards of bad quality should be rejected by the association.
6. That all sales to foreigners should be made as the purchasers desire, but that it should not be necessary to sell all the cards of one kind.
7. That the owners of the cards might return home as soon as they had placed their cards in the hands of the association.

If this plan is adopted seven or eight-tenths of the cards, say 800,000, will come into the possession of the association and then, if the sales are effected gradually without forcing the market, foreigners will have no alternative but to pay a fair price for the cards they require no matter what cunning schemes they may practice. If they only want 5 or 600,000, we will sell that quantity only, and although the number of cards disposed of may be comparatively small, the aggregate sum received will be larger than under the present system. If then the association distributed the money amongst the owners of the cards sold, according to the amount and quality of their productions they would all realize a suitable profit and no one would sustain loss. It may perhaps be said, that if this plan were adopted it would be difficult to prevent individual merchants from effecting secret sales. But we think this could easily be avoided, because if the association acted faithfully towards the producers, nearly all the cards would come into their hands, so that there would be few cards left for those merchants who might be

inclined to act dishonourably and foreigners do not place confidence in native merchants who do business on a small scale. It should also be recollected that although great profits are occasionally made, no also are great losses, and it would be to everyone's advantage to be sure of a steady profit every year.

THE NOTIFICATION RESPECTING THE SILVER YEN.

(From the *Hochi Shimbun*.)

HOW have the public regarded the notification (No. 35) by the Council of State which we published on the 13th instant? We have for some time been expecting such an announcement and now, before commenting upon it, we will reproduce it, so as to direct our readers' attention more particularly to this important document. (*Here follows the notification legalizing the acceptance of silver Yen on a par with the Mexican Dollar.*) The public is no doubt aware of the serious effect the constant fluctuations in the value of Mexican dollars has had upon our foreign trade. Merchants have found it difficult to accurately estimate the cost of their goods, indeed the most experienced have constantly suffered loss from this cause. The Government resolved many years ago to remedy the evil and to replace the Mexican dollar with silver yen. It was found however, a difficult matter to attain this desirable end: many were opposed to it, and of course amongst them those foreigners who invariably try and obstruct every action of the Government whether it is beneficial or otherwise. The Government acted cautiously and bided their time and now at length we have the satisfaction of seeing the notification issued. We are also pleased to learn that the British Government have authorized the Japanese silver yen to be made a legal tender in the English colony of Hongkong and received on a par with the American, Mexican and Hongkong dollars. This step on the part of the British Government we attribute to the recent visit of the Governor of Hongkong and to his minute and careful investigation, into the affairs of Japan. But there are some foreigners amongst us who persistently misrepresent the state of this Empire for their own selfish ends, and they will undoubtedly find fault with this measure. In fact the Editor of the *Gazette*, who is one of them, has already asserted, that the action of the English Government with reference to Hongkong is against the laws of England, and also, that the silver yen is not our legal tender. But we understand that the English Government not only sanctioned the reception of the silver yen in Hongkong, but also in Singapore, which is another dependency of Great Britain. The assertion of the Editor of the *Gazette* that the silver yen is not legal tender here in Japan, when our Government declared it to be so in May last year, serves to expose his careless inaccuracy and the persistent manner in which he follows his policy of blindly opposing the Government wholly regardless of the merits or demerits of their measures. As the Government have now notified, that silver yen will in future be received in all Departments of the State on a par with Mexican dollars, and that all private obligations, payable in Mexican dollars, may be legally discharged in silver yen, it is only reasonable to suppose that, if a sufficient supply of the latter coin is kept in circulation by the Government, Mexican dollars will in course of time disappear from the market. It may be said that silver yen will be subject to the same fluctuations as Mexican dollars and that the same evils will still exist. It is no doubt true that there will be fluctuations, but not to the same extent as in the case of the dollars, because it was impossible to know what quantity of dollars were in the market and their frequent and sudden appearance and disappearance benefited no one but the speculators, while with the silver yen the exact amount in circulation will be always known and the Government will be in a position to prevent any serious fluctuations. It must also be recollected that the injury caused by the Mexican dollar was chiefly due to its being employed as the medium of exchange between native and foreign merchants, this evil will no longer exist now that our own coin will be used, and we look forward with pleasure to the time when the Mexican dollar will finally disappear from our markets thrust out by the silver yen.

PRELIMINARY TREATY BETWEEN JAPAN AND COREA FOR OPENING THE PORT OF GENSAN.

THE native papers contain the following draft of a Treaty lately negotiated by Mr. Hamabusa in Corea for opening the port of Gensan, situated 15 or 16 ri from the capital:—

ART. I.—From the month of March in the year of Koshin, according to the Korean chronology, which corresponds with the month of May in the 13th year of Meiji, Japanese chronology (1880), the Korean Government will open the port of Gensan, situated in Kankion-do, to trade with the Japanese, who shall be entitled to establish a settlement in Chotoku-san, and its neighbourhood on the west facing the sea, the limits of which shall be fixed after a survey has been made by the Sorio-kwan.

ART. II.—The ground-rent in the settlement shall in the commencement be the same as the ordinary tax paid in that place; it may afterwards be increased or decreased by mutual consent between the two Governments according to the requirements of the expenditure mentioned in Art. III.

ART. III.—The Korean Government shall prepare the site of the settlement, clear it from bush and rock, level it and make the necessary roads or bridges; but the Japanese Government shall level the ground for the purpose of building houses thereon and lay out the streets.

ART. IV.—A cemetery for Japanese shall be laid out at a convenient place in the neighbourhood of the settlement, for which the same ground rent shall be paid as has been paid formerly.

ART. V.—The Korean Government shall build a pier from the western coast of Chotoku-san to Chotoku-jima, and keep the same in suitable order and repair, so that cargo may there be landed and ships lie safely at anchor. Korean vessels shall also be permitted to anchor there on condition of paying harbour-duties to the custom-house, and they shall have the right to call there when navigating the coast. When a Korean wishes to take passage in a Japanese ship to any open ports, then he shall send in a petition stating his name and residence and his luggage, and the custom-house shall then grant him permission, and no unnecessary obstacles shall be thrown in the way of his intended voyage in accordance with.

Consul Miyamoto's letter, dated the 29th August of the 9th year of Meiji (1876), says: With regard to extending the pier to Chotoku-jima, that question may be settled when a proper survey of the locality has been made, and according to the exigencies of the time.

ART. VI.—The Korean Government will establish a custom-house near the pier, and build a shed for the protection of the goods against wind and rain while they are being examined.

ART. VII.—The treaty limits for the Japanese shall be ten ri in all directions, the same as at Fusan. Tokugen Fu may be visited as freely as Torai Fu.

P. S. The road from the port of Gensan to the port of Katsuma is within treaty-limits, but as there is a place which is not open to visit, another road shall be made.

If there be any points in the above seven articles, that require further arrangement, it shall be done hereafter according to the requirements of the settlement.

THE FORGERIES OF KINSATSU.

(From the *Hirogo News*.)

We are enabled to give, full particulars of the arrest of Fujita Denzaburo, the well-known Osaka contractor, and one of his partners, Nakano Goichi. The charge upon which they have been apprehended, it is now known, is the counterfeiting of Daijo-kwan *satsu*; or, more properly, the uttering of *satsu* resembling the government *satsu*, made in Germany. So far as is known at present, the counterfeit paper is of four denominations, 2, 5, 10, and 50 yen, but it is thought that other kinds representing much higher values have also been put into circulation. The total amount manufactured is put at three millions of yen, and the way in which the *satsu* were obtained is thus explained by one of our Osaka contemporaries. Several years ago, the Japanese government made arrangements with a house in Germany for the production of a large quantity of paper-currency. At that time, an official who was sent to Europe to take delivery of it purchased a set of the machinery with which it was printed for himself—at a cost, it is said, of upwards of 30,000 yen. This

machinery, which was used for making 2-*gen satsu*, he kept in Germany. On his return to Japan, he, with 20 others, raised some more money, and the paper-money counterfeited in Germany was got over to this country. This was in November or December, 1876, and in the beginning of the following year the confederates began to put the paper in circulation. The Satsuma rebellion was then going on, and it was considered an excellent opportunity to get rid of it. Fujita, who was one of the party, having the commissariat arrangements in his hands. Amongst the money received for taxes from Kioto, Osaka, Sakai, Okayama, Fukuoka, Kumamoto, Kagoshima, and other *ken*s, at the end of 1877 and the beginning of the following year, a good deal of counterfeit *satsu* were found. Careful examination showed that there were four different sorts. Two of these are easily distinguishable with the aid of a magnifying glass; but of the other two, one is so ingeniously counterfeited as to render it a work of great difficulty to detect the fraud. On examining it with a glass magnifying 400 diameters, however, a slight difference can be detected, one of the dragon-flies on the back, in the right-hand ring, having one leg shorter than the others; the other parts are exactly the same. The officials of the Okurasho were astounded at the cleverness of the imitation, and, rightly judging that it was the work of no ordinary man, used every endeavour to fathom the mystery. Finding their enquiries of no avail, Kawaji, the Chief of Police, sent out warnings to the governors of the various *ken*s, advising them to be careful. Certain of the *kenrei*, suspicious of the movements of Fujita, contrived to get two emissaries into his service as bantos, and from them obtained some valuable information. Detectives were also sent to Europe and America, to endeavour to ferret out the source from which the forged paper was issued. It was also ascertained that a German living in the Kawaguchi Concession was very intimate with Fujita, whose house he was in the habit of visiting very frequently. It was therefore conjectured that Fujita was the man who was issuing the counterfeit money; especially as many of the bad 2-*gen satsu* were found amongst deposits made by him with the various banking corporations of Osaka. It was also noticed that an unusual quantity of paper-money had come into circulation since the outbreak of the rebellion. Counterfeit *satsu* representing 300 *yen* were found in Okinawa *Ken*, and certain of the banks traced two or three thousand *yen* worth to Fujita. The detectives were communicated with, the news was transmitted to Tokio, and a very large number of police, in plain clothes, were sent to the various cities where the Fujita Co. were doing business, and all the managers of these branch establishments were arrested at the same time that Fujita himself was taken.

On the night of the 14th inst., two of the leading men of the Fujita Co. were seen talking together privately in Fujita's own house, and at about 11 o'clock a man left the place, apparently with a message. A detective who was on watch followed him, but as the man went into the branch-office of the Company at Do-jima he left him, thinking he had been sent on an ordinary errand. Soon after this, three large cart-loads of goods—what they were can of course only be conjectured—were brought out of Fujita's house, and were taken away to some place unknown. It is supposed that Fujita got wind of the danger threatening him, for when the police searched the house and godowns nothing was found but about 250 *yen*, in gold, silver, and paper. The floors were taken up, and the place in which the idols were kept was examined, but no more money was discovered. The books of account were found—all but the principal one; and thus the most important link in the chain of evidence is missing.

The Osaka Papers contain some interesting particulars of the arrest. We extract the following from the *Shimpo* of the 17th.

We have made enquiry into the strange affair of the Fujita Co. ("Fujita-gumi"), and learn that for nearly two months past a number of police who had been sent down from Tokio have been secretly engaged in watching the doings of Fujita, Nakano, and others, and in enquiring into the deposits received by the 1st and 34th National Banks. Some of the detectives were disguised as peddlers of toilet articles, *jinrikisha*-men, &c. It was arranged amongst them that at 5.30 a.m. on the 15th inst. the houses of Fujita and his brother Shikakutaro, with all their branch shops, and the house of Nakano Goichi, should be visited simultaneously. The night before, a number of the officers, disguised as *jinrikisha*-men, kept watch and ward around the houses of Fujita and Nakano, and at about 5 o'clock on the eventful morning they donned the uniforms which had been lying unused in their luggage for so long, and, arming themselves with sabres, made rendezvous at a hotel at Hachikenya and Yedo-bori, to the number of sixty, or more, in all; they then took up the several positions assigned to them, the residence of Fujita at Korai-bashi, I-cho-me, being surrounded by a cordon of about 30 men. When the hour settled upon arrived, six of them went to the back gate, and admission was demanded. A little boy responded to the call, but he was so frightened at the appearance of the police that no information could be obtained from him respecting the whereabouts of Fujita. An appeal to a maid-servant also failed to elicit the

information they desired, so they rushed into the house, and, catching hold of a *budo* who was attempting to flee from their presence, demanded to be conducted to his master's room. They were led into an apartment which they told was the one they wanted, but found it empty. Pushing on farther, they reached a small room in the innermost part of the house, and here they found some silken quilts and a couple of pillows. There was no doubt that this was Fujita's room; the question was, where was the man himself? One of the officers felt the quilts with his hand, and found them still warm, and the search was eagerly continued, it being evident that the person they were in search of could not be far distant. They met with no success for a while, when one of them, recollecting Oishi's night attack on the house of Kira (Chim-shin-gura) made for the *Samireya* (charcoal-shop) near the godowns, and there amongst the bags of coal they discovered hidden a man who proved to be Fujita Denzaburo. He was at once handcuffed, and was taken away in a *jinrikisha* to Sakai. It is said that the distress of his wife was very great. When he was conveyed from the house she wept bitterly, believing she should never behold him again.

Another band of police proceeded to the house of Nakano Goichi. He happened to be away from home on that night, but, unfortunately for him, while the search was going on, he returned in a *jinrikisha*, and as soon as he entered the house he was informed by the officers that he was their prisoner. He exhibited no emotion whatever, and, leaving orders with his family to take proper care of the house, he gave himself up, and accompanied the officers to Sakai very quietly; even apologising to them for the trouble he had caused them.

It is said that three bantos who had been employed with Fujita for some little time left his service a few days ago, under various pretexts. These men are now believed to have been detectives.

Later.—We have just learned that the arrest of Fujita, Nakano, Kawano, and others, was owing to the forgery of Government *satsu*. These *satsu* were made in Germany some years ago, and came into the possession of Fujita and his partners. During the war in the south-west, Fujita managed to exchange them, to the value of three million *yen*, for genuine *satsu*, the property of the government, that were kept in the office of the paymaster of a certain government department; who, in ignorance of the imposition being practised on him, paid out the counterfeit money, while Fujita was spending the genuine. If this report be true, it is certainly a most extraordinary case of forgery, and the action of the police is not to be wondered at.

The branch establishments of the Co., in Yamaguchi, Tokio, and Nagasaki, were taken charge of by the police at the same time, namely, on the morning of the 15th inst.

The Fujita Co. were the contractors for the supply of clothing, boots, &c., to the F. police-force, but since the arrest all the property belonging to the firm has been put under seal by the police, and even the bantos are not allowed to enter the godowns, although the articles mentioned are required. The F. police has asked the police authorities of Sakai *Ken* for leave to take possession of such as have already been completed.

LAW REPORT.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Wednesday, 24th September, 1879.

MESSES. H. P. LILLIBRIDGE and E. F. FOSTER, Assessors.

EMIL WIEGAND vs. WM. COPELAND.

Mr. Denison appeared for the plaintiff.

Mr. Kirkwood for the defendant.

The petition of the above named plaintiff shows as follows:—

1.—That the said plaintiff Emil Wiegand and the said William Copeland are both citizens of the United States of America, and residing and doing business as partners within the jurisdiction of this Honorable Court.

2.—That by an indenture bearing date the 18th day of July, 1876, the above named plaintiff and defendant entered into partnership as Brewers from the 15th day of June, 1876, for the period of 5 years thence next ensuing, under the firm name of Copeland and Wiegand.

3.—That by the said indenture it was among many other things provided that the capital of the said partnership, consisting of stock, plant, buildings and property should be \$30,000 to be contributed in equal shares by the parties thereto, that is to say: the above named plaintiff was to contribute \$15,000 thereto, and the said defendant a like sum.

4.—That at the time said partnership was formed, the said plaintiff and defendant being well aware that the said plaintiff could not contribute his moiety of the said capital of \$30,000, it was agreed that the said defendant should furnish and contribute to the said partnership capital the balance of the said plaintiff's moiety after deducting therefrom the amount contributed to the said partnership capital by the said plaintiff without charging interest thereon and that repayment of the amount so advanced for the plaintiff by the defendant was to be made out of the profits arising from the business of said partnership.

5.—That the said plaintiff contributed to the said capital the sum of \$100 in cash and \$2,421.44 in plant and stock.

6.—That by the fraud and misrepresentations of the said defendant the above named plaintiff being but indifferently acquainted with the English language and having no knowledge of accounts was induced and persuaded to execute and deliver to the said defendant a mortgage of the monies, debts, bills, notes bonds and other securities for money, stock in trade, chattels, goods and effects and property real or personal due, belonging or thereafter to belong to the said plaintiff and defendant as co-partners, and of the goodwill of said business, as security for the repayment of the sum of \$13,789.18, although the amount then due and owing from the plaintiff to the said defendant was only \$12,478.75, and although the real estate so mortgaged by the said plaintiff to the said defendant was and still remains in the name and as the property of the said defendant.

7.—That the said mortgage was executed and delivered by the said plaintiff to the said defendant on the 18th day of July, 1876.

8.—That the said defendant has in fraud and violation of the said indenture or deed of partnership and mortgage charged or caused to be charged the capital of said business at the sum of \$37,446.75, instead of \$30,000; has employed the monies and enjoyed the credit of the said partnership otherwise than for the benefit of the said partnership and has ordered and contracted for goods and articles and incurred other expenses and liabilities far in excess of the sum of \$100, without the knowledge or consent of the above named plaintiff; has, the said plaintiff verily believes, kept or caused to be kept incorrect, false and fraudulent books of account; has charged or caused to be charged many items against the said partnership that were properly chargeable to him the said defendant personally; has charged or caused to be charged interest both to the said partnership and to said plaintiff personally; has engaged in trade and business with persons other than the plaintiff, on account and for the benefit of persons other than the said plaintiff and defendant as copartners, and has, the said plaintiff verily believes done many other things, at present unknown to the said plaintiff, which can only be discovered upon the taking of accounts of the said business, whereby the said plaintiff has been and is deprived of his rightful participation in and share of the profits arising from the said business and the said business has been and is deprived of the services of said defendant. That the said defendant having entire charge and control of the books of account of the said business has wrongfully and illegally prevented the said plaintiff from inspecting, casting up, or taking copies of and extracts from the said books, and has neglected to furnish or render to the said plaintiff full and general accounts of the said partnership business, whereby the said plaintiff has been and is deprived of his rightful knowledge, in respect of said books and business.

9.—That the said defendant in violation of said indenture has not diligently and faithfully employed himself in and about the business of the said partnership, and has in opposition to and against the express protest of the said plaintiff, drugged or adulterated the beer manufactured by the said plaintiff and defendant, and in many other ways interfered with the brewing department of the said business, whereby the said business has suffered and the said beer has been injured or destroyed or rendered worthless, and a fraud upon the public has been perpetrated. That in his capacity as manager of the said business the said defendant has been extravagant and has defrauded Japanese vendors of barley, to such an extent that it is no longer possible to purchase barley of them, whereby great loss has been occasioned to the said business.

10.—That by reason of the ungovernable and violent temperament and brutal conduct of the said defendant and his frequent and violent assaults upon said plaintiff, it is impossible for the said plaintiff longer to continue business relations with him, the said defendant—, and the said plaintiff verily believes that if said partnership be not dissolved his life will be in danger.

11.—That the said defendant claims that on the 31st day of December, 1878, there was due and owing from the said plaintiff to said defendant on account of the advance made by the said defendant to the said plaintiff as hereinbefore set forth the sum of \$10,937.42; whereas the said plaintiff verily believes he is not actually indebted to the said defendant in excess of the sum of \$5,000 and that if the said partnership be dissolved and the said mortgage be cancelled as hereinafter prayed, the defendant will then be indebted to the said plaintiff in at least the sum of \$10,000.

12.—That by reason of the illegal, false and fraudulent conduct of the said defendant as hereinbefore set forth and in many other respects, the said plaintiff has suffered great and grievous loss and wrong:

Wherefore the said plaintiff prays:

1st.—That the said partnership be dissolved and said mortgage be cancelled by the order and decree of this honorable Court.

2nd.—That the defendant be required to produce the account or inventory of stock contributed by the said plaintiff to the partnership capital.

3rd.—That the said defendant be required to produce all the books inventories, accounts of stock, records, books of account and vouchers kept by him or under his direction in respect of the business carried on by the said plaintiff and defendant.

4th.—That an account be taken in respect of the said partnership business and the defendant be ordered to pay forthwith the amount found to be due the said plaintiff.

5th.—That the said defendant may be ordered to pay the costs of this suit and that the plaintiff may have such other or further relief as the case may require.

The answer of the above named defendant to the petition shows as follows:—

1.—That he admits the allegations contained in paragraph 1 of the said petition:

2.—That he admits the allegations contained in paragraph 2 of the said petition.

3.—That he admits the allegations contained in paragraph 3 of said petition.

4.—That he admits that he was well aware that the said plaintiff could not contribute \$15,000 to pay for his moiety of the capital of the said partnership, such capital consisting of stock, plant, buildings and premises belonging to the defendant, but he denies the other allegations contained in the 4th paragraph of the said petition.

5.—That he denies the allegations contained in the 5th paragraph of the said petition and alleges that the plant and stock brought into the partnership by the said plaintiff to the value of \$2,421.64 was not a part of the original capital of the said partnership, but was purchased by the said partnership from the plaintiff the plaintiff's half share thereof being passed, to his credit, and the defendant's half share thereof being paid for by him by reducing the amount thereof from the sum of \$15,000 due to him as aforesaid for the moiety of the said partnership capital.

6.—That he admits that the plaintiff mortgaged to him his half share of the partnership property, present and future to secure the repayment of the sum of \$13,789.18 due to him by the plaintiff, but he denies the other allegations contained in paragraph 6 of the said petition.

7.—That he admits the allegations contained in paragraph 7 of the said petition.

8.—That he denies the allegations contained in paragraphs 8, 9 and 10 and 12 of the said petition.

9.—That he denies the allegations contained in paragraph 11 of the said petition except so far as the same allege that he claims to be due to him from the plaintiff the sum of \$10,937.25 on the 31st day December last.

10.—That he alleges that the plaintiff has no just cause whatever to demand a dissolution of the partnership, that due accounts have been regularly kept by a competent bookkeeper and admitted from time to time by the plaintiff to be correct, that the plaintiff has had at all times liberty to inspect and examine the same; that he has in no wise been prevented by the defendant in assisting in the conduct of the partnership business and that the defendant has at all times and in all manner done his utmost to further the interests of the partnership business by conforming with the spirit of the partnership articles, and by encouraging the good feeling and confidence that should exist between himself and the plaintiff as partners and that any difficulties or disputes that have arisen are due solely to the plaintiff.

Mr. Denison having read over the petition and answer to the court called the defendant to give evidence. Counsel pointed out to the court that as defendant was necessarily a hostile witness, he claimed to examine him as on cross-examination.

William Copeland was then sworn and said:—I am defendant in this case. That is a copy of the partnership agreement (marked A) Mr. Eytan is book-keeper of our firm. He has not general authority to sign the firm's name without special sanction of Mr. Wiegand and myself. He is authorized to sign the firm's name to business letters by adding his initials under the firm's name; for other letters he must ask permission. When our partnership was entered into, stock was taken to enable us to start the books. Beer, barley, hops, are brewery materials—barrels not included. We made it \$3,000. This was after the partnership was formed. The stock that the firm took from plaintiff was valued at \$2,421 and some cents. Stock-in-trade is everything we had for sale in the place, such as beer, barley, malt, hops and all sorts of malt liquor, spirits &c. The plant is the brewery, including malting apparatus, casks, kegs and taps. That is a bill-head of our firm and is correct (marked B). The stock I say is everything we have for sale. Beer casks are a portion of the plant. On this bill, printed in the list of goods for sale, is mentioned "kegs of all sizes." This was in cases when the kegs could not be returned. We sometimes sell kegs when we have no better use for them in the brewery, and we buy new ones. There is no distinction made between old and new kegs, all are kept in repair. There is no distinction between kegs in use and not in use.

Mr. Denison:—If a memo is made on an inventory of stock-in-trade as a reason for not including kegs not in use, simply that they are not in use, is it not to be presumed that kegs in use should be included in the inventory?

Witness:—It probably would be if circumstances did not alter the particular case. On our last inventory 101 kegs were put on at Mr. Wiegand's request. He would not come with us to take stock unless that was agreed to. He said nothing about other kegs. These 101 kegs were not in use.

Mr. Denison:—How did you arrive at the value of your stock as \$7,000, when you formed the partnership?

Witness:—By taking an inventory of the stock. It was taken in pencil. I have not got it. It was sent to Mr. J. W. Hall to copy. I don't know what became of it. I think it was taken on the 13th June by myself and T. W. Holm, who was then in my employ. The same valuation exactly was placed on the articles as on those that came from Mr. Wiegand. Mr. Wiegand saw the inventory. He acted upon it. He did not accept it in my presence. He saw it in my presence. Mr. Wiegand did not object to it at all. At the end of December, 1876, Mr. J. W. Hall came to the brewery to take stock with us. Mr. Wiegand and myself went over the stock together and found it so near the same as when we commenced that we told Mr. Hall that he might as well value it as before. That is, the stock-in-trade was of about the same value in December as on the 15th June. I think it so appeared in the books, but cannot be certain. On the 15th June, 1877, Mr. J. W. Hall ceased to keep the books. At that time I was too ill to go with him to take the inventory and Mr. Wiegand and Mr. Eytan went over the brewery and I believe put a value on the stock. Did not take stock. We were in the habit of taking stock once a year.

Mr. Denison:—How many inventories have you taken and reduced to writing?

Witness:—I think three—two attached to balance sheets and one in rough. Don't know the date of the last. I think it was taken by Mr. Eyton. One of the two attached to the balance sheets was for 1878, I think. I don't remember the date of the other. And we had one for the subsequent six months. Mr. Eyton made them up. They were taken in memos, and afterwards written out. Mr. Wiegand and myself were with Eyton all the time assisting. I don't know where the memos are. The values were put on the memos. Mr. Wiegand has the same access to the office that I have. I don't know if he was present when the memos were copied out and values carried out. The value put on the stock when we started, on beer, barley &c., has been carried out since as there has been so little change in the market value of the materials. We signed an inventory with the values carried out when Mr. Wiegand took it, at the start of the partnership. That is the inventory (marked C.) We have not bought barley lately. Have had two shipments from California. I think one shipment in July last, and the other in the beginning of this month. The value of those shipments each was much more than \$100. The first was ordered by a written order. We telegraphed I think in 1877. Cannot say it was not last year. The telegram was necessary because the Japanese barley became so bad that we could not use it. No other reason. Mr. Wiegand was consulted as to these orders. The only one I did not consult him about was the last one. That was for about \$800 worth. We have all the barley we want at present. The reason I did not consult Mr. Wiegand as to the last shipment was that I had previously on other occasions consulted him and he refused to give his consent to any more purchases for the brewery. Barley was absolutely necessary. He refused verbally. He also refused in writing. That is the paper from Mr. Wiegand (marked D). The word "land" is left out. Water is absolutely necessary in our business and the water we needed was on the land, and it was necessary to purchase the land to get the water. I don't think the shipments of barley received in July and September of this year had been ordered when that letter was received. The barley from San Francisco is very good, much better than Japanese barley. In buying Japanese barley we could inspect it, but it is all alike. All the shipments of barley we have had, so far as I have seen, have been good. Before Mr. Wiegand came in as a partner I never used Japanese barley. I might have written to Herman our agent in San Francisco that the barley was not fit for a horse to eat; if so it was to induce him to get the best. We often grumble when there is nothing to grumble about. I have never had any trouble with Japanese as to weights. The only time a complaint was made was when we got in twenty sacks of barley late at night and Mr. Wiegand wanted it steeped. I don't remember if Mr. Wiegand or I weighed it, but when weighing is to be done the scales are brought down stairs from where Mr. Wiegand has them. The man who owned the barley was not there. It was weighed and put in steep that night. When the owner came next morning he was dissatisfied about the weight, and because we would not give him what he demanded he took the barley out of the steeping pan. Cannot tell when that was or whether it was at the time when we telegraphed. This is the only time I have ever had any trouble in buying from Japanese. Have been in the country to buy barley and charged the expenses to the firm. When I have brought back more game than barley I only charged half. I think I took Mr. Eyton one Sunday and he came back next day. When Mr. Eyton and myself go away, the books are generally locked up in the safe, since we have had a safe. If Mr. Eyton and myself have been absent for two or three days it has been with Mr. Wiegand's permission. He has especially asked us to lock up the books for safety against fire. I am part owner of the steamer *Reindeer*. She is a small pleasure steamer. I have never authorized her to be advertised for Tokio. I did not know it till long afterwards. I frequently make excursions on Sundays in her. Expenses are charged to me. I am not interested in any other hunting business. I don't know Mr. Moyston. I did not ask him to go into the other hunting business with me. I am a brewer, I think for nine years past. I own one-fourth of the *Reindeer*. I cannot tell when I purchased it. I drew the money out of the bank by cheque. My money and the firm's money are together. I had no bank account of my own. I cannot tell how much money I had in the bank at that time. I cannot tell if the whole amount on deposit was the same as the amount shown on the books belonging to the firm. It often occurred that the firm had no money in the bank while I had. I alone had a right to draw cheques. I do not know that I can now say how my private account stood when I purchased the fourth part of the steamer. The cheque book contains the stubs of cheques given for my part of the steamer (stubb pointed out, date Sept. 13th, 1878, amount \$500, marked E). Stubb dated Sept., 1878 for \$100 was for that amount lent to Mr. Hohnholz (marked F). Mr. Wiegand did not consent to that. It was my own business. (Stubb dated Sept. 3rd, 1878, \$60, G. Berger put in and marked G). There is also one to Peter Clausen for \$600, money lent. These were all drawn from the same fund. One in favour of Mr. Berger for \$505 was in repayment of a loan of that amount from him—by Mr. Wiegand's consent—for barley. Mr. Wiegand knew of my lending money to Peter Clausen. That was my money. Mr. Wiegand had nothing to do with it.

Thursday, 25th September, 1879.

Mr. Denison said that before preceeding with the examination of Mr. Copeland he would ask that the books of account, bank book, and vouchers be placed in Court so that the plaintiff could have them in his hands at any time.

Mr. Kirkwood objected: 1st—That the plaintiff had always had access to the books, 2nd—That he had never been refused access to them, and 3rd—That they are in the hands of the firm's book-keeper,

employed by the firm, and can at any time be inspected out of court by any one authorized.

His Honour said that he would order the books to be produced in Court during the progress of the case. He then ordered that the books and papers referred to, not in actual use, be placed in Court and there left until this action be disposed of, subject to examination by either party. Such books as are in use to be sent to this Consulate after business hours and returned.

Examination of defendant continued.

Mr. Denison: From January 1st, 1879, to June 30th, what sum of money did you draw from the firm.

Witness: The accounts will show. I do not think I drew in excess of the monthly allowance of \$150. For 6 months, \$900. The firm borrowed \$1,000 from Mr. Berger with the consent of Mr. Wiegand, and a promissory note was given for it in the name of the firm, signed by me. It was charged to the firm.

Mr. Denison.—Who received the interest on the monies (\$100) loaned to Mr. Clausen and (\$100) to Hohnholz.

Witness.—The interest on loan to Clausen was received by me. No interest was paid by Hohnholz, because he had an open account with the firm and I put it down to myself. Hohnholz's account was with the firm. Exhibit G. is a cheque for \$60 interest of a loan of \$3,000 from Mr. Berger before the partnership. The loan was for myself. The interest was charged to me. The security for this loan was a mortgage given by myself on my property. No inventory of the plant of the brewery has been taken since our partnership.

Mr. Denison.—Was it not agreed that the buildings, land, plant and stock in trade were agreed upon at a value of \$30,000 when the partnership was entered into? And what sum was charged in the books?

Witness.—I think the value is charged in the books of the firm at \$35,000. I have never had any words or trouble with plaintiff. During this month I had some words in regard to beer. I did not call him any names. I recollect last year plaintiff attempting to enter the office. I never assaulted him.

Mr. Denison called for a letter in the press copy book of the firm, which was produced, letter shown on page 272.

Witness.—This is probably a press copy of the firm's letter, but I have no knowledge of it. The land referred to in exhibit B has been purchased. Mr. Wiegand did not agree to the purchase so I purchased it myself to supply the brewery with water. The land has not since been improved. When the partnership was formed my health was not very good and I think I visited the country in December. I do not know the value of kegs, taps &c. on hand. The mortgage in favour of Mr. Berger still exists.

By Mr. Kirkwood: In the petition which you have heard read there are numerous charges of fraud, violence &c. Are any one of those charges true?

Mr. Denison objected to the question as being direct and not cross examination. Objection overruled.

Witness.—No: They are all without foundation. When the partnership was formed the \$5,000 of stock of trade did not include the stock brought in by plaintiff. When I said that when stock was taken in December, it was the same as when the partnership was formed I meant of course with the addition of Mr. Wiegand's stock. When I charged country expenses to the firm, I always went in the interest of the firm. These trips were an advantage because I got barley much cheaper. The steamer *Reindeer* in which I was interested only went to Tokio once to my knowledge at the time that the Kawasaki bridge was down. She was lent to the Post Office to bring the mails, as I afterwards learned. I bought her for a pleasure boat only, not for profit. I kept an account with the Hongkong and Shanghai Bank in the name of Copeland & Wiegand. I kept no private account. At the beginning of the partnership all the bills were made out and collected by Mr. J. W. Hall. I think he handed the money to me and I deposited it. In June 1877, Mr. Hall gave up the books and Mr. Eyton took charge of them. The day Mr. Eyton came I was in the country. Before I left, I gave the keys of the little safe we had to plaintiff, together with the bank book, money, etc. When I returned, Mr. Wiegand had caused two books to be opened by the book-keeper. (Books produced marked Exhibits 1 and 2). All money I received which was not immediately wanted, whether for myself or the firm, I deposited in the bank in the firm's name and I drew monies out whether for myself. Mr. Wiegand or the firm, out of this deposit. Whenever any money was drawn for the firm's account or for Mr. Wiegand, I informed the book-keeper, who would then give me a receipt which appears in book No. 2, and when I received any money from him appears in book No. 1. The differences between these books would therefore be the amount of money spent on my own account, less the amount in bank. I gave no detailed account of my personal expenditure to Mr. Eyton, I only inform him of money drawn or expended on account of the firm or Mr. Wiegand. I kept no account of my own private expenses. When I loaned Peter Clausen the money it was on my own account, but before loaning such a large amount I asked Mr. Wiegand's consent as I thought he might perhaps object to it. I considered myself at liberty to draw any money over and above that actually required for the firm's use, because according to our agreement (I refer to the deed of mortgage) I was entitled to do so (Deed of mortgage, dated 18th July 1876, marked Exhibit No. 3 put in and the clause read allowing mortgagee to retain all monies except \$150 per month).

By Mr. Denison.—When I went into the country and gave Mr. Wiegand the keys, he was not authorized to sign cheques. To my knowledge I never drew monies out of bank that were required by the firm. Once in six months I knew the state of the bank account. Every cheque I gave was initialled what it was for.

Mr. Denison then called:

John L. O. Eyton, sworn, said: My occupation is bookkeeper for Copeland and Wiegand. I ordinarily sign the firm's letters if not of extraordinary importance. In that event I generally get one of

the firm to sign. (Letter-book shown, page 272.) This is signed by me for the firm (Letter 18th April, 1879, to Herman & Co., San Francisco, real. The letter complains about the bad condition of some barley received.) Mr. Copeland usually signs such letters as I referred to. I cannot tell how much money was drawn out of bank from January 1st to June 30th by Mr. Copeland, but the balance sheet on the 30th June will show. Without reference to the book I cannot tell how much Mr. Wiegand drew. (Paper handed witness.) This is an account current of Mr. Wiegand's made by me from the commencement of the partnership up to 15th April, 1879, with reference to his monthly allowance. (Paper put in and marked Exhibit I.) This is the same account up to June 15th, 1879 (put in and marked J.) I am in the habit of paying Mr. Wiegand sums of money frequently at his request. When I had cash on hand not immediately required I gave it to Mr. Copeland. These accounts were made out at Mr. Copeland's request. I have made no statement for Mr. Copeland but frequently show him the Ledger. The first account shows that Mr. Wiegand overdraw \$98.66. The second shows \$100 drawn in May. By these statements I cannot tell whether both partners drew the same amount. On the 31st December, 1878, there was a verbal agreement made in this way:—that on making up the accounts showing how much each had drawn out, I found that Mr. Wiegand had drawn in excess of Mr. Copeland. I asked Mr. Copeland how I should arrange about it, if I should give Mr. Wiegand credit for the amount that would be due him, calculating at \$150 per month or charge them both equally and give Mr. Copeland credit for the excess that Mr. Wiegand had drawn out. Mr. Copeland said that as it was only a small difference and no doubt Mr. Wiegand required the money to let it stand and credit him with the difference. I don't think Mr. Wiegand had anything to do with this. Taking the balance stated in I & J as the agreed allowance in place of the \$150 per month, it would be necessary to add the difference between the excess drawn by Mr. Wiegand previously, as shown in the statement. Taking this statement as closed up to 31st December, 1878, Mr. Wiegand would have been entitled to draw up to 15th June, 1879, \$825 I think. I think he has been regularly paid since. I do not know of his being refused money. Mr. Wiegand has always had free access to the account books. When I am absent from the office the books are usually put in the safe.

I have heard the evidence of Mr. Copeland. I had various conversations with Mr. Wiegand about the books when Mr. Copeland was in the country. On taking over the books I looked through them to see how they had been kept. Mr. Wiegand showed me his deed of partnership and also mortgage. I think I asked Mr. Wiegand how he came to be credited with \$1,200. (Paper shown witness.) This is a statement of assets and liabilities of the firm of Copeland and Wiegand made out by me, on the 30th June 1879, from the books.

Mr. Kirkwood objected to the admission of the paper as it was made up after the institution of this action.

His Honour said he would allow it to be put in, subject to Mr. Kirkwood's objection.

Paper put in and marked Exhibit K.

(Another paper handed witness.) This was attached to the last paper, and was made out by me (Paper put in and marked Exhibit L.)

Mr. Kirkwood objected.

Objection noted as before.

Witness: According to this statement there is debited to Mr. Copeland, as drawn out, \$1,030.30, as money due him and paid him by the firm. The monthly balance he is credited with on this sheet is \$127.62. (Paper shown witness.) This is also made out by me, and shows Mr. Wiegand's private account. (Paper put in as Exhibit M.)

Mr. Kirkwood urged the same objection.

Witness: It shows the amount up to June 30th, \$747.81, of Mr. Wiegand's account. The same monthly allowance is given as to Mr. Copeland. (Paper shown witness.) This is also made out by me and is a statement of liabilities and assets of the firm up to 31st December, 1878. (Marked Exhibit N.) The capital (furniture and plant) is charged at \$31,000. The stock in trade, \$7,446.65 total \$37,446.65 stated as being the value of the total capital at the commencement of the partnership. I was a bookkeeper in Liverpool, England, for 5 years. I was afterwards bookkeeper for Mr. H. in Yokohama for about 7 years. (Paper shown witness.) This is an account of the stock in trade taken by myself in the presence of both partners, except a few items at the end which were added afterwards when Mr. Wiegand was absent. This was taken a few days after the 30th June and I therefore added to it the sales that had occurred during those few days and also a small amount of beer here which remained in stock in the Spring Valley Beer Gardens. Also some corks which were afterwards counted by the Japanese. These items were added by myself. (Paper put in and marked Exhibit O.) The memo at the end of this paper reads: on hand not yet used: 100 five gallon kegs, 15 wooden shovels, 4 iron shovels, 6 new brooms. These were not in use at this time. The Brewery had others. I took this memo, first in lead pencil and afterwards I put down the values and totals in the office. Last year Mr. Copeland was credited with sums on account of interest. I think the partners had some misunderstanding last year, but I don't know how or when it commenced. I made the separation in the buildings, premises and plant from the stock in trade to make it more plain, without any orders from anybody. This was when I made up the account on December 21st, 1878. With the exception of one occasion, when I went with Mr. Copeland to buy barley, I don't think I was ever absent two days with the safe locked up. I took my gun with me; I think on two occasions, as I had reasons for so doing. During these trips our actual travelling expenses were charged, but no charge was made for powder and shot.

Mr. Denison said he had finished with the witness, but he might perhaps recall him.

Mr. Kirkwood said if he wished to recall him he must show cause.

To Mr. Kirkwood:—I have been in Japan 8 or 9 years. I received a letter from Copeland and Wiegand in July, 1877, for me to call on them. I went up to the Brewery and saw both partners in the office. Mr. Copeland told me that he was unwell and wished to go into the country for a few months. Before this I was not personally acquainted with Mr. Copeland, Mr. Wiegand was foreman at Heght's brewery when I was there as Manager. I have frequently discussed the accounts with Mr. Wiegand. I think he had a very fair knowledge of the accounts. Before the safe was bought and before the new office was built upstairs, the books were all kept in a room in the brewery that was also used by Mr. Wiegand. The new office was finished and the safe was bought about 6 months after I joined them. Mr. Wiegand has never objected to me in any way; I have never refused him access to the books. During the time when Mr. Copeland was absent, Mr. Wiegand and myself frequently went through the books that were kept by Mr. J. W. Hall. (Exhibit H shown witness.) I wrote this letter after Mr. Wiegand had frequently made remarks to me and called me down to look at the barley when it was steeped. He called my attention to light stuff floating on the top. He told me the next time I wrote to Herrman to tell him that it was only fit for horse feed. The reason Mr. Copeland was credited with certain items of interest was because of instructions I received from both plaintiff and defendant, who came upstairs to my office together. Mr. Copeland said then in Mr. Wiegand's presence "I have agreed with Mr. Wiegand to take over the loss that has been sustained through our Shanghai Agency, as the agent is my brother-in-law, but Mr. Wiegand has agreed that as a set off against this, I am to be allowed interest on the money that I have left in the firm and which has been used for making improvements." He then told me to make up the accounts including these items, showing what loss had been sustained by the Shanghai Agency. So far as I know there are no grounds whatever for disagreement between the partners. The expenses of the country trips were immediately entered in the cash-book which was always left on the desk and Mr. Wiegand frequently went through it and saw it. He never objected to such charges. When we went into the country we were able to buy barley on better terms, for we could not buy any in Yokohama at that time fit for brewing.

To Mr. Denison:—These trips were in November last year. One trip was prior to the San Francisco order for barley.

His Honour said he thought the counsel had no right to re-examine the witness except on the Shanghai Agency matter.

At the request of plaintiff's counsel, the Court was adjourned till 10 a.m., 26th.

Friday, 20th September, 1879.

Mr. Denison called

Emil Wiegand, sworn, said.—I am the plaintiff in this case. I have been 31 years engaged in brewing. I learned the trade in Bavaria. I have followed the business in the United States, Peru and Mexico. I came to Japan in 1869. I came here under an engagement from San Francisco, as brewer and manager of the Japan Brewery. I remained in that position about 9 months. After that I went to No. 68, Bluff, for Mr. Heght. I remained in Japan about 8 years and returned to America, where I remained about 2 years, and then came back to Japan. I then hired Mr. Heght's brewery and manufactured beer until the 15th June, 1876, when I went into partnership with defendant. The reason I went into partnership was because I received a letter a short time before from defendant. I have not that letter now. I think I destroyed it or it is lost. I did not answer it, but afterwards I received another letter from defendant. I believe that Mr. Hall, who wrote these two letters for defendant, took them away afterwards. Subsequently defendant and I then met at the house of Mr. Wiebe. We had a conversation about the benefit that would arise if we would join together in partnership, as the price of beer was then so low, and we could raise it; and also on account of reducing the cost of labour that it would make each party at least \$5,000 or \$6,000 a year more by thus joining. I said that I had not money enough to buy my share and Mr. Copeland said that in 2½ years I would, under this arrangement, pay him off all together. He would charge no interest. It would come out of the clear profits of the business. The stock I had was agreed to be taken over. We went to Mr. Hall to get the agreement reduced into writing which I thought we signed, but we found out in the English Court when we had a suit with Mr. Hall that we had not signed the original paper in Mr. Hall's room. But we found we had signed the letter which I mentioned Mr. Hall took away. These names came in a way which I cannot understand. The agreement I supposed we signed, Mr. Hall has yet. At the trial I mention, the letter was produced, but not this supposed agreement. This was sometime in the beginning of June, 1876. When the partnership was entered into, my former stock I appraised and valued at \$7,500, but Mr. Copeland did not agree to this valuation. It was then agreed that it should go in at its actual cost price. It amounted under this arrangement to \$2,421.64. No inventory was taken of the stock in Mr. Copeland's brewery. The partnership capital was agreed to be \$30,000 and I had a half interest. After putting in my stock I was of course indebted to Mr. Copeland the balance between that and \$15,000.

Mr. Denison here wished to amend the 6th paragraph of the petition by substituting \$12,578 for \$12,478.

Witness:—The agreement as to the balance of the purchase money was inserted in the partnership deed. I read the deed of partnership but there were such big words in it I did not readily comprehend it. I have lived 9 or 10 years in America. In Peru I spoke Spanish. In the United States, I used the English language. At the time the deed of partnership was signed we were actually engaged in business as partners. Mr. Eytan

was engaged from 15th July, 1876; the same day Mr. Eyton came. Mr. Copeland went into the country and remained three months. Mr. Eyton showed me the books at this time and explained them to me. When Mr. Copeland returned I pointed out to Mr. Copeland that my stock was only half put down in the books. I told him I had found this out through Mr. Eyton and also that \$5,000 stock was put down in the books when I bought the brewery and plant (except one horse and carriage) as additional to the capital of \$30,000. Mr. Copeland became very angry at my observation and he said it had to remain as it was. Mr. Copeland's health at this time was very bad and since then it has not been good. He has been absent from the brewery a good many times. The first year he was one month in the country, then 3 months and I think another month again. Never made these trips for the business. He said several times that he wanted to go out and look for barley. They (Mr. Copeland and Mr. Eyton) never brought home barley they brought game. Mr. Bernson was the brother-in-law of Mr. Copeland. He was in the employ of the firm before he was sent to Shanghai by Mr. Copeland as our agent there. I told Mr. Copeland that I objected to this as Mr. Bernson was ill and not business man enough. This was in 1877. When I objected Mr. Copeland said he would be responsible for Mr. Bernson. This was before he went there. Mr. Bernson lost about \$500 there. After I found out the loss I spoke to Mr. Copeland, he said that as he was responsible, the business should sustain no loss. At the same time he said that as he had to pay this he would charge interest on Mr. Berger's money, \$3,000. This conversation took place in the office, I did not consent to this arrangement. There was nothing whatever said about interest on improvements. I did not authorize or consent to the loan from Mr. Berger. Mr. Copeland in the office first spoke about a loan from Mr. Berger. I objected and told Mr. Copeland that he should go and get the money back from Peter Clausen. Mr. Copeland spoke to me about the loan to Clausen, but I declined to have anything to do with it. Mr. Copeland has been in the habit of making numerous improvements on the premises. On some of them he has consulted me; but on some he has not. I consented to my own residence being improved, also to the beer shed and stables. I do not know how much Mr. Copeland has expended on improvements. I would estimate the improvements to which I consented as about \$16,000. I have not always been consulted by defendant in regard to goods ordered. There were 100 five gallon kegs and 200 sacks of barley from San Francisco, ordered without my consent. We purchase barley now in San Francisco, but have not always done so. I would rather use Japanese barley for malting purposes than San Francisco barley, because I can examine it here and reject the bad barley in it. The barley we received from San Francisco was not good: it was very dirty and unripe with a good deal of rape seed in it. Unripe barley does not make good beer; rape seed contains oil and anything oily injures beer. We have been buying barley in San Francisco because the Japanese say they do not get good weight. Mr. Eyton weighs the barley. There never was any trouble when I weighed it, but I have weighed none for about a year. In Hight's brewery I generally used Japanese barley. On account of the refusal of the Japanese to sell barley, we had to get it from America. This was last December. We had no barley and I could not malt for 6 or 7 weeks and we telegraphed for it. That was about the time that Mr. Copeland went into the country for barley. At the end of six weeks a man came from the country and we had to pay the money in advance in order to buy the barley. I do not have free access to the books and accounts. When Mr. Copeland or Mr. Eyton are absent the books are locked up in the safe. I have no key. I have asked Mr. Eyton why he locks the books up when the goes out, as whenever I go into the office when he is in, he is always engaged on the books, and I would like to have them left out so that I can see them when he is not there, but he has not left the books out as I wished. When Mr. Copeland and Mr. Eyton were out hunting, some English officers came to pay their bills as they wanted to leave, but as I had no keys, only that of the office door, I could not receive payment. I have examined the books but I cannot understand them. Mr. Copeland has never accounted to me for the profits of any outside business. Mr. Copeland sometimes informed me when he was going up country, sometimes not. I am the manager of the brewery department. Mr. Copeland has interfered with my department. After the beer was made he put the bottled beer in hot water, perhaps 1,000 dozen; by doing this the beer became dead and had a bad taste and a good many bottles burst. We have some of it on hand but we cannot sell it. I objected to this treatment of the beer. I am in the habit of drinking beer. When I objected, Mr. Copeland became very angry and said I was no brewer, and that his mother could make better beer than I could and called me bad names and said I had nothing to say in the business anyway. When nobody was about he used to call me bad names but often he did so in the presence of the Japanese. I remonstrated with him, but he said he considered me less than a Japanese coolie. He has also drugged the beer. Last year, in April, I saw him putting stuff into the hogsheads containing beer, and when I went I found a very strong smell. Mr. Copeland had told me that when he went to Norway somebody told him that this stuff was very good for preserving the beer. I don't know the name of the stuff.

By the Court.—Mr. Copeland showed me the hogshead in which was a kind of liquid. I don't know what it was.

Examination continued.

The stuff was afterwards bottled up. The hogshead was upstairs. The hoops and wood fell to pieces. The bottles were boxed up in the cases of a dozen and put in the brewery where it remains yet and Mr. Copeland keeps the keys of the room. Mr. Copeland took some bottles out and poured some out in a measuring glass and put it into the beer and immediately the casks were bunged up. I saw him doing it and objected and defendant became very angry and

called me the same bad names and told me to get out. After this Mr. Copeland continued to put it in the beer. I was absent, but I know it from the marks of the acid round the bung. I have never been absent except a few hours. During the time I have been partner I have never been absent except one day. This stuff gives the beer a bad smell and I believe affects the teeth. The last time I saw him putting the stuff in the beer was this year; I saw it through an opening near the boiler looking down into the cellar; but as I remembered the insults I had received before I said nothing further about it. After the stuff was put in the casks were rolled about. Mr. Copeland went up stairs after putting this stuff in. I then went down into the cellar and found eleven empty quart bottles in which this stuff had been standing, in the cellar. There was a little of the stuff remaining in each bottle. I poured it all into a little bottle and corked it up and kept it and afterwards took it to Mr. Denison. I swear that the bottle I took to Mr. Denison contained the same stuff that Mr. Copeland put in the beer. Mr. Copeland called it "flavouring extract." I think according to the measure that he put in about a pint to a hoghead. Besides interfering with me in this way he gave orders, when the malt was on the kiln, to have a slow fire, which is just contrary to the proper way of making malt. By a slow fire the malt is made "glassy"; good malt should be "floury." Beer made from such "glassy" malt won't have the same taste as that from "floury" malt. The object of the slow fire is to have pale beer. Our kiln is too low and too near the fire to make pale malt. A brewer would know this fact from looking at the kiln. Mr. Copeland assaulted me last year on the 21st November. I was going up to the office at the time and Mr. Copeland was standing on the platform of the lower step leading to the office, with both of his hands on the railing of the stairs, across the passage way. I asked him to let me pass. He asked me where I wanted to go and I said to the office. He said that I had no business in the office, and then raised his knee and struck me in the testicles. I went backwards and said "Mr. Copeland you have hurt me." He said "you ran against me," but I was standing still when I went up to him. I was hurt and was afterwards under Dr. Gutachow's care. I can feel the effects of the injury yet and I still have a pain in the testicles. The doctor gave me a recipe for salve and a suspensory bandage. I have worn that bandage until a few days ago, and it is now very inconvenient for me to go without it. I have never given Mr. Copeland any reason for assaulting me. Before the petition was handed in, I have saluted Mr. Copeland every morning when I saw him and he has answered me. Since the petition was handed in I have twice saluted him but received no answer from him, and then I gave it up and salute him no more. We used to talk on reasonably friendly terms until the petition was handed in, as long as any strangers were around. We were always friendly until I found out that the books were not right, then I saw that Mr. Copeland acted coolly to me. This was just after Mr. Eyton came. Business in the brewery is now conducted verbally. I received my allowance of \$150 every month after it is due. I was refused this allowance by Mr. Copeland some time about April this year, before the petition was filed. I went once and asked for enough money to pay my servants with, and he said he would see me starve before his eyes before he would give me a *tempo*. An account of the stock-in-trade has been taken several times since the the partnership. I was present for a while in December last year when stock was being taken, but left because it was not being taken properly. I told Mr. Copeland and Mr. Eyton if they would not put it all down, it was no use. There were no values carried out at the time; they were put in in the office, but I was not consulted. I do not know what was the value of the beer that Mr. Copeland had at the time of the partnership. I never showed Mr. Eyton my copy of the deed of partnership. At the time Mr. Eyton pointed out the error in the book, he saw a copy of the deed which he took from the safe of which I had the key where it and other papers were. I opened the safe which was in my house and Mr. Eyton took the papers and read them. Mr. Copeland has refused to let me see the books. I asked him once to let me know how we stood at the bank and he said—"the bank is standing all right;" I said that was not the question. I wanted to know how the firm stood. Then Mr. Copeland went into his private office where he keeps the bank book and I waited in the office some time. He came out of his room but did not come back to the office. I spoke to Mr. Copeland about reducing the expenses of the firm, about the beginning of this year, as business was very slack. I said I thought we did not need a steady bookkeeper. He said he would not let Mr. Eyton go even if he had to pay him \$250 a month. I received a draft of the partnership deed about a month after I joined the firm, from Mr. Copeland, for me to read. There was nothing said at that time about a mortgage or copy of one given me. I never saw such a copy before the deed of partnership was signed. Mr. Copeland told me to go down to the U. S. Consul General and sign the deed of partnership. Before going down I never saw any mortgage. When I went to Mr. Dickinson's office I signed two documents which I supposed were the duplicates of the partnership deed. I then went to the Consulate where I believed I signed the same two documents. When I signed, the two documents in the Consulate I had never read any mortgage. I was asked at the time if I knew what the contents were and I said I did, but I was not aware at the time that I was signing a mortgage. At the time Mr. Copeland said nothing to me about these papers. About 15 months ago I first learned that I had signed the mortgage. I had some words with Mr. Copeland and he said to me if I thought he was not manager, I had better look over my papers. I did so and, to my surprise, found in a sealed envelope in my own safe, two extra papers. After the documents were signed they were left at the Consulate and were afterwards sent to me under cover in Mr. Hall's handwriting. (Deeds of Mortgage and partnership shown.) These are in the handwriting of Mr. Hall. They are both headed in the same way.

Cross-examined by Mr. Kirkwood:

To my knowledge I put my signature to two documents at Mr. Dickins' and to two at the Consulate. I thought they were two originals and two copies. Mr. Copeland brought me down and said he would see me though all right and I signed them. I had no legal adviser at the time. Mr. Dickins prepared the documents. I never recollect signing any documents before, but since then I have signed balance sheets without looking through them. I have been in business entirely or partly on my own account for 9 or 10 years. I don't recollect whether Mr. Hall came to the Consulate with me or not and I cannot say that he brought down the deeds from Mr. Dickins' office, but I think that Mr. Copeland did. When I first agreed about the partnership, nothing was said about a mortgage. The security defendant was to have was the profits of the business. I believed it was usual to sign copies of documents in the same way as originals. I thought two were to be left here in the Consulate and one each to myself and Mr. Copeland.

Mr. Kirkwood.—Did you not say that one of the documents read by Mr. Eytan at your request was the mortgage?

Witness.—I do not know whether I said so or not. He read one of the deeds of partnership in my room. I don't know of any mortgage. Don't know what was done with all the papers after signing. My deal of partnership must have been sent to me by Mr. Hall, but I cannot tell when it was. Whether it was before or after January 1877, or not I don't know, it was delivered to me somehow or other. I have not got the envelope that it came in. I knew exactly what was in it so I did not open it because it came from Mr. Hall. While Mr. Hall kept my books I received frequent letters from him, but afterwards I only received them once and a while. I always opened the small ones. I cannot remember whether I was in Mr. Dickins' office a long or short time when I signed the documents. I don't know whether there was anybody in Mr. Dickins' office at this time or not. I believe I was there once, before this time. At the action in the English Court, you (to Mr. Kirkwood) were my counsel. I do not recollect that this mortgage was spoken of.

Mr. Kirkwood said that he wished to take the advice of the Court, in reference to this fact, viz.: that when he was counsel in the action in the British Court, Copeland and Wiegand against a third party, was the information then given him by his clients in reference to these documents confidential or not?

His Honour said he would consider the question.

Mr. Kirkwood said that pending his Honour's answer he would leave the subject of the mortgage deed.

Cross-examination continued.

Witness. When I went to the Japan Brewery as manager and brewer, Mr. Rosenfeldt was owner. I only managed the Brewing Department. The Brewery got in debt and it was sold to Mr. Kline. I remained with Mr. Kline 5 or 6 months. I left because Mr. Kline used to come home drunk. I then went to Mr. Heght's brewery. I left there because he wanted a cheap man and my salary was too large. I assaulted a Japanese there once. I did not strike him much; I don't think I hurt him much, but I got some medicine from Dr. Dulliston and gave him when he was laid up. I believe I found the cook once dead drunk in my kitchen; he was formerly Mr. Heght's cook. Mr. Heght had told me to look out for him. I collared the cook, but he wouldn't get up. Once on new-year's day all the boys got drunk as usual, and got fighting with knives, and one of the boys with a knife ran against me and I knocked him over. I don't consider my memory very bad. I think it good.

Court adjourned till Monday, 29th, at 10 a.m.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR

OF THE "TIMES OF TAIKO."

CHAPTER XVII.

A NARROW ESCAPE.

Yoshitsune had not failed to notice, when riding towards Misasagi's castle, that his approach might be observed from the upper windows while he was still two bow-shots from the gate. In truth he noted many things during the progress of that visit with a distinctness that was afterwards surprising to himself, for it often happens that men on the verge of a great danger have their faculties sharpened by an instinct of which they are scarcely conscious, and of which, perishing as it does with the necessity that begets it, nothing afterwards remains but a wondering reminiscence.

Until therefore he had traversed this exposed space on his return journey, he rode at a foot pace, looking neither to the right nor to the left, for though he knew that he carried his life in his hand and never doubted there was black treachery behind him, he believed that he had read in Misasagi's eye a wavering malevolence only needing some evidence of mistrust to transform it into active ferocity.

So soon however as the bamboo foliage hid him completely from the castle, he sprang to the ground, and leading his horse into the farthest recess of the grove, tethered him securely before a miniature shrine, where the withered leaves rustled about the pedestals of two stone foxes, elligies of the

Rice God's messengers. The gallant little chesnut seemed to comprehend the gravity of the situation, for though generally restive and fractious in hand, he now picked his way among the bamboo stems with the greatest docility, and stood quite still to be tethered, only looking back anxiously after his master as the latter returned stealthily to the road-side and lay down among the dense underwood.

The moon was still an hour's journey below the horizon when by the last glimmer of the brief gloaming Yoshitsune recognized the leader of the seven men as they dashed past his place of concealment. It did not occur to him to doubt their murderous purpose, yet he could scarcely have endured to avoid them had Misasagi himself been riding at their head. As it was, however, he had risen and entered the grove to seek his horse, when, as though struck by some sudden idea, he turned back and directed his steps towards the castle.

He walked slowly, with the air of one pondering the details of an immature purpose, and when he reached the gate, he paused for some time, looking wistfully at the glow of the charcoal braziers reflected on the oaken beams of the lattice. It may be that the aspect of the comfortable warmth attracted him—for a bitter north wind was forcing the frosty air into every recess of the valley—it may be that some lingering reluctance made him hesitate to disturb this well-being, but whatever the motive of his irresolute mood, it was speedily dispelled by a graver consideration.

In an hour the darkness that now shrouded him from the castle would be flooded by moonlight, and in less than that time the return of his pursuers would make escape impossible.

A hasty examination of the enceinte shewed that it was surrounded by a moat some ten feet wide with a low wall of wood and plaster on the inner side. This wall did not spring directly from the edge of the scarp but was separated from it by a narrow berm, and its summit being within easy reach of one standing below, there was nothing to prevent its speedy escalade.

Having satisfied himself on these points, Yoshitsune set forward in a direction opposite to that of his approach, no longer moving with deliberation or uncertainty, but running as fast as the darkness and his ignorance of the road permitted. He knew that this wide expanse of watery rice fields, over which the wings of the wild-fowl whistled as he passed, could not be altogether destitute of cottage or hamlet, and following a lane that encircled the base of one of the knolls overlooking the castle, he presently reached a little hovel, from the door of which a beam of dull light crossed the narrow path and lost itself in the darkness beyond. This hut had only one inmate, a decrepit old man, who sat cowering over a fire that smouldered among the ashes in a sunken hearth, and feeding the feeble flame from time to time with scant supplies of twigs and withered leaves which he took from a bundle beside him. A rickety table, some wooden trays containing strings of dried persimmons or parcels of parched pea-nuts and bean confectionery, shewed that the old man's means of sustenance were derived from the doubtful profits of a wayside stall.

All these things Yoshitsune's keen eye comprehended at the first glance. Entering the hovel without a word, he closed and fastened the door carefully; a proceeding at which the old man evinced his astonishment by hastily thrusting a handful of straw into the fire, so that a sudden blaze, leaping up, displayed the boyish face and rich garb of the visitor.

Those were not times when a carl might question the comings and goings of his superior. The old man, therefore, merely changing his posture for one of obeisance, awaited some intimation of the other's pleasure.

"You do not object to serve a late customer, I hope," said Yoshitsune, at the same time taking a parcel of gold-dust from his bosom and placing it beside the old man. "The articles I would purchase are not such as you generally deal in, though if I mistake not they form an important part of your stock in trade, being nothing more than a wire bean-pan and a few pieces of charcoal."

The old man, not insensible to the charm of such unwonted gain, bestirred himself to supply his customer's wants, speedily producing a straw bag half full of charcoal and an instrument that resembled a shallow box, made of close meshed iron wire, with a long handle attached.

Yoshitsune raked together the smouldering embers on the hearth and, piling a quantity of charcoal about them, said as he fanned the flame:—

"I am entirely ignorant of this neighbourhood, old man,

but I conjecture from the nature of your trade that your roads are not without wayfarers."

"It is true, Sir," replied the other. "Thanks to the good god Bishamon, whose shrine lies to the south of the hill, I have daily reason to be grateful to the passing pilgrims."

"Suppose, however, that illness prevented you from exposing your wares as usual, should you not run some risk of perishing here unobserved?"

"I think not, Sir," the old man answered, looking up with a sort of timid wonder at his strange questioner. "Some one or other of my neighbours seldom fails to pay me a visit coming or going, morning or evening."

"Ah! that is even more fortunate than I had hoped," exclaimed Yoshitsune, with a satisfaction that added largely to the other's bewilderment. "And now let me warn you that there is not the least reason to be alarmed at the service I require of you, though unfortunately I have no leisure for explanation. Tell me at once: are you prepared to comply with my wishes, or must I unwillingly enforce their execution?"

The old man tremblingly bowed his head but made no attempt to reply. Yoshitsune, placing his hand on his shoulder, led him to the matted corner of the hovel, and there desiring him to lie down, tied his hands and feet securely. This done he placed a pillow under his head, and wrapped him carefully in whatever he could find of clothes or coverlets, all the while touching him so gently and showing such a compassionate desire to reassure him, that the old man, perfectly tranquillized, entreated his visitor not to disconcert him by such unnecessary care.

Yoshitsune then filled the bean-pan with the now glowing charcoal, and carrying it with him, had already crossed the threshold when the old man's voice arrested him.

"Sir," he said, "may I ask you to do me one more favour before you go?"

Knowing well that for the sake of avoiding a little harshness he had already jeopardized not only the achievement of his purpose but even his own life, Yoshitsune nevertheless came back without the slightest semblance of impatience.

"What can I do for you?" he asked kindly.

"In truth I am almost ashamed to say, Sir," was the reply. "But perhaps you would condescend to hide your guerdon at the bottom of the ashes in the hearth."

"Ha! Ha!" Yoshitsune laughed as he hastily complied with this request. "I had overlooked the possibility of your neighbours carrying off the money and forgetting to unfasten your bonds!"

If the assurance of the benefit his visit had conferred on this old peasant afterwards proved a pleasanter retrospect than Miasagi's punishment, it certainly at the time had rather the effect of reconciling Yoshitsune to his design. Five minutes later he had crossed the moat and reached the back of the castle unobserved. Here shaded by trees and overlooking an artificial lake, stood a wing of the building which was apparently used in the summer only, for it was now closed and untenanted. A few blows of his dirk sufficed to displace a considerable area of the plaster on one face, and into the interstices of the woodwork thus exposed he thrust a quantity of withered branches and twigs, building up in their midst the embers of charcoal he had carried from the old man's hovel.

The pile was scarcely completed when the eager wind rushed in to foster the germ of destruction, so that before Yoshitsune had recrossed the moat, the flames had leaped up within the wall and twined themselves lithely about the half decayed beams of the lofty roof. In truth the process of ignition was much more rapid than he had anticipated, and it now became evident that he must either return to the village, with a certainty of encountering the party sent out in his pursuit, or ride past the castle under the eyes of its aroused inmates and in the full glare of the conflagration.

He chose the latter course unhesitatingly, well knowing that it was a desperate venture, but in his heart glad that he might redeem the stealthiness of his deed by an open encounter with his enemies.

Forcing his horse, not without pains, through sparks and smoke that almost hid the path, he heard the clang of the alarm-bell, followed by a tumult of feet and voices within the court-yard. The flames, setting out from a point nearest to the direction of the wind, travelled so swiftly from chamber to hall that escape was necessarily the first thought of the castle inmates, and when Yoshitsune reached the gate, he

found himself surrounded by a crowd of men and maids issuing forth pell-mell.

Under these circumstances to accelerate his pace would have been not only to invite discovery but also to endanger the lives of women and children already sorely harassed by the press. Yet was it a hard thing to pass slowly through these bands of armed men, any one of whom would gladly have struck him down had they known the truth. He dared not dismount—though on horseback he attracted universal attention—for if attacked while on foot there could be no possible hope of regaining his saddle alive, and he never perhaps gave better proof of nerve and self-command than when he threaded his way leisurely among that clamorous crowd, encountering on all sides glances of surprise or suspicion that seemed the prelude of immediate onset.

Arrived at the limits of the enclosure, he saw that a few steps more would decide his fate, for the fugitives were diverging in the direction he had himself previously taken, and if he could but reach the junction of the two roads, his progress thenceforth would be comparatively unimpeded.

At that moment, however, loud shouts from behind warned the people to clear the way, and turning round, he saw the man he had most reason to fear riding after him, accompanied by a large escort of men-at-arms. Over a suit of richly encased armour Miasagi wore a surcoat of glittering brocade, and from either shoulder depended a scarlet lappet, embellished with gorgeous broderies of golden dragons soaring among silver clouds.* He bore himself with haughty unconcern, as though completely indifferent to the destruction of his castle, at which indeed he scarcely deigned to glance, and Yoshitsune almost repented what he had done when he reflected how much less the cost of its consequences would be to Miasagi than to his vassals.

He had scarcely framed this thought when he heard himself loudly denounced as the author of the conflagration, and saw Miasagi ride furiously towards him, sword in hand.

For one moment an almost irresistible craving to close with his treacherous enemy made Yoshitsune rein back his horse, but he saw immediately that twenty blades had leaped from their scabbards at Miasagi's bidding, so overcoming his reluctance, he beat his massive stirrups against the fiery little chestnut's flanks and galloped off at racing speed.

Miasagi made no attempt to follow, for he knew that with his heavy armour, pursuit was hopeless. Moreover he had, as he thought, a surer way of achieving his purpose. Among his escort were half a dozen archers who had already adjusted their arrows in anticipation of his commands. There would only be time for one discharge, but these were skillful bowmen, and as their strings twanged almost in unison Miasagi laughed in merciless anticipation of the result.

Yoshitsune had however foreseen this danger. Turning in his saddle, the glare of the conflagration enabled him to observe every movement of his enemies, and at the exact moment of the arrows' release he threw himself along his horse's withers. The consequence of this manoeuvre was that five of the shafts flew harmlessly over his head, and one, which lodged in the lacquered cantle of his saddle, he broke off above the barb and threw back towards Miasagi with a shout of derision.

Scarcely however was this danger averted when another presented itself, for the seven men who had been sent to the village returned at that moment, and only waiting till their leader had changed horses with Miasagi, resumed their pursuit with renewed vigour, this time in view of the quarry.

Even in the confusion of the crowd and the presence of mortal peril Yoshitsune had not failed to remark the exceptional beauty of the horse Miasagi rode. Coal black, without a white hair in the whole of his graceful body, his clean cut head, oblique shoulders, deep ribs and long quarters promised a rare turn of speed, and it was plain that the chestnut, after so many days of travel, could not hope to hold his own against such a competitor. This, however, did not cause Yoshitsune much concern. The question he asked himself was not whether he could escape from the rider of the black horse, but whether he might hope to encounter him beyond the reach of his comrades' aid. The road was not well suited to rapid progress, being much worn and raised in places above the surrounding rice-fields by roughly strewn layers of mud and boulders, but it lay perfectly straight in

* It was usual for a noble, when driven from his residence by fire, to dress in an unusually splendid costume.

the heart of the valley for more than a mile, and before that distance was accomplished, Yoshitsune felt that his question would be answered one way or the other.

The chestnut needed little urging, and his master wisely left him to choose his own sagacious method of negotiating the various obstacles in their path. At first the excitement of the chase and the prospect of a speedy encounter elicited much whooping and vociferation from his pursuers, but presently the earnestness of their purpose subduing this outcry, no sound disturbed the silence save the labouring of the horses along the clayey road and occasionally the sharp contact of hoof against stone. They were riding in darkness, for the shadows of some clustering hillocks lay broad and black across the valley to within two or three furlongs of its northern exit, where the road, climbing a rocky incline, emerged from gloom and mire into dust and moonlight.

When Yoshitsune reached this point the clatter of his horses' hoofs smothered the noise of pursuit, but he had only counted thirty of the chestnut's strides on the hard road when a sound like the echo of his own gallop rang out sharp and clear behind him. He knew immediately that one of his enemies had commenced the ascent, but what of the others? Second after second the beat of the chestnut's feet and the roll of the black's, traversed the ever shortening distance between the two horses, but no repetition of that echo came from the margin of the shadow, and when Yoshitsune looked back from the summit of the defile, he saw that though the leader of the pursuit was little more than a bow-shot behind him, all the other's had either given up the race or been hopelessly distanced.

The path through the defile was a series of ridges cut in a bed of soft shale, affording on this side sufficiently firm footing; but on that, so worn and polished by the constant trickling of water from the porous cliffs on either side, that Yoshitsune no longer anxious to outstrip his pursuers, deemed it best to dismount and perform the descent on foot.

It was fortunate for him that he did so. A few paces farther on, the road was intersected by a deep gully, across which two narrow planks had been thrown, forming a bridge hardly passable at midday on horseback, and now perilous in the extreme, for beetling rocks and overhanging trees excluded every ray of moonlight from the spot, and the boards were already slippery with frost.

Almost before he perceived this gully, Yoshitsune found himself on the bridge, checked however for a moment by the chestnut, which refused to attempt the passage without a preliminary examination, resulting in the selection of the left plank, his master having chosen the right.

The horse's unerring instinct proved the better guide, for the decayed wood cracked midway under Yoshitsune's feet and nothing but his wonderful activity saved him from a fall.

He did not remount, but loosening his sword in its sheath, stood waiting in the moonlight beyond the cliff.

At that very moment the thunder of the black horse's feet sounded at the top of the ravine. His rider did not apparently realize the dangers of the descent, or perhaps forgot them, seeing the object of his pursuit standing below. Be that as it may, he urged his horse sharply with voice and foot, and the black, stumbling, slipping, but always bravely obedient, came down the rocky steep at headlong speed.

Yoshitsune, throwing up his arms, shouted loudly to admonish the other of his peril, but his warning, if understood, was too late to be profitable. The black horse indeed made a gallant effort to clear the gully, but he had no time to gather himself for the spring and the slippery rock at the margin doubled the difficulty. There was a convulsive struggle, or rather, as it seemed, a shuddering commotion in the darkness, and then a confused mass came hurtling through the air and fell with a dull thud at Yoshitsune's feet.

He stepped up to it, and, turning it over, looked for a moment at the quivering limbs and listened to the loud laboured respiration, after which, drawing the sword from its girth, he transferred them to his own, and returning to the gully found the black horse drinking quietly from a stream that flowed below.

The animal was almost uninjured, and proved as docile as it was beautiful, so that to his great satisfaction Yoshitsune found he could lead the two horses without any difficulty. In this fashion therefore he continued his journey, for feeling persuaded that all danger of pursuit was past and knowing that Kichiji would not travel far without him, he thought his prize justified a little delay.

Towards midnight he reached a secluded farm-house, whose inmates readily gave him shelter for the night, but learning it would be necessary to make a considerable detour in order to strike the main route, he set out again before sunrise, and at the close of a weary day's march found himself wandering through a region of trackless forests and precipitous mountains. Except some traces of infrequent footsteps on the path he followed, no evidence of human presence or habitation had presented itself since noon, nor did it seem reasonable to expect anything but utter solitude in a district where tempest and torrent had everywhere left records of their ravages, and the smoke of volcanoes mingled with the mists of waterfalls. He began to despair of finding shelter for the night and to add to his perplexity the road presently descending into the bed of an ancient water-course and winding here and there among rocks and uprooted trees, became at last altogether indistinguishable, while the branches, intertwining overhead, deprived him of the stars' guidance.

After a time however he again discovered something that resembled a path, and following it through a long ascent, found that he was climbing by the side of a gigantic rock, firmly wedged between two hills and completely blocking up the valley between them. Rising perpendicularly to a height of more than two hundred feet, its face was for the most part clothed with moss and ferns, while from its summit a jet of water, tumbling headlong, crumbled into spray in mid air. Long ages before, all the springs and rivulets from the upper ravines had joined their strength to thrust this monster barrier from their path, but worsted in the contest, had ever since been held captive by their victor, and the shadow of that defeat still seemed to brood over the bosom of the sombre lake, whose heaped up waters pressed with sullen obstinacy against the giant's broad shoulders, sometimes indeed gathering force to surge tumultuously over his head but never, for all that, abating a jot of his immovable solidity.

A little withdrawn from the margin of this lake, Yoshitsune found a house of rough but strong construction, sheltered from the northerly blast and the westerly sun by a precipice of crag and a row of stout cedars. His thrice repeated summons was at last answered by a beautiful girl of eighteen or nineteen, to whom his appeal for shelter seemed to cause the most painful embarrassment. Constrained by some necessity which would have been paramount at any cost save that of hospitality, the idea of denial seemed yet so repugnant to her that Yoshitsune, pitying her evident distress, changed the form of his request and asked to be directed to some place, hostel, hut, or cloister, where he might put up for the night and obtain the means of extricating himself from these wilds among which he confessed to have completely lost his way.

"Alas! Sir," replied the girl, "neither house nor hovel is to be found within five miles of this lake and the path is easily missed even by those that know it well."

"If that be so," said Yoshitsune, "I have no choice but to crave your hospitality until the morning, though I see plainly that my presence is inconvenient."

"No, indeed, Sir," the girl cried earnestly. "Believe me you should be most welcome, but the truth is that my husband has not yet returned from hunting and I am completely alone in the house."

The deep blush and timid glance of trusting appeal that accompanied this avowal had rather the effect of surprising than enlightening Yoshitsune, for in everything save the strength of his purpose he was still a very child.

"But," he objected with evident incomprehension, "unless you know that your husband would close his doors against me if he were present, can there be any reason for doing so in his absence?"

The girl, astonished in her turn, looked more attentively at her visitor, and saw that he was a boy with a bright handsome face and an eye incapable of unmanly or disingenuous expression. Still reluctant, though now irresolute, she offered one more remonstrance:—

"I am sure my husband could not be either ungenerous or inhospitable, but during the few months that I have lived with him there has been no precedent to guide me in such a case, and—and"—this with much diffidence and hesitation—"he is not one to suffer lightly any seeming neglect of his trust."

"Well, well," Yoshitsune said good humouredly, "it is but

a few hours more in the moonlight or at worst a night in the forest. Pray pardon the annoyance I have caused you, and tell me what direction to take in order to reach the nearest shelter."

But at this the girl's scruples seemed finally to vanish. Repeating her assurance that the paths were impassable to a stranger after night-fall, she entreated Yoshitsune to attribute her previous hesitation to unreasoning timidity, and he, easily suffering himself to be persuaded, followed her into a large room, where the moonlight shone on two or three suits of rich armour and various weapons of war or the chase. Here his hostess served him with food and spread the wadded quilts for his bed, doing everything with her own hands; a proceeding that caused Yoshitsune no small surprise, for the furniture of the house, no less than the refined grace of its mistress, accorded ill with this lack of servants. Moreover, for all her assumption of confidence, she left him at the earliest moment permitted by courtesy, having first explained that it would be unnecessary for him to meet her husband, and begged him, if possible, to resume his journey before day-break.

Were these precautions prompted by apprehension on her own behalf or her guest's? In either case the course they suggested was most repugnant to Yoshitsune's nature, so instead of complying, he opened the shutters and trimming the lamp, sat, with his sword at his knees, awaiting his mysterious host's return.

(To be continued.)

DOUBLE ACROSTIC.

The wire has brought us quite disturbing news:
The peace was signed, the victors sought to rest,
But now we find the vanquished do refuse
To put their sacred honour to the test.

1.

'Tis thus we mark a portion of our time,
Before the sun with all its force sublime
Has reached its zenith, 'tis in every clime.

2.

A Scottish tenure you will now behold,
There is a duty on it so I'm told.
You must the nature of this fief unfold.

3.

In a gen'ral way, he's a hero they say,
But on this Law very reliant,
That were I to replace that 'r on his face,
'Twould transform him into a giant.

4.

This Mussulman sheriff, historians say,
Is an absolute law which all must obey.

5.

A lawless mountaineer, all must admit
He's brave, and loyal in a certain way,
But still a man you'll find who's scarcely fit
To be trusted much in the present day.

6.

This title, soubriquet or appellation,
If you connect it with navigation,
Which would seem to be its derivation,
Is a misnomer, and I'll tell you why,
Our hero sails the land, nor would he try
To mark his course by reference to the sky.

SHIPPING INTELLIGENCE.

INWARDS.

Sept. 24, Japanese steamer *Niigata Maru*, Walker, 2,000, from Kobe, Mails and General, to M. B. Co.
Sept. 25, Japanese steamer *Tokio Maru*, Swain, 1,146, from Shanghai, Mails and General, to M. B. Co.
Sept. 27, French steamer *Tihou*, Reynier, 1,726, from Hongkong, Mails and General, to M. M. Co.

PASSENGERS.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Mrs. Green and child, Mrs. Wakamura, Messrs. H. B. Gibb, G. Hamilton, F. O. Daclo, Thomsen, Kora, Nakamura, Ishibashi, Yamagata, Katogiri, Hori, Saiga in the cabin. 3 Europeans, 2 Chinese and 403 Japanese in the steerage.
Per French steamer *Tihou*, from Hongkong:—Messrs. Orata, Taruta, Hirako, Civetta, Giov. Vignani, Pietro Riccardi, Scipione Massaza, Giac. Farfara, Saitou, Donsdebbs, and Canter.

OUTWARDS.

Sept. 21, British steamer *Belyie*, Meyer, 2,627, for San Francisco, Mails and General, despatched by O. & O. Co.
Sept. 21, British steamer *Glencoe*, Gulland, 1,901, for New York, via Japan and China ports, Tea, &c., despatched by Jardine, Matheson & Co.
Sept. 21, Japanese steamer *Sumida Maru*, Hubenet, 896, for Hakodate, Mails and General, despatched by M. B. Co.
Sept. 21, British gun-boat *Typhoon*, Capt. Hood, 6-guns, for cruise.
Sept. 21, Japanese steamer *Tokawago Maru*, Young, 1,230, for Kobe, Mails and General, despatched by M. B. Co.
Sept. 22, Japanese steamer *Toyoshima Maru*, Hubbard, 1,913, for Yokkaichi, General, despatched by M. B. Co.
Sept. 22, British steamer *Guy Manning*, Mann, 2,817, for Kobe, and China ports, despatched by Hudson & Co.
Sept. 24, American ship *Emerald Isle*, Staples, 1,696, for Nagasaki.
Sept. 24, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, for Shanghai and ports, Mails and General, despatched by M. B. Co.
Sept. 24, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, for Hakodate, Mails and General, despatched by M. B. Co.
Sept. 24, British steamer *Oxfordshire*, Jones, 998, for Kobe, despatched by Smith, Baker & Co.
Sept. 26, American ship *Erie the Red*, Allen, 1,580, for Kobe, (with portion of original cargo), despatched by C. & J. Trading Co.
Sept. 26, Japanese steamer *Kinsiu Maru*, Davison, 685, for Kuwanga Saki, General, despatched by M. B. Co.
Sept. 27, U. S. S. *Ashuelot*, Captain Perkins, 1,370, 6 guns, for Shanghai via Kobe.
Sept. 27, U. S. S. *Monongahela*, Capt. Fitzhugh, 2,100, 11 guns, for San Francisco.

METEOROLOGICAL REPORT

COMMERCIAL INTELLIGENCE.

IMPORTS.—The dealers have been greatly inconvenienced by the violent fluctuations in *kinsatan*. Silver coin has been often unobtainable at any price and, for the purpose of clearing goods, short loans have been negotiated at exorbitant rates of interest. Business in all kinds of 'spot' cargo has consequently been much restricted, and dealers are loud in their complaints about the damage to business caused by the gambling operations which have resulted in driving the value of native currency down to such a low point. The only redeeming feature has been a large business in *Cotton Yarn* for long arrival. In *Fancy Goods* the transactions recorded have been of the most trifling nature. Quotations generally remain unchanged but are to a great extent quite nominal.

COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$26.00 to 32.75
" Good to Best	\$33.00 to 34.00
Bombay, No. 20 Do.	\$28.50 to 30.00
Nos. 28 to 32 Common to Medium	\$35.50 to 36.75
" Good to Best	\$37.25 to 38.00
" 38 to 42	\$36.00 to 37.75

COTTON PIECE GOODS:—

Grey Shirtings:—7 lb. per piece 28½ yds. 39 in.	\$1.60 to 1.90
" 8½ lb. " 38½ " 39 in.	\$1.92½ to 2.27½
" 9 lb. " 38½ " 45 in.	\$2.25 to 2.62½
T. Cloths:—7 lb. " 24 yds. 32 in. per piece	\$1.37½ to 1.60
Drills, English: 14-16 lb. 40 " 30 in.	\$2.40 to 2.60
Indigo Shirtings:— 12 " 44 in.	\$1.65 to 1.80
Prints:—Assorted... 24 " 30 in.	\$1.60 to 2.20
Cotton Italians & Satens Black 32 in.	\$0.11 to 0.14½
Turkey Reds: 2 to 2½ lb. 24 yds. 30 in.	\$1.50 to 1.60
Do. 2½ to 2½ lb. 24 " 30 in.	\$1.65 to 1.75
Do. 3 lb. " 24 " 30 in.	\$1.60 to 2.00

COTTON PIECE GOODS:—Continued.

Velvets:—Black ... 35 " 22 in.	\$7.25 to 8.75
Victoria Lawns:— ... 12 " 42/3 in.	\$0.82½ to 0.85
Taffelclasse:— ... 12 " 43 in.	\$1.70 to 2.00

WOOLLENS:—

Plain Orleans ... 40-42 yds. 32 in.	5.50 to 6.75
Figured Orleans ... 29-30 yds. 31 in.	4.00 to 5.10
Italian Cloth ... 30 yds. 32 in.	0.24½ to 0.31
Camlet Cords ... 29-30 yds. 33 in.	4.00 to 5.00
Mousselines de Laines:—Crape 24 yds. 30 in.	0.17½ to 0.18
do. Itajime 24 yds. 30 in.	0.24 to 0.27
do. Yuzen 24 yds. 30 in.	0.35 to 0.40
Cloths, all wool plain or fancy... 48 in. to 52 in.	0.80 to 1.50
Pilots ... 54 in. to 56 in.	0.45 to 0.55
Presidents ... 54 in. to 56 in.	0.60 to 0.70
Union ... 54 in. to 56 in.	0.35 to 0.60
Blankets, green 6 to 8 lbs ... per lb.	0.35 to 0.40

SUGAR.—Quotations are as under. Stock very limited.

Sugar:—Takao in bag ... per picul...	\$5.40 to \$5.50
" in basket	\$5.10 to \$5.20
Taiwanfuo in bag... ..	\$5.55
do. in basket... ..	\$5.25

Daitong	\$4.10 to \$4.50
Japan Rice	\$2.75 to \$3.40
Kerosene Oil	\$1.90
Newchwang Pass	\$2.30

EXPORTS.

SILK.—The market has continued inanimate during the first part of the week. Later on, however, a considerable business has been done in Hanks at a decline on previous quotations of \$20 to \$25 per picul, in consequence of a very serious drop in "yau." Good Medium Maibash have been sold at \$530 to \$535, Kakedas and Filatures are freely offered, but very little business has been done in these descriptions.

Settlements amount to 560 bales and arrivals are 600 bales. Stocks 5,200 bales. Total export to date 2,814 bales against 3,857 bales last season.

	In London at 3s. 9d. per lb.	In Lyons at fr. 4.75. per kilo.		In London at 3s. 9d. per lb.	In Lyons at fr. 4.75. per kilo.
Hanks, —Superior, nom. ...			Kakeda, —Extra		
" Best	\$610 to 620 20 5 to 20 9 frs. 56½ to 57½		" Best	\$730 to 740 24 2 to 24 6 frs. 67 to 68	
" Good	\$590 to 600 19 10 to 20 1 frs. 55 to 56		" Good	\$650 to 720 21 8 to 23 11 frs. 60 to 66

" Medium	\$520 to 530 17 7 to 17 11 frs. 49 to 50		" Common		
" Common, Inferior	\$500 to 510 17 7 to 17 4 frs. 47 to 48		Filatures, —Best	\$750 to 810 24 10 to 26 9 frs. 69 to 74	
Oshins, —Good			" Good		
" Medium			" Med. & Com.	\$700 to 740 23 3 to 24 6 frs. 64½ to 68	

TEA.—We have still to report an excited state of the Tea market; prices having still further strengthened and Good Medium to-day is not obtainable under \$31 per picul.

Settlements for closing week amount to piculs 3,860 and reported arrivals are light, but no doubt a full amount of Tea is to hand in Tokio, from whence this market is being fed.

Fine Grades have attracted some attention and these shew an advance of \$2 to \$3 per picul on our last quotations.

Common	\$19 & under	Fine	\$34 to 38
Good Common	\$25 to 27	Finest	\$39 to 41
Medium	\$28 to 30	Choice	\$44 & upwards
Good Medium	\$31 to 33		

SHIPPING.

The s.s. *Glencoe* has left for New York via Kobo and Chiua ports. The s.s. *Oxfordshire*, and *Eric the Red*, have proceeded to Kobe, and *Emerald Isle* to Nagasaki.

W. & A. GILBEY'S
WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying
on an extensive Foreign Trade, having held for
many years in their Excise Bonded Stores, for the purpose
of their Home Trade, a stock of not less than 12,000
Casks of Wines and Spirits, which are equally
available for Export. These stores are by far the largest
private Duty Free Warehouses in the World, and are under
the supervision of a staff of Excise Officers specially at-
tached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them
to give the best VALUE to the public, as a twentieth part of
the Foreign Wines consumed in the United Kingdom is
supplied from their stock. In the year 1876 W. & A.
Gilbey paid duty on 1,881,049 gallons of Wines and Spirits,
and the average quantity bottled and sent out by them
daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same
whether the Wines or Spirits are obtained direct from their
Head Establishments or from any of their Agents. The
purity and genuineness of every article in this list are
guaranteed in accordance with Act of Parliament, 38 and
39 Viet., Cap. 63.

W. & A. Gilbey have always adhered to the standard of
Bottle Measure recently recognised by the Government,
namely—

6 bottles contain one gallon; 12 half-bottles contain
one gallon.

SECURITY is ensured to the purchaser, each bottle bearing
W. & A. Gilbey's seal and label guaranteeing quality and
measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London;
(Warehouses, Duty Paid) Oval Road, Camden
Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin;
(Warehouses, Duty Paid) Upper Sackville St.,
Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh;
(Warehouses, Duty Paid) Haymarket, West
End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne,
near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-
Western Goods Station, and Boney Street,
Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street,
London.

NOTICE TO MARINERS.

No. 1 of the 12th Year of Meiji, (1879.)

KODO NO SIMA BUOY.

AOGI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby give notice that a Buoy has been moored to mark the sunken rock north of Kodono Sima in the Aogi Seto, the northern passage between Misima Nada and Bingo Nada.

The Buoy is moored immediately to the northward of the rock, in $4\frac{1}{2}$ fathoms of water at low water; on the highest point of the rock, which is of very small area, there is only 10 feet of water at low water of lowest spring tides.

The Buoy is painted Black and white horizontal bands, and surmounted by a cage which stands 10 feet above the water.

The following bearings are taken from the Buoy.

Centre of Karasima (Single tree)...N. $41^{\circ} 15'$ W.

Eastern extreme of Matsui Sima...N. $37^{\circ} 45'$ E.

Eastern extreme of Kodono Sima...S. $1^{\circ} 15'$ E.

Bearings true. On the English Admiralty chart No. 132, $2\frac{1}{2}$ fathoms is given as the shallowest water on the rock.

INOUE KAORU.
Minister of Public Works.

Tokai, April 11th, 1879.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World
May 17th, 1873. 16.

JAPANESE MERCHANTS.

THE acceptance by His Majesty the Mikado of the invitation to the entertainment lately given in his honour by a number of Japanese merchants marks one of those strongly defined points of departure from former customs, and an abandonment of prejudices entertained until quite recently, for which modern Japan is noted and which she may with justice be proud of. In every country the rules governing the social status of the different classes of the population have always shown a strength of conservatism, a power to resist change, and even modification, far superior to that possessed by any other portion of its written and unwritten laws. A political revolution will sometimes, like a hurricane, temporarily carry everything before it; but while many time-hallowed institutions that are thus swept away are doomed never to be revived, the distinctions and limitations formerly attaching to different grades of society will very soon begin to reassert their latent influence if not in a legal, at least in a social point of view. English dominion has completely changed the polity of India in everything except in regard to feelings of caste, which socially it has comparatively but very slightly modified. Even in England, the social prerogatives and distinctions attaching to the nobility in modern days are probably not in general inferior to what they were when the Magna Charta was framed; and the Quartier St. Germain in Paris has preserved its prestige and its characteristics up till to-day, in spite of the terrible revolution of 1789 and of all the others which have succeeded it. In nearly every capital of Europe may be met these strongholds of exclusiveness and social privileges, and if there is any sign that the outer bulwarks of some of them show signs of weakness, it is only within the last decade or so that these indications have become perceptible.

In Japan, the social, even more than the legal and politi-

cal rights of the different strata of the population have, from of old, been well defined in very narrow limits both by law and by tradition and custom. Our most reliable knowledge of old Japan is derived from Kämpfer, with whose works most of the residents here are doubtless acquainted. The gifted Hollander, possessing a wonderful talent of observation and discrimination, fine judgment and great natural shrewdness and tact, to which must be added the most painstaking, untiring energy and capability for work, dealt almost exhaustively with his subject; and, as the constitution of the country did not undergo any change, (the Japan of Thunberg in 1772 and even of Siebold in 1840, being identical with the country as he saw and observed it in 1692,) he left very little of what was new or important to be said by his successors. Coming from a country which was the only one in Europe where commerce occupied a position which enabled those who were successful in the pursuit thereof to be the peers politically and, in nearly every regard, even socially of those who had distinguished themselves in other walks of life; where the merchant prince with his money acquired by trade, taking his seat in the legislative halls of the nation, claimed full equality with him whose boast lay in his ancestors and his quarterings, his military or his diplomatic services; the great Dutch traveller upon his arrival in Japan found himself in a country where the merchant, whatever his wealth might be, was placed at the foot of the social ladder. The non-producing middleman, as he was called, was here considered the inferior of the farmer and of him who practiced what are called mechanical arts—of the carpenter, the blacksmith, the stone-mason, etc. In other countries in Europe, where the merchant's social status was far below that of the nobility and of the civil and military officers of the government, great wealth would open the ranks of these exclusive classes, if not to himself, at least to his descendants whilst in general the purchasing power of his money was limited only by the amount he possessed and by his capability of enjoyment; it was not circumscribed by legal enactments when, in lavish display and expenditure, he desired to show his riches and to emulate those who from their birth had been his superiors. One of the foremost and best known writers of the modern school of British economists states in positive and unqualified language, that great and glaring inequality of fortune and position among its inhabitants is a blessing to any country in exciting a spirit of emulation and industry among the less favourably situated classes, and he ascribes England's superiority in a great measure to this cause. He argues that "no successful manufacturer or merchant ever considers that he has enough till he is able to live in something like the same style as the most opulent noblemen, that those again who are immediately below the highest become a standard to which the class next to them endeavour to elevate themselves; and that the impulse extends in this way from one rank to another till it reaches the very lowest classes, individuals of which are always raising themselves by industry, address and good fortune to the very highest places in society."

Whatever truth and force there may be in this argument it was rendered inoperative in Japan, where the laws not only assigned to the merchant his place in society, but where they also prevented anything like a display of rivalry with those born above him. The clothes which he wore, the *kago* in which he rode, the saddle horse on which he was not allowed to ride, everything in fact that surrounded him had to conform to law and to bear outward semblance of his lowly position. On the highroad, his head had to touch the ground before the lowest passing *samurai*, and if his obeisance did not come quick enough, or was not as humble as the other's arrogant pride demanded, small note was taken by any existing authority if a sharp reminder with a sharp sword confined him for weeks or months to a sick bed. In very detail of his life he had to live up to definite rules and regulations. If the pole of the *kago* in which he was carried was longer than it ought to be—as long perhaps as that of some *samurai* whose year's pension he could have paid out of a day's earnings—he risked that any petty magistrate might order him to step out and carry the *kago*, while, to still further degrade him, his own chair-bearer was ordered to ride within. Still, in spite of all these drawbacks, commercial life in Japan fairly developed itself, showing unmistakable signs of strong, healthy and enduring vitality. The respect and consideration which, among themselves, the members of the commercial community paid to those qualities which in other countries found wider and more general recognition, was found to be sufficient to ensure their practice in spite of disregard, slights and supercilious neglect shown by the more favored classes. From what we can gather from books, from the tales told by story tellers, and from other oral and written sources, we find a condition of things very similar to what existed in Europe in the Middle Ages, both in the composition of guilds, as well as in the more narrow limits which defined the individual commercial household. As regards the latter, it was more particularly pervaded by a feeling which was the outgrowth of the peculiar feudal system governing Japan and was analogous to the spirit moving the old-time *samurai*. The commercial honor and integrity of the house, and the perpetuation of it, was the most important consideration, superior to—often to total exclusion of—all other claims, even those of self and family. The head of each house could only govern as long as he acted up to well recognised principles; any marked and continued deviation therefrom would, in general, speedily cause a family council to curtail his power or to depose him altogether. Where there were no male children, a son-in-law was selected merely with a view to his business qualifications; family, connections and possessions being in such cases little sought for, and often purposely disregarded. It was not an enviable position for any one possessing an atom of spirit and self esteem.

The principal object being to perpetuate the house, he had of course, to adopt the name of the bride; he was treated in every regard worse than the lowest of the clerks, generally obliged to take his meals with the servants and to suffer other indignities, making his condition one of abject servitude, the galling bitterness of which was recognized by the public at large to such an extent as to pass into many of the proverbs of the nation. If, after a few years of such probation, the son-in-law showed himself possessed of the needed business qualifications he was gradually promoted, but failing to do so he was simply "divorced" and sent away without any regard to the injury inflicted upon the conjugal feelings of either husband or wife.

In all old business houses the chief clerk—necessarily a man well advanced in years—possessed a great deal of open and still more of occult power. More especially was his influence made to appear upon the accession of a new chief to the house. The young heir found his chief subordinate full of reverence and apparent submission, but if in the first flush

produced by the marks of consideration which everywhere met him; he ventured to make anything like great innovations, if he offended against the traditions of the house, or even if his private expense account assumed larger proportions than was considered proper or even necessary, he was very soon reminded in humble and submissive but nevertheless in unmistakable language that there was a "power behind the throne" which would only remain unseen and unfelt as long as his acts did not necessitate an appeal to it. In Japan, where custom was all-powerful, the old clerk only very rarely found it necessary to appeal in the last instance to the family council. The system which made him what he was, naturally sustained him in his influence and position. What the first *samurai* of a noble was to his lord, this clerk was to the firm which he served. The latter's devotion and self abnegation, and oft-proven readiness to sacrifice his life if need be in the service of his master's house, made him the counterpart and the peer of the other, even if he lacked the martial air and graces which, with the *samurai*, gilded these same qualities with a brighter and more flashing light.

Osaka became the first commercial emporium of Japan, the place where the great, old established houses had their central office; while in other places, even in Yedo, they had only branch establishments. Those business firms, confined to the latter city, were only considered mushroom establishments, commercial *parvenus*, whose standing and record of only 150 or 200 years did not yet entitle them to formulate claims to stability and prominence which could demand recognition. What comparison could be instituted between such as these and the old Osaka houses with their record?

There was the house of Ten no Jiya, among whose transactions may be found the record of money lent in the eighth century to the celebrated priest Kobodaishi to open up the wilderness of Koyasan and to build temples thereon which exist there to the present day; the record of dealings with the celebrated Hojo family of regents in the 12th and 13th century, and the record of money lent to the great captain Hideyoshi (Taikosama), to build the well known Osaka castle, towards the end of the 16th century. The firm of Kono Ike were, for many and many centuries, the recognized bankers of the *Daimio*, and the names of a majority of the princely houses probably could be found on their books. There are many others whose records go back to the Middle Ages.

The house of Mitsui, which is the one best known to foreigners, dates its origin from the time of Yoritomo in the 12th century. The founder of the house was then a *saki* brewer at Matsusaka, in the province of Isé. Still the firm was generally considered rather as one of the *nouveaux riches*, for it was not until the year 1689 that they commenced business as drapers and silk merchants in the city of Kioto, from which place they branched out to every noted city of Japan. The business of *go-fukuya* has always been the most prominent and the one that was held in by far the greatest estimation.

With the advent of foreigners, were imported the seeds of what was to prove to many an unexpected source of gain and wealth, but to many others an ominous and even ruinous change. As a rule and with hardly any exception, old established houses of good repute and standing kept as scrupulously aloof from the purchase of foreign goods, for the purpose of dealing with them, as if all such goods were tainted with the small-pox. A dealer in foreign merchandise, on however large a scale and however honorable in his dealings, was set down as a *yamashi*, an adventurer. A maker of such plated "Brummagem" trash as is now made would have received as much favor from the ancient, honorable, powerful guild of goldsmiths in London in the 17th century, as the dealers in foreign wares found here in the eyes of the representatives of old houses. Silently, however, but surely,

steadily and even rapidly, foreign merchandise forced its way into the market and into general recognition. Apart from those articles which were new to Japan, but the utility of which soon rendered them necessary, such as clocks, leather shoes, hats &c., foreign goods to a great extent took the place of some leading home staples, such for instance as cotton goods, while in some branches, such as drugs, they entirely supplanted heretofore existing trade. Desertions from the old orthodox, conservative ranks naturally followed, for with many it thus became not a matter of choice but of necessity.

Lucky were those who did so in time; many who in sullen, self opinionated discontent held on for too long a time were "forced to the wall." Each new desertion of course influenced others, until now, although we are assured by well informed Japanese and know from personal experience, that the feeling we have described exists to this day, yet it only does so with a comparatively limited number, and in modified form, destined soon to pass away. Many of the "Brumming" manufacturers, or their sons, now sit in Parliament and ride in their own carriage, adorned, may be, with a newly acquired coat of arms; and, as for their own use they only require genuine jewelry and precious ornaments, the descendants of the old goldsmiths, if any such still continue in the same line of business, will be well content to wait upon them with their goods. In the same way the old fashioned Japanese *go-fukuya* may still refuse to admit into his warehouse a single piece of goods of foreign manufacture, but the *daimio* and their retainers, who formerly formed his *clientèle*, are lost to him; his customers are now largely made up of people who make their living by dealing in foreign goods, while probably nearly all of them make use of them in some form or another, and sooner or later he must abandon the field, or else conform in part to the taste and convenience of those whom he serves.

It seems to be a matter of surprise to many, and one of which among foreigners frequent mention is made, that with the occult influence many of the wealthy Japanese merchants must have been possessed of individually, their position collectively, should both socially and politically have been such an humble and lowly one; but we need not go as far as Japan to find a state of things equally if not more strongly anomalous. It is certainly more surprising that in free and constitutional England the civil disabilities of the Catholics and the Jews should have endured until far into the present century, than that in the most stolidly conservative form of government the world has ever seen, a few rich individuals of the lower classes should be unable to change the social or the political organization of the state.

With the antecedents heretofore prevailing, the acceptance by the Mikado of the entertainment given at Ueno by the merchants of Tokio, does not lack significance. It implies a formal recognition by the fountain head of civic honour and political power, of the social standing as well as of the usefulness and the worth of the mercantile class. It is idle and futile to disparage, or make light of the influence of such facts; their importance is recognised in every country and under every form of government. The honor which has been conferred upon them should make all Japanese merchants alive not only to the change in their social position, but also to the increased range of duties and responsibilities entailed thereby; and the common bond by which they were united on this occasion, should make them forget those prejudices which caused feelings of jealousy, caste and exclusiveness to exist among themselves, and which were generated and born by conditions formerly existing but now wholly and forever abrogated.

EXTRA-TERRITORIALITY IN JAPAN.

VIII.

HOWEVER widely individuals may differ in opinion as to the desirability or practicability of extending the rules of international law in their plenitude to all the nations of the Earth, there is but one opinion among jurists in respect to the entire applicability of those rules to all matters, which concern the relations of one nation to another. Publicists and jurists are all alike agreed, that the positive law of nations, as far as it relates to the essential rights of sovereignty, territorial, legislative and judicial power, extra-territorial action, and compacts or treaties between independent states, applies equally to all nations.¹ All nations alike have the right of contract, and their treaties are subject to the same rules of interpretation and morality which govern the contracts of private individuals. Japan is no exception to this rule. A rigid observance of the faith of treaties, it is said, is appreciated by all mankind whether civilized or savage. It might be added also, that a faithful interpretation of them, is equally appreciated.

The Government of Japan, by her treaties with the Western Powers has surrendered to a limited extent, the exercise of her judicial authority over foreigners, and while those treaties remain in force she will cheerfully abide by the terms of her solemn engagements. But while she is thus willing and ready to acknowledge and rigidly observe her plighted faith, she demands the full and free enjoyment of every sovereign power not expressly surrendered by her. She maintains that the judicial authority conferred upon consuls by virtue of the extra-territorial provisions of existing treaties, in no way denies to her the exercise of her original inherent sovereign power to prohibit by general law the commission of any crime by any and all persons whomsoever, within her territorial limits, not inconsistent with the treaty right of trial and punishment. As to penalties and punishments prescribed by Japanese laws, the consular courts may justly hold that they are not applicable to their own nationals; but as to the *prohibitions* therein contained, they are *obligatory upon all*. In other words, that the authority of consuls to "try and punish" their nationals for crimes and offences committed by them "according to the laws of their own country" does not deny to Japan her sovereign right to define and prohibit by general law, all crimes and misdemeanors committed by foreigners against person and property within her territorial domain.

Nay more, she maintains that it is clear by the very terms of Article VI. of the American treaty, as well as of those of Article V. of the British treaty, that the exercise of that power is, by necessary implication reserved to herself.

It is a singular and most noteworthy fact, that the language employed in both these Articles, limits the jurisdiction over crimes and offences, to the right to "try" and "punish." No better or more precise words could have been found to clearly limit and accurately define the jurisdiction of consuls. It is a simple judicial authority, and confers upon nobody the right to legislate or define by law what acts shall, or what acts shall not be unlawful if committed within the territorial limits of Japan. It is true enough that the treaties expressly declare, that crimes and offences committed by Americans and British subjects, shall be tried and punished according

1. Papers on Extra-Territoriality, presented to the Institute of International Law, Vienna, August 1875. Instructions to Commissioner Everett. MS. April 15, 1845: Op. Atty. Gen. Vol VII. P. 492, -522: Wheaton, Law of Nations, Tit. "Sovereignty."

to the laws of their respective countries. But that has nothing whatever to do with the question of what acts shall be deemed crimes or offences. The treaty provisions relate exclusively to the *mode of trial and measure of punishment*: to the *Remedy*. This word furnishes us the key to the whole question of criminal extra-territoriality in Japan.

"All that has been sought by the Christian Powers," says the American Secretary of State, speaking of the extra-territorial privileges and immunities of American citizens in Japan, "is to withdraw their subjects from the operation of such laws as conflict with our ideas of civilization and humanity, and to keep the power of trying and punishing in the hands of our own representatives."²

No one we think can rightly dispute that general proposition. But let us see more particularly to what extent the able secretary construes the extra-territorial provisions of the American treaty, as an immunity or exemption of American citizens from the laws of Japan.

"Citizens of the United States, resident in Japan, are expected and required to observe and obey the laws of Japan in the same manner and to the same extent as the like obligations rest upon the subjects of that Empire. In regard to the enforcement of these laws, and the imposition of penalties for their infraction, citizens of the United States have secured to them, by the provisions of existing treaties, the right of being tried in the consular courts of their own nation, established in Japan, and according to the mode prescribed by the laws of the United States, and are protected from the infliction of any other penalties than those prescribed or warranted by the laws of their own country. So long as these privileges are recognized and respected by the Government of Japan, there can be no cause of complaint on the part of this Government in relation to the promulgation of any municipal law or regulation, which the legislative authority of that country may deem necessary to its public interest or welfare."³

These instructions set forth clearly and precisely the extent and limit of criminal extra-territoriality in Japan. The claim that Article VI. of the American treaty "confers upon citizens of the United States the rights and privileges of complete extra-territoriality in all criminal matters,"⁴ amounts therefore, simply to this, and no more, viz:—the right to be tried and punished by their own courts, for "offences" against law, and it matters not whether it be offences against Japanese law or American law. The only difference between offences committed by Americans against Japanese laws, and offences committed by Japanese against those laws is, that Japanese will be tried and punished therefor by Japanese Courts in accordance with the forms and penalties prescribed by Japanese law, while Americans will be tried and punished therefor, in accordance with the forms and penalties prescribed by American law. Accordingly, in rendering judgment in the case of a citizen of the United States charged with having "committed an assault upon a Japanese with intent to kill, contrary to law, and against the peace and dignity of the Empire of Japan and the United States of America," Consul General Van Buren with great clearness remarked:—"The counsel for the defence contends that the 'shooting laws' of Japan affect only the subjects of

Japan, and that no foreigner residing in the Empire is under the slightest obligation to obey them, and this appears to be the commonly received theory of the community. The Court cannot subscribe to this doctrine. All persons coming to Japan from a country not having a treaty with this Government are of course subject to Japanese laws. Those from countries having such treaties are exempt from obedience to Japanese laws only so far as such treaties expressly define such exemption."⁵

We have never heard the correctness of this doctrine disputed or questioned by anyone. The power of criminal legislation necessarily remains with the Japanese Government where it originally belonged, unless that power has been expressly surrendered. No foreigner living in Japan can, therefore, claim to be exempt from the obligations of Japanese laws, except by virtue of express treaty stipulation.⁶ Japan, we have already seen, has surrendered her right to try and punish foreigners in her own courts for violating or disobeying her laws, but it does not follow, that she has therefore, surrendered her power to define and prohibit by lawful enactment all crimes and misdemeanours, by whomsoever committed, within her territory.

Surely criminal extra-territoriality could never have been intended to absolve foreigners from the duty imposed upon them by the law of nations, and the laws of honor and hospitality as well, to obey the laws of the territorial sovereign, enacted for the maintenance of order, the security of society, or the tranquility of the realm.

There never was the least reason to suppose that criminal extra-territoriality was sought for the purpose of licensing foreigners to defy and disobey at their pleasure the municipal laws of Japan. We have yet to hear of anyone so bold or so reckless as to assert that doctrine; such a doctrine would justly stamp with infamy any man or any Government that would assert it. Americans and Englishmen come to Japan to exchange in a friendly manner the products and manufactures of their own countries for those of the Japanese. They come, not as "conquerors of the soil, but as alien friends, and as such they are bound by the laws of honor no less than by the law of nations, to respect and obey all the rightful commands of the territorial sovereign, whose hospitality they enjoy."⁷

As, however, it was morally certain that Americans and British subjects would sometimes commit offences against the person or property of Japanese subjects, or the subjects or citizens of other countries, in violation of the law of the territory, and as the Governments of the United States and Great Britain were unwilling to entrust the trial and punishment of their citizens and subjects to the Courts of Japan, it was agreed by the high contracting parties that the consuls or other public functionaries of those countries, thereunto appointed, should try and punish them therefor, according to the laws of their own country; that is, should try and punish them according to the forms and method prescribed by the laws of their own countries. Thus leaving Japan in the full enjoyment of its original sovereign power to enact its own general laws for the government of all persons alike within its territorial limits. It follows therefore, that the laws of Japan should govern in defining what acts shall be prohibited, or made punishable; and that whatever relates to the mode of trial or

measure of punishment to be inflicted for the commission of those acts, should be governed by the laws of the country to which the accused belongs.

The criminal laws of Japan, as long as they do not infringe or restrict the right of consular courts to try and punish foreigners for violations thereof in the manner provided by treaty agreement, or contravene any other treaty provision, are just as obligatory upon foreigners as upon native subjects; except indeed they should conflict with the law of civilized nations, by outraging the rights of humanity, in which case of course no court would be under any obligation to enforce them. The whole question of the power of Japan to define and prohibit by law all crimes and offences committed by foreigners, under existing treaty arrangements, is most ably and clearly expounded by the Honorable John A. Bingham, American Minister to Japan; in a despatch to his government respecting the "Hunting Regulations of Japan," under date of November 17th, 1873. He says:

"Having examined, as requested, the Hunting Regulation's referred to, I am of opinion that nothing therein contained, when construed according to the manifest intent thereof, conflicts with the privileges secured by treaty to American citizens in Japan. It may not be improper for me to add in support of this opinion, that I find nothing in the treaty of 1858, which in anywise denies to Japan the general power to legislate over all persons within her territorial limits by general laws, while article VI. of that treaty does, by necessary implication, in my judgment, declare that the government of Japan may by law define and prohibit offences within her territorial limits, and that no person resident therein is privileged by any treaty to disregard and violate such general law.

"It is no answer to this to say that, because there are certain privileges secured by treaty to the government and citizens of the United States, Japan may not, therefore, rightfully exercise general legislative power over all persons within her limits, in all matters not expressly provided for in the text of the treaty. I am not unmindful, in considering this question, that by Article VI of the treaty, Americans committing offences against Japanese are to be tried in American consular courts, and, when guilty, punished according to American law; but I submit that it does not result from this that the Government of Japan may not by general law define and prohibit all crimes and offences against person and property within her limits.

"There is nothing in the "Hunting Regulations" that I can discover, which can be construed to deny to American citizens the right to be tried for any breaches thereof before the American consular courts, and to be punished upon conviction according to American law. The penalties prescribed can only be held to apply to Japanese subjects, while the prohibitions therein are obligatory upon all."* The Secretary of State, in acknowledging the foregoing, informed the Minister that the views therein expressed were entirely in accord with the views of the United States Government, and added thereto the general instruction before noticed by us, that "Citizens of the United States resident in Japan are expected and required to observe and obey the laws of Japan in the same manner and to the same extent, that the like obligations rest upon the subjects of that Empire."* The power of general legislation by Japan, over the acts, and offences committed by foreigners in the country was further distinctly acknowledged by the Government of the United States in the matter of the Press laws of Japan, issued by the Prime

Minister, June 28th, 1875. The American Minister in transmitting a copy of these laws to the Secretary of State, requested the views of the American Government respecting the power of Japan, under existing treaty arrangements, to regulate and control by general law, the publication of newspapers by foreigners at the open ports of Japan.¹⁰ In response to this inquiry the Minister was instructed, that nothing contained in the existing treaties could be construed as an authority to foreigners to publish newspapers in Japan in violation of the laws of the Empire. that Japan in common with all other independent nations had the perfect right to define and declare by law who might and who might not publish newspapers within the territory of the nation, and the conditions, under which those persons might exercise that privilege; that the general Press laws enacted by Japan were Japanese laws, and whether wise or unwise, politic or impolitic, were to be respected and obeyed by foreigners as well as natives; that Japan might, if she chose to do so, restrict the publication of newspapers to Japanese subjects to the exclusion of foreigners; that all other governments, including the United States, reserved to native subjects certain rights and privileges not accorded to foreigners, and that Japan could not consistently be made an exception to this rule, and finally the minister was instructed to notify American citizens of the requirements of the Press laws of Japan, in order that they might not offend against them through ignorance of their provisions.¹¹

THE Currency crisis, alluded to last week, has already shown signs of abatement; the fluctuations in paper money have not been so frequent or excessive, and coin from the Treasury has been gradually showing itself in all channels of trade. It was indeed a fortunate circumstance that the silver yen were introduced at the time adopted, for otherwise a far more serious perturbation of commerce would have ensued owing to an unusual scarcity of Mexican dollars,—a scarcity which had been gradually showing itself for some time, and from which the late Notifications have afforded the best and most immediate relief. It was not to be expected that this existing scarcity of Mexican dollars would be got over at once; but it would be unfair to attribute to any other cause any solitary instance in which a premium had been demanded for them. Had silver yen not been introduced the same result would have shown itself in a different but a more marked manner. So far the assimilation of dollars and yen has been successfully commenced and, as far as the local trade is concerned, their parity in value already exists. But, as the yen are not yet accepted in Hongkong upon the same value as the dollars, it stands to reason that—for purposes of export—the latter coin must be more sought after and, when found to be scarce, command a premium. A few special transactions have lately tended to create a demand for dollars, (consequent upon the Bank arrangements of accepting or paying yen only after a certain date) and, as these were unusually scarce, the result has naturally been the payment in some instances of a premium to secure them. And this liability to an occasional difference in value must continue until the yen becomes equally serviceable with the dollar as a medium of export. We trust it will not be long before the acceptance of the yen in China removes this slight disadvantage it still has to experience; but whether that event be immediate or not, the benefit already derived by the introduction of the coin upon this market is no less real and can be no less recognized.

The public still wait for some declaration from the Government as to the reported forgery of Kinsatsu and as to the course that will be pursued with the spurious paper, if any exists. But, in the absence of any Notification to the contrary, we are justified in assuming that no suspicion need attach to any of the notes bearing the Treasury seal, and that the semi-official declarations made in Osaka, as also the action of the bankers there and in our own vicinity, thoroughly warrant the confidence which is still felt by the holders of paper currency.

MR. YOKOYAMA YOSHIKIYO, whose essay on the origin of the Japanese race will be found in another column, is a well known archaeologist and writer of various papers on Japanese archaeology. He now discusses a subject which has occupied considerable attention and one upon which other students have been and still are at work. In reading this essay, one is apt to feel disappointed that a *savant* writing at the present time should not attempt to dispel the ancient fictions of "heavenly descent" which still encumber the traditions of past ages, and which, in Japan, still form the starting point of her early history. Mr. Yokoyama still leaves us struggling in the uncertainties of fable and mythology to arrive at any earlier records of history than those we already possess—a period which Mr. Griffis describes as the "Twilight of Fable." A few introductory remarks, which we have omitted in our translation, point out that when the Sun Goddess and the divinities in her train first descended on Japan, some aborigines must already have existed here since Sarada Hiko no Mikoto (a native divinity) went forth to meet them and act as their guide! And even before the advent of the Sun Goddess, when Sosanoō no Mikoto returned to Japan, he found wild inhabitants whom he tranquillised. These inhabitants our author describes as the ancient aborigines of Japan, but for their chief he would also claim a heavenly descent and distinct type of origin. The result is that we are hardly better informed on this subject than previous authors have instructed us.

All writers apparently agree that the aborigines of Japan were similar to the Ainu race; but we must feel that, compared to the peaceful, docile Ainu of the present day, their ancestors were of a very different type. Mr. Yokoyama gives the latter a Manchurian origin and describes them as a fierce and warlike people, living upon the flesh of animals, (and, unless Professor Morse's discoveries point to a still earlier race, we must also assume that they did not despise human flesh as an occasional, if not frequent delicacy,) whilst other histories record the stubborn resistance they offered to the subsequent invaders of their country, wherever the latter may have come from. But we have yet to hear whether the archaeological discoveries lately made in Yezo and elsewhere of signs of a civilisation which the Ainu never appears to have possessed, will not prove that a race existed here anterior to any we have yet heard of. Mr. Yokoyama's speculations are interesting, although it cannot be denied that they are also vague. Much yet remains to be done in the same field of enquiry; and we hope that, with the practical train of thought now developing itself in Japan, we may in time be taken out of the "twilight of fable" which surrounds her early history into the sunshine of knowledge derived from science.

THE late visit of H. B. M. Minister to Sendai gives rise to the suggestion that it may be the intention of the Japanese Government to open a port in that province to foreign trade. It is more than probable that Sir Harry Parkes' cruise in the *Hart* had no object whatever beyond that of a holiday excursion; but still the opportunity is a good one to say a word or two on the subject and, once more,

to revive the old topic of 'more treaty ports'. It was reported last year that Nobiru was to be made into a good harbour and connected by means of a canal with the town of Sendai. Works were commenced, and we heard quite lately of a portion of them having been destroyed by a tidal wave; whilst the canal has also been proceeded with. But a very large outlay has still to be incurred before Nobiru can be considered a safe harbour for foreign shipping, as the contemplated works can only be said to have been partly commenced. The position is a good one for a large rice trade and, when made a safe calling port for shipping, it would give considerable stimulus to the agriculture of the north of Japan. What is so much to be desired for the development of agriculture is easy communication; good roads and cheap freights. So much of Japan still remains uncultivated, and such difficulties still exist in moving produce now raised to a market, that any steps taken by the Government to facilitate communication must be regarded with the greatest satisfaction. For these reasons the country cannot grudge the expenditure of money in making good harbours; but these alone will not be sufficient. Roads must be made into the interior, and cheap freights must be secured for coast traffic; the former has been urged over and over again, and the latter has now equally to be urged at a moment when the authorities are desirous of excluding foreign shipping from a share in the coasting trade, a share which is of little value now but which, if more ports are opened, might be of some importance.

Little or nothing has been said of late about treaty revision, and we are ignorant whether the Japanese still think that the proposed opening of two more ports to foreign trade will be regarded as a concession and a privilege. We would hope, however, that the unanimous opinion which has shown itself on the subject has convinced the Government that foreigners now look upon such partial measures as unsatisfactory and useless; and that, until it becomes the policy of the country to seek as a favor the immigration of foreigners and foreign capital, which now is restricted or altogether prohibited, it is needless to talk of the opening of one or two or more ports.

A PERUSAL of the article we translate elsewhere from the *Hochi Shimbun*, on the subject of Savings Banks leaves a feeling of the greatest disappointment that the native press should still be capable of writing such folly, that their advice to the public should be so pernicious, and that their ignorance of the subject should be so apparent. Reading this article one is disposed to regret that the press laws of Japan do not impose a heavy fine or imprisonment for such writing as that now indulged in by the *Hochi Shimbun*.

The only point in the article which can be endorsed is the one as to the advantage of Savings Banks generally, but on this subject the writer might have given more information, and later statistics than those of 1844! He might have stated that the system adopted in England began in 1817; was sanctioned by an Act of Parliament; the management of the banks placed in the hands of trustees, and the deposits paid into the Banks of England or Ireland for investment in Bank Annuities or Exchequer Bills; that the Government of England recognized their special duty to protect the savings of the poor, and finally, in 1861, established the Post Office Savings Banks which are guaranteed by the state; and that eight years later the savings of the humbler class in the United Kingdom amounted to over 51 millions sterling or about 250 millions of yen, divided between the old Savings Banks and the Post Office. But no writer out of Japan would have recommended that these savings should be invested in commercial enterprises; and, even here, we hope that the one we quote to-day is a solitary specimen. Let the Japanese press urge as strongly as they can the advisability of small savings by the poorer class, let them argue as much as

possible against the folly of keeping paper-money in houses liable at any moment to fire or theft; but, if they have any conscience at all, let them denounce all speculative investment of these savings, and expose the recklessness of those who can tender such advice. In establishing a Savings Bank Branch to their Post Office, the Japanese Government have already taken the right course, and if the native press writers desire anything more honest than to play ducks and drakes with the small savings of poor people, they cannot do better than urge all that class to take their money at once to the nearest Government Savings Bank.

ATENTION has lately been drawn to the increased cultivation of wheat in Japan, and it has justly been pointed out how large a field still exists for the development of this commerce in the acres of unploughed land still lying waste in the country. But to realize the difficulties to be overcome before Japanese wheat can expect to have much influence on the markets of Europe, we would remind our Japanese readers that the cultivation of the grain alone is not sufficient; roads, good roads, and cheap transport are an absolute necessity. The farmer's labour in the interior is useless unless he can bring his produce to a market at prices to compare with those paid by his fellow labourer in countries capable of raising far larger crops than his own. Those desirous of studying the subject cannot do better than read an interesting article by Mr. T. T. Vernon Smith in the July number of the *Nineteenth Century*, entitled "Our New Wheat Fields in the North West." We here see how it is that America has lately so greatly increased her shipments of grain to Europe, and how the enormous immigration of labour from the United States into the fertile lands of Minnesota and the valleys of the Red River and Saskatchewan, promises to make these shipments still larger every year. The influx, we are told, began about October, 1877, just after the "magnificent harvest of that year had been gathered," and in the seven months ending March, 1878, over 2,550,000 acres of land were disposed of on the United States side of the frontier alone—for actual and immediate settlement. But this rush is nothing to what is now taking place in Manitoba on the Canadian side of the boundary. There, it is estimated, the population is being added to at the rate of 400 persons per day, and over 3,000,000 acres of wheat land have, in that district alone, been recently allotted to actual settlers, while it is anticipated that as soon as the rail communication is complete the rush of immigration and the rapid breaking up of the land into cultivation will excel anything of the sort ever known.

At present wheat growing in Minnesota and Manitoba is one of the most profitable speculations in the world, some of the farms produce from forty to fifty bushels per acre, whilst on the Canadian side of the frontier the average is about thirty bushels, which can be delivered on to the railway carriages at a cost to the farmer of between seven and eight dollars per acre or about 10s. per quarter. And 200 millions of acres, of this prolific land, lying along the banks of broad navigable rivers, are yet waiting for the plough!

But America is not the only large grain producing country Japan has to compete with. India considers herself one of the chief sources of wheat supply, her yearly production reaching about 40,000,000 quarters against 45 millions exported by the United States and 35 millions produced in France and Russia; but even India, according to the *Bombay Gazette* (from which paper we have been quoting), sees the possibility of her trade being supplanted by that of America and that it will be impossible for her to compete, in ordinary qualities, with the wheat which will be produced by the United States and Canada. And the advice given to

Indian farmers in order to meet this certain development of the grain trade, would appear to be equally applicable to Japan, should the latter require to find a market for her wheat beyond the Eastern Seas. It is, that the growth should be restricted to the finer kinds which can stand a higher cost of transport than the cheaper sorts. But Japan has fortunately a large market nearer at hand: in China and Eastern Russia, and her best endeavours should be directed to supply the increasing wants of these near neighbours. Those countries alone offer sufficient inducement for Japan to push her wheat farming to every available acre of land which has not yet been touched by the plough, but to facilitate this agricultural progress she must no longer neglect the urgent necessity of good roads and cheap communication.

THE absolute necessity of the command of a large amount of capital for mining purposes, and even for prospecting, has again been shown by the failure of the Alpha Gold Mine, lately started in the Madras Presidency to work some quartz reefs in the Wynad district. This company possesses a property proved to contain some highly auriferous ore, and with a capital of £10,000 its sanguine promoters expected to gain untold wealth. But the money did not go far in the purchase of machinery and plant; the workings were not skillfully conducted and the machinery was not of the most suitable kind. Work had to be suspended, but we now hear that the Foreign and Colonial Tunnelling and Prospecting Company has come to their assistance with £37,000, a skilled mining staff and patent machinery of the most modern description, and that after raising their capital to £60,000 another attempt will be made to continue the work. Great expectations have been formed of the future mining prospects in Southern India and proposals are now on foot in London for the formation of one or more joint stock companies to work the quartz reefs, which, even with the inferior appliances of the Alpha Company, are reported to have yielded 10 dwts. and 12 grains of gold for every ton of quartz. The average yield in Victoria being only from 10 to 11 dwts, the prospects of the Wynad reefs are very promising if worked in an efficient manner. But quartz mining as, in fact, all deep mining requires an unlimited supply of capital, and it is to be hoped that the experiences of the 'Alpha' will prevent any more companies making similar failures, for the want of the very first necessity in mining undertakings. And for Japan the lesson is also a valuable one, when added to those which she has already had the opportunity of gaining in the various attempts made by her people to construct or work mines without capital. Eagerness is now displayed in this country for investments in different industries, whether it be the formation of a *Shōsha*, the purchase of the Yokohama-Tokio railway, or the establishment of a factory or a bank; but no spirit has yet shown itself for subscribing to any large mining enterprise. And yet if Japan wishes to develop her resources, if she is so eager to increase her exports, so desirous of changing the 'balance of trade,' why do not her monied men come forward and provide themselves the capital which they will not allow foreigners to furnish for mining purposes?

THE newspapers brought by the *Oceanic* contain full particulars (which appear in another column) of the massacre of the British Mission to Kabul, and the prompt measures taken by the military authorities to visit the perpetrators with condign punishment. Intelligence of the intended outbreak appears to have reached Candahar from Herat and was telegraphed to the Indian Government, but unfortunately too late to avert the impending calamity. It will be recollected that the Amir's brother is Governor of Herat, and the fact that it was known there, that the English

Envoy was to be attacked, confirms the statement that the Amir's brother is the prime mover in this most unfortunate affair. The British army, being still in their advanced positions will give them a great advantage, but they will probably experience considerable difficulty in keeping communication open with India, as the latest Reuter's telegram (under date October 2nd) states that the powerful tribe of the Ghilzais, which numbers 50,000 well armed fighting men, have made common cause with the mutineers. This defection may delay General Robert's advance until reinforcements reach him, but in all probability a very short time will suffice to overrun the country with British soldiers and to reestablish on a firmer basis the rule of the Amir. The members of the unfortunate mission and their gallant leader appear to have acted with the greatest bravery; hemmed in by a vast crowd of infuriated fanatics in their wooden residency, the little band of seventy-nine men held the bloodthirsty Afghans at bay until their shelter was fired, when they sallied forth and fell, fighting to the last, in a desperate but unsuccessful attempt to cut a passage through the hosts which surrounded them. The greatest excitement naturally prevails in India and England, and we already see that prompt measures have been taken to send out reinforcements from home, whilst the troops now released from service in South Africa, will at once proceed to India. The recent massacre in Kabul revives the feeling which existed in 1841, now nearly 38 years ago, and as a melancholy interest attaches to the capital of the Amir, we extract the following brief account of the city, written in August last, from the Bombay Gazette:—

About a mile-and-a-half to the north-east of the Bala Hissar is the site of the British cantonments occupied by our troops in 1840 and 1841. We went over the ground in the course of a recent morning ride; but beyond the remains of a small part of the rampart on the western side there is nothing now to show that the place ever consisted of anything other than the fields of rice and Indian-corn that now cover it. The gardens and trees that used to adorn it were all destroyed and utilized as forage or fuel before the troops left the cantonments on their disastrous march to Jellalabad, and the houses and barracks were burned to the ground by the fanatical mob of Afghans the instant they were vacated. It was difficult for us to realize the fact that here there was for two years a large British cantonment in which English ladies and children had lived.

Ascending the low range of hills behind the village of Behmaru, 500 yards north of the old cantonment, on which the blood of many a gallant British soldier was spilt in those terrible months of November and December 1841, an excellent and extensive view of the surrounding plain is obtained. The village of Behmaru is still the same miserable collection of mud hovels, which I imagine it was forty years ago, when it so often gave cover to our implacable enemies. The forts which encircled the cantonments, and whose names have yet a mournful celebrity to us, are still standing; but most of them in a dilapidated state. The Rakub Bashi Fort, which cost the British troops upwards of 200 men to capture, would now be untenable against any attack. Mahomed Sherif's Fort from which a British garrison of European and native troops was once disgracefully driven, still stands in good condition. The famous commissariat fort—the loss of which was one great cause of the subsequent disasters—has been considerably altered. Mahmoud Khan's Fort, which our troops never were bold enough to attack, still looks as formidable a place as it must have then appeared to our panic-stricken generals. Between the last mentioned fort and the Kabul River is the spot where the British envoy was murdered. The site of the cantonments has been universally condemned, and the size of the works was also too great for defence. But when one remembers that the garrison consisted of five thousand British troops, with abundance of ammunition, there can be no doubt that, however disadvantageous the position was, if they had been properly handled all the Afghans in the country could never have triumphed over them.

From the hill behind Behmaru a good view of the Bala Hissar and the city of Kabul is obtained, and on the other (north) side stretches out the green meadow of Wazirabad, the centre of which is occupied by a lake which sometimes dries up. On the very site of the old British cantonments the late Amir, Sher Ali Khan, commenced the erection of an enormous line of barracks for his troops. The design, which is being carried to completion by the present Amir, is to form a huge fortified enclosure one side of which will be formed by the Behmaru hills already mentioned. The side parallel to the hills is almost

complete. It is about a mile long, and consists of a series of small rooms built against a high thick mud wall, having an arched verandah running along the front. The western side has also been nearly finished. The official name of this imposing-looking place is Sherpur (after the late Amir), but the people generally talk of it as the new city. It could easily contain half the city of Kabul within its walls. The late Amir intended to have built himself a palace here, and we were shown a site on the brow of the hill which he had levelled for it.

The Ghilzais about the Shutargardau have been interfering somewhat with merchants and travellers between this and Kurram, but they have not interrupted our postal communication. It is very natural (from an Afghan point of view) for the Ghilzais to think that as the road between Kabul and Kurram appears likely to become an important thoroughfare, they should receive from the Amir some stated allowances like the Khyber tribes for protecting the traffic. Indeed, allowances for the maintenance of police posts were formerly made to the Ghilzais; but these have been for some time in abeyance, and the little trouble which the tribe has been recently giving is only meant to remind the Kabul officials of this abeyance, and to quicken their action in re-arranging them.

Sir Louis Cavagnari, the murdered Envoy, trusting probably to his intimate knowledge of the people, appears to have been lulled into a state of false security. We are informed that the Amir remonstrated with him, but without avail upon his custom of riding about the city, and expressed fears for his safety that have unhappily been only too fatally verified. That Sir Louis entertained no apprehension of impending danger is evident from the following extract from an Indian paper:—

"A Kabul correspondent writes to the *Civil and Military Gazette*, under date Aug. 3, that affairs generally in and about the city have apparently taken a satisfactory turn, and any excitement that may have been prevalent previous to the British Envoy's arrival has now subsided, and the feeling of general uncertainty among the people been reassured. Major Sir Louis Cavagnari, accompanied by his staff, may be seen nearly every morning at an early hour, and frequently in the cool of the evening, riding through the bazaars and outskirts of the city attended by a few of the Amir's household and escorted by a small guard of the (Q O) Guide Cavalry and a few sowars from Colonel Sharo Khan's regiment of regular cavalry."

THE CURRENCY QUESTION.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR.—For the past three weeks you and your evening contemporaries have been filling pages with arguments, or rather guesses on the subject of the currency and silver yen. It appears not to have struck any of you that it is just possible that you are being made to serve a purpose, that purpose being to depreciate the Japanese paper currency (*kinsaten*). I am merely hazarding a conjecture myself when I make the suggestion, but if it be true, then you are all working *with a will* for the desired end.

One evening newspaper, especially, amuses itself in making statements that forgeries to an enormous extent are now current: has that paper any reason to be certain that there are any false *kinsaten*, (other than some few of the two yen denomination known to have existed for some years past) or is it working out the ends of its friends? Remember, there are speculators and speculators. To every seller of Satzu there must needs be a seller of Dollars.

I am, Sir,

Your obedient servant,

NIMIUM NE CREDE COLORI.

Yokohama, 3rd October 1879.

REUTER'S TELEGRAMS.

LONDON, October 2nd, 1879.

Yakoob Khan and son, with escort, have arrived in the British camp at Kushi. Anarchy prevails in Cabul. Ghilzais and Mongols attacked General Roberts on Kushi road.

DO-YO-NI.

DIED.

On the 3rd instant, W. G. ASPINALL, Esq., aged 58 years.

NOTES OF THE WEEK.

The P. & O. S. S. *Mulacca* arrived from Hongkong on Monday night with the London Mail of 15th August. The O. & O. steamship *Oceanic* came into harbour from San Francisco early on Friday morning, bringing American dates to 13th ultimo and European telegrams of the previous day. The P. & O. S. S. *China* left for Hongkong on Thursday at daylight, with the homeward mails. The Shanghai and coast port steamers have arrived and departed as usual.

The M. M. Co.'s steamer *Tunais* left Hongkong on the 1st instant, at 6 o'clock, with the European mail of the 24th August.

The *Nagoya Maru* which arrived from Shanghai on Thursday morning, reported that the S. S. *Laudoun Castle*, which arrived off Gutzlaff from Hongkong on the 23rd ultimo, went ashore on the north bank of Woosung bar the same day. She was reported hard aground when the *Nagoya Maru* saw her. We are since informed that she left Shanghai for this port on Thursday evening. It is satisfactory to be able to infer from this that the vessel sustained no injury when aground.

The S. S. *Oceanic* on her last voyage to San Francisco more than sustained her reputation as the fastest boat running in these waters. The trip was made in about ten hours less than a previous voyage three years ago which had up to the present remained unparalleled by any other vessel. The return trip from San Francisco was also made in a remarkably short time. Under these circumstances we should imagine that her visit to England for repairs, is more a matter of precaution than anything else, and that a speedy and pleasant passage awaits those who proceed in her to Europe to-morrow.

It is our sorrowful task to record the death, on the 3rd instant, of one who, in the earliest days of this settlement, was its most genial and hearty representative, sharing in its prosperity, identifying himself with, and always ready to lead in every act of public good or private beneficence; one who was the friend of all, a warm hearted helper to those in adversity and a faithful friend to the many who eagerly sought his acquaintance. There are still many residents in Japan, whose recollection of Mr. W. G. Aspinall will carry them back to the happiest days of this settlement, and not one of these can fail to feel they have now lost the happiest face, the pleasantest link which connected them with that past. Whilst this was the feeling of many when following to the grave all that remained of their cheerful and warm-hearted friend; others, who have known him only during the past few years of his life, mourned no less sincerely for the brave man who had fought through adversity, whose spirit had not been crushed by trial, and whose cheerful sympathy to young and old had endeared his memory to them all.

As the best method of recording variations in Exchange, as well as in Meteorology, we give, this week, a diagram showing the fluctuations which have taken place in the paper currency during the present year. The curve is certainly a most erratic one, and represents hills and valleys of stupendous height and

depth—over which we can imagine the "bear" and the "bull" pursuing their speculative journey; a series of climbs and falls at which even Alpine travellers would stand aghast.

On Thursday evening last we had the pleasure of being present at the first Opera-Concert given here by M. and Mme. Hirlemann; and regret much that a larger audience did not reward the exertions of these really fine performers. Contrary to usual custom, the programme opened with a vocal waltz admirably sung by the lady. Madame Hirlemann is gifted with a soprano voice of great power and fine quality, she has been trained in a good school, and shewed herself to be a vocalist of exceptional merit. To our mind her rendering of this first number was worth the remainder of the evening put together. We have certainly heard no such finished singing since Signora Palmieri and her sister Signorina Persiani enchanted us all with their performances some three or four years ago.

The next number was Abt's "Waldlandacht," sung by one of our well known amateurs. By the way, how was it that only one of the talented amateurs appeared? Surely it could not be that they were announced without the promise of their assistance having been first obtained.

Having at last found the "good piano" so long sought for, M. Hirlemann next played to the delight of all hearers Liszt's Piano-Waltz, founded on themes from Faust. M. Hirlemann (with his permission we will drop the Maestro, it savours so much of the *soi-disant*) is a performer of the first rank in the modern Liszt-Thullberg school, and his powerful and brilliant execution of this *pièce de concert*, left nothing to be desired.

The Concert was followed by a light Operetta "Les noces de Jeannette" with Madame Hirlemann in the title-role. This is a piece quite unsuited to the lady's powers: she is above all things a concert singer but no actress, and her valuable talents were quite thrown away on this "trifle light as air." We should not however forget to mention "Jean." We thought we recognised an old friend in this part, but with a new voice, new clothes, new life and energy; in fact, a new man altogether, he proved himself a very "lion in the chase." We heartily congratulate Mr. Hansen on his successful appearance here in French opera.

The company gives another entertainment on Monday night, and we trust that on this occasion we shall have further opportunities of judging of the really artistic merits of both M. and Mme. Hirlemann. We are persuaded that a judiciously selected programme of high-class operatic and instrumental music, will ensure a full house.

We observe that the House of Commons, on the 8th August last, approved, by a majority of 88, the new contract entered into with the P. & O. Company, for the conveyance of mails between England, India and China.

We notice in a native paper, that a political lecturer named Hoki, has lately been forbidden by the Hiogo Ken authorities to deliver any more addresses within the jurisdiction of the Ken. The authorities considered the last one calculated to disturb the peace of the country.

The people of San Francisco seem determined to accord to General Grant on his return to America, the grandest reception that he has anywhere received. The *Chronicle* of the 13th ult., has over a column devoted to a description of the preparations, which are, as may easily be imagined, on an enormous scale and quite commensurate with the importance of welcoming after his extended journeyings in foreign lands, the Saviour of the Republic, already twice President and in all probability about to be elected for a third term. Our contemporary the *Chronicle*, grows quite enthusiastic when recounting the anticipated triumphs of the day which shall witness the arrival of the *City of Tokio*, and actually has to resort to poetry to describe the effect of the salutes:

Let all the battlements their ordnance fire.

Let the kettle to the trumpet speak.

The trumpet to the cannoneer without,

The cannon to the heavens, the heavens to earth.

We are informed that the "beautiful harbour of San Francisco will be white with the sails of the yachts and shipping which will go to meet and escort the returning hero" and that "the display of bunting on the bay will be the greatest ever made."

Offers of steamers to accommodate those anxious to proceed to the Heads and meet the *City of Tokio* have been freely made, and what with the welcome on the water, the decoration of the city of San Francisco and the large number of old veterans of the war who will assemble to do honour to their brave commander or gracious conqueror, the home-coming of General Grant promises to be one of the most remarkable demonstrations ever tendered to a public man in any country. The notorious "sand lot orator" Dennis Kearney was foolish and brutal enough to propose hanging and burning General Grant in effigy, but a very decided intimation that further exercise of his peculiar powers in that direction would lead to his being hanged, not in effigy but *in corpore vili*, has had the desired effect of closing the foulest mouth in San Francisco with the exception perhaps, of that of the nearly elected mayor of that city.

The recent elections in California seem to have passed off in a very quiet and orderly manner, especially when we consider the asperity and vigorous abuse of the different candidates during the canvass. The hottest fight was of course waged in the city of San Francisco, but the battles of the contending factions were principally waged by newspapers. The workingmen's nominee for mayor, the Rev. Dr. Kallach, who had left the pulpit for the civic stump, was bitterly opposed by Kearney's late organ, the *Chronicle*, and when he, in a public speech, maligned and abused the editor of that paper, in certainly a shockingly offensive manner, the editor retorted by putting a bullet, if not two, into his back; for which offence he was of course arrested, but we since learn has been bailed for \$25,000. The *Bulletin* of the 5th ult. thus refers to this affair. "The last two weeks have been somewhat eventful in Mr. Kallach's life. Within a fortnight he has been shot twice, become a grandfather once, and probably been elected mayor." The result was that he recovered and was elected mayor by nearly 1,400 majority, over two other candidates, one of whom was Bradford Flint Esq., one of the most respectable of the leading merchants of San Francisco. The Republican party have elected their nominee for Governor of the State, Captain Perkins, by 10,000 plurality, and also secured a majority in the State Legislature. The general result of the elections appears to be satisfactory; neither side securing a complete victory, whilst the prominence of the workingmen's party leaves no doubt of their influence in the politics of the Pacific Slope in the future. The days of old monopoly are for ever gone, and with the respect for law and order which seems to be clearly manifested by the result of the election generally, we need fear nothing from the communistic tendencies of Kearney and his followers. In the election for Congressmen the Republican party gain one out of four members, that of Pechesho, who in the 3rd district was elected by 3,700, where in the last election he was defeated by 1. The influence of the Republican party in California seems to have been materially improved and the indications point to a strong support of their nominee for President next fall.

From the very slight interest shown by the sporting portion of the community, it seems very doubtful if we shall have any racing this autumn at Yokohama, as training is at present confined to one stable only. Rumours reach us of the probable dissolution of the Jockey Club, for the best of all reasons:—want of funds and members. Under existing circumstances we are glad to hear, that the Japanese who organized the late successful meeting at Toyama Park, contemplate issuing a programme for an autumn meeting, at which foreigners will be invited to enter ponies and ride. Such a meeting should produce some good sport.

We must contradict the statement quoted on our last Saturday's issue, and which we copied from the *Asian Sporting Times*, to the effect that "the gentleman who races and rides at Yokohama under the name of Mr. Morrison is the brother of a well-known Tirkoot sportsman." Our "Mr. Morrison" has no brother in Tirkoot or any other place, and although it may not be generally known outside the sporting circle, we believe we are correct in stating that the Tartan colors will no longer grace the velvet award of the Yokohama Race course, Mr. Morrison having determined to retire from the Turf. In thus withdrawing his stud from the coming Autumn meeting, the racing fraternity will suffer a severe loss, and many will miss the

genial hand shaking and the jovial smile with which many of us have been greeted after a Tartan victory.

STUART ELDRIDGE, M.D.,
Surgeon-in-Charge.

YOKOHAMA LOCAL BOARD OF HEALTH.

The seventeenth meeting was held on the 19th September, 1879, at the Machigaisho at 10.30 a.m.

President, the Governor of Kanagawa Ken.

The subjects for discussion were as follows:—

1. A letter from the sanitary chemists of the Benten Laboratory to one of the members of the Board.

2. Proposal of Mr. Kawano to hold the meetings of the Board once a week, instead of every second day.

3. Communication that Messrs. Favre-Brandt have presented to the Board three bottles of paracotoine for trial at the cholera hospital.

4. Proposal of the President to compile a full report of the proceedings and measures taken by the Board, since the time of its establishment.

5. *Résumé* of the minutes of the 14th meeting held on the 10th September, 1879.

I.—Dr. Geerts stated that he had received an official letter from the sanitary chemists of the Laboratory, who were appointed by the Board members of the committees for the house to house visitation on the 1st September, requesting him, as a member of the Board, to state whether they had only to examine the drinking water, or also to aid in the general inspection of the houses, premises, etc. The chemists stated, that if they were only to analyze the drinking water, they did not think it necessary that they should go for it themselves, as the water might be sent to the Laboratory, but if they had to take part in the general inspection, they were quite willing to do so, provided that all the other members of the committees were informed of it.

After some discussion between Drs. Simmons, Geerts and Miyajima, the President observed that, as the gentlemen of the Laboratory were officers of the Sanitary Department of the Naimusho and had always been found willing to aid in carrying out local sanitary measures; and as they had moreover been appointed at the 12th meeting members of the visitation committees, he held the opinion that they had not only to examine the drinking water, but also to be considered on an equal footing with the other members of the committees.

The Board agreeing with this view, it was decided that Dr. Geerts should answer the letter accordingly.

II.—Mr. Kawano proposed that as a good deal of work had been done and sanitary measures were now better carried out, the Board might hold its meetings henceforth once a week, according to the resolution passed at the 1st meeting. This seemed to him to be sufficient for working out further details, which were still to be gone into.

As all the members agreed to this proposal, it was decided to hold the meetings of the Board on every Wednesday at 10.30 a.m.

III.—Dr. Wheeler presented, in the name of Messrs. Favre-Brandt, three bottles of paracotoine to the Board, with a request to use them in the cholera hospital of this place. The President requested Dr. Wheeler to return the thanks of the Board to Messrs. Favre-Brandt, and handed the paracotoine over to Dr. Miyajima, the director of the local cholera hospital. The latter, in accepting the medicine with thanks, promised to make a proper use of it in the cholera lazar.

IV.—The President asked the opinion of the Board, whether it would not be desirable to draw up and print, a general and full report of the proceedings and measures taken by the Board, in order that other *Fu* and *Ken* might possess a guide for carrying out sanitary measures.

Dr. Geerts stated, that the government of Kanagawa Ken deserved great praise for the interest it had taken in efficient

sanitary measures: that it had adopted the proper course by establishing a local Board of Health, consisting of members who represented as well the executive government as the medical, technical, chemical and police departments, and that it no longer confided this important matter to the advice of one single person. The method adopted now was a good one, and although several details yet remained to be worked out and to become more perfect, still it was certain that a great deal of good work had been done both by the Board and the local government. He considered it a very good plan to collect all useful information from the minutes of the proceedings of the Board, in the form of a general report, and to have this circulated in all *Fu* and *Ken*. It would then form a valuable guide to the local sanitary officers of the various provinces and it would stimulate them also to institute in each district a similar Board, for the purpose of supervising and aiding the local sanitary officers. For these reasons he highly approved of the proposal made by the President.

As all the members were agreed as to the usefulness of a general report, the President proposed further, that the committee of *réduction* should be asked to draw up such a general report.

It was accordingly unanimously adopted that the *réduction* committee should prepare the general report.

V.—The *résumé* of the minutes of the 14th meeting held on the 10th Sept. 1879, was read and adopted for publication.

The meeting terminated at 12.30 p.m.

NAGASAKI LETTER.

25th September, 1879.

We have lately had a pleasing surprise and a disappointment. Like Ireland we have a grievance and as the Irish one is laid at the door of Great Britain, so is ours. When it was announced the other day that letters *via* Brindisi and Marseilles would be accepted at the Japanese Post Office paid in native stamps, we were grateful for having been relieved of the Sisyphean task of reaching the British Post office on the hill, and we also fondly imagined we saw a speedy termination to that much abused institution in Nagasaki—a conclusion that was certainly premature. It was never popular in our best times and the desire for its abolition, has, it may well be understood, not lessened in these latter days. On each ordinary letter, fully stamped according to the advertised rates from Europe to Japan, which passes through its hands, we have to pay four cents, and upon newspapers two cents whilst it is not uncommon, as was the case with a friend lately, to have to pay about two shillings for a packet of press matter, which only cost that amount in England, where the postage had already been adequately paid. There is no appeal, either, against this organised system of extortion—something is said about Inland Sea rates but our correspondence *via* Shanghai never looks upon that charming locality. In point of fact in the face of published rates of postage, it can only be regarded as a deliberate “squeeze.”

I hear complaints occasionally from the Japanese of my acquaintance of a want of a good educational channel in Nagasaki for the more advanced class of students. I cannot altogether understand this, though one now undoubtedly misses the troops of scholars with which the streets of Nagasaki were familiar some five years ago. Should there really exist such a want, a hardship will be felt by many of the poor *shizoku* in the neighbourhood and adjacent towns—situated, as they are, so far away from any other educational centre. What seems to me to be especially required are a few night-schools similar to those in Yokohama and Tokio, which are carried on by private teachers with a good deal of success. Time was when this southern town held the first position as a repository for western knowledge, and not a few of those now high in office might be named who toiled as obscure students in these narrow streets.

The launch of a barquentine built by Mr. Mitchell, the largest vessel hitherto constructed here, was an event for us last week. The *Aberdonia* as she was christened by Mrs. Troup, is 164 feet in length and her carrying capacity 700 tons. There was unfortunately, owing to the unfavorable nature of the ground on which the stocks were laid, considerable difficulty in getting her off; at the outset a depression of the ground occurred which prevented the launch from taking place at the appointed time and it was only after ceaseless exertions for two days that success attended them. And it is feared that the timbers have been damaged by the strained position of the ship for so long a

time. Is it possible that the building of vessels of this character can now prove lucrative when there are so many good classed ships for sale at very reasonable rates on the China and Japan coast? Besides the late craze of the Japanese in that direction is rapidly dying out.

I am glad to notice the Mitsui Bishi Company have changed their offices to the Kogio Shokwai buildings near the Custom House. Their late offices at the extreme end of Desima were rather more than inconveniently distant in the hot weather. Nothing by the way seems able to lend the least hue of life to “this fanciful piece of ground” as Mr. Mossman, in his equally fanciful history, is pleased to term it; its air of desolation rarely fails to make an impression upon visitors.

Our weather of late has been rather mixed but cool, and for those who do not heed

“Well defined and several stinks”

a climb over the hills in the early morning will prove invigorating. There is only one road suitable for riding and a long line of narrow streets has to be passed through in order to reach it. Pity 'tis, that some of the amassed bul- lion in the vaults of the Okurasho we are now hearing so much of, could not be devoted to the reclamation of certain land we should be delighted to point out. It would then be time to take the subject of a “stable” into serious consideration.

AN ESSAY ON THE ORIGIN OF THE JAPANESE RACE BY YOKOYAMA YOSHIKIYO.

In considering the Japanese people of the present day, we must at the outset make a distinction between, 1st the ancient aborigines, 2nd the race descended from divinities, and 3rd the race who later on crossed over from China and the three divisions of Corea. I am of opinion that the actual aborigines were of the so-called Manchurian race—a people who originally migrated from India into the territory of the Tartars and the Mongols, and were entirely different from the Chinese. Of the people who firstly inhabited Manchuria, one portion advanced towards the south-west and settled in the north-east of China, and became the ancient aborigines of the three divisions of Corea. Another band advanced towards the south, crossed over to the islands there, and then turning off towards the west settled in this country and became the ancient aborigines of Japan: some, again, may have gone towards the extreme east, and, settling in the south, have become the aborigines of America.

Consequently upon the race having thus left their own land and settled in other regions, they eventually became, as it were, a separate people; and in doing so, by reason of the dissimilarity of climate, food and occupation, their physical development, disposition, customs and language could not but change in like manner. These ancient aborigines of Japan were a race resembling the present inhabitants of Yezo; they dwelt in caverns or in trees (from which circumstance they received the appellation of “ground-spiders”), and their long moustaches resembled the spines of lobsters—whence came their further name of *Yebian* or *Kumano*. They were fierce as is the hawk,—and thus were also styled *Hayato* or *Kiōshi*. No distinction was made between the sexes, no affection existed between parents and children, they lived on the flesh of birds and beasts, and did not follow any agricultural occupation. They were banded together in nomad tribes who committed depredations one upon another, and they did not possess any form of government. The so-called descendants of divinities, who came into the regions inhabited by this race, established their boundaries and tranquillised them, gradually advanced towards civilisation, dwelt in buildings, and fostered agriculture; they had among them lord and vassal, master and servant, were united by ties of mutual friendship and support, and possessed a form of administration and a species of literature. Being thus a race with a system of government, they took command of and cared for the aborigines, taught them the art of building, &c., and encouraged agriculture; and so becoming their chiefs and their administrative power, a government was eventually established. In order to cause the aborigines to submit to them, they styled their own original country ‘Heaven’ and themselves ‘Descendants of Divinities’ and declared that the regions occupied by the aborigines had also been created by those divinities.

The race who invaded the three divisions of Corea was probably akin to that above-mentioned. In very ancient days there was no ruler in Corea, but a divinity having descended to earth beneath a *tan* tree, the inhabitants set up this personage as their sovereign, calling him Tan-kun. At the commencement of the Shin dynasty in China, a person called Kishi was sent to Corea as king, and set up his capital at Heijō. When his line came down to his descendant Kijinn, the later was driven by Yei-man of Yen, and taking with him his family and attendants, went into the department of Kimba and dwelt there: this district was afterwards known as Bakan. Again some fugitives from the country of Shin fled for refuge to the eastern portion of Bakan, and this latter locality was thereafter styled Shinkan. There was also a district called Benkan, a dependency of Shinkan. These (Bakan, Shinkan and Benkan) were named the "Three Divisions" of Corea. The personages severally called 'Tankun,' 'Kishi,' and 'the fugitives from Shin' were, I conceive, probably of a race similar to the descendants of divinities.

It would appear that from ancient times downward the communication between Japan and Corea was easy. For instance;—Sasanoō no Mikoto went to Shinra,—Inchi no Mikoto became King of Shinra,—and the wife of one Ama no Hihoko, saying that she wished to visit the land of her ancestors, came from Corea to Japan, whereupon Hihoko also, in pursuit of her, arrived in the province of Tajima. Again, there exist in Idzumi and in Tajima precious articles brought hither from the Heavens, all of which are of divine origin and such as were never made in this country. Subsequently to the period above named, there crossed over to Japan large numbers of Coreans,—not the descendants of the Manchurians, but Coreans who had received instruction from the divine race mentioned before,—and in addition to them, Chinese also came hither. Thus, then, the descendants of divinities and the Coreans and Chinese who arrived later and became, by reason of their preeminent qualities, rulers, generals, subordinate chiefs and officers. They tranquillised the aborigines, and the latter, under their instruction, gradually improved their manners and customs; and although some tribes such as the *Yebisu* of the north-east long held out against the change of government, and frequently raised disturbances in the neighbouring regions, they were either reduced to obedience by force of arms or caused to yield by dint of persuasion, so that in the end the civilised and uncivilised tribes became united and formed one common race. The present inhabitants of Yezo are a people who have preserved until now the ancient condition of the Manchurian race who did not cross over hither but continued to dwell in that island. Although, owing to lapse of years, there may have occurred some changes in their customs, we can yet see, from a glance at them, what was the condition of the ancient unmixed aborigines of Japan.

During the period *Kōnin* (810-824 A.D.) there was written by the prince Manda a work called *Shinsen Seishiroku* ("A newly selected list of surnames"), in which it is mentioned that there existed in Japan three different types of physical development, according to the origin of race, viz., the heavenly and earthly divinities, who formed the 'Divine line,' the family of the Emperor and Princes, forming the 'Imperial line,'—and the Chinese and Coreans, who constituted the 'barbarians.' The reason why the author of the work in question did not touch upon the aboriginal type was probably because it was a very rare occurrence for descendants of the aborigines, bearing their own surnames and followed by their own attendants, to be employed in any capacity at the Court. Although these men may in some few instances have become mayors or heads of villages in distant localities, still, in the Five Home Provinces, the only race differing from the descendants of heavenly divinities was that known as Earthly Divinities. These so-called Earthly Divinities mentioned in the work in question were those who dwelt in this country prior to the descent of the Sun Goddess from heaven; for instance, Okuni-mushi no Kami and Kotoshiro-mushi no Mikoto, though originally sprung from heavenly divinities, were placed in the separate category of Earthly Divinities.

There may also have existed some descendants of the aborigines, who in later times falsely alleged themselves to be of the line of heavenly or earthly divinities, or, again, of Chinese or Corean family. During the reign of the Emperor Ikuō (412-453 A.D.) the confusion of surnames was cor-

rected, and under the Emperor Tenchi (668-671 A.D.) census records were drawn up.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

GOVERNMENT NOTIFICATIONS.

NOTIFICATION, No. 93 A.

It is hereby notified that permission having been given to the National banks established at the undermentioned places, in accordance with the 'National Bank Regulations,' to issue paper money (which may at any time be exchanged for Japanese currency,—a sufficient amount of the issue of which is always kept in the banks, corresponding to the amount of the issue of their paper money) all payments either private or official, and for taxes, with the exception of those for the interest of the Public Loan Bonds and Customs duties, can be freely made with this paper money and the people shall accept it without suspicion.

Note.—The paper money to be issued from these banks being similar to that indicated in Notification No. 90, of 1877, and No. 16, of 1878, no specimen is attached herewith.

(Signed) OKUMA SHIGEMOTO,

Minister of Finance.

September 26th, 1879.

147th National Bank established in Kagoshima Ken.

151st " " " " Kumamoto "

NOTIFICATION, No. 41.

It is hereby notified that the following addition has been made to the Notification No. 35, issued in November, 1878. "The general circulation of the Trade Silver Yen, will be in accordance with Notification No. 12, issued in May, 1878."

(Signed) SANJŌ SAN'EYOSHI,

Prime Minister.

October 1st, 1879.

[The following are the two notifications above referred to.]

NOTIFICATION No. 12.

It is hereby notified that the Silver Trade Dollars which have hitherto been coined for the convenience of trade in all the open ports, but which have hitherto only been circulated within the limits of those ports, shall hereafter be free to circulate generally, and may therefore be used in paying taxes and in all business transactions either public or private.

(Signed) SANJŌ SAN'EYOSHI,

Prime Minister.

27th May, 1878.

NOTIFICATION No. 35.

It is hereby notified that the coining of the Silver Trade Dollar (of the increased weight and of the revised pattern) notified by Notification No. 35 of the 2nd month of the 8th year of Meiji, is suspended, and that of the Trade Silver one yen (of the revised pattern) notified by Notification No. 34 of the 7th year of Meiji, will be recommenced and the coin brought into circulation.

(Signed) SANJŌ SAN'EYOSHI,

Prime Minister.

26th November, 1878.

COURT, POLITICAL AND OFFICIAL.

The presentation of the Imperial Prince to His Majesty the Emperor, which was to have taken place on Tuesday last, has been postponed. The Prince will remove to the Palace lately erected in the premises of the residence of Mr. Nakayama, about the 10th instant.

As His Excellency Iwakura, the Vice-Prime Minister, will leave Tokio for Kiyoto in the mail steamer sailing about the 8th instant, he invited His Excellency Sanjo and several other high officials to a farewell entertainment at his residence in Tokio, on the 2nd instant. It is expected that the Vice-Prime Minister after finishing his business in Kiyoto, will visit the Imperial Mausoleum in Idzumi-yama.

We learn that their Excellencies Kawamura, Kuroda and Saigo, held a private meeting on the evening of the 30th ultimo, at the residence of His Excellency Saigo, and that the latter visited the Police Bureau early on the next morning.

Intelligence from Sendai announces that His Excellency

Hayashi, the Junior Vice-Minister for Home Affairs arrived there lately. He visited the local Prisons, Schools, Factories &c. on the 22nd instant, and left for Ishinomaki on the following day. His Excellency proposes to visit the prefectures of Iwate, Awamori, Akita, Yamagata &c. to inspect the localities which have suffered from the recent floods.

Mr. Hanabusa, the Japanese Envoy to Korea, who has been quarantined in the *Takuo Mura* at Nagasaki, owing to illness on board, left that port for Gensan, Korea, on the 27th ultimo, the necessary number of men to replace the sick having arrived from Tokio.

Intelligence has been received in Tokio, that General Kawaji, the Superintendent of Police, accompanied by two other officials, left Marseilles on the 24th August last in the Mail steamer *Yangtze*, and that he may be expected to arrive here about the 8th instant.

It is rumoured, that the Government is about to immediately convene a meeting of the Prefects of all the provinces at Tokio, in order to discuss an important public question, the nature of which is at present unknown.

Mr. Sekiguchi, an official of the Finance Department, proceeds to China on Government business.

Mr. Inuduka, the President of the Tokio *Sailunshu* who has been in secret communication with the Minister of Justice for some days past, left Tokio for Osaka early on the morning of the 2nd instant.

Mr. Watanabe, the Governor of Osaka *Fu*, arrived in Tokio on the 27th ultimo. His visit is rumoured to be in connection with the Fujita affair.

Mr. Matsuda, the 1st Secretary of the Home Department, and lately Envoy to Loochoo, has been unwell and is still confined to his house.

His Majesty the Emperor of Russia, recently presented Mr. Tokiiti, the First Secretary of the Colonization Commission, with the decoration of the order of St. Anne of the 1st class; Mr. Onodera, a senior subordinate officer of the same Department, with the decoration of the order of St. Stanislaus of the 3rd class, and Mr. Fukase, the President of the Government Hospital at Hakodate, with the order of St. Anne of the 3rd class.

The Belgian Minister, The Ch. de Groote, Chargé d'Affaires for Belgium, who has recently been visiting his country on leave of absence, was made Envoy Extraordinary and Minister Plenipotentiary for Japan, on the 12th July last, and is expected to return here early this month.

His Excellency the Italian Minister, who has been staying at the Hot springs in Tônosawa, in the Hakone mountains, returned to Tokio, on the 27th ultimo.

We understand that H. I. H. Prince Henry, who recently went to Nikko, will return to Utsunomiya to-day, and thence to Tokio, in a steam launch which will be sent thither from the Naval Department.

The Duke of Genoa is expected to arrive here on the 13th instant.

It has been decided that the Central Board of Health will, in future, meet only once a week instead of three times as hitherto. This may be considered as another sign of the decrease of cholera.

The number of Cholera cases having much decreased in Tokio, all the branch offices of the Tokio District Board of Health in that city were closed on the 30th ultimo.

For the same reason all the medical officers appointed to the Branch Police Stations in Yokohama have been dispensed with, and cholera patients will hereafter be attended to by the doctors of the Nogé Hospital.

The cholera hospitals established in Ôkubo, Komagomi and Shinagawa, will be closed on the 10th instant, and all fresh cases will be treated at Fukagawa which will now be sufficient for the purpose.

Sometime since His Majesty the Emperor presented the people of Tokio with 70,000 yen for sanitary purposes, and several of the Imperial Princes, Ministers, &c., followed his example. An extraordinary meeting of the Tokio *Fu* Assembly will be held on the 15th instant, to decide upon what objects this money is to be expended.

From the 1st October, the hours of attendance at all the Government offices will be from 9 a.m. to 3 p.m.

The fencing school recently built at the Central Police Station, for the policemen in Tokio has been completed, and will be opened on the 6th instant.

NAVAL AND MILITARY.

Their Excellencies Kawamura, the Minister for the Navy and Yamagata, the Chief of the Military Staff Bureau, will leave Tokio shortly, on a tour of inspection of the coast defences at Sôshû. It is supposed that the inspection will occupy four or five days.

It is rumoured that the Japanese Man-of-war *Tsukuba Kan* which left here lately for Muroran, Yezo, will, after a stay of two or three days in that port, proceed to Mexico.

The *Nichi Nichi Shimbun* says, "that fencing after the foreign system has hitherto been taught to the students of the Naval College, but in future they will be taught according to the good old Japanese style only." Our contemporary does not inform us if the "students" are to be furnished with *katana* (two handed swords) as part of their equipment. We imagine the next number of the *Nichi Nichi* will contain the usual contradiction which follows these improbable announcements.

We learn that the statement made by the native journals to the effect that the services of the remaining foreign officers of the Naval Department will be dispensed with, is untrue, and that their engagements will be renewed on the expiration of the present agreements.

A native contemporary states that Lieut. General Tani the Military Inspector for the Eastern Division, will leave Tokio with his suite about the 3rd instant. Lieut. General Tani will first proceed to Hakodate, and will inspect the barracks at Awamori, Sendai, Shibata, Takasaki, Utsunomiya, Sakura, Tokio and Kanagawa on his way back to the capital.

Such of the soldiers of the Imperial Guard and infantry of the Kiyodôdan, who were not at the encampment in April last, were marched out to the Narashino plains, on the 27th ultimo. An encampment has been formed and they will undergo a thorough course of field drill.

INDUSTRIES, TRADE AND FINANCE.

The formal opening of the Woollen Factory at Senju, Tokio, took place on Saturday last, in the presence of Mr. Ito, the Minister for Home Affairs, and several other members of the Government. After inspecting all the departments of the factory, which were at work for the occasion, the party sat down to tiffin, when speeches were delivered by Mr. Ito and replied to by Mr. Inouye, the Director of the works, and by Mr. Augustus Polt on behalf of the foreign employes. In the afternoon the factory was thrown open to the public.

After tiffin Mr. Ito addressing the company said:—

"Gentlemen,—Although there has been an increasing demand for woollen goods in this country, none have as yet been manufactured here and we have had to depend upon foreign countries to supply our wants. As the experiment was never attempted and presents great difficulties to private enterprise, the Government purchased the necessary machinery in Europe, engaged engineers and workmen, and completed this factory as a guide to others. I sincerely trust that it will prove a great success and that private individuals may in consequence be induced to embark largely in similar undertakings."

Mr. Enouye Seizo, the Director of the factory, replied as follows:—

"Your Excellency:—There can be no doubt that the public generally are impressed with the necessity which exists for establishing woollen manufactures in Japan, but as the enterprise involves the expenditure of a large amount of capital, private individuals have been prevented from embarking in a hitherto untried field of industry. This we understand is the reason why the government have established this factory. Now that the enterprise is fairly inaugurated, and your Excellency has personally assisted at the opening ceremony, I cannot but feel grateful that I, with my limited experience and ability, should have been chosen for the responsible position I occupy. I humbly trust that our endeavours may be crowned with success, and that we may be enabled to raise the woollen manufacture, until it shall take rank with the manufacture of cotton and silk, as one of the leading industries of the Empire. One thing your Excellency may rest assured of, that we will do all that lays in our power to further the objects the government have in view in establishing this important undertaking."

The following are the quantities of wool which have been purchased by the Woollen Factory :—

From Australia.....	Weight	210,484 kin.
" "	Value	129,349.369 yen.
The Farm in Shimosa.....	Weight	8,659½ kin.
" "	Value	3,761.228 yen.
" Kiyoto.....	Weight	432 kin.

The factory has been worked occasionally for experimental purposes since the 14th of January last.

The following are the customs returns of the month of September for Tea, Rice, Silk, and specie :—

	Weight in piculs.	Value in Yen.
Tea	15,297.69.	457,925.
Raw Silk	828.40.	546,181.
Noshi Silk	415.31.	55,301.
Waste Silk... ..	601.83.	43,831.
Rice	352.80.	1,411.
	17,496.03	1,104,649
Specie Expected.		
Gold Coin Value		128,800.
Mexican Dollars		248,000.
		376,800
Specie Imported.		
Gold Coin Value		328,800.
Mexican Dollars		102,000.
		430,800
Customs Revenue.		
Duty on Exports		44,510
" Imports		124,865
Miscellaneous Income		1,742
Total		171,117

The inspection of the tea exhibited at the Competitive Exhibition in Yokohama, having been almost completed, the ceremony of presenting prizes to the exhibitors of articles of superior quality will take place on the 10th instant, in the Custom House here, which has been lent for the occasion. The Ministers and other principal officials of the Government are expected to be present.

Competitive exhibitions of horses and cattle will be held in Kobe and Sendai, on the 1st March, 1880.

Some *Shizoku* of Shizuoka Ken recently sank six oil-wells in Yaguchi-hara, in the neighbourhood of Kanaya on the Tokaido. Five of the wells are said to be yielding satisfactorily and the best of them is producing about three koku of oil in the twenty-four hours.

The Authorities of Kanagawa Ken are about to establish an experimental farm at Kuragigori, Bushiu. The expenses of this establishment are to be defrayed out of the local taxes.

Telegraph offices have lately been established in Takaoka and Fushiki, in Ishikawa Ken, and Yanagawa, in Fukuoka Ken, and communication will be opened with those offices on and after the 10th instant.

The Osakayama tunnel on the Kiyoto-Otsu railway, which has recently been pierced, is 470 ken or 940 yards in length. The tunnel will be lined with brick throughout at a cost of 125,000 yen.

The *Chogyu Shinbun* says that "the dealers in foreign goods in Tokio, Yokohama, Osaka, Kobe and Nagasaki, have agreed not purchase any more matches of foreign make and that they will only purchase and sell the matches manufactured by the Shindzuisha Co., in order to decrease, in some measure, the importation of foreign goods. For this purpose they have established a large shop in Tokio to purchase and send out these matches to all the provinces." Our contemporary also states that, "the opening ceremony," whatever that may be, "was performed on the 1st instant."

We hear that the Memorial lately prepared by the Tokio Chamber of Commerce, upon the subject of the Japanese Laws affecting debtors and creditors, has now been presented to the Ministers for Home Affairs and Finance.

The *Hochi Shinbun* quoting from a letter dated 15th September, from a merchant in Fusan, Korea, states that the number of Japanese residents there now exceeds 1,000, and that many new houses have lately been built. Trade is so prosperous that the amount of business now transacted in a month is equal to the business done in twelve months in former times.

The value of our imports is about 60,000 yen per month on an average, and mostly consist of muslin, lacquered ware, woven cloth &c. &c., but the profit has lately been very small.

Maruta Konji, of Niigata, has long been endeavouring to establish a company to run steamers between Niigata, Nawoyetsu and the Island of Sado. His efforts have at last proved successful as the necessary capital (25,000 yen) has been subscribed and the local authorities have granted a subsidy of 10,000 yen. The Company will commence operations at once.

On the 20th and 21st ultimo, a number of the Police Officers from Tokio, accompanied by the officers of paper money Bureau, inspected the *Kinsatsu* in the possession of the 32nd National Bank in Osaka. Notes to the amount of yen 33,420 were examined, and the officers told the officials at the bank then they might use them. On the following day, the same officers examined the *Kinsatsu* of the 34th National Bank in the same city, to the amount of about yen 29,000, but not a single forged note was found among them. It is said that one of the members of the 32nd National Bank asked the officers to instruct him how he could distinguish the forged from the genuine notes, as it was highly important for the banks to have the information, but the officers did not comply with this request, stating that it could not be explained easily and they would let him know on some future occasion. Irie, another principal *Banto* of Fujita & Co., has been arrested in Osaka. When any of the members of Fujita & Co. wish to communicate with Fujite Denzaburo, now in prison, upon business of the firm, they are allowed to do so by letter left unsealed so that the Police authorities may read them before delivering them to Fujita.

According to the *Osaka Nippo*, the editors of all the newspapers under the jurisdiction of Kiyoto *Fu* were summoned to the Police Station on the 20th ultimo, and ordered not to publish in their papers anything whatever respecting the recent arrest of Fujita Denzaburo in Osaka. This foolish attempt to "bark" discussion is scarcely calculated to attain the object the authorities appear to desire, in fact we think it will have an exactly contrary effect.

The authorities of Osaka *Fu* notified on the 23rd ultimo, that although there had been several rumours respecting the arrest of Fujita and others, and that counterfeit paper money was in circulation, the public should not refuse to accept paper money of any denomination, as their doing so would impede the circulation of *Kinsatsu* and thus cause great loss in business. The authorities also notified the different newspapers not to publish any more unfounded rumours respecting the counterfeit money, as their doing so might have very grave effect upon the public finances.

The *Mainichi Shinbun* says, that as the trial of Fujita and his associates who are in prison in Sakai will occupy more than two months, a special court will be temporarily established in that town to dispose of the cases.

A report from Sakai to the *Hochi Shinbun* states that the trial of Fujita and others there is conducted entirely in writing, and that no one but the officials know what is going on.

Yasuda, a *Shizoku* of Kago-shima Ken, who until lately has been living in Osaka and was conspicuous for his wealth, was arrested in Osaka a few days ago. Some say that he is one of Fujita's accomplices, but others have it that he was implicated in counterfeiting the old coinage in company with Oyama, while the latter was Governor of Kago-shima Ken in 1873.

The *Osaka Nippo* says, that the German Consul in Osaka has filed a complaint against the *Osaka Shinpo*, in consequence of that journal having stated that a German is implicated in the forgeries of *kinsatsu*.

The *Maru Maru Shinbun* of Saturday last, contains a clever cartoon devoted to the absorbing topic of the forgeries of *kinsatsu*. A stalwart policeman is depicted seizing—one in each hand—two large and plump wild geese, whose plumage is represented by *kinsatsu*. Counterfeit *kinsatsu* are called *Gan satsu* by the Japanese and *Gan* is also Japanese for a wild goose. The artist has significantly shewn a number of other and smaller geese flying away.

A report from Osaka dated the 27th ultimo, states that, the people in Osaka and Kobe have lately refused to accept two

yen paper money and in consequence, that trade has suffered considerably, but since all the banks agreed to exchange these notes free of charge whenever required, the circulation of that kind of *kinsatsu* has been restored and is now going on as before.

The *Choya Shimbun* says "it is rumoured that the authorities have notified the merchants engaged in foreign trade, that it is reported that certain Chinamen have circulated counterfeit Mexican Dollars, and although the amount of the counterfeit coin is yet unknown, they should be careful when accepting dollars."

The mint at Osaka recently forwarded to Okinawa Ken, 10,000 yen worth of 20 *sen* Silver coin; 10,000 yen worth of 10 *sen* pieces and 5,000 yen worth of 1 *sen* copper coin, for circulation in the Islands. We dare say the Loochoons will feel less repugnance to Japanese coin, than some of them seem to feel toward Japanese rule.

The *Mainichi Shimbun* says that the Hongkong and Shanghai Bank forwarded to Hiogo, on the 1st instant, 48,000 silver yen, by the S. S. *Tokio Maru*.

Some of the foreign firms in Yokohama are said by the *Nichi Nichi Shimbun*, to be refusing to accept Silver Yen notes, and that in consequence Mexican Dollars have much decreased in quantity and their price is gradually rising.

The *Akebono Shimbun* says "that Horio Mowuke and the other representatives of the farmers in Kasugaigori, in Aichi Ken, who were recently handed over to do Police Authorities in Tokio, for having insisted upon presenting a memorial to the Home Department, are now satisfied with the explanations given by the authorities and have quietly returned to their home." We wonder to what extent imprisonment assisted the "arguments" of the authorities in bringing conviction to the minds of these poor farmers!

The Governor of Niigata Ken who is now in Tokio, will return to his post about the 5th instant, when he will, it is expected, settle all matters in connection with the recent riots.

The *Choya Shimbun* states that on the 26th ultimo the authorities of the Central Police Station in Tokio notified the proprietor of the *Mondô Shimbun*, that the future publication of that journal was prohibited, and no more copies of its issue No. 376 should be sold but must be handed over to the police. For the last two or three days, no Osaka papers have come to hand and we are very much afraid that they may have sustained a similar fate.

Sudzuki Tamesô, of Sakaicho in this port, was on the 30th ultimo, sentenced to 70 blows with a bamboo, for having sold rice brandy made up in bottles so as to imitate the European article.

It has been the custom almost from time immemorial for the islanders of Hachijôjima to pay their annual tax in a kind of silk cloth known as *Hachijô-ori*, which is only produced in the island. On the 27th ultimo, fifty *Ilki*, (pieces each fifty two feet long), arrived at Tokio from the island, being the tax for the present year.

A heavy storm is reported to have visited the neighbourhood of Nemuro, Yezo, on the 14th ultimo. During this gale, the sailing ship *Settsu Maru*, which was lying at anchor in the Bay, of Hanasaki, parted from her anchor and went ashore. The ship became a total wreck and went to pieces. The crew are reported to have been saved, but about twenty of the passengers were drowned. A Japanese junk also went ashore, but she sustained but slight damage. The sailing ships, *Yamato Maru*, *Kintai Maru* and *Bitoku Maru*, also drifted ashore, but they only sustained slight damage and no lives were lost. Numerous other casualties occurred to both ships and people, but no details have yet come to hand.

A number of *Shizoku*, of Nagasaki Ken, lately applied to the local authorities for permission to explore and colonize an Island called Matsushima, situated 70 or 80 ri from Okishima and 30 or 40 ri from Okitsushima. The application having been granted by the local authorities, Shimomura and Obata arrived here in the *Tokio Maru*, on the 19th ultimo, to obtain the sanction of the Home Department.

The German Government having requested the authorities of Kiyoto Fu, to send to that country two or three men well acquainted with the method of dyeing pursued in Japan, the men are now being selected from among those employed in the dyeing establishments in that city.

The entertainment to the parties to the great gas case and the leading men of Tokio and Yokohama, was given last night in the building of the Branch of the Foreign Office in this port. About 260 guests were present.

Mr. Kawasaki and three others intend, to establish a United Club in Tokio.

A recent report from Fusan in Korea, announces that the total number of cholera cases among the Japanese residents there since the commencement of the epidemic on the 21st July up to the 4th Sept. ult. was 23, of which 17 proved fatal while 6 have recovered. As there have not since been any case of the disease among either the Japanese or Koreans, communication has now been re-opened and mercantile relations resumed. Mr. Hanabusa has already succeeded in obtaining the consent of the Korean Government to open the port of Gensan to Japanese trade and residence, but it is said that the negotiations for the opening of Nikawa, which is the most important port in Korea, present many difficulties owing to the objections raised by the native conservative officers, who are in favour of keeping the country closed to foreign nations. Nikawa can be reached from the capital by a broad, level road of only 8 Japanese ri in length. The inhabitants of the town are rich and prosperous, and coral, agate and other valuable articles are found there in abundance. The town is much superior to Fusan in every respect.

The total number of cholera cases throughout the whole country, from the commencement of the epidemic up to 30th Sept. last, was 148,038, of which 83,012, proved fatal, so that the death rate is 56.07 per cent. of those attacked.

The number of cholera cases in Tokio Fu, from the commencement of the epidemic up to the 30th Sept. last, amounted to 2,053, of which, 1,525 cases proved fatal, 363 recovered and 165 persons were still under treatment on that date. It will thus be seen, that notwithstanding the immense population of the capital, the number of persons attacked was small as compared with the other Prefectures. The Tokio District Board of Health have spent about 30,000 yen in sanitary measures and otherwise in connection with the outbreak of the disease.

The number of new cases of cholera and deaths in Tokio, reported during the week, is as follows:—

DATE.	NEW PATIENTS.	DEATHS.
September 26th.....	6	—
" 27th.....	3	—
" 28th.....	3	2
" 29th.....	2	—
" 30th.....	6	7
October 1st.....	7	7
" 2nd.....	5	2
Total.....	32	18

Return of cholera cases in Kanagawa Ken, from the commencement of the epidemic up to the 3rd October, 1879.

Date.	New Patients.	Died.	Recovered.	Under Treatment.
June 18th to }	1926	1321	422	203
Sept. 26th }	7	27	3	190
" 27th.....	43	21	7	195
" 28th.....	14	15	10	184
" 29th.....	25	9	9	191
Oct. 1st.....	4	10	9	176
" 2nd.....	17	14	17	162
" 3rd.....	10	11	5	157
Total.....	2046	1428	482	

There were no new cases and no deaths in the town of Yokohama on the 30th ultimo and the 3rd instant.

IMPERIAL GOVERNMENT RAILWAYS. YOKOHAMA STATION.

TABLE SHOWING THE FLUCTUATIONS OF KINSATSU FROM JANUARY TO SEPTEMBER, 1879.

Remarks.—The lowest quotation for Kinsatsu, during the past nine months, was reached on the 5th February, when they touched 530 or $32\frac{1}{2}$ per cent discount.

The highest quotation was attained on the 22nd June, when the rate touched 418 or $4\frac{1}{2}$ per cent discount.

The mean or average valuation of Kinsatsu, during the nine months, has been 471.7 or about $18\frac{3}{4}$ per cent discount, and is represented by the thick horizontal line immediately above the rate 475.

ARRIVAL OF THE AMERICAN MAIL.

INDIA AND AFGHANISTAN.

Simla, September 6th.—At a late hour Thursday night a messenger travelling post haste reached Alikneil from Cabul, and informed Major Connolly, the British political agent, that the British Embassy at Cabul had been attacked by several Afghan regiments which had assembled in that city demanding arrears of pay, and that the military escort of the Embassy was defending themselves. The Viceroy of India immediately ordered the troops of Alikneil to move instantly on the Shutargardan Pass. General Roberts has been ordered to proceed to the Peiwar Pass and advance on Cabul, while General Stewart has been ordered to hold Candahar and concentrate at Candahar. The forces of the Khyber Pass are being strongly reinforced and will operate on Jellalabad. Major Connolly telegraphed Friday night the substance of a letter received from the Ameer of Afghanistan, who confirmed the news of the revolt, and adds that the regiments which have mutinied were joined by the populace. The Ameer's arsenal and stores were first plundered and destroyed, and the British Embassy was then attacked by overwhelming numbers. The Ameer declares that he was completely surprised by the outbreak. He endeavored to quell it, and sent General Daoudshah to Major Cavagnari's assistance, but General Daoudshah was unhorsed and fatally wounded. The Ameer then sent his son with the Governor of Cabul and other influential personages, but the mob was wholly uncontrollable. The attack on the British Embassy continued throughout Wednesday, when a fire broke out on the premises. The Ameer, writing on Thursday, says he is in great distress, and is himself besieged. The Viceroy of India is at present ignorant of the fate of Major Cavagnari and other members of the Embassy. General Roberts has already started for the Peiwar Pass. The advance on Cabul will be made very speedily, and will be strongly supported. The Viceroy's Military Secretary accompanies General Roberts.

London, September 7th.—Intelligence communicated by the India Office is to the effect that the attack on the British Embassy at Cabul was commenced by three Afghan regiments, which were joined later by nine others. The Viceroy of India telegraphed yesterday that General Roberts will reach Peiwar from Simla in five days, and will take command of the rapid advance on Cabul. General Stewart has been ordered to hold Candahar and threaten Ghuznee if necessary. The Ameer writes that the troops at the first outbreak, after stoning the officers, rushed to the British Embassy and stoned it. Several volleys were fired from the Embassy in return. A second letter from the Ameer, dated September 4th, says: "Thousands assembled to destroy the British Embassy. Much life was lost on both sides. I, with five attendants, have been besieged all day yesterday and up to now. I have no certain news of the Envoy, whether he was killed in his quarters or captured."

A correspondent at Bombay asserts that symptoms of discontent had been noticed at Cabul for some time. The bearing of the population toward the members of the Embassy has been defiant. The force defending the Embassy numbered 79. They fought with the greatest bravery. It is said that the Ameer's son was fatally injured. Large numbers of the mutineers were killed. After the buildings of the Embassy were fired the survivors sallied out and defended themselves desperately, but all were killed, including Major Cavagnari. Intense excitement prevails throughout India. It is believed at Paris and Vienna that the outbreak is due to Russian intrigue.

Simla, September 7th.—Noon.—Troops of all arms have been recalled from Peshawar and are reoccupying Candahar. Yakub Khan has asked for British aid. Badshah Khan, who holds the country beyond Shutargardan Pass, has offered his services to the British. Major Connolly reported all quiet yesterday to and beyond Shutargardan Pass.

Simla, September 7th.—7 p. m.—According to authentic intelligence received from Ali Kheyl, some of the natives have come in and reported that they have seen the dead bodies of British officers at Cabul. It is rumored that nine troopers belonging to the escort escaped.

London, September 8th.—A Calcutta dispatch reports that the disturbances at Badakshan were not serious. Affairs at Herat are unsettled. Kuram Valley is infested by robbers. The trade by Shutargardan Pass has been stopped. The force ordered to leave Candahar, September 8th, has been instructed to remain, and the city was reoccupied.

A despatch from Prome says: Massacres in Mandalay continue. Diplomatic intercourse between the Burmese Court and the British has virtually ceased. The Cabul outbreak will probably encourage the King to create open rupture with England. The Rumpu rebellion will be stamped out in a few weeks.

London, September 8th.—Lady Cavagnari received a telegram from the Viceroy of India, dated Sunday evening, announcing the death of her husband.

London, September 8th.—A dispatch from Calcutta, says: From imperfect information obtainable, there seems to be good reason to favor the view that the disaffection has not spread all over Afghanistan, but that the affair is a local emeute, which

will speedily disappear when the British troops arrive at Cabul. The Government, apparently, does not doubt the fidelity of the Ameer. Badshah Khan's adhesion to the British cause is valuable as removing what might have been a serious obstacle to the advance from Kuram to Cabul. The fact that the insurgents did not wait until the winter snows had blocked the passes, or even until the British had evacuated Candahar, indicates that the rising was wholly unpremeditated. The Kuram column, which will be first to move on Cabul, is in excellent condition, not having suffered from cholera. It consists of the second battalion of the Eighth Regiment, Sixty-seventh Regiment, the Seventy-second and Ninety-second Highlanders, two mountain and two field batteries, one battery of horse artillery, and three cavalry and one regiment of pioneers. The movement by the Khyber Pass is intended to support the main advance by way of the Peiwar Pass.

A dispatch from Allahabad states that the nine troopers of the escort who escaped were absent from the city collecting forage at the time of the outbreak. The mutineers finally burned down the doorway of the Embassy and swarmed in.

Simla, September 8th.—It is reported that three of the mutineer regiments have marched from Cabul. In official circles Ayab Khan and other chiefs are suspected of complicity in the outbreak.

London, September 8th.—The British mission to Afghanistan consisted of Major Cavagnari, his secretary, Jenkins, Dr. Kelley, Lieutenant Hamilton, commanding, with an escort consisting of twenty-six cavalry and fifty infantry and a Sepoy guard. The troops of the embassy were lodged in two houses in the city joined by a quadrangle. The houses were spacious, but unfortunately chiefly constructed of wood.

London, September 8th.—The Viceroy of India telegraphs as follows: Advice from Ali Kheyl, dated Saturday last, says that Badshah Khan saw the corpses of Major Cavagnari and members of his staff and escort. The party made a very stubborn defence. The loss of the rioters killed in the fight is estimated at over one hundred.

London, September 8th.—The *Times*, on the revolt in Afghanistan, says: Our duty is to act with courage and firmness. What has happened by no means creates a new situation. It does not supply a single new argument for annexing Afghanistan, and our policy, however modified in details, will be to keep steadily to the lines which have already been traced with the approval of public opinion.

Simla, September 9th.—The Governor of Candahar has expressed his absolute devotion to the British, and has offered to raise a contingent of troops.

London, September 9th.—Sir Stafford Northcote, Chancellor of the Exchequer, speaking at Exeter yesterday, said the outbreak at Cabul appeared to have been unpremeditated. So far as could be judged the Ameer has been entirely true to the British, and it was certain that the assistance he implored would not be refused. There seems to be great doubt, he said, whether a prompt advance is possible.

A military correspondent, reviewing the situation, says: Twenty-five per cent. of the native troops on the frontier have gone on the sick list. The season has been an unusually sickly one. The hospitals are full of men unfit for service by fever and hardships of the campaign. There are very few infantry regiments in the Trans-Indus Provinces which could muster 500 men, and there is probably not a cavalry regiment in the Punjab which could put 300 men on parade. The transport departments have been broken up, and their reorganization will be difficult. Upwards of 60,000 camels are officially reported to have perished in the late campaign. General Roberts may have sufficient mules and camels to admit of the hasty advance of a brigade in light marching order, but the Governor of India will have to strain every nerve to guard his communications and keep him provisioned. Unfortunately, the regiments in India nearest to Afghanistan have mostly suffered from cholera, and are numerically weak, the men being debilitated, and they will require heavy drafts to bring them up to their war strength, and at least two months must elapse before men to recruit the regiments can arrive from England.

News received from Allahabad, through reliable sources, gives assurance that General Roberts will be at Cabul in a fortnight. It is said in military circles at Simla, that the 9th of October is the probable date of the commencement of the forward movement, because of a deficiency of the wheeled transportation. A correspondent at Simla says, those who know the position of things declare an advance impossible. It is reported that Cabul itself has been sacked by a mob.

Simla, September 10th.—Latest intelligence from Glikhehl, dated the 9th, confirms the statement that Major Cavagnari and his followers were killed while charging upon the mob from the burning Residency. Two hundred and ten men were lost before Major Cavagnari's party was overpowered by numbers.

London, September 10th.—The *Times* says: Gen. Roberts has but 2,000 infantry, 1,000 cavalry and 8 guns, an inadequate force to cope with the rebels in Cabul, and at the same time maintain its own communications. General Roberts will probably be compelled to delay his advance until at least three fresh infantry regiments have reached Kuram Valley. There

is a rumour that some Afghan troops who left Cabul intended to advance on the Shutargardan Pass. Significance of this however, is destroyed by a telegram from Allahabad, announcing that the British troops and guns are already there. Another dispatch from Allahabad says as early as the 16th of August the Ameer advised Major Cavagnari to abstain from riding about Cabul, fearing an attack upon him.

The authorities of India have been notified that the Dragoons and Jaucera, two regiments of Infantry and three batteries of artillery will arrive from Natal before November 5th.

A special dispatch from India says: Two regiments of Highlanders and two regiments of native troops are moving up the Kuram valley, and two regiments of native cavalry and one British and two native regiments of infantry are now on their way to Kuram valley. The statement that the Sepoys who were with the Embassy were left alive, is disbelieved.

London, September 11th.—According to a dispatch from Kohat, General Roberts left that town on the 10th for the front. General Massey, on hearing of the massacre of the Embassy, pushed forward a regiment of Pioneers to the Shutargardan Pass and formed an entrenched camp there. Previous accounts from General Massey seem to show that he had not sufficient force for any further advance.

Lahore, September 12th.—The Hindoo attached to Major Cavagnari's mission, who concealed himself during the attack by the mob, and who escaped at night, has arrived at Keratza. He reports that the Embassy was attacked in the morning and set on fire at noon, but that it held out until evening. He believes all others connected with the mission were killed. The Ghilzais near Shutargardan have promised to assist the British with transportation.

Simla, September 12th.—A confidential agent from Yakoob Khan is waiting at Ali Kheyl to ask the British to advance. Gen. Roberts is expected at Ali Kheyl to-day. The inhabitants at Candahar are well disposed. Reports relative to the movements of the mutineers are conflicting. Some special dispatches revive the rumor that they are approaching the frontier.

The Viceroy's dispatches to-day mention nothing of the death of the Ameer. It is considered that the report of his murder or suicide may be put aside as unfounded.

Reports from Mooltan state that Herat, Badakshan and Balkh have all revolted against the Ameer. A holy war is being preached throughout Afghanistan.

London, September 12th.—Telegrams to the Government confirm the apprehensions of organized opposition by the population of Afghanistan. The Viceroy, however, is sanguine of speedy success. It is believed preparations are making for an advance in sufficient force to pursue the Heratse regiments. It is stated that General Donald Stewart will have command of operations in Afghanistan.

Simla, September 12th.—Yakoob Khan has written to the Governor of Candahar, informing him of the massacre of Cabul and ordering him to follow the advice of the British authorities. The Government has sanctioned the construction of a railway in the Bolan Pass.

London, September 12th.—The *Times* points out that the Government of India is systematically concealing the news concerning military instructions. The rumors, which are plentiful, must be accepted with reserve. All that is certain is that the plan of operations successfully followed last autumn will be repeated this year. Three columns will follow the same routes, starting, however, from the scientific frontier instead of from the cantonment which in 1878 marked the boundary. The Khyber and Candahar columns will probably be mainly confined to making demonstrations and holding the marauding tribes in awe. The troops of the centre column are at this moment being pushed up from Kohat to Kuram, so that in a few days we may expect that the whole force now in the valley to the east of Peiwar have been transferred to the western slope. When once the position of the Shutargardan Pass has been occupied in force and rendered impregnable, a forward movement will be made to Kushi, about fourteen miles distant. Provisions of all sorts are to be obtained around Kushi, and it will probably be converted into an extensive depot. General Roberts' subsequent operations must, in a great measure, depend upon the temper of the hill tribes and the news which he may receive from Cabul. If the hill men co-operate with him, or even remain neutral, a rapid advance with a small force is feasible. If, on the contrary, current rumors are true and the Ghilzais and others have joined the revolt, General Roberts will be compelled to hold the chain of communications in great force before venturing an advance. The Ghilzais are the most powerful tribe in Afghanistan. Their territory extends 600 miles in length by 30 miles in breadth, and their fighting strength is 50,000 well-armed men.

The Viceroy of India telegraphs a sketch of military arrangements, under date of September 11th. General Roberts will have 6,500 men, consisting of two brigades of infantry and one brigade of cavalry. This force takes possession of the country from Shutargardan Pass to Thull. The country will be held by 4,000 men under General Gordon. The Khyber line, from Peshawur to Ghundamak, will be protected by 6,000 men in addition to the Peshawur garrison. This force will provide a movable column to hold Jaggalolak, and communicate with Ca-

bul. The reserves at Peshawur and Rawul Pindi will number 5,000 men. The above force will represent a division capable of meeting all opposition. It will have its headquarters at Cabul, and army line to base at Peshawur. It will have a second line by way of Shutargardan when that Pass is closed, after which Gen. Roberts must look for maintenance to Cabul and Peshawur. The Khyber column is in active organization. Troops are now advancing to occupy Dakko. The guides are pushing on to Bazawal. A correspondent at Allahabad says that the orders are to occupy Cabul without the Ameer's consent.

A correspondent at Chaman says: "An important rumor is in circulation that an intimation of the pending danger to the Embassy at Cabul reached Candahar from Herat and was telegraphed the Indian Government, but too late to avert the calamity. All reports point to the Ameer's brother as the prime mover in the outbreak."

A dispatch from Bombay reports that the advance has already begun from Lundi Kotum. Jelalabad has been speedily reoccupied.

Rangoon, September 12th.—A Government steamer has left Mandalay, bringing down the staff of the British residency at that place. Fears are entertained that King Theebaw would follow the example set at Cabul, by massacring the Embassy.

GREAT BRITAIN.

London, September 7th.—The steamer *Brest*, of Glasgow, conveying 130 passengers—Italian, Swiss, German and French—from Havre to Liverpool, en route for New York, went ashore to-day off the Lizard. Five Italians, a German and a Frenchman are missing.

London, September 7th.—Rev. Mr. Talmage preached a missionary sermon in Surrey Chapel this morning, to a large congregation. In the afternoon he preached for the last time in the British metropolis, in Agricultural Hall, to an immense audience, roughly estimated at nearly twenty thousand people.

London, September 8.—Consols, 97 11-16; 4 per cent. bonds, 105; 4½s., 108½; Erie, 27½.

Liverpool, September 8th.—Cotton firmer and fractionally dearer; Uplands, 6 13-16; Orleans, 6 15-16; sales, 10,000 bales. Receipts of wheat the past week: From Atlantic ports, 76,000 quarters; from Pacific ports, 49,000 quarters; from other sources, 12,750 quarters.

London, September 8th.—*Dresden, China* and *Altuna* are equal favorites for the great Yorkshire Handicap to-morrow. *Parole*, carrying eight stone and thirteen pounds, is next in favor.

London, September 8th.—Lorillard's *Geraldine* is favorably mentioned for the Champagne Stakes at Doncaster to-morrow.

London, September 8th.—Bullion gone into the Bank of England on balance to-day, £37,000.

London, September 8th.—Notice of ten per cent. reduction of wages has been posted at Park End Colliery, Forest of Dean. The notice affects a great number of men.

London, September 9th.—The leader of the Ashton Trades Union fear they will be unable to prevent a strike, as the mill hands believe it would be beneficial in reducing production, even if it did not prevent a reduction of wages.

At a meeting of shareholders of the Union Spinning Mills at Oldham, running 900,000 spindles, a suggestion to run on short time or to stop the Oldham Mills entirely, so as to bring pressure to bear on the Liverpool cotton market seemed to meet with great approval.

Glasgow, September 9th.—It is estimated that 3,000 people are still out of employ here. The iron trades only are doing well. Building trades are in the worst condition, and it will be necessary again to make provision to assist the unemployed during the coming winter.

London, September 9th.—Silver, 51½; Consols, 97 11-16; Erie, 27½.

Liverpool, September 9th.—Cotton firmer; Uplands, 6½; Orleans, 7; sales, 7,000 bales.

Breadstuffs steady; wheat, 8s. 9d. for red Western spring. Receipts of wheat the past three days, 198,000 cwt., including 125,000 American.

London, September 9th.—It is stated that the military authorities in India have been empowered to hold back any troops whose term of foreign service has expired. Large reinforcements of troops are to be dispatched to India to operate in Afghanistan, the first batch leaving England on the 16th of the present month by the troop ship *Malabar*. The troop ships *Junna* and *Euphrates* follow speedily.

Manchester, September 9th.—Bell, architect and surveyor has failed. Liabilities, £43,000.

London, September 9th.—The race for Champagne stakes took place to-day at Doncaster, and was won by *Ereion*, *Glen Ronald*, second; *Zealot*, third; *Henry George*, fourth, and *Geraldine*, fifth. Twelve horses started. *Ereion* won by a neck with two lengths between the second and third horse.

London, September 9th.—It is said that cereal harvest in Kings county, Ireland, has been virtually lost in consequence of heavy rains and floods which begun Saturday last. There are also very bad reports from County Down with regard to the crops.

London, September 9th.—Belgium, Holland, Italy and Spain will be buyers of food in America, as well as England and France.

New York, September 10th.—English advices state that the emigrant movement to Texas is carried on in London by the Texas Freehold Farm Aid Emigration Union, under a species of lottery system, its subscription tickets selling in all parts of Great Britain at two shillings and sixpence monthly. The drawings are monthly, each ticket securing eighty acres, fenced, a house with verandah, well of water, team, some stock, farming tools, and £10 worth of provisions, with from five to ten years to pay for the same. The recently-arrived English farmers came under the auspices of this Union. The *Standard* says the selection of South Texas is due to the exertions of Dr. Kingsbury, who a year or two ago was sent over by the Texas Railway Company to lay before the farmers the advantage of taking up sites along the railway. Kingsbury is a director of the Freehold Farm and Emigration Union. The *Anglo-American* says: Trades Unions might find it to their advantage to support this Company, and so utilize its organization as to make it of wide benefit to England's overstocked labor markets. Many English manufacturers, looking about for eligible sites, are turning their thoughts toward America, believing the limit of manufacturing progress has been reached in England. Several English gentlemen are now visiting the Western States with the object of investing capital.

The same paper says: The Mormons are the only active emigration agents connected with the United States. Eighty missionaries came here last year, and in Europe there are now 400. The Mormons in England number 10,000, and 6,000 in Scandinavia. In Switzerland there is one Mormon Conference and eight missionaries.

London, September 10th.—The race for the St. Leger stakes at Doncaster to-day was won by *Rayon D'Or*; *Ruperra* second and *Ereter* third. Betting this morning was three to one on *Rayon D'Or*, one hundred to fifteen against *Ruperra*, and twenty to one against *Ereter*.

London, September 10th.—Cotton Operatives at Ashton and neighbourhood held the largest meeting to-day ever known in that district, and unanimously decided to strike to-morrow. The operatives will not have to resort to the funds of the Trades Union for a fortnight.

London, September 10th.—Silver, 51½; Consols, 97 13-16; four, 105½; new five, 105½; Erie, 27½.

Liverpool, September 10th.—Cotton steady; Uplands, 6½; Orleans, 7; sales, 8,000 bales, including 5,350 American.

London, September 10th.—Two regiments at Chatham and eight batteries of artillery have been ordered to be in readiness to proceed to India. Several battalions will, if necessary, be ordered from Cape of Good Hope to India. Major Cavagnari's relations with the Ameer were latterly very cold.

London, September 10th.—The Secretary of the Indian Government has issued a note that no correspondents will be allowed to accompany the troops into Afghanistan, but that regimental officers may communicate with the newspapers.

Horrocks, Miller & Co., the largest cotton manufacturers in the north of England, have given notice of a five per cent. reduction in wages.

London, September 10th.—The colliers in West Bromwich decide to ask an increase of wages in South Staffordshire and Worcestershire, and also to form a branch of the National Emigration Association. The cotton operatives of Padiham, Lancashire, also propose to form a branch of the National Emigration Association.

London, September 10th.—The steamer *Crest* from New York has grounded at North Head.

London, September 10th.—The ironmasters of Lanarkshire and Ayrshire reject the demand of the workmen for increase of wages, until the price of iron exceeds fifty shillings per ton.

A third of the furnaces are to be blown out, the masters believing the revival in the iron trade only temporary.

The self-actor minders in the Ashton Cotton Mill are the most determined on a strike. If the weavers do not strike with the minders, they will, in almost every case, be locked out. The friends of the Minders' Union will probably enable them to continue to struggle for two months or more. The weavers could not possibly remain so long without experiencing great privations. Card-room hands will doubtless be locked out when the struggle begins. Five per cent. reduction in wages has been posted in the Lancashire mills, and short time and reduction of wages in the mills near Stockport.

The operators of two large mills at Mossley have struck against the reduction posted at other mills.

London, September 11th.—Bullion in the Bank of England increased £278,000 the past week. The proportion of reserve to liability is 58 5-16 per cent. Bullion, gone into bank on balance to-day, is £215,000.

London, September 11th.—The Manchester *Guardian* says: In consequence of the cheapness of provisions the fall in wages is not anything like so serious in its effects upon the condition of working-people as the measure of reduction appears to indicate. Although at the present moment the cotton industry is overshadowed by menacing clouds, there are already clearly

discernible signs of returning prosperity. The importance of favorable rains in Asia can hardly be exaggerated, and we may reasonably hope that the next year in India and China will be prosperous. The revival of enterprise in America also means renewal of activity in international trade.

It is understood a new association of capitalists has been formed in Hamburg with a view of starting an additional line of steamers to the United States and the East Indies, which will compete for goods traffic only. Two new steamers, especially adapted for this description of business, have been ordered.

London, September 11th.—The steamer *Zealand*, from Antwerp for Philadelphia, ran down the *Mark Currier* off Dungeness. Four persons were drowned. The steamer was uninjured.

London, September 11th.—A French review of the beet sugar trade says: Whatever may be the result of the crop in France, the yield throughout Europe will be equal to that of last year.

London, September 12th.—The farmers who sailed from Liverpool for Canada to investigate the advantages of settlement in the Dominion, represent Roxburghshire, Berwickshire and Dumfriesshire, Scotland; Durham, Cumberland and Yorkshire, England; and several districts in Ireland.

London, September 12th.—A Berlin correspondent repeats the statement from *Novoye Vremya* that the forthcoming meeting of Russian scientists will consider the question of abandoning the old method of reckoning time.

London, September 12th.—Consols, 97 11-16; Four, 104½ ex coupon; 4½, 108½; new 5, 105½; Erie, 26½.

Liverpool, September 12th.—Cotton quiet; uplands, 6 13-16; Orleans, 6 15-16; sales, 7,000 bales. Breadstuffs strong: wheat 8s 9d @ 9s 7d per cental for average Californian white; 9s @ 10s for red western spring. Receipts of wheat the past three days were 93,000 centals, including 50,000 American.

London, September 12th.—The Home Rule League of Dublin (Power, Parnell and O'Leary present) appointed a committee to arrange for calling a popularly elected convention of 300 members, the same number as composed the former Irish Parliament, to discuss Irish questions before the next session of Parliament.

London, September 12th.—The Doncaster cup was won by *Isonomy*; *Jeanette*, second; *Glandale*, third.

London, September 12th.—An explosion occurred in the colliery of the Crewe Coal and Iron company at Leycott. Five persons are known to have been killed.

London, September 12th.—The cotton operatives are on strike. FRANCE.

Paris, September 7th.—Arnado De Noe, better known as Cham, the caricaturist, is dead. He was born in Paris, January 26th, 1819.

Paris, September 8th.—A duel took place on the Prussian frontier between Marquis Olivares and Du Bourais. The latter, who had given offence by speaking contemptuously of General Martinez Campos, Spanish Premier, was seriously wounded.

Paris, September 9th.—The *Bulletin des Pailles* says: The first threshings in the west and northwest of France show a very poor yield both in quality, and there is no set-off to the bad results in the southwest, east and centre. Though France will not have to purchase so largely as last year, she will require fifteen to twenty million hectolires, and must buy it almost exclusively in America in competition with England.

Paris, September 9th.—The carpenters in this city have struck for higher wages and shorter hours.

London, September 10th.—The *Times* Paris correspondent reviews the statement that there will be a compromise on clause seven of the Ferry Education bill.

London, September 10th.—A dispatch from Paris to the *Standard* says a shock of earthquake was felt at Lyons, Tuesday.

Paris, September 10th.—The *La Soleil* says: Prince Gortchakoff, in an interview with its correspondent at Baden, disclaimed the slightest concern at the attacks of the Berlin newspapers. He had always deprecated any undue weakening of France, and hence Bismark's hostility to him. The friendship of the Russian and German Emperors would certainly suffice to smooth any slight differences which might arise.

Paris, September 10th.—The Bank of France is daily losing large sums in gold twenty-franc pieces, purchased for export.

The Franco-American Union intends organizing a grand fête, the proceeds of which are to be divided among the families of the victims to yellow fever in the Mississippi Valley.

Bordeaux, September 10th.—The steamer *Colombo* from New Orleans, August 11th, for this port, grounded at Bec D'Ambe.

Paris, September 11th.—A second ballot will take place at Bordeaux, Sunday for member of Assembly. The contest is between Blanque and Archard. The former has arrived at Bordeaux and delivered an address before a large crowd.

Specie in the Bank of France decreased 36,626,000 francs the past week.

Paris, September 12th.—Twenty-eight million francs' worth of French gold will leave for the United States this week.

In a detailed annual statement relative to the French harvest, Etienne, a great agricultural authority, says: It has been very

good in four departments, good in seven, fair in 24, poor in 40 and bad in 15. This year's aggregate crop will be 90,000,000 hectolitres, against 93,000,000 last year. This will make necessary the importation of 5,000,000 or 6,000,000 hectolitres.

GERMANY.

Berlin, September 8th.—With the exception of old and defaced coins all silver hitherto held back has now gone into circulation.

The newspapers mention rumors of a coming meeting of Bismarck and Gortchakoff.

Berlin, September 9th.—Baron D. Bubrill, Russian Ambassador, has suddenly arrived here. It is reported that he is charged with the duty of bringing about an interview between Bismarck and Gortchakoff.

London, September 10th.—The *Times* Vienna correspondent learns from a good source, that the Cabinets of Russia and Germany are arranging a meeting at Berlin between Princes Bismarck and Gortchakoff.

London, September 10th.—A correspondent at Vienna bears, from an absolutely trustworthy source, that the Emperor of Germany visited the Czar in consequence of the Czar having written the Emperor expressing dissatisfaction at the demonstrations of friendship between Austria and Germany to the exclusion of Russia.

RUSSIA.

St. Petersburg, September 7th.—Eighty-four young persons, sentenced to hard labor and deportation to Siberia for political offences, have left Moscow under armed escort.

London, September 7th.—A dispatch from Baku states: Colonel Malama has taken command of the expedition to Merv, pending the appointment of a successor to General Lazareff. Sickness is still prevalent in the command.

Berlin, September 8th.—The rumor that Count Schouvaloff will immediately succeed Prince Gortchakoff is revived.

London, September 10th.—A Paris dispatch to the *Standard* states that the attacks of the Russian press on Germany have been resumed with redoubled violence.

A correspondent of the *Soleil*, who interviewed Prince Gortchakoff at Baden, reports him as stating that he had quite recently tried, but vainly, to induce the Czar to allow him to retire.

St. Petersburg, September 10th.—The *Gazette* says: The massacre of the members of the English Mission to Afghanistan obliterates the scientific frontier between that country and India, and makes necessary the occupation of the whole of Afghanistan by the British. But this is incompatible with the assurance given by England to Russia, with whom there must be an understanding in regard to measures of satisfaction to be taken by England. The *Gazette* proceeds to recommend a solution by a partition of Afghanistan, so as to bring English and Russian dominions in contact in Central Asia.

Berlin, September 11th.—Prince Orloff, Russian Ambassador at Paris, has again asked to be allowed to retire. Should his request be granted Baron Dabril will probably succeed him.

London, September 11th.—A dispatch from St. Petersburg says the newspaper war against Germany has subsided.

St. Petersburg, September 12.—The *Russkaf Prosveta* gives, under reserve, a list of impending changes, which include the appointment of the Czarowitch as Chief of the Military District of St. Petersburg; Prince Doudoukoff and Korsakoff, Minister of Foreign Affairs, as Privy Councillors; Wolujeff, Minister of the Interior, General Todleben as Minister of Ways and Communication, and General Abrutcheff as Minister of War.

SPAIN.

Madrid, September 10th.—The Council of Ministers has finally decided to reopen the Cortes, October 28th.

Havana, September 12th.—The Association of Planters, has asked King Alfonso for permission to import from 25,000 to 30,000 Chinamen yearly, whom they consider the best adapted to endure the climate and fatigues of Cuban field labor, and to bring from Spain and the Canary Islands 10,000 workmen, continuing the importation in this manner until the number shall have reached 400,000 men. These will be paid their passage and be supported for three days after their arrival, during which time it is considered they may find work. The Association calculates that the expense of bringing 40,000 men here yearly will amount to \$3,000,000, which it is proposed shall be raised by general taxation, as the immigration would benefit the whole country. The recent treaty between Spain and China prohibits the immigration of Chinamen by contract.

The insurrectionary movement at Santiago de Cuba was begun by about 100 men, mostly colored, raising a revolt in the streets. After killing some policemen, they took to the woods and mountains.

Madrid, September 12th.—Rumors regarding the influence of the British in Morocco and the mounting of guns, and fortifying of barracks at Tangiers by British engineers, etc., are entirely false.

AUSTRO-HUNGARY.

Vienna, September 7th.—Five leaders of the Bosnian insurrection are now in Novi-Bazar, and it is feared they will organize an opposition to the Austrians.

Vienna, September 11th.—The Turkish Commander at Plevelje, in pursuance of an order from the Porte, protested against the occupation of that place by the Austrians and demanded that there should be a joint Austro-Turkish garrison. The Austrians, however, finally occupied the place without opposition.

Vienna, September 12th.—It is denied that Austro-Hungary has guaranteed to Turkey the safety of her European possessions in return for allowing the peaceful occupation of Novi-Bazar.

Geneva, September 12th.—Baron Haymesle, Austrian Ambassador to Rome, will be present at the interview between Bismarck and Andrassy. Bismarck will be received by the Emperor during his visit.

ITALY.

Rome, September 8th.—The Pope has written an autograph letter to the Emperor of Germany, summing up the results of the late negotiations, and suggesting the Emperor's direct intervention in the way of clemency.

Rome, September 12th.—Measures for the destruction of the phylloxera are being energetically prosecuted in the Como and Milan districts. Phylloxerated vines in the district of Lecco, near Como, and contiguous orchards and mulberry plantations have been destroyed by order of the Italian Minister of Commerce. Three infected vineyards in the district of Monza have been inundated to extirpate the pest.

HOLLAND.

London, September 8th.—Dirk Mul, banker of Winchoten, Holland, and a public man enjoying unlimited confidence, has suspended, stating that he lost 500,000 guilder by the collapse of two potatoe flour mills. Great excitement prevails. There is some rioting and the police are obliged to protect the premises of the defaulter.

SWITZERLAND.

London, September 8th.—A dispatch from Geneva announces that the harvests in western Switzerland, and in the Departments of Savoy and Ain, in France, have been successfully garnered. They are abundant and excellent.

TURKEY.

Constantinople, September 7th.—The Greek members of the Turco-Greek Frontier Commission have drawn up a note to the Ambassadors, insisting that the fulfilment of the thirteenth protocol of the Berlin Treaty is obligatory upon the Porte. The Turkish Commissioners intend to maintain that the protocol merely recommends that the Porte agree to the delimitation therein suggested. It is reported that if negotiations fail a European Conference will assemble for the purpose of settling the Greek and other questions.

Constantinople, September 8th.—Turkish troops have been sent to repress the insurrection, which has broken out in Kardostan.

London, September 8th.—The British Consul-General in Eastern Roumelia has reported to Aleko Paaba, Governor of that Province, that in consequence of the oppression of Mussulmans, the people declare they would prefer Russian to Roumelian government.

Vienna, September 9th.—Aliko Paaba has communicated to the International Commission his resolution to resign.

Berlin, September 10th.—It is asserted that Austria, as the price of Turkey's non-resistance to the occupation of Novi-Bazar, guarantees the Sultan his European possessions.

Constantinople, September 12th.—The rebellious Kurds have been defeated and dispersed with considerable loss.

ROUMANIA.

Vienna, September 7th.—The *Presse* announces that the mission of Boreacu, the Roumanian Envoy, has been partially successful, France and Germany are most disposed to assent to a compromise, based on the principle of gradual emancipation of Roumanian Jews. Austria has accepted this principle.

Bucharest, September 10th.—The Maize crop has failed in most districts in Roumania. The yield in Wallachia is especially small.

AFRICA.

Vienna, September 12th.—Advices from Alexandria represent that the King of Abyssinia claims the whole of the strips of the coast ceded to Egypt in 1877, and also several towns and the territory in which they are situated. If his demands are rejected war is apprehended.

London, September 12th.—King Mtesa, ruling near Victoria Nyanza, Africa, has abolished slavery throughout his dominions. At least half a million slaves were to be liberated.

THE JAPANESE PRESS.

SAVINGS BANKS.

(From the *Hochi Shimbun*.)

CAPITAL is in the closest relation to enterprise, because sufficient capital is absolutely essential to the successful carrying out of every enterprise a man may desire

to embark in. The readiest way to accumulate a large fund is to allow a great number of people to subscribe to it, and any system having this object should not be overlooked by us. We will therefore give a short account of Savings Banks. A Savings Bank is an institution established, not for the rich, but for the poor who have no other means of investing their little savings profitably and securely so as to provide a fund for their maintenance during old age. These admirable institutions had their rise in England, where the clergy adopted the system of allowing each labourer, &c. to deposit with them every evening a sum equal to two sen of our money, and at the end of the year or such other time as it was required, the depositor got the whole amount back in one lump sum. This primitive mode of dealing has undergone many changes. At present we find that the accumulated savings of the poorer classes in England have reached an enormous amount, indeed so far back as 1844 they aggregated 156,378,180 yen which was invested in various profitable undertakings. It therefore seems, that although the primary object of these Savings Banks is to provide for the safety of the deposits of the poorer classes yet, as soon as the accumulated deposits reach a large sum they are then employed in remunerative enterprises. The public may perhaps think that here in Japan no great amount of capital can be obtained from such a source as a Savings Bank, but it is impossible to judge now to what extent Savings Banks may yet be developed in this country; the reports of the Post Office Department are, however, very hopeful. According to the seventh annual report of the Department (for the year ending 30th June, 1878), the deposits during the year under review amounted to 208,944,679 yen in 48,358 different sums, which is an increase of 152,474,459 yen, or about 270 per cent. over the preceding year and 175,118,951 yen, or about 517 per cent. over the year before that. If the money deposited during last year was added to that remaining in the Banks on the 30th June, 1877, it would amount to 269,136,324 yen. The withdrawals during last year were 2,276, representing 57,103,796 yen, leaving remaining on deposit on the 30th June, 212,032,528 yen. It will thus be seen that the deposits are rapidly increasing year by year and as the withdrawals are only about one-fourth of the deposits, the money accumulated may fairly be employed in profitable industrial enterprises. The most important point in the Savings Bank system, is to have the offices for the receipt of deposits established in convenient places, this we have already done, and we may therefore look forward to a great development of the institution. We are of opinion that a further step in advance should be made and private Savings Banks established as well as the present government Post Office Savings Bank. There is a very prevalent notion amongst our countrymen to hold aloof from government institutions while they eagerly take advantage of private institutions of a similar description and in the case of Savings Banks we think a general participation in their many benefits is principally prevented through their being entirely in the hands of the government. According to the report we have mentioned, there are only 11,811 depositors in the whole empire! If the system was extended so that private Savings Banks could be established we are confident the number of depositors would be vastly increased, and the large accumulation of capital could then be profitably employed in remunerative industrial enterprises. Do not our readers think this would prove one good way of accumulating capital?

COUNTERFEIT KINSATSU.

(From the *Mainichi Shimbun*.)

I.

THE most ingrossing topic of conversation amongst the public at present is the rumours respecting the alleged forgeries of kinsatsu by Fujita and his accomplices. Although we have no positive information that there is any foundation for these rumours, still, as so much attention has been directed to the subject, and so much uncertainty has arisen, the paper money which forms the circulating medium for the country, is looked upon with suspicion. In our opinion, the government must at once take steps to remove the present suspense and thus relieve the existing severe financial pressure. We shall first treat of the subject as if the rumours respecting Fujita were correct and

then, as if they were incorrect. To judge from the newspaper reports and the many notifications issued by the Kiyoto and Osaka *Fucho* the charge against Fujita and his accomplices is one of forging paper money. If such is not the case, the government should at once issue a notification stating so explicitly, and thus allay the anxiety which has arisen in the minds of all business people. The government has of course many different duties to perform, but the most important of all, is to keep the population in a state of quietude and contentment. The rumour respecting the paper money has spread over the whole empire and has caused great excitement in every city, town and hamlet. Even if the rumour is unfounded the silence of the government will cause a decrease of confidence in the paper money, so that the government must speak out on the subject. For ourselves, we believe the reports are entirely without foundation and that the government should issue a notification to that effect without delay, and bring the matter to a final conclusion. What we mean by a final conclusion, is not the trial of Fujita, Nakano and the other suspected persons, but the course to be adopted with reference to the forged paper money. There are numerous crimes such as treason, robbery, etc., the injuries inflicted by which are personal and guarded against by the arrest and punishment of the offender, but the crime of counterfeiting currency is essentially different. The injury inflicted is in its effects like the bite of a poisonous snake. After the snake has bitten a man and is killed, the poison still circulates in the man's body, and in like manner after the forger has been punished according to law, the counterfeit money still remains in circulation throughout the community. We shall now consider the best mode of dealing with this important subject on the supposition that the current rumours are founded in fact. The question then naturally arises, should the counterfeit money be confiscated by the government, or should the government give genuine kinsatsu in exchange for it? To this we would most unhesitatingly reply, that the exchange must be made, and we will give our reasons in the next part of this article.

(To be continued.)

TREATY REVISION.

(Abridged from the *Fusō Shimshi*.)

AFTER the failure of the mission of His Excellency Sameshima, Their Excellencies Okuma, Yenomoto and Yoshida were appointed Commissioners for negotiating the revision of the existing treaties. Nothing definite appears to have been done by the Commissioners, although it is reported that they have had frequent meetings and that while Their Excellencies Okuma and Yenomoto are in favor of throwing open the whole of the country to foreigners, in exchange for such a revision of the treaties as would allow us to levy what duties we pleased and also give us jurisdiction over all residents in the Empire, the other Commissioner thinks it would be more politic to try and obtain the right to levy duties now, and let the other questions stand over until some future time. As no practical result came of the deliberations of these Commissioners, the public naturally concluded that the Government found great difficulty in accomplishing their object. We have frequently urged the necessity of entrusting the negotiations to some resolute Minister and we therefore hail with satisfaction the appointment of His Excellency Enonye—who is pre-eminent amongst the members of the Cabinet for his firmness and ability—to the office of Minister for Foreign Affairs, and the addition of Their Excellencies Awoki and Uyeno to the Commission for negotiating treaty revision. In other countries, the Minister for Foreign Affairs occupies a very prominent position. For example, in England the Prime Minister is sometimes Chancellor of the Exchequer and sometimes Secretary for Foreign Affairs; in Germany, Prince Bismarck personally supervises the foreign relations of the Empire; and in the United States of America, the Foreign Office is called the Department for State Affairs. Here in Japan, the Minister of Foreign Affairs holds an office of the very utmost importance, because we are struggling to attain the same status as other nations, and the people will look to him to restore us our national rights and privileges. The Government of Japan has already sent several missions to foreign countries with a view of getting the treaties revised, but so far without success, and it has now been determined that the

negotiations shall take place in Tokio. Should the government fail this year, we feel convinced that they will persevere year after year until this great object is attained. But there should be no failure in the forthcoming negotiations, if there is, the prestige of Japan will be lowered before the world. The Government seem to be fully alive to this fact which is evidenced by their recent action in changing the Ministers. Now that His Excellency Inouye is at the head of the Foreign Office, with Their Excellencies Okuma, Yenomoto, Yoshida, Uyeno and Awoki to assist him, they should unite their forces and armed with the right and justice of their cause, resolutely insist upon a revision of the treaties.

ADMIRAL YENOMOTO AND THE LOOCHOOAN DIFFICULTY.

(Abridged from the *Kinji Hiron*.)

IT is not yet known whether we shall be involved in a war with China respecting Lochoo. There are numerous rumours current relating to this momentous question. Some say that even if the present complication is settled peacefully, the Chinese Government are determined to go to war with Japan sooner or later, and that the present time would be a most opportune one for Japan to attack her neighbour. We have no doubt that these rumours are merely an expression of the feeling of those who are desirous of hostilities, because we have never heard anything of the kind from thoughtful, observant people who are well acquainted with public affairs. We have also heard, that the settlement of the Lochooan difficulty is considered of vital importance and as the Government are engrossed at present in matters of Home policy of great moment, they have entrusted the negotiations to Admiral Yenomoto, with injunctions to endeavour to bring about a friendly solution of the complication, although of course if China insists on taking hostile measures, Japan will not be backward in meeting her. Although we cannot vouch for the truth of this rumour, yet we think that it is extremely probable. It will be remembered that it was Admiral Yenomoto who recommended the cabinet to abolish the *Han* government and make Lochoo into a prefecture, out of which arose all the present trouble, it is therefore only natural that he should carry the measure through to a final settlement. The negotiations which led to the exchange of Saghalien for the Kurile Islands, a transaction which was not without its disadvantages to Japan, were also conducted by Admiral Yenomoto, so he may be said through his previous experience, to be well fitted for the task of arranging with China. If it should however be found that China insists upon declaring war, we must act courageously and notwithstanding our desire for peace, boldly take up arms in defence of our rights. The latest accounts tend to show that the Government of China is disposed to adopt a peaceful policy, so it may be found after all, that Admiral Yenomoto, in his anxiety to avert the horrors of war, has been premature in offering his services as a negotiator. If matters are amicably settled it will be of the utmost benefit to both countries, and we fervently trust that a lasting peace may be established.

LAW REPORT.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Monday, 29th September, 1879.

MESSES. H. P. LILLIBRIDGE and E. F. FOSTER, Assessors.

EMIL WIEHARD vs. WM. COPELAND.

The cross-examination of plaintiff was resumed by Mr. Kirkwood. Mr. Kirkwood:—What became of the letter you say Mr. Hall wrote to you on behalf of Mr. Copeland before the partnership was formed?

Witness:—I think I gave it back to him as he said he required it. Mr. Kirkwood: Did that letter refer to any mortgage or security for your half interest?

Question objected to and objection sustained.

Witness: Mr. Hall at this time kept my books and wrote letters for me. I believe I asked him for the letter once and he said that I could have a copy of it. I believe the last time I saw it was in the English Court when our case against Mr. Hall was being tried. In that trial I was sitting close to you (Mr. Kirkwood) and paying attention to all that was going on. I do not recollect whether that letter referred to any mortgage or not. At that time I did not understand the English language as well as I do now. I do not

remember whether I instructed Mr. Hall to write an answer to that letter or whether any answer was sent. Mr. Hall has given no reason why he kept that letter. We went to Mr. Hall's office and there made a preliminary agreement. Mr. Hall was there, but I do not recollect what took place. I had so much confidence in Mr. Copeland that I paid but little attention to what was done, as Mr. Copeland had a much better knowledge of the English language. We talked over the agreement, but I cannot recollect what was done, but we signed on paper what we had spoken over. I don't know where that paper is now. I believe Mr. Hall read it over before we signed. Mr. Hall went into another room with the same paper and when he came out we signed it. This was the same paper that proved to be a letter afterwards, in the English Court, where I saw it. I never had the letter in my hands so I could look it over; but it was not the same writing that Mr. Hall did when we were at his office; as the paper then used was long and the writing was large and this letter was on small paper. I cannot swear that the paper I saw in the English Court was not then folded so as to look small. I do not know whether anything was said then about its being a letter. I cannot swear whether the memo. that Mr. Hall first drew up and the letter both were presented in the English Court.

Mr. Kirkwood:—Do you charge Mr. Copeland with making to you false statements by which you were induced to enter into the partnership?

Witness:—I found that things were not as he represented them to me. Mr. Copeland told me that the brewery was a new one and in perfectly good order but I found it was not as represented. It had been repaired. Before this perhaps I had been there twice but it was never shown to me how it was. Before the partnership I had been living for over a year at No. 68. Mr. Copeland's brewery is not a quarter of a mile from No. 61. I cannot tell when Mr. Copeland's new brewery was commenced or completed. It was the only opposition brewery then. I took no interest in it and rarely passed by it. I had been frequently in his old place in 1872. The present brewery was probably 5 or 6 months old in July 1876, but the timber of the old brewery had been used in building the new. Mr. Copeland and I agreed that Mr. Dickens was to draw up the deed of partnership. I do not know who took the papers to Mr. Dickens as I was busy then at No. 123. I left it altogether to Mr. Copeland. The only thing left to Mr. Hall was the stock-taking. Ever since I returned from America, Mr. Hall had been keeping my books and collecting my bills and writing my letters. I do not recollect Mr. Hall bringing any papers and reading them to me at the brewery. I do not recollect any discussion then as to the amounts to be put in the mortgage or deed of partnership. I do not recollect bringing any draft mortgage down to Mr. Dickens. I do not know whether I had any conversation about the mortgage with Mr. Dickens, or not, I do not know whether I had any other business with Mr. Dickens or not. I do not recollect receiving any letter from Mr. Dickens when I signed the partnership. I think there was nothing mentioned about my asking for a guarantee letter that Mr. Copeland would give half of the property when the mortgage was paid off. (Paper shown witness.) I have never seen this paper before and cannot say whether it is a correct account of Mr. Dickens' services or not, or whether it has been paid. Cannot tell Mr. Dickens' handwriting, but this looks like Mr. Hall's handwriting. I cannot say whether Mr. Hall was authorised to collect and pay bills or not. I did not bother myself about the outside business.

Mr. Kirkwood:—If you considered your stock worth \$7,500, how did you come to sell it for \$2,400?

Witness:—I sold it at \$2,400 (as it was put in the partnership) as that was the cost value of it. It was composed of beer, barley malt, hops &c. I put down \$7,500 as the selling price. I think that malt, barley, hops &c. would have sold for more than cost. I bought of Mr. Copeland one-half of everything on the place except one horse and carriage, for \$15,000. The firm took over my stock at \$2,421.61. Mr. Copeland and I were the firm. Had we bought this stock from a third party we would have had to pay each one half.

Mr. Kirkwood:—What objection have you to the amount that appears in the mortgage?

Witness:—It was always understood that Mr. Copeland was to be paid off from the monies that came in from the business. I believe there is some \$1,200 in the mortgage more than I owe.

Mr. Kirkwood:—Do you charge Mr. Copeland with having put the amount of \$13,789.18 in the mortgage fraudulently?

Witness:—It cannot be otherwise. I believe Mr. Hall had instructions from Mr. Copeland. I cannot tell whether Mr. Hall knew all about these transactions or not.

Mr. Kirkwood:—Do you charge Mr. Hall with complicity in the fraud you say has been practiced on you?

Witness:—I cannot tell whether I do not. I cannot say whether Mr. Dickens knew about it or not, but I do not charge him with complicity in this fraud. Mr. Eytan pointed me out some points in the books. We were only about an hour looking over them in one day. I was very busy at the time with the men. The safe I took the paper from belonged to Mr. Copeland. Mr. Eytan read the papers. I opened it because Mr. Eytan asked me about the partnership. Mr. Eytan looked for the partnership paper in the safe.

Mr. Kirkwood:—Why did you not get your own deed of partnership instead of rumaging among Mr. Copeland's private papers?

Witness:—Mr. Eytan asked me to open the safe and the paper was right on the top. I never looked over any papers.

Mr. Kirkwood:—When Mr. Copeland returned from the country how did you receive him?

Witness:—Just as usual. I always tried to keep the peace. I never spit in his face.

Mr. Kirkwood:—Did you ever object to Mr. Copeland going into the country for his health?

Witness:—I objected to his going gunning.

Mr. Kirkwood:—Did you not say that some officers came to pay a bill when Mr. Eyton and Mr. Copeland were away. What man-of-war was it?

Witness:—I cannot say what one it was. The bill was paid afterwards when the ship came back. I don't know the amount of the bill. I cannot say whether it was on a Sunday or not. The time when Mr. Copeland and Mr. Eyton were away for three days, I had to write all the chits &c.

Mr. Kirkwood:—Did not Mr. Copeland and Mr. Eyton at one time leave early on Sunday morning and come back on Sunday evening and the other time on Saturday, after business hours and returned on Monday morning?

Witness:—Once when they were away it was very warm and fermentation rapidly commenced and I had to work very hard. I don't know whether this was one of the trips he told me he was going for barley.

Mr. Kirkwood:—Was it not before Mr. Eyton came on July 1877, that you opened the Shanghai agency?

Witness:—I think it was. I do not know whether the charges for opening that agency were charged in the books or not. No such charges were pointed out to me by Mr. Eyton when we looked over the books. I know nothing about keeping books. I know what a cash book is. Once when Mr. Copeland went in the country, I kept the cash book for a month. (Exhibit 1 shown witness.) The initials E. W. on first page are mine; the signature on pp. 4, 5, 6, 7, 8, 9 are mine. (Exhibit 2 shown witness.) I kept in my possession this one, Mr. Eyton kept No. 1. They are both in Mr. Eyton's writing except the signature. Mr. Eyton and I are old friends. I have great deal of confidence in him. I recommended Mr. Eyton to Mr. Copeland. Ever since the time that I went over the books with him, he has not been the same to me as he first was; he showed himself altogether on the side of Mr. Copeland who tried to keep Mr. Eyton as much as possible with him. I do not know whether Mr. Copeland and Mr. Eyton knew each other before he came to us as book keeper. Mr. Copeland used to invite Mr. Eyton to dinners, pleasure trips, &c. I believe that Mr. Eyton thought himself safer on Mr. Copeland's side than on mine, because Mr. Copeland had more money than I, and that was the reason he took Mr. Copeland's side. I do not know whether it was before or after Mr. Copeland went into the country for his long trip that he made the arrangement about the Shanghai Agency. I do not know the date when we had the conversation about the loss incurred by the Shanghai Agency. Mr. Eyton was then present. I said nothing about charging interest on the improvements, I did not agree to it. The \$500 was borrowed from Mr. Berger in December, but I did not agree to it. The loan to Clausen was made about 3 or 4 months afterwards. The loan from Berger was made by Mr. Copeland and paid off before I knew anything of it. Mr. Copeland told me at that time it was his own money that he had lent to Clausen. (Cheque stub June 18th, produced, showing \$515 paid to Berger). My best estimate of the improvement and repairs made with my consent was about \$1,600. The house where I now live was first a kind of saloon and afterwards used as a store house. I suppose to put it in its present condition would cost \$500. It could not have cost \$2,000. I think the cost of the new office would be \$600, and the addition to the stable about \$150. There was a large chimney put up to which I consented, which cost, as far as I heard, about \$100. A partly new waggon was made by one of our workmen and cost about \$150. A large new drain was made by the Government but I agreed to its cost which Mr. Copeland spoke to me about, it might have been \$500. I also consented to repairing a cooler, it cost \$100 at least. I also consented to the enlargement of the cellar, which cost about \$40. I also consented to one drain being cut from the cellar to the new drain which would cost about \$100. I also consented to the purchase of a new beer, which cost perhaps \$50; also a new hand-power wheel and belting and putting it up, which cost altogether perhaps \$30. The pond has only been cleaned once since I was there, but I never asked what it cost and don't know. (Paper shown witness.) This is a balance sheet signed by me. (Exhibit 4) (Another paper shown.) This is my signature on the balance sheet; these other papers were attached to it when I signed it (Exhibit 5.) The papers attached to Exhibit 4 were also attached when I signed it.

Tuesday, September 30th, 1879.

Court resumed at 10 a. m.

Mr. Denison called Mr. Eyton.

Mr. Kirkwood objected.

His Honour said this was an unusual case and very much mixed up and he thought it best not to be too strict in formalities.

Witness:—This is the cash book from February to 31st August, 1879, (Exhibit P). This is the Ledger from 15th June, 1876, to August 31st, 1879, (Exhibit Q). On page 14 of the cash book there is charged under the head of General Expenses, for refreshments in January, February, March and April, International Hotel, \$20.75; Bank Exchange, \$50.40; Gibbs, \$37.40; McKenzie, \$4. These were incurred by defendant. On page 24, under date of July, 1879, appears these items: Bank Exchange \$20.70; International Hotel, May and June account \$15.90. These were also incurred by defendant. I have heard Mr. Wiegand's evidence. There was one chit came in signed by him which I paid, I think it was for 40 cents. Mr. Wiegand shortly after came in the office and seeing this chit on the file, said that it was incurred when he was in business on his own account and he paid me for it, and at the same time he told me not to pay any of his accounts without his first seeing them. I find the date November, 1878. I heard Mr. Copeland's evidence that he had a running

account with Hohnholz at the time he loaned the \$100: I find on page 87 of the Ledger, Hohnholz, debtor to improvement account, February, 1879, \$27.81. On page 70 same book, I find in March, 1878, the first loan made from Mr. Berger was March 21st, 1878, \$500. This was paid off in June, 1878. In November, 1878, \$500: December, 1878, \$500. On page 68 under interest account, the first charge is under date February, 1878, debtor to W. Copeland, interest on improvements from June to December, 1876, \$1492 at 6 per cent. \$89.42. The items of interest charged were so made by orders from both partners. These charges appear March, 1878, Copeland \$70; May, 1878, \$100. I think there was a cross entry afterwards made for these items. Mr. Copeland received credit for it, he did not draw it out at the time. In March, I made him a payment on account of interest through an error of mine, instead of charging it directly to Mr. Copeland. In order to properly explain the interest account I would have to go over the books privately. On page 68 appears "W. Copeland as per receipted account \$88." In January, 1879, "W. Copeland, \$90;" this is a cash payment to him. In the credit account it is credited as charged in error. In December interest account, there is no separate item of \$90.

Mr. Denison:—Explain the item, cash payment to Berger in Dec., 1879, \$90.

Witness:—This was on loan account for money due him at the time.

Mr. Denison:—State how much was charged to the interest account, on account of your instructions?

Witness:—I cannot tell. The cash payments to Mr. Copeland do not appear. The total charged on this ledger to interest "profit and loss" account, \$1,563.63 which includes interest to Mr. Berger also; of this appear, as having been charged according to instructions received, the sum total, \$1,467.97.

Mr. Denison:—Do you still continue to charge in the same manner.

Witness:—Yes. My instructions have not been revoked. The rate charged is one per cent. per month.

Mr. Denison:—What do the improvements amount to?

Witness:—Under the heading "property account" is charged, dr. to improvements and repairs, \$6,446.72. The interest in June was \$64.66. The amount of the interest for the balance of the term would be \$1551.84, therefore \$775.92 would be Mr. Copeland's half. This amount (\$1,551.84), with the amount already charged makes some \$3,100. One-half of this would be charged to Mr. Wiegand. On page 30 is Mr. Bernson's account. The loss sustained through him is put down at \$574.21.

Mr. Denison:—Please look in Exhibit P, and tell how much beer was sold to the International Hotel in May, 1879.

Witness:—I find in the book in which the totals of the month's sales are entered, on page 154, sales to the International Hotel in May, 1879, \$15.00, April (on page 148) \$5.00 in March (p. 143) \$10.00, January (p. 133) \$10.

Mr. Denison:—Therefore the total sales for 4 months would be \$25.00 and the "shouting for the crowd" would be \$20.75.

Witness:—Yes.

Mr. Denison:—Does Mr. Copeland usually order Champagne.

Witness:—He orders whatever people want. Does not drink beer himself. This a Journal, at the time of starting partnership there appears for land, buildings and plant \$30,000. Plant &c. \$5,000, stock brought in by E. Wiegand, \$2,421.65 and is carried out \$37,421.65. In the Ledger (Q) there is credited to Mr. Wiegand, on account of the stock he brought in, first entry June 15th 1876, "by stock Copeland \$1,210.82." This is Mr. Hall's entry not mine.

Mr. Denison said that he wished to call Dr. Geerts but he was not here.

His Honour said that he was unable to get Dr. Geerts to come. It seemed he was in possession of a certificate which he considered relieved him from attendance.

Dr. Herman Gutechow, sworn, said. I am a practicing physician. I attended Mr. Wiegand on the 25th and 26th Nov. last year. He came to my house. I examined him and could find no change in the outward appearance of the scrotum. His left testicle was very sensitive to touch and he complained of great pain. The injury might have occurred from a kick. I prescribed for him.

Cross-examined by Mr. Kirkwood.—There was no swelling or discolouration about the testicle. Every one knows that great pain comes from an injury to the testicles: a heavy blow would produce discolouration, but a slight injury might prove a pain for a long time. I could not tell whether the injury was occasioned by a blow or not. Except from what Mr. Wiegand told me I had no means of ascertaining the injury.

Koidi Shoji, cautioned, said:—I am in the employ of Copeland and Wiegand as a cooper. I came with Mr. Wiegand when he entered partnership. Not understanding English I could not understand the words, but in November last year I saw they were using angry words. I have seen Mr. Copeland putting the beer bottles in hot water by which a good many were broken. I have seen Mr. Copeland putting some medicine in the beer barrels. I have heard angry words between the partners after this stuff was put in. I saw Mr. Copeland in last October strike plaintiff with his knee. I do not know English at all but I recognize the sound of the words as of a ——— but I don't know the meaning of them. From the commencement of putting the medicine in the beer, I have heard Mr. Copeland use these words frequently. I have seen the barrels that contained this medicine. They all broke to pieces afterwards. Once the Japanese took the barley away because they did not get good weight. I don't know that the scales were changed.

Cross-examined by Mr. Kirkwood:—The casks that were rotten were brought from the cellar. It was a very wet and damp place where they were formerly kept. I don't know how long they had been there. I know what a mash tub is. The boys always use this medicine I refer to, to clean the mash tub every time it is used. I don't know whether Mr. Wiegand saw the boys do this or not but I

suppose he did. When I saw Mr. Copeland strike Mr. Wiegand I was near the cooping place. I am certain it was before 11 o'clock in the morning. A little over a year after I came, I first heard the partners quarrelling. I don't know how many times I have seen the medicine put in the casks when they were filled with beer. I do not think Mr. Wiegand was ever with Mr. Copeland when it was put in.

Witness:—American. When I was at Mr. Hight's I mostly used American barley. I don't think Mr. Hight wanted me to use Japanese barley which I said was not as good as American. I don't know whether I told Mr. Hight that Japanese barley would not sprout. When I was at Mr. Hight's, we bought barley from a friend of mine in San Francisco, Mr. Scheer. I believe I have an unsettled account with Scheer now. I did not get any commission from him. It was in November 1878, when we were unable to malt. Barley was very scarce in Japan then. I don't know whether the Japanese that came and got the money was a farmer or a merchant. I don't know whether he was paid the money first in order to get the barley or not. It is not usual for a brewer to keep a record when he malts or brews. I generally put a memo of the weight of the malt either on a paper or chalked it on the scale each time, and at the end of the month I added them up. I kept the papers in a little box. I don't recollect whether I destroyed them or not.

Mr. Kirkwood:—Who wanted a safe bought?

Witness:—I went to a French safe and bought a safe. I said that it would be a good thing to have a safe and lock the books up as I did not like to see them lying about. There is only one key. Sometimes Mr. Eyton has it and sometimes Mr. Copeland. I never asked Mr. Eyton for the safe key. I have found the books out twice but as each time I went up, I was reported. I was afterwards afraid to look over them. Mr. Eyton said to me once that he didn't like to have other people making entries in them. I think it was about 18 months ago that I told Mr. Eyton I wanted the books left out.

Mr. Kirkwood:—You say Mr. Copeland has never accounted for the profits of any outside business. What business has he done?

Witness:—He bought a steamer. I heard he was in the other-hunting business, but I can't say whether he was or not. That is all I know about that.

Mr. Kirkwood:—Did not Mr. Copeland tell you he had received a letter recommending that lager beer should be put into hot water to make it keep?

Witness:—Yes, he said he had such a letter from Europe. I believe he said he wanted to try the experiment, but I said nothing about it. When lager beer is made well and out of good material it will keep itself without any such thing. The beer that he put in hot water was well brewed. We have some bottled beer which has not been put in hot water which is sour, but it was made from malt that was one-third ground. Mr. Copeland ground it when the new wheel was put up. The beer he put in the hot water has not all been sold. It was not because it had too much hops in it, but because it was boiled, which made it so bitter.

Mr. Kirkwood:—When Mr. Copeland called you bad names what did you say?

Witness:—I told him he ought to be ashamed of himself for using such names. I went once to Mr. Denison and asked him what I should do about it. I also spoke to Mr. Eyton, but to nobody else.

Mr. Kirkwood:—When did Mr. Copeland commence putting the stuff in the beer?

Witness:—From the first of our partnership. I only know of him putting it in the beer that was stored in the cellar. I never assisted him to put it in. In the winter of 1876 when I first found out about his putting the stuff in, he commenced calling me bad names. When he first commenced putting it in the beer he lent me a book about this stuff. I didn't read this book and I have mislaid it. The reason I did not read it was because the letters were too small and I had no time in the day time. The stuff I took to Mr. Denison. I believe Dr. Geerts has examined since. I have no report from him but I believe he reported to Mr. Denison. I judge by my own teeth that it hurts them. My teeth commenced to ache. I had them filled and refilled and when the filling came out the last time I had them pulled out by Dr. Perkins.

By the Court:—How long after you commenced using this beer did your teeth commence to decay?

Witness:—About 5 or 6 months. I was running up and down and did not know what to do.

Mr. Kirkwood:—Did you not ask Doctor Perkins to give a statement in writing that it was the beer that made your teeth ache?

Witness:—I asked him if I needed him would he make a statement about it for me. The doctor himself uses the beer a little. I never recollect sending from the brewing department to Mr. Copeland to tell him the beer was ready to have the stuff put in. I don't think I ever said so to Mr. Eyton. I might have remained an hour in the brewery while the stuff was being put in. Taking the general quantity of casks in the cellar it would take perhaps half an hour to put the stuff in. Last winter Mr. Copeland ordered the fire to be relined on the malt kiln. The kiln is close to Mr. Copeland's house and a good way from mine. The fire was kept up at night. There are always two boys on the watch and I come over and see about the fire. I don't think if the boys went asleep a big fire on the kiln would be dangerous to his house. I never complained at all about Mr. Copeland ordering the fire down. The kiln is the same as Mr. Copeland used to have. Mr. Copeland had 1 ale beer when I first joined him but it was oily.

Mr. Kirkwood:—Do you recollect the 23rd November last year?

Witness:—Yes I received a kick. I had been at the Enryka Hotel with Mr. Reppen, the night before, drinking beer. We had three or four games of ten pins with little balls about 3 lbs. I went home about 10. The next morning I don't know when I got up. It was about 2 p.m. that I received a kick. I recollect Mr. Copeland coming into my room in the morning at 10. I was up but I went to bed again. I told him I had a headache, I was lying on the

bed when Mr. Copeland came in. I had a towel round my head. Mr. Copeland had a glass of beer and complained about its not being clear. We had some words then, I put on my boots and went into the brewery. Mr. Copeland was not there. I looked round and saw him standing on the platform. I told him I wanted to go up stairs and see the books. My headache had gone away after I had my dinner. I don't know whether Mr. Eyton was in the office. From the platform up to the office door is about 12 or 14 steps straight up. The office door was shut as it was cold weather. I did not say I was going up to turn Mr. Eyton out.

Mr. Kirkwood:—Mr. Copeland refused you your allowance, was any money due you?

Witness:—Yes, there was two months due me. Whenever I wanted 3, 4 or \$5, I asked Mr. Eyton for it, and he gave it to me. At the time when he refused to give me money, he said he had none on hand. I told Mr. Copeland that we had better have a book-keeper just to make up our account at the end of the month, as it would be cheaper and he could do it in 4 or 5 days. Mr. Hall when he kept our books, did it that way.

Re-examined by Mr. Denison:—

When I went into business with defendant the plant of the brewery was all old. I consider the waggon &c. as repairs not improvements. All chit forms I signed with my own name and even put the hour upon them. I pay them when sent to me once. When I saw a chit on Mr. Eyton's desk with my name on it and it was charged up to me I told him not to pay any more.

Mr. Kirkwood objected that this evidence was not in order because the subject was not brought out in cross-examination.

Objection over-ruled.

Witness:—I then went over to my house and got the money and paid Mr. Eyton and tore the chit up. This was last year. I don't think I have given any chits this year except for very small amounts at the International Hotel, Bank Exchange, or Foot's. I have seen once by the books that Mr. Copeland's chits are charged to the firm. It was never agreed that private chits were to be charged to the firm.

Cross-examined by Mr. Kirkwood:—It is not customary for brewers to go round to customers who keep bars and order drinks all round?

Witness:—Yes, for beer, but not champagne.

Mr. Denison said that to-morrow he wished to examine Mr. Eyton with reference to the books.

Mr. Kirkwood said he should object, unless cause was shown.

Friday, 3rd October, 1879.

Mr. Eyton recalled and re-examined by Mr. Denison: Where I got astray in the interest account is the entry in February 1878, which amount was credited to Mr. Copeland and reads in the Ledger, June to December 1876, interest \$89.42, January to June, 1877, interest \$171.72 June to December, 1878 (it should be to Dec., 1877) \$222.46. I made an error in entering it in the Ledger. The next entry in March 1878, is a cash payment on account of interest to Mr. Copeland \$70.00; then in May 1878, a cash payment of \$100.00 on account of interest; then June, 30th, cash payment to Mr. Copeland, as per receipted account, \$88.51 (receipted account produced showing the two cash payments with which he has been credited). The receipted account is the second one, the \$183.60, the first interest payment, is not included. The first entries on the debit of page 68 are credits to Mr. Copeland; the others are cash payments and debited to interest and credited to cash. I do not think it necessary that these items should appear in Mr. Copeland's account. As regards interest it does not show the totals drawn out by Mr. Copeland. Under improvement account in July, 1876, \$263.17; August, \$209.72; September \$141.72; October \$335.90 November \$266.16; December \$273.82; total for six months, \$1490.49. Interest is charged on these improvements, for the first 6 months up to Dec. 31, 1876. Interest on expenditures for Dec. alone are charged on December 31st in the same year, as interest for 6 months. I was instructed to charge it so when both partners were present. I asked them if I should charge interest month by month and I was told to make the first 6 months one charge. I think Mr. Copeland was the spokesman at the time but both partners were present and they had been consulting together. The next two half years are charged in the same way; after this interest was charged monthly. As it seemed to me a little unfair to charge in this way I spoke to Mr. Copeland about it, so I made up a *pro forma* account charging interest monthly; I showed this to Mr. Copeland and he said to charge monthly interest on expenditures for improvement. The bills were generally paid on the 12th of the month and at the end of the month interest was charged. I never made up what the difference between interest monthly and the account as it stands would be.

Shimabari Kisaru, cautioned said:—I am employed by Copeland and Wiegand at their brewery. I have known Mr. Wiegand for 6 or 7 years. I was with him at No. 68. I do not know who has charge of the brewing department but Mr. Wiegand manufactures the beer. I do not understand their language, but I have heard loud talk between the partners. Shoji Koidi is in the employ of the firm at present.

George E. Rice, sworn, said: I prepared a statement of the books of Copeland and Wiegand up to 31st December, 1878. (Paper shown.) This is a statement made from the books at the request of both partners. I produce the written request from the firm to me to make up such statement (statement put in, exhibit S, and a report on it exhibit T). The books were sent from the brewery and I made up the statement from them. I took no evidence, as I presumed the books correct.

Cross-examined by Mr. Kirkwood:—I based my calculations on the statement that one half of the brewery was \$15,000.

Mr. Kirkwood:—If half of the brewery was sold to Wiegand for \$15,000 before the partnership, does it matter what amount

is entered in capital account, so long as half belongs to each partner?

Witness:—I should say it would affect them in the books. Suppose the property was worth \$40,000, that would be credited to the partners as having been put in, and if Wiegand has only \$15,000 that would leave a further sum of \$25,000 to be credited to Copeland, otherwise the books would not balance. If I had the management of it, I would not have put down the capital at all.

Mr. Kirkwood:—If the capital stock was \$40,000 would you not put each partner down as \$20,000?

Witness:—Yes.

Mr. Kirkwood:—Did not Copeland and Wiegand put in an equal share at the starting of the partnership?

Witness:—No. Copeland put in his share and advanced to Mr. Wiegand the balance of his share which he did not have.

Mr. Kirkwood:—Before the partnership did not Copeland sell to Wiegand one half the brewery &c.?

Witness:—The selling of the brewery &c. and the formation of the partnership was done at the same time.

Mr. Kirkwood:—Do you then consider that Mr. Wiegand's one-half share of the purchase money or so much thereof as is unpaid and for which he is indebted to Copeland, should properly appear on the books at all.

Witness:—It is just as well to have it that way as any other. If no mention was made of the value of the property, and each partner having a half interest it would make no difference.

Mr. Kirkwood:—For what reason could you in your report make the firm indebted to Copeland \$30,000?

Witness:—I understood that to be the value of his property as agreed upon. He sold half to Wiegand but he had not paid him first, therefore he got credit for the whole amount and it is worked off and credited to Wiegand out of his part of the profits, as per agreement.

Mr. Kirkwood:—Do you consider it to be the same thing for the firm to owe Copeland \$30,000 as for the firm to owe him \$15,000 and Wiegand to owe him \$15,000?

Witness:—Of course it is not. The difference is that Wiegand would be charged (in the latter case) \$7,500 more than he should be. I do not pretend to be an expert in accounts. The way the accounts are kept shows a loss of \$2,421.65 to Wiegand. I have made the report on the basis of the capital stock being \$32,421.65 crediting Copeland with \$30,000 and Wiegand \$2,421.65. On the assumption that the \$2,421.65 was not a part of the \$30,000 capital stock, if you credit Copeland with \$30,000 as against the firm, then Wiegand appears only on the debit side as he is part of the firm. The mortgage says Wiegand only put in \$1,210.82 instead of \$2,421.65; of course the account may be made up according to a different form.

Mr. Kirkwood:—Explain to me why Wiegand should have been credited with the whole amount.

Witness:—Because he brought it in and it was his property.

Mr. Kirkwood:—What would there be irregular if Wiegand had sold his stock to the firm after its formation for \$2,400, and he (Wiegand) then credited with one-half of that amount on his private debt to Copeland, and he and Copeland being each credited with one half as against the firm?

Witness:—The difference would be he would not then get his full credit.

Mr. Kirkwood:—Suppose Wiegand should have sold his stock to A for \$2,400, he (Wiegand) keeping one half of the cash, pays Copeland the other half to be credited on his mortgage. The firm then buys the stock from A for \$2,400, each partner paying equally for it and being credited with one-half of such stock as against the firm, would that not be perfectly regular and correct?

Witness:—I think it would.

Mr. Kirkwood:—What would be the difference in the pecuniary condition of Wiegand, in the issue of the two suppositions I have made?

Witness:—I think the two supposition are different. According to the books I did not think he had been credited for his proper amount and I made my report accordingly.

Mr. Kirkwood:—I know the instances are different but what is the pecuniary difference to Wiegand?

Witness:—In the one event he deposits \$1,200 and puts the other half in his pocket, in the other he gives \$2,400 to the firm and gets credit for half of it.

Mr. Kirkwood:—Does he not in both instances that I have supposed, start with \$2,400 in stock and finish with a credit against the firm for half that amount, and a credit against his private debt to Copeland for the other half?

Witness:—I do not think he does. The questions are so long I do not clearly follow them. As to the first question I think Wiegand would be credited with \$1,200 stock account and the firm debited with \$2,400, and in the second case (where he sells to a third party), in the books, stock would be made debit to cash \$2,400 and at the closing of the books all accounts should be brought down and the balances carried to profit and loss and this account would be closed by crediting and debiting each partner whichever way it was. In any event the stock being put in or bought, the stock would be increased.

Mr. Kirkwood:—If Mr. Wiegand is given credit on the books of the firm for the whole of the amount of the \$2,400 is he entitled to any credit on his private debt to Copeland?

Witness:—He is only entitled to a credit once of \$2,400. It reduces his indebtedness the same for this reason that it is understood that his half share of the profits are to be used to pay off the balance of his indebtedness which is the difference between \$2,400 and \$15,000.

Mr. Kirkwood:—Leaving out of question any particular agreement between these parties; Wiegand is indebted to Copeland \$15,000 and puts into the business, stock to the value of \$2,421.65, and the whole of that is credited to him on the books of the firm, would he be entitled to any credit on his private account to Copeland?

Witness:—He cannot be credited but once, and not on his private debt to Copeland unless an agreement to that effect exists.

Mr. Kirkwood:—Apart from any agreement, if Wiegand (owing Copeland at the same time \$15,000) sells Copeland one half of his stock for \$1,210.82 and brings the remaining half into the firm, would he (Wiegand) not be entitled to a credit as against the firm for one-half and as against Copeland for the other?

Witness:—Yes, he would.

Mr. Kirkwood:—The business buys \$2,400 worth of stock but instead of paying cash they take it from Wiegand and give him credit for it, the business is immediately closed up; the business starts with \$30,000, Wiegand owing \$15,000; the business realizes on sale \$32,400; after paying off the debt to Wiegand (\$2,400) there would then remain \$30,000 to divide.

Witness:—Yes.

Mr. Kirkwood:—Was your only reason for charging back interest, that you could find no agreement for it?

Witness:—Yes, I refused to allow it, for that reason. I transferred the items and left the accounts as if they had not been so charged. I made no allowance for wear and tear, it would be borne by each partner equally. All the property belongs in equal shares to the partners.

Mr. Kirkwood:—Why did you in your report make Copeland's share \$28,703, and Wiegand's \$7,022, if half belongs to each?

Witness:—Because those were the balances shown by the books.

Mr. Kirkwood:—Apart from the private indebtedness of Wiegand to Copeland, are those the amounts which would be coming to each partner, if the property should sell at that aggregate?

Witness:—If each had an equal share and the business was sold for that sum, each partner would be credited with one half.

Mr. Kirkwood:—Does it show how they stand to each other individually?

Witness:—Yes. If you go through the books and add to the \$2,421.65, the dividends that have been credited to Wiegand, it will show how much his debt is reduced. The \$7,022.29 represents the balance of his account or the difference between what he has been credited with and drawn out. Wiegand at this time owed Copeland on his private debt \$15,000 less \$2,421.65 and his share of the dividends. I do not credit Wiegand but once for the \$2,410 in my report. I know Mr. Epton's handwriting. I am not prepared to say whether these were errors or not in the books, but I found items which I thought ought to have been under other headings and I changed them.

By Mr. Denison:—Will you look at the ledger on page 5; is not Wiegand there charged with that \$15,000 private indebtedness and also credited with one half of the stock he brought in (\$1210.82)?

Witness:—Yes.

Mr. Denison:—What has become of the other half of that stock?

Witness:—It is credited to capital account in the Journal.

Mr. Denison:—On the payment of this \$15,000 as charged in the books to Copeland, Wiegand owned absolutely one half of the property.

Witness:—Yes.

Mr. Denison:—Then does it not make a difference to Wiegand whether he is credited with \$1210.82 on the books or the total amount (\$2421.65)?

Witness:—I think it does.

Mr. Denison:—Supposing the capital account is charged with \$37,446.65 and credited with \$30,000, is their not a debit balance on that account?

Witness:—Yes.

Mr. Denison:—Were not these books opened in that way.

Witness:—The entry reads land, buildings and plant \$30,000, stock in trade \$7,421.65, furniture \$25, and capital account is credited with it. The \$25 is afterwards passed out by another entry.

Edward Iberger, sworn said: I have a mortgage on the Spring Valley Brewery. I have it not here, it is entered in the Consular Books (Book produced page 306. Mortgage dated 3 July, 1875, for \$3,000). This mortgage is not paid, and is still in force. There are no sums due me from Copeland and Wiegand; I loaned the firm money last year, which has been paid. Mr. Copeland borrowed it from me and gave me a promissory note for the amount, signed by Copeland and Wiegand.

Cross-examined by Mr. Kirkwood:—I have spoken to Mr. Wiegand about this mortgage. I was not aware at the time of the formation of the partnership. It may be that Mr. Copeland spoke to me about this mortgage in Mr. Wiegand's presence at the brewery, in June, 1876, but I do not recollect.

Mr. Kirkwood:—If Mr. Wiegand said he knew nothing of your having a mortgage, would that be correct?

Witness:—If he said so now it would be incorrect.

Adjourned till Monday, 6th October, at 10, p.m.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XVIII.

SOUTHWARD AGAIN.

Yoshitsune need not have feared to overlook his host's return for a clamour of voices and laughter heralded the latter's arrival some time before he came in sight. He was accompanied by three men, two of whom carried the carcass of a wild-boar slung on a bamboo pole between them, while the third was laden with bows, pikes and other paraphernalia of the chase. All three, though merely of large stature and mighty thighs, looked puny beside their leader, who, as he

strode along with the springy tread and swinging gait of elastic vigour, seemed the very embodiment of sturdiness and energy.

Exhilarated by the crisp frosty air and the memory of their successful sport, the hunters joked and chatted with jovial unrestraint until they came within a few paces of the vestibule, when their leader, suddenly pausing, stooped down and examined the ground closely. The object of his scrutiny led him first to the porch and afterwards in the direction of the stables, returning from whence he whispered some words that acted like a spell upon his comrades, transforming their gruff gaiety into the watchful reserve of men accustomed to peril.

That his presence was discovered, that his hostess had good reason to dread the wrath of such a man as her husband seemed, were conclusions Yoshitsune found no difficulty in forming. But his heart suggested at the same time a resolution not less certain. At whatever risk to himself, the kindness shewn him by this gentle girl should cost her neither reproach nor suffering. This, whether the offspring of a boy's romance or a man's generosity, was the first passionate zeal that ever braced his nerves to their full tension, making him grip his sword with such force that his fingers seemed to crush the golden bangles on its hilt.

Presently across two thin partitions and a narrow corridor there reached him the sounds of a conversation carried on in evident ignorance that every word was thus audible. Who were these the woman had admitted in her husband's absence, and did she not know that of ten travellers in those times, nine were his enemies and one perchance, his friend? Yes, she did indeed unfortunately know it, and had therefore at first refused shelter to a boy, little more than a child, who had lost his way and seemed too weary to find it even when directed; but she could vouch,—which she did in truth by her earnest tears—that this was not a visitor to be mistrusted. Well, well, it might be so, though a girl's compassion was not the safest guide in such matters. She was not of course likely to guess that a man following these by-paths with two such horses as now stood in the stable and the part of a freshly broken arrow buried in the cantle of his saddle, were better without than within the dwelling of one whose life depended on seclusion. However, the thing was done and the duties of hospitality might not be avoided. Though unless he was much mistaken, they represented in this case more than mere food and shelter.

This last conjecture, uttered at the door of Yoshitsune's room, was followed by a request for permission to enter, and the traveller found himself confronted by a face that none could have looked on with mistrust. The first words of the man's greeting, too, judged by the knowledge of what his guest had overheard, shewed that this frank, loyal countenance did not belie his nature.

"You are welcome, Sir, to the house of one who cannot as a rule afford to be hospitable lest he should foregather with enemies unawares. You will forgive my wife's reluctance to admit you when you know that her husband's life depends upon his seclusion."

This disclosure was sufficiently explicit to be reassuring, without however seeming to invite a reciprocity of confidence. Yoshitsune briefly acknowledged his host's welcome, adding that as he knew none and was unknown in that district, his intrusion would not he hoped entail any disagreeable consequences. Partly however because he wished to avoid giving trouble, and partly, because he saw that he had suddenly become the object of a wondering scrutiny, he declined to partake of the food and wine which was presently served.

It would have been easy to misconstrue the motive of his abstinence, but the host had drawn a very natural inference from his youthful guest's appearance, and belongings, and being, for the rest, slow of mistrust, he merely called his three comrades, and desired them to post themselves without for the purpose of giving timely warning if any approached.

"I am not afraid that you will think me inquisitive," he said, "if I conjecture that you have encountered no light peril within the last few days. The empty saddle tells I trust of a foe's fall rather than a friend's mischance, nevertheless it may be that you are in search of more than common shelter. Should this be so, and should you see any promise of security in a place, that I, myself a fugitive, have chosen with that aim, the best welcome a soldier can give is to offer you, while you are here, the command of his sword and of

theirs, so though they be, that have followed him in his exile."

Yoshitsune had not fully appreciated his own loneliness and longing for fellowship until taught by the emotion these words of sympathy caused him. From the first he had felt himself strangely drawn towards this generous man, and now yielding to an impulse, afterwards to be called an inspiration, he determined to confide in him altogether.

"I do not deny" he said, "that your aid would have been more than welcome to me yesterday, when I burned the castle of Miasagi of Shimosa, in revenge for an act of falsehood and treachery, but the peril of that undertaking is past. Yet, since I know that with such men as you the best way of showing gratitude for a kind offer is to accept it, I will ask you to see me safely to-morrow on my route to Oshin, whither I go, as the guest of Hidehira, for I have good hopes that he will help me to raise the Genji standard against the enemies of my father Yoshitomo."

The look of hesitating enquiry in the other's eyes had generally changed to one of almost painful eagerness as he listened, and now flashed out into a great light of happy recognition. Yet he offered no immediate explanation of his mood, other than might be gathered from gestures of joy accompanied by profound obeisance, so that Yoshitsune was fain for a time to content his own curiosity with conjecture.

"Why, my young master," the host cried at last, so soon as his agitation permitted him to be coherent, "such an admirable hazard as this more than repays my fifteen years of waiting; for you must know that this life of concealment has only been made tolerable by the hope of one day striking a blow for the noble family you represent. Then with excited haste he explained that his father had held high office among the Earl of Harima's liege-men; that dying young he had left his wife and infant child to the care of a brother, who thirteen years later fell in the last great battle of the rival houses, that he himself, Saburo Yoshimori, being then prescribed as the child of a rebel, had escaped with difficulty, and accompanied by three of his father's faithful vassals, had lived ever since among these mountains and forests: "not indeed, that I value my life greatly for my own sake, but because it belongs to you and yours and from this day it will begin, I hope, to be serviceable."

Yoshitsune was certainly not less pleased than his host at this strangely fortunate meeting. He no longer refused to drain a cup to the happy issue of the allegiance Saburo then and there swore to observe to the death, though it was not without painful revival of a half subdued grief that, reading this signature newly added to the roll of his liege-men, he remarked above it the erased characters, Matsuda Naojiro. But this passing sadness was soon dissipated by the sunshine of Saburo's robust hilarity. He had summoned his three comrades to share the revelry—which they did indeed with an earnestness that evinced something more than mere love of wassail—and the four men were not content to leave any particular of their young master's projects or adventures unexplored. The news of the notorious bandit, Kuwasaka Chohan's death had already reached them, and when they heard that it was the deed of this boy of sixteen, their liege-Lord's son, the strong man's unaffected admiration caused Yoshitsune a thrill of rare pleasure.

"But, my young master," Saburo presently exclaimed, as though visited by a sudden recollection, "in telling us of your prospects you have surely omitted the name of a very active ally?"

"Have I in truth?" Yoshitsune replied incredulously. "That were good news if it be assured."

The four looked at each other wonderingly.

"It cannot surely be possible," Saburo questioned, "that any who work for the Genji interests are opposed to those of the Earl of Harima's son?"

A deep flush, whether of shame or anger, mounted to Yoshitsune's brow at this enquiry. "Such a thing is not, I fear, impossible," he answered. "But let me know now the origin of your doubt."

"The origin is only a day old," Saburo explained, "for this very morning I had a visit from one Nei, who had come North, he said, with the object of procuring allies for his master, Kiso Yoshinaka. He asked me to join, telling me that the purpose of the league is the overthrow of the Genji's enemies—as indeed I scarcely needed to be told, knowing that Yoshinaka is your own cousin,—and if it had not happened that my comrades were absent at the time, we should surely

have enrolled our names forthwith instead of deferring the matter till to-morrow."

"You will not enroll your names to-morrow either. Saburo, I think," said Yoshitsune, in a low voice and with evident reluctance, "for you will then know that Kiso Yoshinaka's father was mercilessly murdered by his nephew and my eldest step-brother, Yoshihira. The man who wrought that deed of blood, died, as you have no doubt heard, by his own hand after my father's defeat at Kiyoto, but his crime still remains unavenged; and this I well know," he concluded sorrowfully, little witting how prescient his words were, "that though we have a common cause with Kiso in our enmity to the House of Hei, he will never deem any success complete if shared by the brothers of his father's murderer."

"In truth I see that you speak wisely," cried Saburo, his honest face pale at the very conception of the false step he had so nearly taken. "But the gods be praised," he added fervently, "I have not pledged myself in any way."

"And supposing you had pledged your word half a dozen hours ago, master, should you see no reason to retract it in your present knowledge?" asked one of Saburo's vassals.

The look of bewildered surprise this question caused its recipient afforded an unmistakable index of his naive unreasoning honesty.

"I know not whether I understand you to suggest that it is sometimes allowable to recall a promise," he replied sternly. "I have heard of such things but hope never to see them."

"That you never will in your own case at least, Saburo, I am very sure," Yoshitsune interposed. "Nevertheless, your discretion to-day saved you from a disagreeable alternative."

"Discretion!" laughed the other with quickly restored good-humour. "I fear me you will have a bootless search my young master, if you look for much of that in such a numskull as this."

"You leave the exercise of that quality to your wife, I suppose?" Yoshitsune said merrily, as his pretty hostess, now doubly beautiful in her bright happiness, filled his cup with wine."

"Aye! aye! Sir," Saburo assented with boisterous relish of the joke and his wife's confusion. "Give me a woman's instinct before a man's judgment any day in the year. You never did a better thing, my girl, than when you disobeyed your husband's orders this evening. Though I doubt," he added, looking significantly at his guest, "I doubt whether she would have been quite so wise had she foreseen the results of her wisdom."

The tears that filled the girl's eyes at these words were not easily forgotten by Yoshitsune. He would have been glad indeed at once to secure such a colleague and companion as his host, but he felt that until his own future was more clearly defined, it would be a cruel thing to cast the shadow of loneliness over the life of this fair young wife. Accordingly when Saburo entreated permission to follow his master's fortunes forthwith, Yoshitsune pretended that it was more expedient he should present himself to Hidehira entirely without companions, and Saburo, who seemed to have abandoned every idea inconsistent with obedience and devotion, having received an assurance that the earliest prospect of action should be the signal for his summons to the Genji standard, readily consented to turn back from a village on the main route, where they rejoined Kichiji the following evening. Perhaps if the two men could have foreseen the things to come, they would have been content that this their first parting should also be their last meeting. Yet were it pleasant to believe that the noble fealty Saburo's after history displays was less the offspring of chance impulse than the outcome of matured heroism.

Yoshitsune and the merchants performed the rest of their journey without accident. Kichiji himself rode forward to apprise Hidehira of their arrival, and the Constable immediately sent his eldest son, Yasuhira with three hundred spears to meet his youthful guest. Hidehira was now an old man, still hale and active, but already approaching that period of life when every year added is accounted a gift of good-fortune. Peering far into the future from the summit of large experience, he saw lying beyond the limits of his own generation, chances he was fain to anticipate or prevent. Amongst these was the forfeiture of the hereditary office conferred on his family as the reward of their twelve years struggle with the Northern Rebels, for though his four sons were sufficiently apt in arms and not witless in the cabinet, the astute old man foresaw that the charge he himself held would presently prove too weighty

for such hands as theirs. It was this prescience, rather than any immediate project of espousing the Genji cause, that induced him to summon Yoshitsune, for knowing the promise of his childhood he had conceived the idea of adopting him as his successor.

Since however this purpose required above all things a careful preliminary study of the lad's disposition, Hidehira devised various expedients, which, while they enabled him to estimate Yoshitsune's qualities, served also to content the latter as apparent preludes to the action he desired. Of this nature were tourneys with sword and glaive, target practice by mounted bowmen, sham fights, tactics, exercises of muniment and anastrationation, with much other martial mimicry, in all of which Yoshitsune won universal applause and showed that if he had not the weight and thews of his most stalwart competitors, he had a gift of versatility and endurance sufficient to secure invincible victory.

But when these things, pleasant pastimes though they were, began to represent the whole results of a year's residence in Oshin, the old impatient longing for sterner sport revisited Yoshitsune with redoubled force. Neither was he without more direct incentive, for there came to him during these days a letter from his father-in-law, Yasutsune, the Lord High Treasurer, urging him to action, and pointing out that if Shigemori were once removed the fall of the House of Hei would be assured. Yoshitsune felt certain that though this letter was in the Lord High Treasurer's hand-writing, its contents had been dictated by his mother,* Tokiwa and the idea that his inactivity had wrong remonstrance from the weak patient woman, who had carried him in her arms through all the perils and sufferings of that memorable flight sixteen years before, stirred in him such a strength of self-reproach, that when the perusal of the letter elicited nothing from Hidehira but a not unwonted warning against premature adventure, he determined at all hazards to revisit the capital, and judge for himself whether delay or expedition was the better policy.

The Constable, when he found he might not gainstay this resolution, was fain to provide his guest with such equipment and escort as might in some degree mitigate the hardships and perils of the journey, but Yoshitsune, judging wisely that secrecy would be his best safeguard, elected to ride southwards without attendance or evidence of rank, and so set out one spring morning, just a year after his arrival in Oshin.

Misasagi's black horse was little accustomed to such a listless rider as his young master proved that day. In truth Yoshitsune carried a sad heart away from the land he had visited so full of hope. He had apparently lost a year in learning that prosperity can make men more faint-souled than adversity. A hundred thousand spears, aided at the outset by Hidehira's great resources and assisted in the issue by the growing disaffection to the Heike rule, seemed to his boyish enthusiasm a force more than sufficient to sweep every obstacle from its path, and carry the white† ensign to a higher place than it had ever before occupied. If then Hidehira's protestations of attachment to the Genji cause were sincere—and Yoshitsune respected the old man too much even to suspect the alternative—might it not be that the clear-sighted statesman esteemed the lad's own incapacity an insuperable obstacle to success? This was a bitter supposition, hard, very hard to entertain, but for all that it seemed to Yoshitsune the most reasonable explanation of Hidehira's reluctance. What confidence might be judiciously reposed in an untried boy of seventeen whose best years had been spent amid the droning of orisons and fumes of incense? Alas! how faint and pale had the growth of his childish hopes now waxed, and how little profit he seemed to have drawn from that mysterious training among the ruins of the Dragon God's shrine! Had he honestly carried off the palm in all the martial exercises at the Constable's castle, or had he not rather been suffered to gain these victories in compensation for the disappointment to which he was doomed? Gloom and misgiving, humiliation and perplexity! Nothing was certain but the reality of his failure.

But as he rode on into the bright sunshine and under the budding cherries, he fell by degrees into a happier mood, and

* In the third year of Yoshitsune's residence at Karuma Kiyomori, falling dangerously ill, shaved his head and retired from public life. This involved reparation from Tokiwa, who shortly afterwards married Yasutsune, the Lord High Treasurer: a match which seems to have been of a political nature, for Yasutsune was subsequently an active partizan of Yoshitsune's.

† The Genji flag was white: the Heike, red.

began to conceive a less hopeless solution of the Constable's hesitation. If there was any vaunt the old nobleman ever allowed himself, it was that his ancestors had won their rank, not by rebellion but by subduing rebels. He never tired of recounting the endless sieges and strange combats among mountains and forests during the twelve years' war, and he often told the story of Yoshitsune's fore-father, Yoshiie, whose face even in sleep wore such an expression of haughty fearlessness, that the rebel chief, Muneto, had roused him to lay at his feet the sword with which he had intended to assassinate him. To such a man then as Hidehira, anything like revolt might well seem an inglorious ending to an honourable career, and yet without Imperial sanction, no attempt to overthrow the Heike could escape the taint of treason. This was a serious obstacle to success, for not Hidehira alone but many another possible ally would be deterred by the same consideration. Nor did there seem to be any hope of a remedy. It was well known indeed that the ex-Emperor, Shirakawa, was at heart hostile to the Taira clan. He had suffered a thousand indignities at Kiyonori's hands, and was not likely to forgive a subject whose autocracy extended even to the details of his sovereign's private life. But though he might gladly welcome the fall of the Heike, could he be persuaded to authorize the agent of that fall? Always by his side was the subtle prelate Joken, ready to dissuade him from everything savouring of open opposition, while the recent birth of his son and Kiyonori's grandson, the Crown Prince Antoku, furnished the Heike chief with a new claim to authority and consideration. No, from the ex-Emperor nothing might be hoped, and other help there was apparently none. Here was a difficulty of which Yoshitsune now first recognized the importance and the hopelessness at once. He thought of his mother, of her husband, the Lord High Treasurer, of his uncle Yorimasa, the ex-Emperor's intimate friend, and of many others more or less likely to be useful, little knowing that even as he rode on his journey, causes, at the outset utterly unconnected with the result he desired, were yet operating steadily to produce it.

Still pondering these things, he found himself on the third evening of his travels toiling up the rocky ascent to Saburo Yoshiuori's cottage. A certain amount of uneasiness marred the pleasant prospect of his friend's greeting. With another to be explicit or reticent might be a matter of choice, but Saburo's trustful candour was a touchstone that admitted no insincerity. He must be told of the possible as well as of the probable causes of failure, and it was not unnatural that Yoshitsune should find pain in the idea of confessing to another that which had cost him so much to admit to himself.

Not one whit disheartened by a year's inaction, but if possible lustier and sunnier than ever, Saburo was too much delighted by this unlooked for visit to think at first of enquiring its cause, or to note the shadow of dejection that even his own hearty welcome failed to dispel. It was not so however with his girl wife, Ine. As she ministered to her guests' wants with that tact of sympathetic forethought possible only to woman, Yoshitsune knew by certain inexplicable tokens that his mood was understood, and that the embarrassment of explanation would be largely averted by this understanding.

"Well, my young master," Saburo said, when the chill mists of evening had been shut out and they were all gathered round the glowing braziers, "we have often thought during the past year how irksome this delay must have been to you, but as the proverb says: 'nothing is so short as waiting when it's past.'"

If indeed it were past, instead of being but the prelude to perhaps longer delay, thought Yoshitsune sorrowfully. Before he could reply, however, Ine laughingly interposed.

"Saburo is always in a hurry, Sir," she said, "but none the less he has often told us, as he well knows, that a year or two could scarcely suffice to mature the Lord Constable's plans."

A look of blank astonishment testified Saburo's surprise at this statement, delivered as it was with an air of assurance quite unique among the sturdy man's experiences of his timid little wife. However, since he found it easier to mistrust his own memory a thousand times than to doubt Ine's veracity once, he made no attempt to dispute this new exposition of his opinions.

"You see, Sir," he explained, "this wife of mine remembers best what it pleased her most to hear. And what I told her too, I suppose, for that reason," he added, evidently

glad to discover a motive at least for the assertions so unexpectedly attributed to him.

"Indeed, Sir, it is not fair to reproach me with such a faint heart," Ine objected. "My husband does not really believe that I have so little love for the good cause."

"Well, well, my girl, 'twas spoken without thought. I would not have the young master believe either that you opened the door to him last year by mistake," said Saburo facetiously.

"Besides, Sir," Ine resumed, pursuing her advantage, "we always expected that you would have to make another journey south before everything was ready, and as my husband proposes to leave me in Kiyoto when—he follows you to the war, we thought that you might perhaps allow us to commence our services by attending you on your route."

Saburo made no attempt either to confirm or deny all this. He had evidently resigned himself to hopeless incomprehension.

"You once told me, I remember, Saburo," said Yoshitsune, "that you preferred a woman's instinct to a man's wisdom any day in the year. Do you know I begin to be of the same opinion."

"By my faith, Sir," replied Saburo, moving uneasily as if he half suspected he was not fully awake, "I cannot honestly ask credit for any proper notion of mine own at the present moment, but whether my wife's proposition has had my previous sanction or not, I am very sure that I heartily approve of it now."

"If either her proposition or your ready assent surprised me, my estimate of your good hearts were less than it happily is," Yoshitsune said warmly. "There are however two causes which make me hesitate to accept your offer. The first is that my visit to Kiyoto is not undertaken in prosecution of any fixed idea."

"Then at least we cannot be in your way," Ine put in, quick to profit by every advantage.

"That you never could," declared Yoshitsune. "The fact is however, that Hidehira seems reluctant to take any decided action at present, neither will he do so, I fear much, until our cause receives Imperial sanction. How that is to be obtained I cannot in truth tell. My only hope is in my mother or my uncle, Yorimasa, but whether I can solicit their aid without causing or incurring great danger is a question I have no means of resolving. You will understand therefore that I must be unknown in the capital as well as on my way thither, and that I may, and probably shall, be obliged to fly for my life at the last."

Saburo did not suffer his wife to anticipate him now.

"Can it be that you bid me hold, Sir, lest I should share your peril?" he cried out his honest face flushing with indignation.

"Not so, not so, Saburo," Yoshitsune made haste to explain. "There are reasons for my own consideration not yours."

"Then, Sir," insisted Saburo, encouraged by Ine's glance of admiring approval, "before you go any further let me anticipate your assurance that my only share in your danger shall not be suspense."

"You shall do as your own brave heart suggests," replied Yoshitsune, not less moved by Saburo's devotion than by admiration for his heroic little wife. "But hear my second reason before you decide anything. I am not going direct to Kiyoto."

Ine's countenance fell. Seeing that Yoshitsune hesitated, she hazarded a timid suggestion:—

"You propose perhaps to try and gain access to your brother in his place of banishment?"

"Not so," was the reply. "I should be doing him a bad service if I made such an attempt. I am going to the house of my cousin, Kiso Yoshiwaka."

Saburo started back as if a reptile had suddenly reared itself before him.

"You are joking, master," he said with an attempt to smile but with a hoarse and very tremulous voice.

"I have heard much of Kiso's doings since I saw you last," Yoshitsune continued, taking no notice of the other's agitation. "Whatever his purpose be, he has won many liegemen of our house to his cause. He is either indifferent to the obstacle that deters Hidehira, or has discovered a method of surmounting it. This alone were a sufficient motive for my visit, but there is another, Saburo, and an unanswerable one. It is absolutely necessary to determine whether Kiso is an

enemy or a friend. If the former, we must seek to check his growing strength; if the latter, to assist it."

"Sir, Sir," Saburo groaned, finding no answer to this argument either in his own perturbed brain or his wife's desponding silence, "his father died by your brother's hand and he is the best bow-man, if not the best swordsman, in all the eastern province."

Yoshitsune could not refrain from smiling at the strange disquiet of this strong man, so timid for another, so careless for himself.

"Saburo does seek to dissuade you, Sir, since he only gives you an additional reason for pursuing your purpose," Ine now interposed, "but what he says justifies his own determination to follow you. Surely you will not forbid him, knowing that he knows your peril?"

It would have been difficult indeed to refuse anything to such a pleader, and for the rest, Yoshitsune was only too happy in this fellowship. So it was arranged that the cottage among the hills should be abandoned to the tenacity of the mists and mosses, and five days later the whole party, Yoshitsune, Saburo, Ine and the three vassals, looked for the last time upon the mountain-girdled waters of the mere, awakened by the early sunbeams to a renewed knowledge of their captivity.

(To be continued.)

DOUBLE ACROSTIC.

PROEM.

It shapes its course through good and evil,
Fearless alike of man or devil;
Upholds the right, redresses wrong,
Protects the weak against the strong.

1.

Its meaning if you seek to trace,
You'll find this light is out of place.

2.

A means of locomotion sure but slow
Is seen, in its meanderings to and fro.

3.

Born in penury, dragged up in the mire,
To what position won't this light aspire.

4.

This light is easy if you do but try,
One hint alone I'll give,—just mind your eye.

5.

Such cool assurance printed on his face,
I would not stand it, were I in your place.

6.

Part of a dress becoming and romantic,
Not much affected by our cousins 'cross th' Atlantic;
Another meaning though this light can claim,
They're more at home than Britishers in handling same.

TONIC.

DOUBLE ACROSTIC.

Had I an acrostic to make,
Some ordinary pains I would take
To write it correctly.
For to make a mess of this word,
Is really so very absurd
You will see it directly.

1.

It may be the turning point
Where women cease their waste,
And want not.

It may be you're out of joint,
When nothing suits your taste,
And can not.

It may be but a berry,
Or when making merry,
A somewhat.

2.

This expression we oft are apt to use,
When with surprise we're tempted to refuse.

3.

You haul it so, and though with labour fraught,
A sailor's not a sailor till he's taught.

4.

There is a tide in the affairs of man,
Taken at the flood may lead to glory;
Availing not this period when he can,
His fate may be quite another story.

5.

This applies to the church collectively,
Including the people,
It is used as well respectively,
Applied to the steeple.

SHIPPING INTELLIGENCE.

INWARDS.

Sept. 27, Dutch schooner *Lotte*, Wilson, 25, from Kurile Islands, Otter pelts, to Hohnholz & Co.
Sept. 27, American ship *Alexander McNeil*, Sproul, 1,122, from Burrard Inlet, Lumber, to E. B. Watson.
Sept. 27, Japanese steamer *Tsuruga Maru*, Steadman, 661, from Kobe, Mails and General, to M. B. Co.
Sept. 28, Japanese steamer *Takasago Maru*, Young, 1,230, from Kobe, General, to M. B. Co.
Sept. 28, H. M. S. gun-boat *Hart*, Com. Evans, 584, 4 guns, from Sendai.
Sept. 28, Japanese steamer *Takachio Maru*, —, 1,407, from Niigata, General, to M. B. Co.
Sept. 29, American barque *Jonathan Bourne*, Doane, 1,472, from Cardiff, May 5th, Coals, to M. M. Co.
Sept. 29, British barque *Don Accord*, Wilson, 400, from London, May 9th, General, to J. Kniffer & Co.
Sept. 30, British steamer *Malacca*, Smith, 1,709, from Hongkong, Mails and General, to P. & O. Co.
Sept. 30, British barque *Lord of the Isles*, Watt, 317, from Takao, Sugar, to Chinese.
Sept. 30, Japanese steamer *Sumida Maru*, Hubenet, 896, from Hakodate, Mails and General, to M. B. Co.
Sept. 30, Japanese steamer *Tagonoura Maru*, Carter, —, from Loochoo Islands, via Kobe, Mails and General, to M. B. Co.
Oct. 1, Danish schooner *Nateshda*, Brodersen, 186, from Takao, Sugar, to Chinese.

Oct. 1, American ship *Importer*, Shelburne, 1,270, from New York, Kerosene, to Frazer & Co.
 Oct. 2, Japanese steamer *Nagoya Maru*, Wynn, 1,914, from Shanghai and ports, Mails and General, to M. B. Co.
 Oct. 2, German schooner *Auguste Reimers*, Thompson, 207, from Taiwanfoo, Sugar, to E. B. Watson.
 Oct. 3rd, British steamer *Oceanic*, Metcalf, 3,700, from San Francisco, Mails and General, to O. & O. Co.

PASSENGERS.

Per Japanese steamer *Takachiho Maru*, from Niigata:—5 Japanese in the steerage.
 Per Japanese steamer *Takasago Maru*, from Kobe:—Mr. Kalb and 209 Japanese in the steerage.
 Per British steamer *Malacca*, from Hongkong:—Messrs. Roston-ger, Leverage and W. Moses, and 8 Chinese.
 Per Japanese steamer *Tayonoura Maru*, from Loochoo Islands via Kobe:—200 Japanese in steerage.
 Per Japanese steamer *Sumida Maru*, from Hakodate:—Messrs. John Milne, Mark Schieper, Revd. Ewington, 2 French Missionaries, Mrs. Purcell, four children and servant, and 7 Japanese in cabin; 80 Japanese and 2 foreigners in steerage.
 Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Mr. and Mrs. W. H. Smith and 3 children, Mrs. Fitzgerald, infant and servant, Mrs. Goddard and family, Mrs. and Miss Starnunose and child, Miss Matsunoto Nakano, Messrs. McGregor, W. Miller, J. J. Skinner, F. Briga, A. W. Crookston, C. Esdale, Saw Chue Fong and son, Oka, S. Matsumoto, Hirakawa, Watanabe, Shimada, and Maki, in cabin; and 2 Europeans, 2 Chinese, and 185 Japanese in steerage.
 Per American ship *Importer* from New York:—Mrs. Wood and Miss Howes.
 Per British steamer *Oceanic* from San Francisco:—Mrs. J. L. Addicks, Messrs. A. Williamson, F. V. Samuels, G. K. Ceuwaechter, Mess F. Hensager, Messrs. Pompeo Mazzocchi, Capt. A. M. Bial-o and wife, Miss Anna N. Harp, F. Morita, H. Yegawa, Mrs. P. Heinemann and family, Miss Fisher, J. Hatel, J. L. Hammond, Miss Anna G. Davis, Miss Sarah B. Clapp, Mrs. Schraut, K. H. McLean, Spencer McKenzie, Dr. B. C. Atterbury, Rev. C. F. Reed and wife, Miss Dora Rankin, T. C. Thornicroft, Rev. H. D. Foster and wife, Miss Ada H. Haver, Mr. Saria, Mrs E. B. Watson, child and nurse, P. A. Ames, Eugene Patroa, Oglen Mills, Robt. E. Dredon and wife, C. Pernet, wife, child and nurse, Henry Ritsch, and 3 in steerage. For Hongkong, Singapore and England:—Mrs. H. J. Stone, Miss Kittie Wilson, Miss Anna Wilson, Miss Ella Wilson, Mrs. D. B. Sickle, Mrs. Minty and child, J. M. Campbell, and 470 Chinese.

OUTWARDS.

Sept. 27, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, for Hakodate, Mails and General, despatched by M. B. Co.
 Sept. 30, Japanese steamer *Samuyne Maru*, Thompson, 854, for Kobe, Mails and General, despatched by M. B. Co.
 Sept. 30, Japanese steamer *Tokai Maru*, Hogg, 652, for Kobe, General, despatched by M. B. Co.
 Sept. 30, Japanese steamer *Tuyeshima Maru*, Hubbard, 1,913, for Yokaiichi, General, despatched by M. B. Co.
 Oct. 1, British barque *Wyllo*, Brown, 800, for Kobe, General, despatched by Cornes & Co.
 Oct. 1, H. M. gun-boat *Hart*, Com. R. Evans, 584, 4-guns, for Tientsin, via Kobe and Nagasaki.
 Sept. 30, Japanese steamer *Tokai Maru*, Hoss, 652, for Kobe, Mails and General, despatched by M. B. Co.
 Oct. 1, Japanese steamer *Tokio Maru*, Swain, 1,146, for Shanghai and ports, Mails and General, despatched by M. B. Co.
 Oct. 2, British steamer *China*, Alderton, 1,030, for Hongkong, Mails and General, despatched by P. & O. Co.
 Oct. 3, Japanese steamer *Takasago Maru*, Young, 1,230, for Kobe Mails and General, despatched by M. B. Co.
 Oct. 4, Japanese barque *Kanagawa Maru*, Eckstrand, 606, for Kobe, General, despatched by M. B. Co.
 Oct. 4, Japanese steamer *Niigata Maru*, W. Walker, 1603, for Hongkong, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Japanese steamer *Tokio Maru*, for Shanghai and way ports:—Mr. and Mrs. Foster, Rev. A. C. Shaw, Mr. and Mrs. G. W. Much, Mrs. Staples, Captain Saigo, Messrs. J. R. Morae, A. J. Lines, Singi, Takiyagi, Nabeshima, Fushikawa, Ennesche Dentsthe, Ennesche Satshe, Nishikawa, Morita, and Master Latham.

Per British steamer *China*, for Hongkong:—Mr. and Mrs. Scot, Miss Dare, Staff Surgeon Belster, Mr. McNab. Steerage 19 Chinese and 3 Europeans.

Per Japanese steamer *Niigata Maru* for Hongkong, &c.:—Mr. Ando, Japanese Consul at Hongkong, wife and servant, Messrs. Inouye, Saur, Inouye Katsu, Drs. L. H. Gulick, Thornicroft, Messrs. R. A. Lane, Kingoku Tamanoi, and Master Kingoku Takano.

CARGOES.

Per French steamer *Tibre*, from Hongkong:—
 Merchandize 7,045 packages.
 Per British steamer *Malacca*, from Hongkong:—
 Merchandize 8,077 pkgs.
 Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—

Total 102 Bales.

Silk worm Eggs for Italy 56 Casks.

REPORTS.

The American ship *Alexander McNeil*, reports: Leaving Victoria on the 26th July, had moderate weather with easterly winds, first part of passage thence to and off the coast of Japan had a succession of heavy gales from S. and S.E. Arrived on the 27th instant. Passage 61 days.

The H.B.M.'s gun-boat *Hart*, reports: Left Sendai on Thursday, the 25th September, had fine weather to port.

The Japanese steamer *Takachiho Maru*, reports: Left Niigata at noon on the 24th instant. Arrived at midnight of the 27th instant, had fine weather throughout.

The American barque *Jonathan Bourne* reports: Left Cardiff on May 5th. Crossed the equator in the Atlantic, May 30th: passed the Straits of Sunda, August 20th. Took pilot off Rock Island on the 27th inst. Have had light winds the entire passage. Cargo, coal for the Messageries Maritimes Company.

The Japanese steamer *Takasago Maru* reports: Left Kobe at 7 a.m. 25th instant. Experienced light variable winds with fine weather, passed two sailing vessels outside Vries Island beating up. Arrived at 4 p.m. 28th instant. Passage 83 hours.

The Japanese steamer *Tsuruga Maru* reports: Left Kobe on the 25th instant. Experienced moderate, variable winds with fine weather throughout. Arrived at 5 p.m. 27th instant.

The British barque *Lord of the Isles*, reports: Leaving Takao on the 7th September, had fresh N.E. wind to Van Deimen's Straits thence for four days had rain and squally weather terminating with a strong N.E. gale and high sea, lasting 48 hours; thence to port light easterly winds and calms. German schooner *Augusta Reimers* and Danish schooner *Nethedden* left Takao 3 days previous to 7th, for this Port.

The British steamer *Malacca* reports: Having fine weather throughout.

The British barque *Don Accord*, reports: Left London May 9th. Experienced light N. E. trades to the Equator which was crossed June 16th in 270° west, 37 days out. Brist S. E. trades from 30° west 100° east. Brist S. E. trades to Java Heads which were passed August 20th, 102 days out; thence to Maclesfield bank moderate S. W. monsoon: thence to Siwe Mesaki, heavy E. N. E. gales with terrific squalls, thunder and lightning. To Vries Island light N. E. winds; thence to port light S. W. winds. Arrived at Yokohama at 4 p.m. 29th inst. Passage 142 days.

The Japanese steamer *Tayonoura Maru* reports: Left Kobe at 8.30 p.m., 28th instant. Experienced fresh E.S.E. winds with fine weather. Arrived at noon 30th instant. Passage, 34 hours.

The Japanese steamer *Sumida Maru*, reports: Left Hakodate at 7 a.m. 27th instant. Experienced strong head winds throughout the passage. Arrived at Yokohama at 1 p.m. 30th inst. Passage 34 hours.

The Danish schooner *Nateshda*, reports: Leaving Takao on the 4th September, had strong easterly winds with high sea to Van-dieman's Straits, whence had six days rain and squally weather, after which had winds from S.W. for two days, thence to Port fine weather with easterly winds. Arrived at 5.30 a.m. on the 1st inst. Passage 26 days.

The *Auguste Reimers* reports: Leaving Takao on the 7th Sept. On the 27th September, when off Van Dieman's Straits experienced very heavy weather. Arrived at Yokohama October 1st.

The Japanese steamer *Nagoya Maru* reports: d Leaving Shanghai on the 24th September at 5.40 a.m. had strong head winds and rain to Nagasaki. Arrived at Nagasaki on 26th. 6 a.m. Left Nagasaki 26th. 7 p.m. Had light winds and fine to Kobe, arrived at Kobe. 28th. 10 a.m. left Kobe 30th. 6 p.m. Had strong southerly winds and heavy rains to Yokohama. Arrived 5 p.m., 2nd instant.

The O. & O. steamer *Oceanic* reports leaving San Francisco, September 13th, at 6.30 p.m. Had moderate to fresh westerly winds and sea to the meridian, thence to Yokohama had strong westerly winds and high sea. Arrived in port 7.25 a.m., October 3rd. Passage 18 days, 18 hours.

LIGHTSHIP SIGNALS.

The following are the signals made from the lightship to denote the approach of vessels:—

Merchant steamer:—A black ball, with the national flag of the vessel below, at the yard arm.

Mail steamer:—A black diamond, with the company's flag below, at the peak.

Man-of-war:—National flag of the vessel at the peak.

Sailing vessels:—For a ship: flag B. (red): barque, flag C. (red ball on white ground): brig, flag D. (white ball on blue ground) schooner, flag E. (white ball on red ground) all commercial code with the vessel's national flag below as soon as it can be made out

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 26TH, 1879.
Observatory of Daigaku, Moto-Fujimicho, Hongō, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.
Light Continuous line—max. & min. Thermometers.
-----represents velocity of wind
.....percentage of Humidity
Max. velocity of wind 18 miles per hour on Tuesday, 2 p.m.
The barometer is reduced to the freezing point and to the level of the sea
The record exhibits considerable fluctuations during the week, with a marked fall in the temperature at the close. The first four days are remarkable for the range in temperature there being a difference of about twenty degrees between the minimum and maximum for each day. Such ranges of temperature, accompanied as they are in this case by a high percentage of humidity, are sufficiently disagreeable in their effects to attract the attention of everybody.

COMMERCIAL INTELLIGENCE.

IMPORTS.—Dealers are still greatly inconvenienced by fluctuations in *kinsatsu*; but silver coins have now become more plentiful, and the rates of interest for short loans are easier than last week. A large business has been done in *Cotton Yarn* for long arrival. Quotations, generally, remain without much change.

COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$26.00 to 32.50
" " Good to Best	\$32.75 to 33.75
Bombay, No. 20 do.	\$28.25 to 29.75
Nos. 28 to 32 Common to Medium	\$35.50 to 36.75
" " Good to Best	\$37.25 to 38.00
" 38 to 42	\$36.00 to 37.75

COTTON PICKER GOODS:—

Grey Shirtings:—7 lb. per piece 28½ yds. 39 in.	\$1.60 to 1.90
" " 8½ lb. " 38½ " 39 in.	\$1.90 to 2.25
" " 9 lb. " 38½ " 45 in.	\$2.25 to 2.62½
T. Cloths:—7 lb. ... 24 yds. 32 in. per piece	\$1.37½ to 1.60
Drills, English: 14-15 lb. 40 " 30 in.	\$2.40 to 2.60
Indigo Shirtings:— " 12 " 44 in.	\$1.65 to 1.80
Prints:—Assorted... " 24 " 30 in.	\$1.60 to 2.20
Cotton Italians & Satens Black 32 in.	\$0.11 to 0.14½
Turkey Reds: 2 to 2½ lb. 24 yds. 30 in.	\$1.50 to 1.60
Do. 2½ to 2½ lb. 24 " 30 in.	\$1.65 to 1.75
Do. 3 lb. ... 24 " 30 in.	\$1.60 to 2.00

COTTON PICKER GOODS:—Continued.

Velvets:—Black ... 35 " 22 in.	\$7.25 to 8.75
Victoria Lawns:— " 12 " 42/3 in.	\$0.82½ to 0.85
Taffeta-lace:— " 12 " 43 in.	\$1.70 to 2.00

WOOLLENS:—

Plain Orleans ... 40-42 yds. 32 in.	5.50 to 6.75
Figured Orleans ... 29-30 yds. 31 in.	4.00 to 5.10
Italian Cloth ... 30 yds. 32 in.	0.24½ to 0.31
Camlet Cords ... 29-30 yds. 32 in.	4.00 to 5.00
Mousseline de Laines:—Crape 24 yds. 30 in.	0.17½ to 0.18
do. Itajime 24 yds. 30 in.	0.24 to 0.27
do. Yuzen 24 yds. 30 in.	0.35 to 0.40
Cloths, all wool plain or fancy... 48 in. to 52 in.	0.80 to 1.50
Pilots ... 54 in. to 56 in.	0.45 to 0.55
Presidents ... 54 in. to 56 in.	0.60 to 0.70
Union ... 54 in. to 56 in.	0.35 to 0.60
Blankets, green 6 to 8 lbs	per lb. 0.35 to 0.40

SUGAR.—The *Lord of the Isles*, *Nadeshta* and *A. Reimers* have arrived from Formosa, and report the *Anna* loading for here. Holders are firm and prices show some advance.

Sugar:—Tahiti in bag ... per picul	\$5.85 to \$5.90
" " in basket	\$5.08 to \$5.40
Taiwanfuo in bag	\$5.75
do. in basket	\$5.60
Ohing-pak and Ke-pak	\$9.00 to \$9.25

China No. 4-5 Kongfun & Kook-fah... per picul	\$6.50 to \$8.00
Daitong	\$4.10 to \$4.50
Japan Rice	\$2.60 to \$3.10
Kerosene Oil	\$1.90 to 1.92½
Newchwang Pass	\$2.25

KEROSENE OIL.—The *Eric the Red* has taken most of her cargo on to Kobe. The arrival of the *Importer* has somewhat weakened quotations. Stocks are still very large.

EXPORTS.

SILK.—The demand has fallen off during the past week, in consequence of very discouraging news from Europe. Further small concessions have been obtained on Hanks and the tendency is still towards lower prices.

Of Hanks only 320 bales have been settled, whilst rejections amount to 400 bales.

Filatures are in rather good demand at somewhat lower rates.

Kakadas attract but little attention and dealers are disposed to sell the lower qualities at considerable reductions. The better grades are less pressed for sale.

Settlements:—30 bales Kakadas and Oshius, and 215 bales Filatures. Arrivals 475 bales. Stocks 5,300 bales. Total Exports to date 2,916 bales against 3,960 bales last year.

	In London at 3s. 9d. per lb.	In Lyons at fr. 4.75. per kilo.		In London at 3s. 9d. per lb.	In Lyons at fr. 4.75. per kilo.

„ Medium			„ Good		
			„ Med. & C'on... \$620 to 640	20 9 to 21 5	frs. 57½ to 59

TEA.—Business has been rather quieter during the closing week, settlements not exceeding 2,300 piculs.

We make no change on our last weeks quotations, though towards the close prices appear rather weaker, though at the same time the inferior quality of parcels now offering demands some concession in rates to induce purchasers.

Common	\$19 & under
Good Common	\$22 to 24
Medium	\$26 to 39
Good Medium	\$30 to 32

Fine	\$33 to 35
Finest	\$36 to 39
Choice	\$40 to 45

SHIPPING.

The *Guy Mannering* has been chartered in Shanghai to load Tea for New York. The *Wylo* has been despatched to Kobe to complete taking in Tea for New York.

The *A. McNeil* from Burrards Inlet, *J. Bourne* from Cardiff, and *Bon Accord* from London have come in from ocean voyages and are free, and the *Summa* and *A. Newton* are still disengaged.

The *Nimrod* proceeds to Nagasaki and back under coal charter.

NOTICE TO MARINERS.

No. 1 of the 12th Year of Meiji, (1879.)

KODO NO SIMA BUOY.

AOGI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby give notice that a Buoy has been moored to mark the sunken rock north of Kodono Sima in the Aogi Seto, the northern passage between Misima Nada and Bingo Nada.The Buoy is moored immediately to the northward of the rock, in $4\frac{1}{2}$ fathoms of water at low water; on the highest point of the rock, which is of very small area, there is only 10 feet of water at low water of lowest spring tides.

The Buoy is painted Black and white horizontal bands, and surmounted by a cage which stands 10 feet above the water.

The following bearings are taken from the Buoy.

Centre of Karasima (Single tree)...N. $41^{\circ} 15'$ W.Eastern extreme of Matsu Sima.....N. $37^{\circ} 45'$ E.Eastern extreme of Kodono Sima....S. $1^{\circ} 15'$ E.Bearings true. On the English Admiralty chart No. 132, $2\frac{1}{2}$ fathoms is given as the shallowest water on the rock.INOUE KAORU.

COUGHS,

ASTHMA,

BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 30th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Indian Medical Service.

Mr. T. KEATING,
Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have prescribed them largely, with the best results.

W. B. G.—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for **INTESTINAL or THREAD WORMS.** It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London,

Export Chemist and Druggist.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcers, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World

May 17th, 1873.

THE JINRIKISHA.

AUGMENTED rapidity in travelling is not the least remarkable of the advances made by modern civilization. The development of arts and industries, the spread of knowledge, and the possession by the people of comforts and refinements unknown to their forefathers, may be largely ascribed to the facilities which the nineteenth century has brought to locomotion. Doubtless, also on the other hand, the ease and swiftness with which merchandize can be conveyed from one spot to another, no matter how remote, while creating new markets, has been in a large degree responsible for the over-production which is to blame for that long period of universal commercial depression not terminated even now. The aggregate good, however, wrought and rendered possible, by bringing all places into easy communication is indisputable. It may not be so generally distinguishable in the intercourse between nations, as it is in the internal traffic of a nation. How different, for instance, is the England of to-day from the England of one hundred and fifty years ago, when a journey of forty miles in a private vehicle to a country town was an exploit to be proud of; and when the goods carriage of the interior was effected in huge lumbering wagons, at great expense, and at a rate of speed rarely exceeding sixteen miles a day. This, too, was about the distance covered by many travellers; those, at least, who were dependent for their conveyance upon the "tail of the cart," that straw-filled and voluminous dicky, described by Smollett and Fielding, where so many varieties of life and adventure were encountered in the days of the great-grand-fathers of the present generation.

However cumbersome and troublesome Japanese travelling may be even at this day, it has not only made many improvements in the course of the last twenty years, but it contains many analogies with that obtaining in Europe for many years

after Will Adams and Captain Saris had died, after the English East India Company's factory at Firando had closed in disastrous failure, and the small Dutch colony at Deshima was left in somewhat humiliating possession of its not always too profitable monopoly of the limited western trade with the islands of the extreme Orient. The "kago" and "norimon" of the Asiatic travellers had their counterpart in the *chaise-à-porter* of Paris and London, Bath and Versailles; and, indeed, to this day there is not very much to choose in point of appearance and luxury between the mountain-chair in which indolent or invalid tourists can make their ascents in the Swiss or Savoyard Alps, and the basket whereby the acclivities of the Hakoné range may be surmounted, without much exertion, if in scanty comfort. And before the days of Macadam it is probable that the Tokaido was a better road than any of the highways then to be found in Great Britain. In whichever way we look back on the past, we are likely to find that it is advisable not to be too censorious of the defects apparent in the means of transportation employed by eastern nations, and their slowness in adopting the modern improvements of the west. Those same advantages of which we are now so sensible are, after all, of the most recent introduction, and were only assumed in spite of ignorance as dense, and hostility as stupid, as any which could be encountered in the heart of China in this last quarter of the nineteenth century.

Considering the volcanic and mountainous nature of the country, and the few years since the necessity or advisability of more rapid and commodious transit has begun to be realized, one need not be astonished that the condition of the roads is much the same as it was in the times of Kaempfer, and has not made proportionate improvement to that attained in other branches of civilization. We will say nothing of the railway between Tokio and Yokohama, which will probably be extended ere long, or the more southern route which is doing much to develop the capabilities of Kobe, Osaka, and the fertile districts near and round the lake of the Ise. Our concern is rather with ordinary routes which are or should be available for wheeled traffic; and in this respect much improvement is still possible: nay, further, some of the changes introduced are actually detrimental. Among these may certainly be classed the jinrikisha industry, which has attained such a development as to be a national calamity.

There are, we believe, several claimants for the honor of having invented these vehicles or introduced them into Japan, whence their use has extended to Shanghai and other Chinese ports. Their advantages are numerous and obvious, and there is not a foreign resident in this empire who would not willingly testify to their great convenience. Further, if they were to be swept off the face of the land there would be but one feeling, that of regret, at their disappearance. And yet their abolition would be one of the best things that could happen to the nation, so largely do the injuries inflicted by them preponderate over the good which they effect. One of the minor charges to be made against them is, that the space which they occupy is out of all proportion to their usefulness

A jinrikisha with two coolies running tandem, and conveying only one passenger, will fill nearly as much street-room as would a cab capable of carrying five persons besides the driver. Their number is excessive, the supply, as a rule now-a-days, far exceeding the demand. Thus, many of the drawers are frequently unemployed, perhaps for days together, the consequence of which too often is hunger and unfit condition for the hard work of their calling when it comes. Then how unsociable the vehicles are. A pleasure or business party, in Tokio for instance, the city of long distances, having to employ them, is as thoroughly disintegrated the while as though its members were separated by miles. Such are some of the lesser wrongs which can be brought to their account, and might be passed over in silence, if there were not much weightier ones beyond. Those who have taken the trouble to observe the *kuruma* men of the Tokaido must have seen that, as a rule, they are the flower of the peasantry. Often handsome of feature (for their race), youthful, active, clean of limb and even graceful of action, they will whirl their loads along for incredible distances at the rate of seven or eight miles an hour. We ourselves on a very hot day in summer, have made the journey from the Bluff to Odawara with the same two coolies with whom we started in less than seven hours, including stoppages. Of course men like these often earn in a short period handsome wages, which there is too much reason to fear they recklessly dissipate in long hours of voluntary or enforced leisure. Their food is certainly not sufficiently nutritive for the labor they perform, and for the copious drain of moisture their exertion demands from their frames. It is taken hurriedly, in enormous quantities and frequently when the body is in a glow of heat, and in short intervals of rest between periods of violent strain. What wonder then that their term of age should be much shortened; that after a few years of toil, many of them should be compelled to leave the road, broken in limb, wind and spirit, frail and consumptive, without a cent laid by for their support, and more than ever unfit for the field work for which they were intended, and, employed at which, they would be adding to the wealth of the country, and living healthy, honest, and self-respecting, if poor and laborious lives. Their moral condition is as wretched as their physical. Crowded for the most part in miserable hovels, they breathe a pestilent atmosphere pervaded by dirt and vice, and gamble, drink and otherwise dissipate, by night, the strength of which they have so much need by day. Hundreds of them annually fall victims to sunstroke; and the records of the hospitals show that, while numbers of their class have been attacked by the epidemic, now not extinguished though diminishing, very few have risen from the collapse. In short all their surroundings are as demoralizing and friendless as they can be, and it is only natural that the jinrikisha-drawer should become the extortionate, servile, lazy, impudent ruffian we too often find him. With aspirations above those of a beast, and without a beast's instincts of prudence and care for the preservation of its health, he is put to do a beast's work, and in the due course of things becomes brutal, and grows in brutality.

All this should be matter not only for reflection but for action on the part of the rulers and philanthropists of the nation. The evil which has been allowed to grow cannot be extirpated now by any direct legislation. The task would be too herculean, and would cause too much present suffering among the very class it would be intended to benefit. But much may be done by indirect means. Improvement of the high-roads and by-roads; railway and water-carriage extension; steady increase in vehicular conveyance by horse-power; the introduction of tramroads into the large towns; all these measures would rapidly tend towards the abolition of the public jinrikishas, and the compulsory return of the drawers,

before their period of complete exhaustion comes, to nobler pursuits. They would prevent any further diversion of the best part of the peasant youth from agriculture, and avert an evil which at present threatens to become serious—the rapid deterioration of the race in its lower levels. In a future article we will endeavour to consider some of the questions which still arise in connection with the means to the attainment of the desired end.

THE LOOCHOO QUESTION.

I.

BY the publication of the letters from China and Japan written by the special correspondent of the *New York Herald* who accompanied General Grant on his recent tour, the public has for the first time been placed in possession of authentic information as to the actual position of the Loochoo Question, and of the course, up to the time of General Grant's visit, of the diplomatic correspondence upon it between the two countries—Japan and China. Hitherto the secrecy which necessarily accompanies the course of delicate international negotiations has been strictly maintained; and no trustworthy information on the subject has been obtainable either from or by anyone not officially concerned with the matter: while the lips of these latter have been sealed. The disclosures, however, now made by the correspondent of the *New York Herald* render further reserve unnecessary; and we propose to avail ourselves of the opportunity thus afforded to lay before our readers, in the course of a few articles, a general review of this interesting question; for which purpose recourse will be had both to the sources of information already made use of by the writer of the letters referred to, and to other materials not hitherto made public in any form.

With the main features of the case we may assume a sufficient familiarity on the part of our readers; but before going back (as will be necessary) to the earlier history of the relations of China and Japan with Loochoo, it is desirable at the outset to state succinctly the actual question at issue, giving at the same time the gist of the diplomatic correspondence upon it; as well as to recapitulate very briefly, the events which have more immediately brought the matter into controversy.

The issue between Japan and China may be narrowed to this:—"Is or is not Japan justified in exercising absolute and undivided sovereign rights in Loochoo?" China says "no," claiming herself certain rights over the islands, the precise nature and grounds of which we shall have to examine with some minuteness later on: and she not only complains that Japan has assumed to exercise such rights without consulting or even informing her upon the subject, but demands that the recent Imperial decree of the Japanese Government, effecting an important administrative change in the islands shall be recalled: and it may be added that, though this does not explicitly appear in the diplomatic correspondence, yet Prince Kung, Prince Regent of China and the chief Minister of the Foreign Office, appears to have distinctly told General Grant, in his unofficial interview with him upon the subject, that China would consider the refusal of Japan to comply with this demand as a *casus belli*. The answer of Japan, if peremptory, has the merit of directness and simplicity. Though willing to discuss, for the purpose of convincing the Chinese Government, the historical aspect of the question, Japan distinctly asserts a *de jure* and *de facto* sovereignty over the islands, resting (if upon nothing else) upon a prescriptive title acquired by a possession of some three centuries; and, asserting,

on this and other grounds (into which, as into those of the Chinese claim, we shall have to enter fully by and by) her absolute freedom to do what she will with her own, returns to the demand made upon her to recall the recent decree a direct and unqualified refusal.* The diplomatic correspondence which has passed since that already made public is of such recent date that it would be premature to speak of it here in detail: but we may be permitted to say that, having regard to the refusal of Japan to comply with the demand, compliance with which Prince Kung seems to have intimated was a necessary condition of the maintenance of peace, its tone is considerably more pacific than might have been anticipated.

The actual step which called forth what would thus appear to have been intended as an *ultimatum* from the Chinese Foreign Office, was the abolition, in March of the present year, of the semi-feudal administration in Loochoo, and its conversion into a Prefecture (*Ken*) on the pattern of the rest of the Empire. But this was not the beginning of administrative changes recently introduced. The first actual step in the great revolution of the form of government in Japan, which commenced in 1868, was the mediatisation of the provincial principalities: this step was taken in Loochoo in the fifth year of the present reign (1872); when the islands were converted into a mediatised principality (*Han*) and their hereditary chief placed on the footing of the other chiefs whose dominions had been similarly dealt with, with the rank of a noble of the Empire: and two years later the administration of the 'Riu Kiu Han' was placed, like others, under the immediate control of the Department of the Interior. In 1875 a proclamation was issued to the 'Riu Kiu Han' prohibiting the payment of the honorary tribute to China and the acceptance from her Emperor in the future of the ceremonial investiture of the chieftains of the islands as previously accustomed. In the same year a further proclamation was issued decreeing the adoption of the reformed calendar and the observance of public holidays, etc., in accordance with existing official regulations, making the new criminal code applicable throughout the islands, and effecting other changes of a like nature. In the early part of the present year, as just now mentioned, the final step in the direction of centralization, already consummated throughout every other portion of the Empire, was taken as to Loochoo also, by the conversion of the "Principality of Riu Kiu" into the "Prefecture of Okinawa"—"Okinawa" being the collective name given to the group by the islanders themselves. This last measure, which involved the removal of the chieftain from the exercise of political functions, and his withdrawal (in common with all the other feudal princes), into private life as a noble of the Empire, was not adopted until after the representatives of the Chinese Government had begun to remonstrate; it was in fact a practical reply to remonstrances which had, from the mere fact of remonstrance being possible, rendered the step a political necessity.

Having premised thus much as to recent events and the present position of affairs, we shall proceed in our next article to review in its main outlines the early history of Loochoo; which, apart from its bearing upon this question, is intrinsically of considerable interest: and afterwards to examine into the merits of the present dispute by the light of the historical events relied upon by either side, so far as they are valuable in assisting the formation of a

correct opinion upon the question at issue from the point of view afforded by the usage of nations and public law.

EXTRA-TERRITORIALITY IN JAPAN.

IX.

WE have already endeavored to show, that while the extra-territorial provisions of existing treaties secure to foreigners in Japan, the right to be tried and punished by their Consular Courts according to the laws of their respective countries, for crimes and offences committed by them against Japanese subjects, they are on that account none the less bound to observe and obey all the municipal laws and regulations of this empire. This conclusion is derived from the assumed fact, that Japan has never surrendered by express treaty consent or otherwise, her original sovereign power of criminal or municipal legislation over all persons, foreign or native, living within her territorial jurisdiction. Unless it can be satisfactorily demonstrated, that Japan has so surrendered or delegated her original legislative power to prohibit the commission of any crime against life or property by foreigners, the conclusion which we have arrived at is necessarily irresistible. It has been shown that the Government of the United States has, in the most solemn official manner, distinctly and repeatedly affirmed, that Japan has not expressly or impliedly surrendered or delegated that power.

The claim is however put forward by some, that the British and German, and perhaps other of the European Governments, dispute the "American theory" of extra-territoriality and contend that by virtue of existing treaty arrangements, Japan has impliedly if not expressly, surrendered her power to legislate against the commission of crimes committed by British or German subjects in Japan, as completely as though those subjects were on British or German soil; and that, consequently, no penal laws which Japan may enact, can bind British or German subjects, unless those laws have first received the "sanction" of the British or German Governments. It is said that the language of the Foreign Jurisdiction Acts of Parliament, the provisions of the China and Japan Orders in Council and the acts and declarations of Her Majesty's representatives in Japan, fully justify the conclusion that such is the construction placed by Her Majesty's Government on the extra-territorial provisions of the treaty.

Upon an attentive perusal however, of the China and Japan Orders in Council, and the Acts of Parliament upon which they are based, we feel justified in believing that they warrant no such conclusion. The Foreign Jurisdiction Act upon which the assumption of complete extra-territoriality in Japan is generally sought to be based, was passed by the British Parliament in August 1843, fifteen years before the signing of the treaty of Yedo. As the act itself declares, serious doubts had arisen as to the authority and jurisdiction which the British Government might exercise over its subjects in the countries of the Levant and elsewhere, and also as to how far the exercise of that jurisdiction was controlled by the laws and customs of Great Britain. It was therefore declared that:—

"Whereas by treaty, capitulations, grant, usage, suzerainty and other lawful means, Her Majesty has power and jurisdiction within divers countries and places out of her Majesty's dominions, &c., &c. Be it therefore enacted that it is and shall be lawful for Her Majesty to hold, exercise and enjoy any power or jurisdiction, which Her Majesty now hath or may at any time hereafter have, within any country or place out of Her Majesty's dominions, in the same and as ample a manner as if

* This refusal was categorically returned in answer to Prince Kung's despatch of 10th May, which closes the series hitherto published. The document conveying it had been despatched to Peking a few days before the interview between General Grant and the Home and other Ministers of the Japanese Government at Nikko, on 22nd July.

"Her Majesty had acquired such power or jurisdiction, by the cession or conquest of territory."* Many persons seem to think that this Act of Parliament is equivalent to the assertion by Great Britain of the right to exercise the same power and jurisdiction over British subjects in Japan and other countries out of the British dominions, as if that jurisdiction had been acquired, by cession or conquest of territory: and proceeding upon this mistaken premise, they take it for granted that British subjects in Japan are thereby "entitled to the same privileges and immunities which they would have enjoyed from a cession or conquest of territory." This is a great mistake. The Act neither asserts, nor was intended to assert anything of the kind. It is a simple statutory declaration of the lawful right of Her Majesty's Government to exercise and enjoy, in the manner to be provided, such jurisdiction and power,—and no more,—as is or may be conferred upon that Government by virtue of treaty, consent or otherwise, in countries out of Her Majesty's dominions. The Act does not attempt to assert or define the extent of that jurisdiction in any case; it simply declares that "Her Majesty's Government hath power and jurisdiction within divers countries and places out of Her Majesty's dominions," and that the power or jurisdiction which she hath,—whether it be much or little,—she may enjoy and exercise in the manner afterwards provided.

The idea that the Foreign Jurisdiction Act warrants the conclusion that Great Britain ever intended to assert the right to exercise jurisdiction over its subjects in Japan, to the same extent as if she had acquired jurisdiction by "cession or conquest of Japanese territory," is downright nonsense. The British Government never asserted such a thing and the Foreign Jurisdiction Act says nothing of the kind. The object of the Act was simply to empower Her Majesty's Government, by positive law, to duly exercise such jurisdiction and power over British subjects in countries and places out of Her Majesty's dominions, as then was, or at any future time might be, granted to the British Crown, by treaty, consent, or otherwise, and to legalize the jurisdiction so exercised.

The Act accordingly provides that everything done in pursuance of such power or jurisdiction in countries or places out of Her Majesty's dominions, "shall be as valid and effectual as if done according to the local law of such place or country." It also provides that the mode of carrying into operation the jurisdiction thus conferred in countries beyond Her Majesty's dominions, shall be by the "Proclamation of an Order in Council," providing for the exercise by Her Majesty's servants of such jurisdiction as Her Majesty may, by treaty or otherwise be permitted to enjoy, in any country to which the order applies. In pursuance of this Act, various Orders in Council have from time to time been proclaimed by the British Government, providing for the exercise of the jurisdiction conferred by treaty on Her Majesty's Consuls and other judicial functionaries in China and Japan. These are generally styled the "China and Japan Orders in Council," their declared object being to make "provision for the due exercise of Her Majesty's power and jurisdiction aforesaid, and particularly for the more regular and efficient administration of justice among Her Majesty's subjects resident in or resorting to the dominions of the Emperor of China or of the Tycoon of Japan."† They also provide that all Her Majesty's jurisdiction in Japan, both civil and criminal shall be exercised, with certain exceptions, subject to the provisions of the Order; "and as far as circumstances will

admit, in accordance with the principles of and in conformity with the common law, the rules of equity, the statute law and other laws in force in England." And it is further enacted, that "Any act, other than an act that would by a Court of Justice having criminal jurisdiction in England, be deemed a crime or offence, making the person doing such act liable to punishment in England, shall not, in the exercise of criminal jurisdiction under this Order, be deemed a crime or offence, making the person doing such Act liable to punishment."‡ Finally the Orders in Council provide, among other things, that Her Majesty's Minister in Japan may from time to time, subject to the approval of Her Majesty, make such regulations as seem fit for the peace, order, and good Government of British subjects resident in Japan, and that such regulations may impose penalties for offences against the same as follows:—for each offence, imprisonment for any term not exceeding three months, with or without a fine not to exceed in any case the sum of \$500.§

Now, it is plainly obvious that there is nothing in all this that in anywise denies to Japan the exercise of her original, inherent power of prohibiting by general law the commission of any and all crimes or offences by British subjects within her territorial dominions, or that claims to absolve the subjects of Great Britain from their bounden duty, to respect and obey every lawful command of the Sovereign of Japan. It does not follow because the British Parliament or Her Majesty in Council has deemed it fit for the maintenance of friendly relations between British subjects and the Government and subjects of Japan to enact certain regulations for the order and government of those subjects in Japan, that the British Government therefore intends or desires to usurp the legislative power of Japan. Nor does it follow that because Her Majesty's Minister has been empowered to legislate penalty in certain matters over British subjects in Japan, that he may therefore disregard the sovereign legislative power of the territorial Sovereign, by claiming the right to sanction the municipal laws and regulations of Japan before they can be enforced against British subjects. Moreover, we are not aware that any such claim has ever been set up by the British Government. Any one who reads the extra-territorial provisions of the treaty between Japan and Great Britain will at once perceive, that while those provisions confer upon the British Government the rights and privileges of jurisdiction over its subjects in Japan, they at the same time impose upon the British Government a corresponding obligation, viz., of providing a system of jurisprudence necessary to carry into effect the objects contemplated by the treaty. The Government of Japan having by treaty consent, "waived in favor of the British Government the exercise of a part of its inherent sovereign jurisdiction over British subjects within its territory, it became the duty of Her Majesty's Government, in taking advantage of that concession, to make suitable provision by law, for the exercise of the jurisdiction so conferred," to the end that her treaty engagements with Japan might be duly fulfilled.¶ It became also the duty of Her Majesty's Government, in providing for the exercise of the jurisdiction so conferred, "to secure, as far as possible, the sovereignty of Japan, against any injurious effects resulting therefrom."‡ The Government of Great Britain has

† Digest of the British Orders in Council for China and Japan, p. 2.

‡ British Orders in Council for China and Japan, 1865, §. 5, 6, p. 4.

§ British Orders in Council for China and Japan, Sections, 85, 86, p. 22-3.

¶ Instructions of the British Foreign Office to Her Majesty's Consuls in Turkey, China and Japan, see British Consular Manual, Ch. V. p. 145, 146, 229, 230: also British State Papers Vol. XXXI. p. 1022.

‡ Phillimore, International Law, Vol. 2 Ch. V. s. 276, P. 314, 315.

solemnly and repeatedly acknowledged these obligations, and the China and Japan Orders in Council are nothing else than the lawful constitutional method adopted by Her Majesty's Government for the due fulfilment of those obligations. Certain legislation, on the part of Her Majesty's Government, became necessary to enable British Courts to exercise in Japan the jurisdiction conferred by treaty, and the Orders in Council were intended to supply that need; but they were never intended by Her Majesty's Government to "injuriously affect the sovereignty of Japan," by denying the inherent and reserved legislative powers of the territorial Sovereign.

Such we conceive to be the spirit and sole intent of the British Orders in Council. Upon a careful comparison of these Orders with the legislation of the American Government, enacted "to carry into effect the provisions of the treaties with Japan and China," it is perfectly apparent, that so far as the legislation of the two countries is to be received as indicating the extent of extra-territorial jurisdiction claimed by them respectively in Japan, the Governments of Great Britain and America hold identically the same view. The constitutional methods of the two countries differ somewhat in the manner of exercising the jurisdiction conferred upon them, but in everything that relates to the sovereign legislative power of Japan, the Governments of the United States and Great Britain appear to have proceeded upon the same theory. The Act of Congress of June 22nd, 1860, after conferring upon the Ministers and Consuls of the United States in China and Japan certain judicial authority in civil and criminal matters, provides that:—

"Such jurisdiction in criminal and civil matters shall "in all cases, be exercised and enforced in conformity "with the laws of the United States, which are hereby, so "far as is necessary to execute such treaties respectively, "extended to all citizens of the United States in said countries, so far as said laws are suitable to carry said treaties into effect; but in all cases when such laws are not "adapted to the object, or are deficient in the provisions "necessary to furnish suitable remedies, the common "law, including equity and admiralty shall be extended "in like manner over such citizens in said countries; "and if defects still remain to be supplied, neither the "common law, including equity and admiralty nor the "statutes of the United States furnish suitable and appropriate remedies, the Minister in the said countries, shall "by decrees and regulations, which shall have the force "of law, supply such defects and deficiencies."*

Enough has been shown we think, to render it manifest that the British Orders in Council and the Acts of Congress are identical in spirit and intent, and that the object of both alike was solely to make provision for the due exercise by those Governments of the jurisdiction expressly conferred upon them respectively, over their subjects and citizens in Japan, by virtue of existing treaty stipulations: and to organize and carry into effect the system of jurisprudence demanded by those treaties. Both Governments have provided, and very properly, that the jurisdiction conferred upon their respective Courts in Japan shall be exercised upon the principles of and in conformity with the common law, the rules of equity and the statute laws of those countries. They both appear to have foreseen that certain acts might be committed by their subjects and citizens in Japan, for which neither the common law, nor the existing laws of those countries would furnish an appropriate remedy, and hence

* The better opinion seems to be, that notwithstanding the provisions of this act, the American Minister can exercise no legislative powers in Japan: and that the only authority which an Act of Congress can constitutionally confer upon a Minister, is the power to make such regulations and rules of legal procedure as may be necessary to enable the Consular Courts to "carry into effect the system of jurisprudence demanded by the treaty."

each has attempted to supply such possible deficiency by conferring upon their Ministers in Japan suitable legislative power to that end. The end and aim of both Governments appear to have been, so far as their laws indicate, to provide suitable remedies for all matters of controversy, contemplated by the treaties as the object of legal adjudication, and to provide adequate remedies and suitable penalties for all unlawful acts, committed by their subjects or citizens against the subjects of Japan, or the subjects or citizens of other countries, and nothing more. We think, that rightly understood, the British Orders in Council no more than the American Acts of Congress, can be construed as implying any assertion on the part of the British Government of the right or power to legislate over its subjects in Japan, in any manner inconsistent with the general original legislative power of Japan. No one of course contends that any Act of Parliament or Order in Council can affect, control or in any way modify the provisions of a treaty with Japan. We have simply endeavored to point out, that nothing contained in these, can be construed to warrant the conclusion arrived at by some, that the British theory of extra-territoriality in Japan differs from that of the Government of the United States, in any essential particular.

THE Notification issued by the Prime Minister on the 8th instant finally removes the suspicion which still lingered in people's minds as to existence of torture in Japan. That remaining stain of ancient barbarism has now been once for all removed from the code of Japan, and it has, at last, been removed in the most formal manner. As far back as June 1876, a notification was issued by the Prime Minister changing or revising an article of the Amended Code so as to make it read "verdicts in criminal cases shall be given on the evidence (aidenok). In case of the death (of the accused) before the verdict is given, his crime is not to be further considered." This at the time, was accepted as abolishing the use of torture to extract confession from accused persons, and this Review then paid a just tribute to the enlightened policy which dictated such a course. But the wording of the notice was not clear; a doubt still existed on the subject and it could not be denied that, although the practice had generally been abolished, still the power of applying torture did exist with the executive authority. And instances were reported,—notably those of the Takabashi mutineers—in which it had been applied; circumstances which called forth our strongest remonstrances in an article in February last. We then urged that this blot on the escutcheon of Japan's laws should be absolutely and irrevocably removed, not by intimation or by vague interpretations of a decree, but in plain, direct and emphatic language. To what we then wrote on the subject nothing remains to be added beyond welcoming with the greatest satisfaction this latest and most conspicuous step in the progress of Japan, by which, in unequivocal language, she abrogates all previous laws relating to torture. It is an event on which we may congratulate the whole country—the Government as well as the people.

WE have received a copy of the Report of the Committee of the CHINA FAMINE RELIEF FUND, the record of a noble work of philanthropy which was carried out by willing and efficient hands and made possible by liberal donations from every part of the world. No more heart rending tale can be imagined than this description of the GREAT FAMINE which devastated five provinces of China, each as large as a European kingdom and each containing a population of from fifteen to twenty-five millions: a scourge which is estimated to have destroyed from nine

and a half to thirteen millions of human beings! The funds placed at the disposal of the Committee "far exceeded their most sanguine expectations both at home and abroad," amounting to Taels 204,560, of which Taels 124,430 came from England and the remainder from China, Australia, America, the Straits, Japan, Tasmania, Canada and New Zealand. The report contains an exhaustive account of the famine, and will doubtless prove to be the most reliable historical record of this great disaster which, following the ones of previous years, seemed to be the climax of misery to a whole continent. We propose referring at greater length to the interesting volume now published, but in the meantime we extract the following from the General Introduction, as containing advice which should not be without its effect upon other countries, and which in many particulars is especially applicable to Japan:—

"The primary cause of famine must doubtless be traced to the All-wise and Supreme Ruler of the Universe, whatever may be said of the ordinary laws of nature and the occurrence of drought, blight or other agencies. At the same time these agencies or their action may be entailed or intensified, and even modified by human instrumentality. The course and operation of aerial currents may be considered as elements that have to do in the production of drought and famine, and from their being in some degree foreseen may be taken as warnings for timely preparation. But unless regarded and used accordingly, as is to be feared will not be the case in China, all previous information will be of little avail. Again, the denudation of forests and the consequent desiccation of the soil are a well-known occasion of the calamity now before us. China as well as other countries is grievously at fault in this respect, and the authorities and people might well learn lessons on the point from the painful experience through which they have lately passed. The prevention of the course they have hitherto pursued, and the scientific development of their coal mines, as a substitute for the reckless destruction of their forests, would be fraught with the happiest results in the line we are now considering. The silting up of many of their rivers and streams through sheer neglect, and thereby arresting the process of irrigation, is another pregnant cause of the evil in question. Above all, however, there are the roads and means of communication with the interior, where the famine has most severely prevailed. These demand improvement at once, that in the case of another calamity of the kind, supplies from the sea-coast and the surrounding country may more readily be obtained."

THE *China Mail* in noticing one of our late articles on Extra-territoriality in Japan has, we are sorry to see, missed the point at which we are working and which, if not already made clear, will we hope develop itself to the editor of our Hongkong contemporary as our essay proceeds. The *China Mail* says "If, as is generally maintained by the authorities on the subject, the full privileges of extra-territoriality place the subjects of foreign nations under the protection and government of their own laws, and no other, then it becomes immaterial what other laws may be passed by Japan, so long as they are not applicable to the subjects of foreign States enjoying such exceptional privileges. It is difficult, therefore, to follow our contemporary's line of argument with any good result."

But that "If" is the very word which we question, and our endeavour has been to show that foreigners do not enjoy the full privileges of extra-territoriality under any existing treaty obligations. Our argument is that the treaties only confer a portion of extra-territorial privileges and immunities upon foreigners, and we shall have to confess to a disappointment if our purpose has in any way been left obscure. The subject is one which could not be undertaken in a cursory manner, and as it necessarily extends over several articles, we trust our critics will have patience to read the whole series before confessing their inability to "follow the arguments with any good result." The result we hope to attain,—and we think it a good one,—is to show the difference between extra-territorial immunities as popularly understood, and those actually conferred by a treaty; the difference between privileges conceded in law, and those acted upon in practice.

AMONGST the industries which, thanks to the researches of science, have in late years attained gigantic proportions may be mentioned tar distillation and

the utilisation of the other residuals of the coal-gas manufacture. For a long time after the establishment of gas-works, the tar and ammoniacal liquor so plentifully produced in gas making were a positive nuisance, owing to the difficulty of getting rid of them; now they form a very important item of revenue in every economically managed works and large sums are paid by those who purchase these residuals, generally by contract extending over a period of years. By subjecting coal-tar to distillation there are, as is generally known, obtained amongst other useful products naphtha, benzole, dead oil, paraffin oil, paraffin for candle making—excelling for beauty and whiteness the best wax—and pitch, as well as the beautiful aniline dyes. The extent and importance of the industry is not, however, as well known as it deserves. We learn from a paper lately read before the chemical section of the London Society of Arts, by Mr. W. H. Perkins, F.R.S. that the value of the coal tar colours alone, produced in Europe during the year 1878 amounted to no less than *three million one hundred and fifty thousand pounds sterling*, Germany heading the list with two millions worth. The noteworthy and instructive thing about this whole subject is the fact that these enormous industries which have sprung into existence since 1856, are entirely the fruits of theoretical researches in organic chemistry and the experiments now being extensively carried on, may be expected before long to bear practical fruit, possibly even more valuable. Another subject towards which the eyes of chemists are turned with expectation is the artificial production of indigo upon a commercial scale. The distinguished German chemist Beyer, has succeeded in removing the principal difficulty by actually producing it in the laboratory.

THE inexcusable manner in which certain Japanese manufacturers persistently pirate the intellectual labour of Europeans and Americans bids fair to become an international question and will certainly be one of the many points requiring attention when treaty revision is being discussed. It is of course extremely creditable to the mechanical abilities of the Japanese, that they are able to imitate so perfectly every article from a rock-drill to a lamp burner, but this affords but small consolation to those inventors who have been deprived of the legitimate results of their genius. From a contributed article to the *Times*, we notice that the numerous flagrant instances of the infringement of important patents, is attracting much attention amongst inventors and manufacturers in England, to the total want of any law which would enable inventors to obtain protection in Japan. There can be no doubt, as stated, that well-directed legislation for protecting the fruits of inventive genius is calculated not only to raise the standard of thought, but to stimulate intellectual study and research in the various branches of science and industry, and must therefore, produce ultimate, if not immediate, benefit to the nation at large. The experience of all other countries bears out the truth of this assertion and the constantly growing evil, so loudly complained of, must inevitably work its own cure and bring about a change in the Japanese law affecting patent rights.

THE LOOCHOO DESPATCHES.

The *New York Herald* for August 15th, contains a letter from the pen of Mr. John Russell Young, its special correspondent with General Grant, dated Peking, June 15, 1879, giving a full account of a conversation held between Prince Kung and General Grant on the strained relations existing between China and Japan in connection with the question of Loochoo. Prince Kung, speaking on behalf of the Chinese Government, availed himself of General Grant's presence

in Peking, and of the circumstance that he intended proceeding thence to the capital of Japan, to secure his good offices in obtaining an understanding between the two countries on the question which had arisen between them. It appears that the Viceroy of Tientsin had previously addressed the General on this subject, and Prince Kung said at this interview, that the Viceroy was preparing a full statement of the case for General Grant's information. The General undertook to study and consider any information so afforded him; and further, that upon arriving at the capital of Japan, he would give the same attention to any view of the matter that might there be presented to him, and do his utmost to bring about a satisfactory understanding. He naturally explained his own unofficial position, and added that he could not undertake to come to a conclusion acceptable to China. The *grace* of the Chinese complaint diplomatically regarded, was stated to be that though China claimed sovereignty over Loochoo, Japan had taken arbitrary proceedings there without consulting China, or even informing the Chinese Government of her intentions; and that the efforts of the Chinese Government to obtain an explanation, either from the Japanese Minister in Peking or through their own Minister in Tokio from the Japanese Foreign Office had been unavailing. The Prince declared that, though his Government's policy was one of peace, it was not one of 'peace at any price'; and that unless Japan withdrew from the position she had assumed, China must declare war. Nevertheless he declared that his Government only wished to insist on its just rights, and expressed his and the Government's willingness to be guided by General Grant's decision in the matter. General Grant assured the Prince of his readiness to do all that lay in his power to secure the maintenance of peace.

The account of the interview is followed in Mr. Young's letter by a brief recapitulation of some of the salient features of the history of Loochoo and of the origin of the present trouble, with respect to which (except as to not a few inaccuracies) the public has already been made familiar.

The *New York Herald* of 1st Sept. publishes a further letter written after General Grant's arrival in Japan (dated Nikko, July 23, 1879) containing still more interesting matter, from which we extract, to day, the Despatches given at the end of this article.

On the arrival of General Grant in Tokio, the Chinese Legation presented him with a statement of China's case, probably that referred to by Prince Kung as being in course of preparation by the Viceroy of Tientsin. After scrupulously guarding himself against the commission of any act of discourtesy towards the Government whose guest he was, or against the U.S. Minister to Japan, or of any other breach of diplomatic propriety, General Grant received this statement from the Chinese Legation, which presented the case upon historical and other grounds. But by far the most interesting part of the letter refers to the conversation held between General Grant and some of the Japanese Ministers on the 22nd July at Nikko, when a complete statement of the case from the Japanese point of view was laid before him. The Cabinet Ministers who conferred with the General on this occasion were the Ministers of the Interior and War Departments respectively. Mr. Yoshida the Envoy to the United States being also present. The statement laid before the General had been prepared under the immediate direction of the Home Minister in whose hands (since the earlier interchange of correspondence already referred to), has rested the entire matter, subject of course to the ultimate decision of the Imperial Council. To the contents of this memorandum, most of which is reproduced in this letter to the *New York Herald*, we shall have occasion to refer at length at another time.

Upon the merits of the case the General not unnaturally declined, in the course of this conversation, to pronounce an opinion—remarking that there were "many points in both cases which were historical and could only be determined by research," but declared his sole interest in the matter to be his anxiety for the sake of the two nations immediately concerned as well as for that of the world at large—especially America—to 'keep the peace' if it lay in him to do so.

He gave it as his opinion, that at the present moment Japan was, in war-material, in her army and navy, stronger than China. Against Japan, he said, China is defenceless, whilst

it was impossible for China to inflict injury on Japan. Therefore, Japan could afford to be magnanimous. But there was also the future position of the two countries to be taken into consideration; and China was making solid progress, and no one could say what would be her position 20 or 30 years hence. He strongly counselled peace, and was assured once more by the Ministers present, that there was no consideration holding a higher place in the minds of Japanese statesmen than the maintenance of peace with China.

General Grant then pointed out, that the thing which caused especial sorrow to China was that she believed Japan's course of action to have been adopted for the purpose of humiliating her. They regarded Loochoo, as a stepping-stone to Formosa—especially having regard to the Japanese expedition to Formosa in 1874: and he pointed out to the Japanese Ministers that these Loochoo Islands controlled China's trade with the Pacific—a point to which his attention had been drawn by the Viceroy of Tientsin, but which was not alluded to in the communication of the Chinese to the Japanese Government. The General also proceeded to point out (what is undoubtedly familiar to the minds of statesmen both in China and Japan), the grave importance to the two countries of an amicable settlement—that if war broke out the foreign powers would seize the opportunity to step in and settle it in their own way to the weakening of both China and Japan; and "your quarrels" he said "are their opportunity. Such a question as Loochoo offers a tempting opportunity for the interference of unfriendly diplomacy." With the quotation of the pregnant words with which this sentence concludes, we will close this résumé of a communication the interest of which to those concerned in the political questions of the Far East is not easily to be paralleled.

The following are the despatches published by the *New York Herald*:—

From the Chinese Envoys Ho and Chang to Mr. Terashima, Japanese Minister for Foreign Affairs, dated 7th October, 1878:—

"Loochoo is a group of small islands in the Chinese seas, whose extent is but limited and whose productions are but scanty, not worth coveting nor appropriating, lying solitary in mid-ocean, and yet existing as a country of itself, which ever since the time of Hungwu, of the Ming dynasty has been subject to China, receiving investiture and paying tribute and constituting one of China's foreign dependencies. But the internal government of the country has been always left open to Loochoo itself to administer. Our Ta Tsing dynasty compassionating it, on account of its small size, has treated it with more than ordinary kindness, and the Loochoosans on their parts have served us with more than ordinary respect. Loochoo, according to established regulations, sends tribute to China once every two years, and has never failed to do so. The regulations, ceremonies and like matters pertaining to this subject are recorded in the Ta Tsing Hui Tien, and in the regulations of the Boards of Ceremonies and in books written from time to time by those who have been sent as envoys to confer investiture, such as the Chung Shan Chuan Sin Luh, as well as in the Chung Shan Shi Lioh and the Kiu Yang Chi, written by natives of Loochoo, and also in the Lia-Kiu Chi, written by Japanese, in all of which they may be found clearly narrated. Moreover, Loochoo in the time of our Hien Tung entered into treaty relations with the United States of America, France and Holland, and in all those treaties Loochoo made use of the Chinese title of the reign, the calendar and the mode of writing. There is not a country in Europe or America that is ignorant of the fact that Loochoo is a country subject to our dynasty. Suddenly it has been reported that Japan has prohibited the payment of tribute by Loochoo to China. Our government hearing this cannot believe that a great country like Japan would disregard the obligations of friendly intercourse, oppress a small country, or be capable of an act so contrary to good faith, to justice, to the feelings of mankind and of reason. Having been sent as envoys to this post, and having resided here for some months, we have had opportunity to examine into all the circumstances. We have not neglected since our two countries have entered into a treaty for the maintenance of friendly relations to make it our earnest aim to cultivate feelings of peace and amity. Your honorable country is aware that in the first article of the treaty it is stipulated that the States belonging to our respective countries shall act toward each other with courtesy, and shall not encroach upon each other's territories and that the observance of this provision is equally obligatory upon both countries. Now, if you should treat Loochoo with insult and oppression and arbitrarily presume to change old established regulations how could you face my country and how could you face the countries that have treaty relations with Loochoo? Although Loochoo is a small country, the whole people, high and low, submit to us with their whole hearts, and it would be insupportably difficult for you to coerce them. At the present time, when all nations are on terms of intercourse, and the principles of propriety are deemed of the first importance, to set at naught treaty obligations for no good reason, and to crush a small country, is a course of procedure which, if looked upon in the light of men's feelings or of international law, will undoubtedly meet the disapprobation of all countries which hear of it. Having been sent as envoys to Japan, it

has been our desire to preserve amicable relations: and in two personal interviews on the subject, our views have been earnestly and repeatedly urged upon you. But lest we have failed to make ourselves intelligible on account of the difference of our respective languages, we address you this candid written communication, earnestly hoping that Japan will act toward Loochoo in accordance with what is right, so that the form and administration of its government may go on in the old established way, and that you will not suffer any hindrance to be interposed to its sending tribute to China, and that thus our amicable relations and neighborly intercourse may go on uninterruptedly, and that we may not give all other nations occasion for ridicule. Your Excellency administers the affairs of the Foreign Department with such distinguished ability and wisdom that looking at the matter in the light of men's feelings, good faith and justice, you will doubtless be able clearly to distinguish between what is straight and what is crooked, what is beneficial and what is hurtful. We, therefore, address this communication to Your Excellency, hoping for an immediate and candid reply."

From Mr. Terashima to the Chinese Envoys, dated 21 November, 1878:—

"Terashima, Minister of Foreign Affairs, makes the following communication in reply:—I am in receipt of a letter which speaks of matters relating to the Loochoo Islands, all of which I have read and made myself acquainted with. Those islands, as I have already in two personal interviews with Your Excellencies earnestly and repeatedly informed you, have truly belonged to my country for several hundred years, and are now under the jurisdiction of our Home Department. Suddenly and unexpectedly I have now to acknowledge the receipt of a letter from Your Excellencies, in which you speak of the fact that Japan at the present time prohibits the payment of tribute by Loochoo to China, and say that your honorable country, hearing this, 'cannot believe that a great country like Japan would disregard the obligations of friendly intercourse, oppress a small country, or be capable of an act so contrary to good faith, to justice, to the feelings of mankind and to reason, and speak of our 'treating Loochoo with oppression and insult, and arbitrarily presuming to change old established regulations,' and also of our 'setting at naught treaty obligations, crushing a small country' and the like. As your letter contains such expressions it would seem as if your country, without stopping to inquire into my government's reasons for issuing the prohibition referred to, abruptly gives utterance to such false statements and violent language. Is this the way 'to promote neighborly intercourse and to preserve amicable relations.' If it is really the case that your government has instructed you to use such language it appears evident that your government has no wish to preserve the relations of peace and amity between our two countries. I must, therefore, trouble Your Excellencies to convey these considerations to your government for me, and with that view I transmit this reply."

From the Chinese Envoys to Mr. Terashima, dated 29 November, 1879:—

"We beg to acknowledge the receipt of Your Excellency's scholarly note in reply to ours, discussing the case of Loochoo, which we have read and made ourselves acquainted with. We have already, in two personal interviews with your Excellency, discussed the subject, and again and again urged our views upon your consideration. But, fearing that we may not have succeeded in conveying our meaning, we therefore prepare a written statement of the case, which is by no means expressed in words hastily uttered. Even in our former letter, not wishing to speak too bluntly, we made use of indirect expressions, and our sole desire in so doing was to give great weight to the maintenance of neighborly intercourse, and it was to our surprise when Your Excellency, on the contrary, took exceptions to the language employed. Our two countries having contracted a treaty for the cultivation of friendly relations, we who have had the honor of being sent to your honorable country as envoys also desire nothing else than to render stable our relations of peace and amity. If Your Excellency, thoroughly appreciating the mutual dependence of our respective countries, which may be compared to that of the jawbone to the teeth, will give your mind solely to conserve the best interests of both countries and to the maintenance of firm and enduring peace and amity, not only will your action be in accordance with our most earnest wishes, but our government will sincerely commend and avail themselves of it. Now, in the first article of the treaty for the cultivation of amicable relations it is provided that as regards territorial possessions of either country the two governments will treat each other with proper courtesy. During several years past written communications and envoys having again and again passed between us for your government to send to Loochoo the orders referred to, without the least intimation to us, is not, it is to be apprehended, the way to give weight to neighborly intercourse or to maintain friendly relations. In all intercourse between two countries it is indispensable that they treat each other with perfect justice and sincerity and that both parties should abstain from the use of disingenuous language in the communications that pass between them. Now, as appears from what Your Excellency says that your government 'has reasons' for what it has done, we trust that Your Excellency will thoroughly consider the matter in strict accordance with the feelings of mankind and the principles of justice and favor us with a reply. This is our hope. While making this special communication we take the opportunity to wish Your Excellency the blessings of the season."

From Mr. Terashima to the Chinese Envoys, dated 30 December, 1878:—

"With reference to the case of our Loochoo province, I have already replied in my letter dated November 21, 1878. As in your

letter there is contained nothing which was not contained in your despatch of the 7th October, 1878, which has already been answered, except what is said about thoroughly considering the matter in strict accordance with the feelings of mankind and the principles of justice, which has already been done, I have nothing further to offer in reply. In sending this special answer I take the opportunity to wish Your Excellencies the blessings of the season."

From the Chinese Envoys to Mr. Terashima, dated 26 February, 1879:—

"The Chinese envoys have just received a despatch from Prince Kung and the other Ministers of our office for the management of foreign affairs as follows:—"With reference to the case of Loochoo we had already received from Your Excellencies a letter stating that you had prepared and forwarded to the Japanese Department of Foreign Affairs a despatch in which you set forth a true statement of what was justice, and in a reasonable spirit investigated the difficulties in the case, &c., as is on record. We are now again in the receipt of a letter from Your Excellencies stating that you had received a reply from the Department of Foreign Affairs, a copy of which you forward for our inspection, &c. Upon the receipt of this we have to say that Loochoo has been a country belonging to China from the time of the late Ming dynasty, and has for generations kept its fidelity as a foreign dependency and unfailingly came to present tribute. From the representation of their state and condition which is now made to us by the Loochoo Commissioners they appear deeply worthy of commiseration, and it is certainly incumbent upon us to extricate them from their embarrassment. Japan having contracted with China a treaty of commercial intercourse, and for the mutual promotion of peace and amity, with a due regard to what is in accordance with the feelings of mankind, as well as with the principles of reason, would not, we should think, go so far as to actually hinder and put a stop to the bringing of tribute to us by a country which belongs to us. Our hope is still that Your Excellencies will consult with the Department of Foreign Affairs, and urge a settlement of the question in such a way that the old status may be preserved, in order to preserve unbroken the intercourse between our two countries and to promote friendly relations. We therefore again write to Your Excellencies in order that you may duly take notice and act accordingly." The receipt of this makes it incumbent upon us, the envoys, to address a despatch to Your Excellency, hoping that by all means Your Excellency will, in a friendly spirit, deliberate with us and carry forward the settlement of the question. This is our urgent prayer."

From the Chinese Envoys, dated 12 March, 1879:—

"Yesterday we had the pleasure of calling upon you, and of deriving enjoyment from your learned instructions. Referring to what we have heard as to your honorable country detailing men to go to Loochoo, I explained most minutely and circumstantially the inexpediency of such a proceeding. Your Excellency's reply was, that 'when upon consultation a clear understanding had been arrived at in the case, the men could then be recalled.' We have thought over the matter again and again, and it appears to us that as we are now just in the midst of our consultation in relation to the settlement of this subject, in obedience to a despatch received from our Office of Foreign Affairs, a copy of which was forwarded to Your Excellency, it would be far more satisfactory that the men should not be sent at all at present, rather than that they should be recalled after we have permanently arranged matters. This is what I had the honor to say to Your Excellency, thoughtfully to weigh the course to be pursued, and we pray that after examination you will adopt our views."

From Mr. Terashima to the Chinese Envoys, dated 15th March, 1879:—

"I beg respectfully to acknowledge the receipt yesterday of your honored letter. Referring to what you say on the subject of the Loochoo Islands I was favored with a copy of a despatch from the Chinese Office of Foreign Affairs, all of which I read and made myself acquainted with. Now the tenor of the despatch contains nothing in the way of a satisfactory reply to the expression of my sentiments contained in the answer which I had the honor to send you on the 21st of November, 1878. But as I have already, at a personal interview spoken to you in detail upon this subject, it is not necessary for me to repeat what I then said; and, further, as to the appointment by my government of men to go to the Loochoo Islands, although Your Excellencies say that you speak frankly your wishes that those persons should not go at the present time, &c., yet in reference to this, inasmuch as this step has been initiated for the peace and security of that land and people, it is really necessary that it should be carried out at an early date, so that it is not in my power to comply with your wishes. Having a few days since, had a personal interview with you, you will understand the particulars, and I therefore ask you to excuse me from omitting them and to give them due consideration."

From the Chinese Envoys to Mr. Terashima, dated 20th May, 1879:—

"The Peking government were evidently becoming impatient. On May 20, 1879, the Chinese envoys, spurred on by the Yamen, again addressed the Japanese Minister. "We are now," write the envoys, in receipt of a despatch from our Office of Foreign Affairs, in which it is asked, 'What reasons can your government possibly have to justify your abolishing the government of Loochoo and erecting it into a province.' From the time that our two countries entered into a treaty for the maintenance of amicable relations up to the present nothing has occurred in our intercourse contrary to harmony and friendship, so that our government is really unable to understand the action of your government in this matter, and has ordered us, the envoys, to write to Your Excellency and make

inquiry. Upon the receipt of this it becomes our duty to address a communication to Your Excellency and we earnestly and urgently hope and pray that we may be favored with Your Excellency's reply."

From Mr. Terashima to the Chinese Envoys, in reply to the above:—

"I am now, in receipt of your communication, dated May 20, 1879, in which you speak of the abolition of our Loochoo province and the erection of the Okinawa province in its place. That step was inaugurated by the Home Department of the Japanese government for reasons connected with its own convenience. In your letter dated October 7th, 1878, I found upon reading it that it contained language that cannot be tolerated, and on the 21st of November, the same year, I sent you a letter in reply to yours, requesting you to communicate this fact to the Chinese government, as is on record. Nevertheless, upon reading your letter of the 15th of March, 1879, I had that in reference to what I requested you to communicate in my previous reply there is nothing at all satisfactory. I beg to call your attention to this subject as being. I make this special and respectful reply."

From the Chinese Envoys to Mr. Terashima, dated June 10, 1879:—

"On the 27th of May we received a communication in which you state that the Home Department of our government, for reasons connected with its own convenience, abolished our Loochoo province, and erected its place the Okinawa province," all of which we have duly read and made ourselves acquainted with. Now, Loochoo is a country which, from several hundred years ago to the present time, has received investiture from and paid tribute to China, as is well known to every country under heaven. Now your communication abruptly makes use of the expressions, 'our Loochoo province,' and 'our Home Department.' We know not in what year and what month your country invested the dependency of Loochoo. Was it before you entered into the treaty with us, or was it subsequent to that time? With reference to all that is laid down upon the map of Japan it is allowable for you to use the expression, 'our Home Department,' but Loochoo lying solitary in the midst of the ocean, has from ancient times until now existed as a country by itself. Although it has received investiture from and paid tribute to China and constituted one of our foreign possessions, it has nevertheless been allowed to control its own governmental regulations and prohibitions. If its designation and its obligations are spoken of we say that it is a country subject and belonging to China. If its government be spoken of we say Loochoo really exists as a country by itself; so that the abrupt use, in your despatch to us of the term 'Home Department' is really inexplicable. Your Excellency, in a reply to a communication from us on a former occasion, stated your government had reasons for what it had done. Be so good, then, as to state what these reasons are, as we would like to publish them to the whole world. Further, in the communication received from you, you say that in our letter of October 7, 1878, we made use of discourteous language. In that despatch we used the words 'cannot believe that a great country like Japan is capable of such acts,' and also words, 'now if,' and again 'for no good reason,' all of which assumed that Japan had not done the acts specified—which was strictly treating Japan with great consideration. As there is nothing whatever wrong in the meaning conveyed by the Chinese text, and still, Your Excellency again and again takes exception to the language used, it seems as if Your Excellency had misapprehended the meaning of the text. But in reference to the affairs of Loochoo, our country ought to have heard from you. Our former despatch was in accordance with the mind of your government, and our government having now heard that Japan has abolished the government of Loochoo and created it into a province, has ordered me to address a communication to Your Excellency, requesting you to put a stop to these proceedings. Again, on May 10, 1879, our Office of Foreign Affairs, addressed a communication to the Japanese Envoy Shishido, ordering him to forward copy of it to Your Excellency, which you, we presume, have received. The Envoy Shishido stated that he had not been instructed by his government to discuss this case, so that Pekin is, therefore not a suitable place in which to consult and carry out arrangements for a settlement. We, the envoys, therefore, fervently hope that Your Excellency will give the settlement of this case, your most thorough consideration and will favor us with a reply. This is our most earnest prayer."

The following is the despatch referred to in the foregoing one, as having been sent by Prince Kung to Mr. Shishido, the Japanese Envoy at Pekin, dated May 10, 1879.

"The Prince Kung and Ministers of the Office of Foreign Affairs address the following despatch:—Loochoo is a country which for generations has received investiture from China, and for several hundred years up to the present time has used the Chinese calendar and paid tribute to China, as is known to all nations under heaven. Except so far as the receipt of tribute due is concerned China has left to Loochoo entirely the management of its own governmental regulations and prohibitions. The several nations which have treaties with China and Japan, and which have also exchanged treaties with Loochoo have by so doing given evidence that they all recognize Loochoo as a distinct nationality. Loochoo, although acknowledging submission to China, has also acknowledged submission to Japan. China has been aware of this. She has never found fault with Loochoo for so doing—thereby herself also recognizing Loochoo as a distinct nationality. As to the payment of tribute to China by Loochoo that is an affair that China does not consider of any importance. Now, what has Loochoo done to offend Japan that you suddenly abolish its government and make it a province? This is most assuredly inconsistent with the first article of the treaty for

the maintenance of amicable relations, which says, 'as regards the territorial possessions of either country the two governments shall treat each other with proper courtesy.' Moreover, Loochoo having been recognized by China and by the other countries as a distinct nationality, for Japan, without good reason, to destroy the national existence of the people and put a stop to their sacrifices is an act of disrespect on the part of Japan toward both China and the other countries. Loochoo being a small country and acknowledging submission to both of our countries, and being more intimately related and nearer to Japan, it behooved your country to guard and protect them in every possible way. But to abolish and destroy their national existence is a proceeding which will not add to the reputation of Japan, and will be contrary to what is held to be just and right by other nations. Since Your Excellency has been appointed by your government to come hither with the view to the maintenance of amicable relations, and inasmuch as the abolition of the government of Loochoo is something which greatly concerns the peace and amity of our two countries, we, the Prince and Ministers, consider what we have said above as a statement in the interests of the lasting perpetuation of unbroken peace and amity and of all concerned. Your Excellency should, therefore, address a communication to your government, requesting that an immediate stop may be put to the measures for abolishing the government of Loochoo, and that thus the relations of peace and amity between our two countries may be rendered more intimate, and the intentions of Your Excellency in coming hither for the maintenance of amicable relations may be thereby still more clearly manifested. We submit our humble views on this subject, trusting that Your Excellency will thoughtfully weigh and examine them, and take action accordingly. We, therefore, address you this necessary despatch."

This completes the diplomatic correspondence up to the time of General Grant's arrival in Japan, as published in the *New York Herald*.

REUTER'S TELEGRAMS.

LONDON, 7th October, 1879.

The British position at Shintarganlan, has been unsuccessfully attacked by independent tribes from the south.

(From the Hongkong Daily Press.)

Simla, 18th September.

The survivors of the escort state that the attack on the residency was not premeditated.

Communication between the Khyber Pass and Cabul is interrupted by the frontier tribes.

The advance is delayed on account of the difficulty of transport.

The strength of the Khyber and Kurram columns is 12,000 each.

Simla, 21st September.

The Afreedis and other Khyber Pass tribes have guaranteed the safety of their portions of the road to Cabul.

General Roberts' force will shortly advance.

London, 19th September.

The *Standard* publishes a telegram which states that the troops at Herat have mutinied and massacred the civil and military authorities.

Simla, 20th September.

The report of the outbreak of a mutiny at Herat is confirmed.

London, 19th September.

Advices from the Cape, dated 2nd instant, state that Cetewayo and a few followers, being in a most prostrate condition, surrendered without resistance. He was brought in to Ulundi, and thence to Greytown. His ultimate destination is at present unknown.

Sir Garnet Wolseley announced at a gathering of the Chiefs that Zululand is now to be divided into three provinces each under a white resident.

A new ministry has been formed under the presidency of Riaz Pacha.

Cetewayo has been sent to Capetown.

An Embassy from the Ameer has arrived at Ali Kheyl with pacific assurances.

Bombay, 25th September.

A Chinese Envoy has arrived at Livadia to sign the Treaty with Russia, after which he returns to China, leaving a permanent Embassy at St. Petersburg.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no wise responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions or for the deductions they may choose to draw therefrom.]

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

DEAR SIR.—Allow me to call your attention to an error, which I noticed in your last weekly paper. In an article entitled "Japanese Merchants," you severally make mention of "KAEMPFER," the justly celebrated early Japan traveller and writer, as having been a Hollander and Dutch traveller, whereas almost everybody is aware that he was a *German*, both by name and birth, also was his far-famed work on Japan written in the *German* Language, and subsequently translated into Dutch, English and French. I may add, that Doctor A. Kaempfer was born in *Lemgo* (*Westphalia*). He died there in A.D. 1713, —which details you will find to be fully corroborated, on referring to any good Encyclopedia.

Kindly insert this for the information of your readers.

I enclose my card,

and am, Dear Sir,

Your obedient servant,

O. F.

Yokohama, 6th October 1879.

[We are much obliged to "O. F." for pointing out the error committed, which we acknowledge to have been a serious one. Two blacks cannot make a white, but it is some consolation to see that our mistake is not entirely singular, as the *London Morning Post* (in an article just reprinted by the *London and China Express*) speaks of KAEMPFER as that "good Dutch Missionary" which certainly caps our own error. The *Encyclopedia Britannica* tells us that, for some unknown reason, Kaempfer's great work has never been published in the original German; but was translated from the MS. into English and thence into French and German.—Ed. J.W.M.]

The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 11, 1879.

JAPANESE ERA 2599, MEIJI 12TH YEAR, 10TH MONTH, 11TH DAY,
DO-YO-HI.

NOTES OF THE WEEK.

The M. M. steamer *Tanais* arrived from Hongkong on Wednesday afternoon, bringing the London mail of 22nd August and Marseilles dates two days later. The P. M. S. S. City of Peking arrived from Hongkong on Wednesday morning, and left for San Francisco to-day at noon. The O. & O. steamer *Oceanic* left for Hongkong and England last Sunday afternoon and the M.M. steamer *Volga* for Hongkong on Thursday morning. The Shanghai and coast port steamers have arrived and departed on their usual days.

Sir Harry Parkes left to-day in the *City of Peking* for England and every resident in Japan will share in the regret that his sudden departure has been caused by telegraphic news of the serious illness, at home, of Lady Parkes. Mr. Kennedy will now represent British interests in Japan, in whose experienced hands we may be sure they will be well looked after. The Hon. J. A. Bingham U. S. Minister, will be Doyen of the diplomatic corps.

By the same steamer we have also to notice the departure of the Revd. Dr. Syle, who for many years has been one of the most respected and useful members of our own and the Tokio community.

The *Vega* left to-day for Kobe and Nagasaki, and after some short delay in the Philippine islands will continue her homeward

cruise, thus circumnavigating the newly proved *Island* known as Europe and Asia! Every one will wish "God speed" to Professor Nordenskjöld, Captain Palander and the officers and crew of the *Vega*, and equal fortune in warm latitudes to the honor they have gained in arctic ones. As one of the mementoes of his visit to Japan Professor Nordenskjöld takes with him a medal presented by the Tokio Geographical Society. On one side is the inscription

"Tokio, Japan,
"Society for Geographical Science.
"16th September, 1879."

and on the other:

"The *Vega* arrived at Yokohama on the 2nd September from a voyage through the ice sea, a feat now performed for the first time, and of the greatest importance for geographical science. We congratulate ourselves upon having the honor to receive the members of the expedition at dinner to-day, and, as a souvenir, we present this medal to the chief of the expedition, Professor Nordenskjöld."

The brig *Jumna*, which left here for Nagasaki on the 8th inst., returned to port this afternoon, having been in collision with the M. B. S. S. *Takasago Maru*. It seems that on the night following the brig's departure, about half-past nine, and when off Oshima, the lights of a steamer coming head on were seen. The *Jumna* kept on her course, and so did the steamer until close up when she tried to go to starboard, but the brig struck her bows on—just abaft the main chains on the port side—carrying away her own bowsprit and head gear and shattering her stem. The injury to the steamer consists in smashed boats, bulwarks, etc. The *Takasago Maru* was returning to this port from Kobe. She remained by until morning to render any assistance required and offered to tow the brig back to port, which offer was, however, declined. We suppose the damage claim will be readily adjusted.

The TOKIO GEOGRAPHICAL SOCIETY are displaying great energy in their publications, and we have now to acknowledge the receipt of their third volume of this year's transactions. We trust that this energy may continue, and that their present zeal in geographical science will not diminish or, from the want of more discoveries and more papers, suffer from premature exhaustion. The meeting now recorded took place on the 28th June, when thirty nine members, including the Chairman, H. I. H. Prince Kita Shira Kawa, were present. Two papers were read, the one being a "History of the Empire of China under the Yuen Dynasty" by Mr. Kitazawa Masayuki, and the other upon the "System of the examination of candidates for civil and military offices in China and of their promotion," by Mr. Ohara. The first contains a brief biography of Kian (Gengis Khan), the ancestor of the Yuen dynasty, and an account of his conquests. The second describes in elaborate detail the changes that have been made in the systems of 'examination' from the time of the Emperor Dshong until the present day and mentions that the principal subject given is the composition of poetry. Mr. Ohara remarks, however, that although preferment should only be awarded to those who pass these examinations successfully still, in point of fact, appointments and promotions are now generally made simply by the caprice of superior officers—much to the disgust of the public. Neither of these papers can be termed geographical contributions, but we think the Tokio Society have done wisely in extending the scope of their papers to other matters as, by this means, they will certainly succeed in getting a fuller supply of transactions that if confined to the one science the title they have adopted would lead us to expect. It may possibly be found advisable to change or add to the name of their association.

We are glad to see that our Dramatic Amateurs, after their long torpor, are again to the fore with a new musical burlesque "Ivanhoe." We hear that all the army of talent attached to the corps has put forth its entire strength in the preparation of the new piece—poet, scene-painter, director and composer of the music vying with each other to produce the most perfect *extravaganza* ever seen on the Yokohama boards. Mr. Keil has been engaged as accompanist; the theatre has been redecorated and its acoustics much improved. We may therefore expect a most successful opening night on the 17th, and would recommend our friends to secure their seats well in advance.

The Yokohama native piece-goods merchants have notified the foreign firms that, for the future, they will not take delivery of such goods as Cotton Yarn, Shirtings, Cloths, Blankets, Canvases, Carpets, Paper, etc. unless the original form of package is complete and uninjured. They state that a comparative injury is done to them by the present practice of hoops, cords and other packing being removed by the godown-keepers before delivering the goods, as the bulk of the package becomes thereby increased and the cost of transportation made heavier. A grievance we can readily imagine, and one it is difficult to think should so long have been submitted to; but the concluding argument of the native merchants against the practice does not appear to be one in which we should have expected them to be so interested, although it is one for which the home manufacturers will doubtless be thankful. The circular states that the custom of removing the hoops, etc. from the bales must "moreover have a bad influence on the name of the manufactories in foreign countries where the packages are made."

The fluctuations of *kiasatsu* during the past week have again been considerable, the highest point touched having been nineteen and the lowest twenty-four and three quarters per cent discount. These variations will make the continuation of our last week's diagram as erratic as its previous course and lead us to expect many further contortions before a level and steady line can be reached. For that interesting record of *satsu* fluctuations our thanks are due to Mr. E. J. Pereira, of the Hongkong and Shanghai Bank, from whose diagram our 'curve' was reduced by the kindness of Professor Mendenhall of Tokio, the able compiler of the Meteorological Reports which appear weekly in our columns.

Friday next, the 17th instant, is a general Japanese holiday when a religious service is performed by H. M. the Emperor for the souls of his Imperial ancestors, and the first fruits of the rice crops are offered to the gods.

A Notification was issued yesterday from the Finance Minister, stating that a Branch Office of the Osaka Mint has been established in Tokio, where bullion will be received for coinage. To-day's native papers only give a portion of the rules and conditions upon which bullion will be received in Tokio, so that we defer their publication until they are complete.

The first heat for the "Champion Pair Oars" was rowed on Thursday afternoon under very favorable circumstances of weather and water; the harbour, after its late boisterous behaviour, having settled down to 'mill-pond' calmness. The two crews consisted of:—

- | | |
|-----------------|---------------|
| 1. Gaspar | 1. Towse |
| 2. Whitney | 2. Litchfield |
| Churchill, Cox. | Hall, Cox. |

A good start was effected about half past five o'clock, but after the first few strokes Whitney's boat drew ahead and rowing 38 to the others 36, he maintained a lead throughout the course, which was increased to at least six lengths at the finish. Time, 7 min. 49 seconds. Distance 1 mile. The winners showed some hurry at the start but soon settled down to good, steady and regular work, winning with ease and showing themselves to be a formidable pair. No. 1 of the losing boat hardly did justice to the full length of the stroke and was generally the first to quit the water with his oar, but even could this defect have been avoided, the result would hardly have been different.

The second heat was rowed this afternoon, in rather lumpy water, and without much scope for excitement to onlookers, as the previous winners had even easier work of it than in their first victory. Messrs. Walker and Wood were beaten by about six lengths, but the distance could have, evidently, been doubled had the winners desired to do so. Time 9 min. 24 sec. The American "pair" have taken their laurels easily so far, but a hard tussle will yet be necessary before they can claim the cups in the final heat, to be rowed on Regatta day.

Bad weather has been sadly against rowing during the past week, and but little practice has been possible. The "Club Fours" are in a very mixed condition, if not in perfect disorder, owing to frequent changes; and one crew, although it has a new 'stroke' and a new 'bow' is, we hear, not yet settled. The race between Tokio and Yokohama promises to be a very good one, and if weight and muscle can carry the

day the visitors have certainly the better prospects. The following are the names and weights of the two crews:—

Tokio Crew.		Yokohama Crew.	
1. Strange, 10st. 12lbs.	1. Gaspar 11st.	1. Gaspar 11st.	1. Gaspar 11st.
2. Trevethick, 14st.	2. Fraser, 11st. 10lbs.	2. Fraser, 11st. 10lbs.	2. Fraser, 11st. 10lbs.
3. Morris, 15st. 11lbs.	3. Hamilton, 12st. 8lbs.	3. Hamilton, 12st. 8lbs.	3. Hamilton, 12st. 8lbs.
Stroke. Whitney, 11st. 6lbs.	Stroke. Litchfield, 11st. 10lbs.	Stroke. Litchfield, 11st. 10lbs.	Stroke. Litchfield, 11st. 10lbs.
Cox. Kuchler, 9st. 12lbs.	Cox. Haselwood, 9st. 12lbs.	Cox. Haselwood, 9st. 12lbs.	Cox. Haselwood, 9st. 12lbs.

We notice in the *Indépendant de Saigon*, of the 16th ultimo, that a meeting was held there for the purpose of forming a Jockey Club. A committee was appointed and a general meeting of the members was to have taken place at an early date to consider the rules and regulations of the Club which were to be drawn up by the committee in the interim. Sixty-seven persons had promised to join the club which promises to be a great success, if the programme announced is carried out. The following issue of the same journal contains a notice of a floating dock entirely constructed at the arsenal at Saigon, and a report of the meeting of the town council to consider the question of lighting the settlement with gas. We observe that M. Pelegrin who erected the gas works both here and in Tokio and Hiogo, had submitted a proposal for the consideration of the council.

We have been favored with the following official account of the number of foreign employés at present in Japanese service, which will be found of interest:—

Nationality.	In Government Employ.	In Unofficial Employ.	Total.
English	158	118	276
American	48	72	120
French	34	9	43
German	34	9	43
Dutch	13	18	31
Austrian	6	5	11
Danish	—	12	12
Italian	3	1	4
Russian	2	—	2
Portuguese	2	1	3
Swiss	1	10	11
West Indian	1	—	1
Belgian	1	—	1
Manila	4	—	4
Chinese	9	52	61
Peruvian	—	1	1
	316	308	624

The second Hirlemann concert was given on the 9th, in the Gaiety Theatre, and we are glad to record a somewhat better attendance. The singing of Madame Hirlemann was again the feature of the evening, her fine voice, pure intonation and good method, giving genuine pleasure to the entire audience. The lady has evidently studied almost exclusively in the French school, that style suiting her much better than the German and even the Italian. Thus the gem of the evening was No. 7, the Bolero by V. Massé, which Madame Hirlemann literally sang *à ravir*; the Italian air was also thoroughly good, but the "Ombra leggiera" of Meyerbeer was scarcely satisfactory and would have been more effective with the original Italian words. As to the instrumental part, we were much disappointed with the opening number marked on the programme as "Sonata in F major, Op. 10, Beethoven." We are bound to say that we never heard this grand Master so cruelly murdered before. Wrong notes, false time, with a plentiful application of the loud pedal do not make a Beethoven sonata; and we fear M. Hirlemann must resign all claim to being considered a performer of classical music. From this exhibition one would almost infer that the proud Maestro (!) is not even entitled to write himself *pupil* of even the humblest Conservatoire in Europe. On the other hand the Rondo of Chopin (one of his earliest works), came within the performer's powers and was fairly played, while in de Konstzky's *caprice héroïque* "le réveil du lion," M. Hirlemann displayed a dexterity of digit and power of biceps that would have delighted the heart of the Chevalier himself; although he might very reasonably have objected to the improvisation introduced into the middle of the piece. The evening finished with some detached fragments from Verdi's *Travatore* and the audience dispersed with the melody of the *Misere* lingering in their ears. The final concert of the present series will be given on Monday, previous to the departure of M. and Madame Hirlemann for Shanghai.

The *Nichi Nichi Shinbun* relates an incident of the kinsatsu scare in Osaka, which tends to shew that the Japanese are as competent as any other people to take advantage of an opportunity which either fortune, or the misfortune or stupidity of others, may afford them. An astute and enterprising individual named Hamamura Zenjirō, whose usual residence is Namba Mura, in Osaka, observed that there was an extraordinary demand for newspapers containing accounts of the Fujita affair. It was quite immaterial to Hamamura whether the newspaper reports were true or false, for his purpose it was sufficient that the demand existed, and acting in the true spirit of all monopolists, he purchased the whole of the remaining copies of Osaka journals published after the 15th September, which contained any reference to the counterfeit kinsatsu. Accurately judging that the unsophisticated country-people would present a more promising field for his operations than the more acute citizens, he started for a tour through the province of Kishiu, and as long as his stock of papers lasted, announced in stentorian tones, that he was selling "the only full, true and particular account, of the great event that had just taken place in Osaka; that the well-known Fujita Denzaburō and Nakano had imported from Germany, counterfeit kinsatsu to the value of 3,000,000 yen, and had spent it in organizing a conspiracy against the Government and an attack upon the local garrison." He also announced that "the plot was discovered the day previous to that fixed for the rising, and about five regiments of police had arrived from Tokio and arrested the conspirators." Under the stimulus derived from these announcements the newspapers went off rapidly at a profit of from 10 to 15 cents per copy and the enterprising Hamamura, found himself the fortunate possessor of a clear profit of about 80 yen on the transaction. While returning to Osaka, he noticed that everyone was anxious to get rid of two yen kinsatsu and a brilliant idea occurred to him, which he at once proceeded to carry into practice. He hastened to Osaka, borrowed 40 yen, added it to his capital of 80 yen, and changed the whole into kinsatsu of small denomination. He then went to the Province of Idzumi and gave out that he was the Manager of an Osaka Bank, and with all the authority due to his assumed position in the financial world announced, that there was no doubt whatever the government would confiscate all the counterfeit two yen kinsatsu in circulation. Hamamura also stated that the proprietor of the financial institution he represented, was a most benevolent individual, positively welling over with the milk of human kindness, and had empowered him to relieve, to some extent, the misery which this action of the authorities would entail upon the innocent inhabitants, by buying up a limited number of the two yen kinsatsu. "Of course," said Hamamura, "we have no desire to obtain these kinsatsu, but I am authorised to take a few at a discount!" Upon this, great competition arose amongst the ignorant farmers to take advantage of the generous offer, and the crafty representative of the imaginary bank succeeded in turning his 100 yen into 300 in the course of two days, after which he left amid the thanks and blessings of the recipients of his favours. A few days afterward, however, the authorities became acquainted with his proceedings, and although the police have been on the look-out for him, he has, up to the present, succeeded in evading their vigilance.

During the recent election for Mayor in San Francisco, party feeling was at its highest and one of the local journals attributes the quiet and orderly condition of affairs which nevertheless prevailed "to the free use of the pistol" during the days preceding the polling. The same journal adds, that the frequent use of the "pacifier" was injurious to the name and fame of the city but "it was felt during the election that heated discussions were unwise and dangerous, because no one knows that his antagonist is not armed and avoids discussions that may at any moment end in hot powder and cold lead."

A Country Solicitor, writing to the *London Times* recently, conveyed a warning to executors which may not be out of place in Japan. "I am convinced," writes the solicitor, "that the delivery of fictitious accounts to executors, in answer to the statutory notice to creditors and claimants has become a regular trade." He then narrates a case which came under his own observation and in which he assisted in the prosecution of a person charged with such an

offence. The man pleaded "guilty" in twenty-nine cases, and the success of the practice was shewn by twenty out of twenty-one accounts having been paid without dispute, and in some instances a second account had, (after payment of the first account sent in), been delivered with a letter of explanation and apology, and in several cases paid without demur. The particular fraud referred to, (that of a brewer) came to light through the fictitious account being sent in under the estate of a man well known to have been a strict testotaller of long standing. The claim for "beer supplied" excited suspicion under these circumstances; investigation disclosed the attempted imposition and resulted in the punishment of the man who sent it in.

One of the most cogent arguments used by the advocates of the divorce act when it was introduced in the English House of Commons was the facilities it would give to the poorer classes to divest themselves of unsatisfactory helpmates. The legislature seems to have gone a step further lately and whether intentionally or otherwise, provided a simple, speedy, and effectual method of procuring a judicial *separatio à mens et thoro, à vinculo matrimonii*. Take for example the following scene in the Lambeth Police Court, which is reported in *Vanity Fair*:—"A respectably-dressed man said he had a dreadful wife, and could not live with her.

MR. CHANCE. What can I do for you?

APPLICANT. I want a judicial separation.

MR. CHANCE. I have no power to help you in that respect.

APPLICANT. I thought you had that power under the new law.

MR. CHANCE. I have power where a man is convicted of an aggravated assault on his wife to grant separation.

APPLICANT. What am I to do, then?

MR. CHANCE. You must go to the Divorce Court.

The applicant then withdrew, 'very much disappointed'; but when he comes to think the matter over, he will, no doubt, grasp the worthy magistrate's meaning, and take very good care that the assault he commits upon his spouse shall be sufficiently aggravated to ensure him, after a few weeks of prison, peace for the remainder of his life."

PARIS LETTER.

PARIS, August 16th, 1879.

When parliament is sitting, people wish for the prorogation, and when the latter arrives, the situation is felt to be so dull, that the reassembling of the Chambers is ardently longed for. There is not a minister worth his salt, but is at the present moment "drinking some water," to set right a deranged liver, and re-plate his stomach against the attacks of the cookery of the future. Ministers have forgotten their cares, and are either ruralising, or cutting gambols at the sea side. Every member of the governing classes is anxious to have his run: business is postponed—even in the case of guillotine work, till a more convenient season. Before now prisoners have been hanged, that jurymen might dine. Not the slightest importance is attached to the meetings of emperors, and the bellicose intentions of Italy are less interesting than the hunting down of Cetewayo. M. Naquet has had to suspend his stumping in favor of divorce, the most conjugally unhappy couples trying as a last resource for their miseries, the efficacy of our Indian summer. Even the Papal Encyclical, that urges us to pin all our philosophy on the *Summa Theologia* of St. Thomas Aquinas, having but one "Angelic Doctor," as the Chinese have but one Confucius, falls on inattentive ears. M. de Lesseps has retired under his tent, cursing the day the Pilgrim Fathers landed in America, as the opposition of their descendants to his Darien scheme has prevented the shares from being "warply taken up." Even *Père Duchêne*, an intermittent journal claiming a monopoly of foul language, has, under the influence of fine weather, declared it has left off sack and will live clean; it demands the "Scientific" republic—just like Messrs. Gambetta and Littré, and perhaps the Earl of Beaconsfield were he French. A wet day has prevented the out-break of a revolution; merry sunshine proves a successful calmanth—hence extremes meet. Indeed there are many pious persons with Jules Ferry and his clause No. 7, on the brain, that can now sleep as innocently as the just; and even the Jesuits do not believe Paul Bert intends to cut off their heads, as a comic journal represents him to be doing. We have entered apparently on the lotus eating stage of the republic; Prince Jérôme is as harmless as the Comte de Chambord, and both have set out on excursions, which cannot but fortify their beliefs, that France does not want to be saved by either of them.

Whether or not France be indifferent or irreligious—and a nation that is so rich, prosperous and contented, cannot resemble the Cities of the Plains, she is vowed to the Saints, and to none

more so than to the Virgin. "Mary" is the most popular in the whole calendar; her fête, the fifteenth of August, has just been held and honored. The Bonaparte appropriated and farmed this day for dynastic ends; but Bonapartism has disappeared like last year's snow, and St. Mary was never more popular. But who has not in their family a Mary to honor or to remember, for the living and dead of this name are alike called to mind on the Saint's anniversary? The flower markets of the city were inadequate to supply the demand for pots and bouquets, so the flagways had to be requisitioned. On the day in question, "Paris is really a city of flowers," and not only the poor, but the well-to-do, lay in a provision of these gifts, which have the merit to suit all purposes, while possessing the democratic character of being uniformly pleasing. It is a veritable "Decoration Day," for the com-teries, as the tributes to "Maries in Heaven," are numerous. For Maries living in the fifth story, or in the attic like Jenny l'Ouvrière, a fuchsia or a myosotis is the favorite; it looks big and tall, and these are advantages not to be despised for a small apartment, and slenderly furnished. It is at the Madeleine flower market, and the "Floral Magazines" in the vicinity, that the upper ten make their purchases, and where the triumphal and pyramidal bouquets are to be found, combining ingenuity of design, with diversity of colors. It is here also that the boulevard is supplied as well as the *salon*, for Mary Magdelen is remembered in camellias and yellow roses; the latter if crushed and drooping, are more expensive—and at the same time significant.

A free-thinking journal has no objection to the sweet name of Mary, save that it is "a relic of Christianity." It also appears the clergy do their best to keep that appellation fashionable: the journal hopes that a son patriotism will replace it by Franoia or Francine, just as the Russians have Yelva, and the Turks, Fatima. The language of flowers is considered when making a present, but not generally so. In the case of the absent, abstinence, not rosemary, is selected for remembrance; for the engaged, orange tree in flower; the same shrub in fruit, is sacred to mothers-in-law; a wall flower is the symbol of indifference, and fern of sincerity; moss signifies maternal love, and white mulberry, sagacity; the nenuphar means coldness. Roses are so vague, that following their color, they range from the love of the turtle, to the infidelity of the nightingale.

If it be difficult for a rich man to enter into the kingdom of heaven, he has an uncommon number of agreeable advantages on earth, and just now at the sea side, where only a heavy purse can command a bed and pay for the toilettes of madame and the girls, for during the most extravagant days of the empire, costumes if less loud, were never more expensive than now. Proof that human nature is superior to political fluctuations. There is quite a rage for every one with the means building a tabernacle on some point of the coast of Normandy, and pock-marking the façade, with Rouen plates. The plan looks odd, suggests an artistic householder, and keeps away swallows. The architecture is alone bad, being a combination of Swiss chalet, a Norman mansion, a Chinese pagoda, and a pigeon house. For general enjoyment, Trouville is the best of all the Normandy watering places; Dieppe has degenerated into a city, and Deauville is a kind of Escorial, in an arid waste, sacred to blue blood for one-twelfth of the year. The vicinity boasts of nine blades of grass, being one more than last year; the stunted trees have a tendency still to grow downwards rather than upwards. The mansions are in lath and plaster, the gingerbread being highly gilt. In addition to the salt of the earth that seek a few week loneliness, Deauville is patronised by numerous shoddy foreigners, and queer characters. The newest thing in the matter of bathing, is not so much harlequin colored dipping costumes, as tents—the latter are pitched along the beach where the owner pleases; later, struck, folded like the Arabs, and all as silently steal away.

The Exhibition in the Palais de l'Industrie continues to be very attractive: there is a scientific character about the show, that makes it not only pleasing but instructive. The "voltaic pencil" has ceased to be a toy; it makes several copies instantaneously of a sketch or a plan, and electricity seizes our attention, not only from its mysterious powers, but their singular application. There is one case devoted to sea-cables, where the whole science of laying a cable is brought home in a clinical to the meanest capacity in ten minutes. The cutting and setting of precious stones are processes that ever draw, and prove that nature unadorned is not always the best. There is a manufacturer who works up sharks' skins into all the elegant multines in parvis hitherto monopolised by tortoise shell and mother of pearl; he explains the stages through which the skin passes to become an article of industry. The cabinet noir is a novelty; this is not the infamous bureau, wherein, under the second Empire, letters for private individuals were scientifically opened—and then closed; it is a room where sunlight is excluded, but by means of luminous glass dials, the interior is as bright as day. Knobs of balustrades made in this material, would do good service to people getting up stairs at the small hours, and a plate of it round a lock, would enable the hole to be found for a latch key—often a trying task even for philosophers.

In the Communal schools of Paris, the pupils of both sexes, come at eight in the morning and leave at four; they bring their déjeuner with them, a piece of bread with butter or lard, or a morsel of meat or a little fruit, and a bottle of diluted wine. This is passable in summer, but in winter, trying. Now the Municipal Council intend founding "school canteens," by means of which any pupil of the primary school can obtain for two sous, a bowl of soup, a portion of meat, and vegetables. The bread they must bring themselves. The mayoralties will supply the tickets—30 per month, for fr. 3, and the indigent would receive them gratuitously—but no difference in color, to indicate distinction. There are many parents in the city who cannot send their children to school, from inability to provide the no-day meal, and in one arrondissement of Paris, there are 20,000 children, insufficiently fed. It is all very well to improve the heads of the rising generation—provided their stomachs have first nothing to complain of.

The late visit of leading French *littérateurs* to London has contributed much to dispel many erroneous ideas relative to England, and to suggest some matters for adoption in France. The Polytechnic Institution for example, where science is made easy, by interludes of songs and vaudevilles will be imitated in Paris; a company is in course of formation to carry out the idea. Mr. Edmond About is remarkable for his anglo-mania, in his mode of life he is not un-English; he has for instance a family of seven children and his hospitality is of the olden time; his lady is an Alsatian and since the war, he has nailed up his mansion in Alsace, vowing neither to let or sell it, till—date hoped for rather than fixed. He is now wholly occupied with politics rather than literature, and his journal the "Nineteenth Century" brings him in fr. 100,000 a year. His power as a writer lies in the clearness of his style, and the original and logical manner in which he presents a subject. He is classed as the dauphin of Voltaire; he believes in no programme of religion, and his end is independent morality.

Alphonse Daudet has just given the first chapter of his new novel in the *Temps*.—"Kings in Exile," a Parisian story; it is a sample of the author's charming style and blemishes—the latter too much pad, excess of word painting. He has two models—Dickens and Zola. But he lacks the warmth and imagination of the first, and the strength of the second. He writes French beautifully—faultlessly; he cannot invent a story; he depicts scenes and describes characters, but the thread, the plot is very slender—hence, this want of action has caused his failure as a dramatist. He entered life as a junior secretary to the Duc de Morny, his duty being, to relate to the duke all the light gossip of the papers and the clubs. He was a royalist, but is now republican, and his old friends detest him. He attacked Gambetta for years, estimated him as a nullity—they are now fast friends.

The actress Mlle. Agar illustrates, that a vigorous consumption of cod-liver oil, can make a withered, dried up, parchment old maid, blooming and fresh—equal to a Jouvence bath. In Russia, divorce can be obtained, but the delinquent party or even both, cannot re-marry.—At Amboise, an ancient officer of Charles X. aged 80, has just gone through a hard day's work: he abjured protestantism at nine o'clock, was baptised at ten, and married to a lady aged 24, at eleven.—M. de Girardin says, that the soldier who mounts guard before the door of a bishop's palace, has the order "never let the poor ring." The parliament house of the Faroe islands, consists of a shed coated with tar and painted white inside; before commencing the members partake of sandwiches of black bread and dried mutton; then sing and dance, and afterwards proceed to the exercise of legislative functions.

YOKOHAMA LOCAL BOARD OF HEALTH.

The eighteenth meeting was held on the 24th September, 1879, at the Machigashiro, at 10.30 a.m.

President, the Governor of Kanagawa *ken*.

The subjects to be discussed were:—

- 1.—Report by the President of a correspondence between the Chinese Consul at this port and the Keuroi.
- 2.—Report of the Cemetery Committee and proposal of a new site for another foreign cemetery.
- 3.—Proposal of the President to request the officials of the Naimusho Laboratory at this town to attend the meetings of the Board.
- 4.—Communication by Dr. Georts of a letter of Messrs. G. Galy and Larrion requesting the Board to examine the Wyckoff tubes of the American pipe company, for the purposes of aqueducts, etc.
- 5.—*Résumés* of the minutes of 15th and 16th meetings.

1. The President states that the Governor had received an answer from the Chinese Consul upon the matter of the proposed house to house visitation by members of the Board. The Chinese Consul informed the Governor "that he had addressed his countrymen at this place to have cleanliness observed, and that the proof of its efficiency was that there had been no cases of cholera amongst the Chinese. As there were Chinese sanitary laws, which the Chinese must obey, the consul could

"not agree with the proposal of having an inspection made in the Chinese premises by members of the Board."

The President informed the meeting further that the Governor had answered this letter, by "stating that as it regarded here a matter of public health, which was not provided for in the treaties with foreign countries, or in any other manner, the Board of Health had considered it of great importance to make a house to house visitation throughout the whole town; whilst the Kencho also expressed his regret and astonishment that the Chinese Consul made objections against the carrying out of sanitary measures in a part of the town."

II. The Cemetery Committee handed over the report about the present foreign cemetery at Yokohama.

The President suggested that the committee should inspect and also report upon some proposed spot for a new cemetery.

Dr. Geerts proposed to have the latter report upon the new ground added to the first report upon the old cemetery, and to publish them afterwards together as a single one.

Accordingly it was resolved to complete the present report by that on the proposed site for a new cemetery, situated at a distance of 7 *cho* from the village of Kitagata, on the left side of the end of the rifle-range.

III. The President proposed to request the officials of the Government Laboratory at this town to attend the meetings of the Board and to give them also the opportunity of stating their views in sanitary matters.

Mr. Kawano seconded this proposal and Dr. Geerts also approved the same as being useful both for the officers themselves and for the Board. In England the local sanitary inspectors for instance were obliged to attend the meetings of the District Board of Health, even though not being members of that body.

The proposal was carried unanimously.

IV. Dr. Geerts handed over to the Board a letter of Messrs. Galy and Larrien, requesting the Board to examine the wooden Wyckoff tubes of the American pipe company, which tubes were now largely made in America for aqueducts, irrigation, etc.

The letter was accompanied by a sample of the pipe, a catalogue and further explanation of the same.

Dr. Geerts stated that the Wyckoff pipe is a combination of wood, iron and asphaltum, and seemed to be much superior to the ordinary wooden pipe, as to durability and strength.

The President proposed that a committee of this Board, consisting of Mr. Tsunagi, Dr. Geerts and one officer of the Kencho should make a trial of the tubes at the Kosaku-bun-kiyoku in Tokio, where the necessary apparatus for such experiments would be found, and that the date of making the experiment should be fixed afterward.—Carried.

Dr. Geerts proposed then that the four following points ought to be investigated:—

1.—Are the pipes watertight when combined, so that they do not allow salt or brackish water from the outside to mix by diffusion with the water inside the pipe?

2.—What is the pressure the pipes can resist, without the water coming through the joints or covering?

3.—Can they be made from Japanese materials, provided the necessary circular saw-machinery should be bought?

4.—Comparison of the cost of making these pipes here in Japan, with the cost of cast-iron tubes of the same size and diameter.

Resolved that these points shall be investigated, and that a letter shall be sent to Messrs. Galy and Larrien to inform them of the same.

V. The *résumés* of the minutes of the 15th and 16th meetings, held on the 12th and 17th September were read and adopted.

REPORT UPON THE FOREIGN CEMETERY AT YOKOHAMA, BY THE CEMETERY COMMITTEE OF THE DISTRICT BOARD OF HEALTH.

1. *History*.—The foreign cemetery at Yokohama was commenced in the year 1858, when two foreigners were buried there. But at that time a regular cemetery did not exist. It was not until the year 1859, when three Russian officers were buried (26th August) and after the year 1860, when two Dutch captains found their graves there (26th February), that the place was considered as a regular burial place for foreigners. From this time up to the 10th July, 1870, the Kucho of Hommura was in charge of the cemetery, no foreign superintendent existed until the 11th July, 1870.

An inaccurate cemetery book, kept by the former Kucho of Hommura, is still at the Kencho, but its records were found to be incorrect, we abstain from quoting the numbers given in the same. The present cemetery register was commenced on the 11th July, 1870. Before that date no exact register was kept.

2. *Surface of the cemetery ground; number of persons buried in the cemetery from the beginning up to date (30th September, 1879).*—The quantity of ground in the cemetery is not known by the cemetery committee or the present superintendent, but the Kencho gives it as 3,271 *taubos*.

It is not possible to state the exact number of persons buried there since the commencement of the cemetery up to date, because many persons seem to have been buried without their names being registered, or without a stone or other mark being left at the grave. The present superintendent says that he—when digging a new

grave—sometimes finds old coffins at places where no mark or the slightest indication of a grave exists.

At present (30th Sept, 1879) there are in all 1,473 *visible* graves in the cemetery; out of the number there are 783 graves registered in the cemetery book. The remainder (690) of the graves must consequently date from before the 11th July, 1870, when no exact register was kept. Only about one third of the present visible graves have stone or iron monuments erected on the same. The other graves, without any stone or monument, cannot now be identified for the greater part. Dividing the total number of *taubos*, as stated by the Kencho, by the present number of visible graves, we find that the cemetery contains now *one* visible grave for every 3½ *taubos*.

Subtracting however the roads, gangways and other necessarily lost space, and estimating the surface of these altogether at about 1,535 *taubos*, we find that only 3,682 *taubos* are left, or about 2½ *taubos* for each grave.

3. *The median number of persons yearly buried in the foreign cemetery of Yokohama, during the last eight years (January 1871.—December 1878).*—We find that the average number of persons, buried during the last eight years (3rd Jan., 1871—24th Dec., 1878) in the foreign cemetery is 92 per year, or about 8 per month.

When we suppose that the same number will be buried in future years—which is probably an under estimation, as the foreign population and shipping in Yokohama augments—it follows that the number of persons buried will, after ten years, have been augmented by 920.

Although we do not wish to call the cemetery at the moment *overfilled*, still it is now already tolerably filled, and it will easily be seen that the cemetery must necessarily become over crowded after a very few years, for we observe that the cemetery does not only serve for the foreign residents at Yokohama and Tokio, but also for the large floating population on board ships, who arrive or are lying at this port.

4. *Situation of the foreign cemetery and distances from inhabited places.*—The situation of the present cemetery, near to the village of Hommura (Moto-machi) on the one side and near to the Bluff road on the other side, is such that an extension of the same after a few years will be impossible. As the ground cannot be extended, it follows that sooner or later another cemetery must be looked for.

The following are the distances between the surrounding dwellings and the nearest graves:

No. 99, Bluff, American naval hospital	57 mètres.
Accessory building of the American hospital	8 "
No. Bluff (house on the corner)	25 "
No. Bluff (newly built house)	28 "
No. 98, Bluff	30 "
No. 97, Bluff	45 "
No. 100, Bluff	30 "
The nearest house in Moto-machi (Hommura)	15 "
The nearest house on the road to Mr. Gérard's tile manu- factory	7 "
Mr. Gérard's tile manufactory	35 "
Middle Street in Hommura	10 "
Three wells of drinking water in Hommura are situated at a distance from the graves of	10-20 "

If we accept that the distance between a properly situated cemetery and inhabited places ought to be at least one kilometre, then we find that the present foreign cemetery does not only not fulfill this condition, but that it is as near as possible to densely populated parts of the town.

This immediate proximity of dwellings to the graves is the principal obstruction to the extension of the cemetery at a future date.

5. *Sanitary condition of the village of Hommura (Moto-machi).*—This is not satisfactory. Several causes co-operate to make this part of Yokohama an unhealthy place. During the present epidemic of cholera eight persons have been attacked by the disease in the immediate vicinity of the foreign cemetery, one person belonging to the cemetery itself. Although the crowding of the houses, the unclean habits of the people living there, the defective system of drainage, form causes of unhealthiness, still it is also probable that the proximity of the cemetery and the quality of the water of several wells in Moto-machi form other prominent causes. The graves being on the slope of the hill towards Moto-machi, it is clear that the water, by its underground passage, will infiltrate and run towards this place and mix with the original well water of Moto-machi.

From the wells in Moto-machi—have been found to contain water wholly unfit to drink and were not of very good quality. The danger of water-pollution becomes indeed a very great one, if the bodies of persons who die of *infectious diseases*, like cholera, typhus etc. The common people, being ignorant of the danger, use the water of the wells for drinking purposes, but we deem it our duty to object strongly on sanitary grounds against the burial of persons who have died from infectious diseases, in such a close neighbourhood of densely inhabited places.

6. *Choice of another ground for a new cemetery.*—The cemetery committee of the Board has inspected another site, at the request of the President. This new site is situated at a distance of 7 *cho* from the village of Kitagata, on the left side of the end of the rifle-range.

We found this place to consist of a hill with fine trees and a picturesque view towards the east and south-east.

The soil is dry and suitable for the purpose.

The distance from the settlement is just far enough as not to cause the cemetery to become a danger for the living and on the other side it is not too far away from the settlement to cause inconvenience in transport. If it should in after years become necessary to enlarge the new cemetery, there will be no difficulty whatever to extend the ground at this place in any direction.

A road for carriages can easily, and without great cost be made

along the left side of the rifle range, where at present merely a path exists.

It will be difficult to find another more suitable and picturesque spot for the cemetery; the only objection which perhaps could be made by some persons is that part of the road towards the new site runs parallel with the rifle range, and that it is objectionable to have shooting going on during a funeral procession. But in answer therefore to we state that shooting at the rifle range is generally done early in the morning and that burials in Yokohama usually take place in the afternoon. Besides, arrangements can easily be made so as to prevent shooting going on during a funeral procession.

7. *Proposed arrangement for a new cemetery.*—In advising the necessity of another more distant and less dangerous foreign cemetery in Yokohama, we beg to state also our views about an arrangement of the matter, although this subject is not a strictly sanitary, but merely an administrative one.

When it is decided to choose the above spot or another one for a second cemetery, then we propose that arrangements be made upon the following principles:

1.—It shall be forbidden to buy new graves at the old cemetery. Everyone not possessing already a grave at the old cemetery at the moment that the new cemetery comes into use shall be obliged to purchase a grave at the new cemetery.

2.—Members of the same family possessing, at the moment that the new cemetery shall come into use, graves at the old cemetery, shall be permitted to use henceforth their graves at the old cemetery and shall not be obliged to provide for another grave at the new cemetery, except in cases of persons dying of infectious diseases.

3.—All persons, who die from infectious diseases must be buried in the new cemetery.

CONCLUSIONS.

From the observations we beg to conclude:

1.—That the present foreign cemetery at Yokohama is situated far too near to inhabited places.

2.—That it is by this reason a constant danger to the health of the people living in its neighbourhood, which danger becomes as very serious one if persons who have died from infectious diseases are allowed to be buried there.

3.—That the present cemetery will, after a few years, become overfilled with graves, that extension of the ground will be found absolutely necessary.

4.—That a future extension of the present ground cannot take place, as it is on all sides surrounded by houses.

5.—That it is consequently desirable to provide for a second more distant and less dangerous burial place for foreigners.

6.—That the new site, on the hill at the left of the end of the rifle range, is in every way a very suitable and picturesque spot for a cemetery.

7.—That it seems unnecessary at present to compel those who are now in possession of a grave at the old cemetery, to use the new cemetery, unless in cases of infectious diseases.

8.—That henceforth no new graves shall be permitted at the old cemetery.

9.—That future details of arrangement and administration might be worked out and fixed upon in co-operation with the Board of Consuls.

Cemetery Committee of the District Board of Health at Yokohama.

(Signed)

A. J. C. GEERTS,
E. WHEELER,
T. T. NISOMIYA,

Yokohama, October 3rd, 1879,

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

NOTIFICATION No. 42.

It is hereby notified that as, ever since the revision of article 318 of the *Kaitai Ritsurui* (Amended Code), notified by Notification No. 86, in June 1876, torture to extract confession is not to be used, all laws and regulations relating thereto (torture) have been abrogated.

(Signed)

Sanjō Saueyoshi,
Prime Minister.

October 8th, 1879.

COURT, POLITICAL AND OFFICIAL.

His Majesty the Emperor, was present in the Senate on the 8th instant, while the debate was proceeding on the proposed new law regulating enlistment for the army. The general public was excluded from the Chamber during the debate.

Private meetings of the Ministers and Councillors of State will, according to the *Choya Shinbun*, be held in future three times a month.

Mr. Shotai, the ex-King of Looschoo, having been made a *kizakoku* (noble), became entitled to a pension from the Government, but as a law is in force making the commutation of pensions compulsory, the Council of State informed him on the 6th instant, that he will be allowed 200,000 yen in Government loan bonds, in lieu of an annual pension.

Mr. Kinashi, the 3rd Secretary of the Home Department, has received instructions to proceed to Looschoo by the steamer which leaves for Nafa shortly. He will be accompanied by three of the Looschooan officers of the former Han, who have lately been staying in Tokio. Mr. Kinashi's duty is to assist the Governor of the Ken, in endeavouring to conciliate the Looschooans and get them to conform to the rules and regulations issued by the Japanese Government, which they have hitherto generally neglected to do. Mr. Kinashi is well acquainted with the peculiarities of the islanders as he resided amongst them for a long time.

We have been informed that Mr. Yoshi, the Junior Vice-Minister for Public Works, will shortly make a tour of inspection and visit the mines in the districts of Kiyoto, Tsuruga, &c.

Decorations have hitherto only been awarded to such of the Government officials who belong to the *chokunin* and *sōnin*, but it is rumoured, that all the officers of lower grades who have served the Government ever since the Restoration will receive suitable rewards for their long service in the month of December next.

Mr. Chida, the Chief Secretary of the Tokio *Fu*, was presented on the 3rd instant, with one hundred *yen* by the Council of State, as a slight recognition of his many years faithful and diligent discharge of his duties.

The Chief Superintendent of Police, General Kawaji, was in such bad health when he landed from the French Mail steamer, that he had to be carried to the Railway Station in a litter.

Mr. Matsudaira Tarō, the Japanese Consul at Vladivostock, left for his post in the *Nagaya Maru* on the 8th instant.

A number of officers of the General Post Office in Tokio have been ordered to inspect the Branch Offices in the provinces.

Mr. Ikeda, the Japanese Consul at Tientsin, returned to Japan in the *Genkai Maru*, on the 9th instant.

Kiyoto has been considered an imperial city even since the permanent removal of the Mikado's residence to Tokio. As it has now been decided to proceed with the erection of the Palace in Tokio, it is thought that the removal of such portions of the old Palace at Kiyoto to Tokio, for use in the new building, would dispose of the claims of Kiyoto to be considered on a par with the present capital, and Messrs. Iwakura, Ito and Sugi are about to visit the old Palace to see what parts of it can most advantageously be brought to Tokio. At the same time they will visit Nara, and inspect whatever documents there are there, having reference to the removal of the capital in the reign of Kammu, about 1,100 years ago.

It has been decided that all the ancient shrines and temples whose owners cannot afford to keep them in repair, will be maintained at the expense of the Government, and that the shrines of the Tokugawa *Shōguns* in Nikko, and at Shiba and Ueno in Tokio, will also be maintained although they are comparatively modern structures. We think the authorities have acted very judiciously in ensuring the preservation of objects of such great interest not alone to the people of Japan, but to all residents and visitors.

According to a return published by the Home Department, the total number of shooting licenses issued in Japan, during the year ending 30th June 1878, was 35,885. The fees on these licenses came to 35,080 yen, paid by 34,880 people. For the same year, 251 licenses were issued to foreigners, who paid in license fees 2,510 yen.

Nichi Nichi Shinbun stated the other day that the services of all the foreign engine drivers on the Tokio-Yokohama railway were dispensed with at the end of last month, and that the railway engineers' agreements which will terminate next December would not be renewed. We are authorised to say that the statement is entirely without foundation, and may be added to the already extensive list of inaccuracies which have lately appeared in the native papers.

The *Mainichi Shinbun* contains a rumour respecting the *employés* in the Imperial Japanese Post Office which is, in all probability, as untrue as the *Nichi Nichi Shinbun's* story about the engine drivers.

The *Hochi Shinbun* says that, "the Russian Minister, the Russian Admiral, and several other officers visited the Printing Bureau on the 6th instant. After being conducted over the various branches of the establishment by Mr. Tokuno, the

Director, the visitors were entertained at tiffin. Afterwards, the paper factory at Oji was inspected."

When in Nagasaki, General and Mrs. Grant each planted a tree of the species called *Hierugi* (*olea aquifolium*), in the public garden there. They did so at the request of Mr. Uchimi, the Governor, who wished some memento of their visit.

H.I.H. Prince Henry safely returned to Tokio, on the 5th instant, in a steam launch sent by the Naval Department, and was received at the Imperial Branch Palace at Shiba.

In accordance with the decision recently arrived at by the District Board of Health, the Governor of Kanagawa ken summoned all the members of the District Assemblies to Yokohama and pointed out to them the necessity of rebuilding all the latrines, etc. in their Districts.

His Excellency the Senior Vice-Minister for Foreign Affairs, who is also President of the Central Board of Health, resigned the latter office on the 3rd instant, and His Excellency Sano, a member of the Senate, has been appointed in his stead.

A notification has been issued by the authorities, that in consequence of the steady decrease of cholera in Tokio, the local District Board of Health will be closed.

The Finance Department recently forwarded to Governor Hennessy various articles purchased by him during his visit to Japan and valued altogether at 6,000 *yen*.

NAVAL AND MILITARY.

When the Japanese man-of-war *Hoshu Kan* was lying off Fusan, the Korean Government requested permission for a number of their officers to be allowed to inspect the vessel. The Japanese Envoy at once granted the desired permission and a large party of officers belonging to the Korean army visited the vessel. The Koreans were entertained on board at dinner served in European style and, after ample justice was done to the repast, the visitors inspected the vessel thoroughly, being particularly interested in the engines and equipment. The Korean officers seemed quite alive to the necessity of having men-of-war and made many enquiries as to the cost of such ships and the expense of maintaining them.

The Hydrographical Bureau of the Naval Department, intend in future to issue a pamphlet occasionally containing all recent information interesting to navigators, which may be furnished to the Department by Japanese or Foreign men-of-war.

His Excellency Kuwamura, the Minister of the Navy visited the Russian man-of-war *Crayser*, on the 4th instant, and was received with a salute of seventeen guns.

The Japanese man-of-war *Hoshu Kan*, returned to Kobe from Korea, on the 3rd instant. She will come up to Yokohama in a few days.

Native papers state, that the steamer *Takau Maru*, which left Nagasaki on the 27th ultimo, for Gensan, the newly opened port in Korea, will return to Nagasaki after a stay in Gensan of about a week.

The Japanese man-of-war *Tsukuba Kan*, which left Shinagawa a few days since, arrived at Mororan in Yezo, on the 3rd instant. The trip was made entirely under sail.

At the Autumn Regatta on the 16th instant, matches will take place between boats from the different men-of-war in harbour. We understand that boats from the Japanese men-of-war *Kongu* and *Nishin* will also compete.

The General-officers appointed to inspect the army will leave Tokio about the 15th instant and proceed to the several districts allotted to them.

The military college at Toyama, was inspected by the General appointed for the purpose, on the 7th and 8th instant.

The cadets of the Military College proceeded to the Narashino Plains on the 5th instant, and will remain there about six weeks for target practice and field exercise.

Two sample rifles have recently been made at the Government Arsenal in Koishikawa, after the pattern designed by Major Murata. These rifles proved so satisfactory, and such an improvement upon the weapon with which the Japanese army is at present armed, that a large number of them are to be manufactured without delay.

Lieut-General Toriwo, an attaché of the Military Staff Bureau, who has been absent from the office through indisposition since the month of January last, recently sent in his resignation,

but the Government notified to him two or three days ago that the resignation will not be accepted.

INDUSTRIES, TRADE AND FINANCE.

The ceremony of distributing the prizes to the successful exhibitors at the Competitive Exhibition of Tea, has been postponed to the 12th instant, on which day the general public will not be admitted to the exhibition. In the evening after the distribution of the prizes a dinner will be given to about 300 guests, native and foreign, and there will be a display of fire-works. On and after the 13th instant, the exhibition will be again opened daily from 9 a.m. to 430 p.m. The Tea Exhibition will close, on the 16th instant, and that for Silk and Cocoons will be opened subsequently.

The authorities of Iwate ken, intend to hold an exhibition of rice from all parts of Japan, in the month of November next. The object of the exhibition is to improve the culture of rice by exciting a spirit of emulation amongst the farmers.

It appears that there are only some 7,000 sheep at the farm at Shimosa, and very many less at the farms in Kanagawa and Kiyoto, and it has therefore been absolutely necessary to import the wool required for the factory in Tokio, from Australia. The authorities are anxious to prevent this as much as possible and have been endeavoring to find a locality suitable for sheep, so as to establish more farms. The island of Hachijō is said to be well adapted for the purpose, and a number of sheep are to be imported from Australia and placed on the island in charge of some of the students who have completed their studies at Shimosa.

Mr. Mayeda, who recently returned from Paris, brought with him thirty silver medals and forty-six certificates of merit which had been awarded to Japanese Exhibitors at the French Exhibition. These medals and certificates will be forwarded to the cities or prefectures in which the successful competitors reside, for public presentation to them. The gold medals arrived some time ago and have already been placed in the possession of the recipients.

The Colonization Commission have decided to send a large number of exhibits of fish, seaweed, etc., from Yezo to the exhibition of fish and fishing apparatus to be held in Berlin, next year.

A native Chamber of Commerce has, at last, been established in Nagasaki. The first meeting was held on the 1st instant.

Ishie Naaji, of Kojimacho, Tokio, lately invented (?) a method of writing letters or drawing pictures on five sheets of paper at once, and applied to the authorities on the 6th instant for a patent.

The Japanese have already established a marine insurance company and we now learn from the *Chiugai Bukka Shimbu*, that a number of the leading merchants in the capital have applied to the authorities for the permission necessary to enable them to form a life assurance society. The same paper expresses great satisfaction at so useful an institution being established by natives, and prophecies for it a most successful career.

The *Nichi Nichi Shimbu*, says that the freight paid on goods shipped from Yokohama to other ports in the country amounts annually to about 10,000,000 *yen*, yet no insurance has ever been effected on these goods. The Yokohama native import merchants, with a view of protecting themselves, have now made arrangements with the Tokio Marine Insurance Company, to have their goods insured by that company at the following reduced rates:—

To	Ordinary Rates. Reduced Rates.	
	Yen.	Yen.
Niigata.....	9.10	6.00
Hakodate	5.80	4.30
Ishinomaki	4.70	3.20
Yokkaichi ..	3.00	1.40
Kobe	3.13	1.80

The Treasury sent a telegram to the branch office at Osaka on the 3rd instant, asking if many applications were made to exchange two yen kinsatsu, the reply received stated, that no applications had been made and that no counterfeit notes of any denomination had lately been paid in for taxes.

The following is the official return of Imports and Exports in all the open ports in Japan, during the month of August last, as prepared by the Customs Bureau of the Finance Department:—

Total Value of Imports,	Yen 2,606,181.027
" " " Exports,	2,482,483.159
Excess of Imports over Exports,	123,697.868
Total Custom's Revenue,	214,884.42
Exports of gold and silver coin and bullion,	970,104.832
Imports do. do.	320,760.32

Excess of Exports over Imports, 649,344.512
 The following is the shipping return for this port during the month of September last:—

MISCELLANEOUS.

The fire which destroyed the prison at Yamagata on the 25th ultimo, was attended with a sad loss of life, and is said to have been the most fatal in its effects which ever occurred in that town. The conflagration was first discovered about 5 o'clock in the morning and the officers at once commenced releasing the prisoners, but the fire spread so rapidly that they were unable to liberate the whole of them and when the flames were finally extinguished, it was found that about thirty of the unfortunate prisoners had perished miserably in their cells. As the prison was surrounded by a high wall, the firemen could not succeed in getting into the burning place in time to avert so serious a disaster, which it is said they could easily have done if there had been free access to the prison. There were about eighty prisoners in the gaol when the fire broke out, twenty are still in custody, thirty bodies have been recovered and the remainder are supposed to have escaped in the confusion. A strong and apparently well founded suspicion exists, that the destruction of the prison was the act of an incendiary, as it broke out in the rear of the prison where no fire was allowed.

The Acting Editor of the *Hochi Shimbun* was, on the 6th instant, fined ten yen at the Tokio *Saibansho*, for publishing a libel on Mr. Nishima, the Governor of Yamagata ken, respecting the manner in which he carried out his official duties.

The fifth anniversary of the establishment of the Nobles' Club in Tokio, was celebrated by the members in the Club house, on the 7th instant. All the *Kiwazoku* in the capital and the two Prime Ministers, were invited to attend the banquet given in honour of the occasion. As the 17th instant will be the third anniversary of the opening of the Nobles' School, (*Gaku-shin-in*), a banquet will be given to celebrate the event.

A severe storm passed over Hakodate on the 30th ultimo. It was thought at one time that the shipping in harbour would sustain much damage, but they escaped uninjured, while the mischief done to houses, fences, &c. was comparatively trivial.

The *Akebono Shimbun* says that, the time of the departure and arrival of the trains in Yokohama and Shimbashi, will be altered on the 1st November. After that date, the first train in the morning will leave at 8 o'clock instead of 7.15 as at present.

The number of new cases of cholera and deaths in Tokio, reported during the week, is as follows:—

Date.	New Patients.	Deaths.
October 3rd	9	4
" 4th	7	3
" 5th	11	1
" 6th	6	3
" 7th	9	3
" 8th	5	3
" 9th	6	1
Total	53	18

Return of cholera cases in Kanagawa Ken, from the commencement of the epidemic up to the 10 October, 1879:—

Date.	New Patients.	Died.	Recovered.	Under Treatment.
June 18th to }	2046	1428	482	156
Oct. 3rd	13	9	19	141
" 4th	10	6	—	145
" 5th	15	8	28	124
" 6th	10	16	18	100
" 7th	5	3	2	100
" 8th	—	3	2	95
" 9th	10	9	16	80
Total	2109	1482	567	

On the 9th instant, for the first time since the appearance of cholera in Kanagawa Ken, there were no new cases of the disease throughout the ken. The Statistics of the Sanitary Bureau of the Home Department, give the following returns for the whole country, up to the 6th instant:—patients, 151,206; deaths, 84,855; cured, 31,817; under treatment, 34,534; percentage of mortality 56.12.

A SENTIMENTAL JOURNEY ON THE RIVER JORDAN.

(From a French Sketch.)

If a person wants to go from Jerusalem to the borders of Jordan, it is necessary for him to procure an escort of Arabs, whose chieftain receives a certain amount of money in return for his protection. Tourists often join together in a caravan and share the expense, and under these circumstances you may by accident meet with pleasant travelling companions. Thus it happened that, while I was exploring the hills of Judea, I met with an American family, who made me a proposal to join them on the above mentioned conditions. We had already for some days been examining the Holy City together. I accepted with pleasure.

Not to trespass upon privacy, I shall call this family by the name of Bromly which is not its right name. Mr. Bromly, his wife and his daughter Helena had in their suite an Egyptian dragoman and a courier, whom they had engaged at Malta. Mr. Bromly was one of those men, whom it is the fashion nowadays to hold up as a model for the American youth. He had made plenty of money, and considered everything in life from what it is conventional to call "the practical point of view." Twenty years' intimate association with her partner in this chase after dollars had made his wife a softened reflex of the husband. By one of those compensations, for which we are sometimes indebted to a bountiful nature, the daughter differed in every respect from her father and mother. She was gifted with a beauty, that appears to belong by right to all American ladies in the spring of life, and who had had the benefit of certain privileges of education and certain social advantages, which were unknown to her parents; this is the case in all young countries that have recently entered the path of progress. It is unnecessary to tell, that this young person's grace and varied accomplishments were the subject of a perpetual admiration on the part of Mr. and Mrs. Bromly; they worshipped her as the realisation of their most beautiful dream: to become rich had been the object of this double existence; Miss Helena was its delight. No wonder then, that she was somewhat spoiled; how could it in fact have been otherwise?

Early in the morning, at the hour when the first rays of Syria's sun gild the dome of Omar's mosque, we sallied forth from Saint Stephen's gate on the eastern side of Jerusalem, mounted on horseback, and followed by mules that carried the tents and baggage, under the escort of six Arabs. As we left the town and turned the Mount of Olives, Clarkson the courier, approached and put certain questions to me with regard to the safety of the roads and the journey generally, because he knew, that I had some experience in these matters. As long as our conversation lasted, his eyes turned toward Miss Bromly with an expression of solicitude, that struck me. I rode at the head of the caravan, by the side of this young lady. The ice had been quickly broken between us. Miss Helena had the freedom of manner and language, which are characteristic of the young ladies in her country; besides, I was her countryman, and the scenery, through which we passed, furnished abundant material for conversation. After luncheon, when reclining in the shade of the limestone blocks, that strew the steep slope of the mountain, we all looked on each other as old friends; three hours passed together under tent are at least equal to three weeks of ordinary intimacy. As we descended the natural staircase formed in the rock, Clarkson was despatched in advance to secure us a good camping ground, in the vicinity of Jordan. He seemed reluctant to leave us.

On our arrival at the river, Miss Bromly, who had brought a bathing dress with her, appeared before us dressed as if she had been at a fashionable watering place, and with the most natural air jumped into the water on the spot where John the Baptist is reported to have baptized the crowds that flocked to him from Jerusalem and Galilee. There was a strong current, and Mrs. Bromly showed some uneasiness when her daughter entered it. In the meantime, the courier remained on the bank in the attitude of an indifferent idler, but his eyes expressed something more than indifference, and I thought that I could read in them a resolve to jump in in case of danger. He strove to hide his too visible interest, when I came up to him. All this was suspicious. I continued to observe him. Why should a man in his rank of life feel such a particular interest for one of his travellers? I had a foreboding of an adventure, which excited my curiosity.

While we were thus standing, looking at the fair swimmer, who was playing in the water, I happened to remark to Mrs. Bromly that her daughter seemed to be happy and in good spirits. The maternal enthusiasm immediately burst forth. In ten minutes I knew the whole history of the young lady, many things even which I should never have dared to ask about. Helena was an angel; nevertheless she had, so it would appear, one day given way to that impulse, which alas! is the common lot of people of every age and in every clime, whether they be angels or devils. She had fallen in love—a mere child's fancy, the mother hastened to add—with a little penniless artist, whom the Bromlys had met at Paris. They had had some trouble to get that fancy out of her head, but at last they had succeeded, and now she even seemed to have forgotten it altogether.

"And what was the name of that audacious painter?"

"Bromly, Charles Bromly."

"A relation of yours?"

"Not at all—a mere similarity of name—a pure coincidence."

"Well, madame, I have a theory."

"And that is?"

"That there is a sort of predestination in these coincidences. We cannot help feeling a certain interest in people who bear the same name as ourselves.—And the painter? Did he take things as easy as your daughter?"

"No, he persisted for some time in his courtship, but by travelling, we got rid of him. Travel is a great resource, a great remedy."

Mrs. Bromly told me all this in not very refined language; she had never wasted her time on studying the niceties of her native tongue. While I was listening to her, the courier's eyes were with avidity fixed on the fair swimmer's radiant features; and I must not omit to state that the mere pleasure of exercising her strength and agility made Miss Helena look glorious; she did not even appear to be aware of that modest admirer's presence. But he!—Once more I was obliged to remark, that this fellow was strangely absorbed, that his physiognomy expressed I don't know what, but something that a courier is not allowed to feel for the lady who employs him, not even in our democratic country. The blood rushed violently to his swarthy cheeks and his eyes positively caressed the handsome face that showed itself above the water. I said to myself: "It is clear as daylight that the unhappy man has gone mad—that is evident—but the object of his madness suspects nothing—of course not!" Miss Helena's parents seemed to me to be as blind as she. I considered, whether I ought not to put them on their guard; but then I thought, that after all it was no business of mine. To meddle in other people's affairs is to get into trouble.—This consideration settled the matter, and I pointed out to Mr. Bromly a wren, that sat on a thorn-bush: "See there," I said, "the nightingale of the desert, singing in the branches of a tamarind tree on the river. I should like to know, whether it was warbling that same melody, when John the Baptist was standing in the water?"

"I don't care about those melodies," replied Mr. Bromly, "but I would like to know how much Herod the Great paid Cleopatra for an acre of ground in this country. I bet, it was not much."

"Why not? this soil was once fertile. The Knights of the Sepulchre, who were its proprietors, at one time, derived princely revenues from it."

"It does not look so," said Mr. Bromly; "nevertheless, with the aid of irrigation one might do something with it."

Our conversation was interrupted by a piercing cry from Mrs. Bromly. We turned quickly round, and we saw Miss Helena being carried away by the current. Already the courier was swimming with all his might to the rescue, which did not prevent me from throwing off my coat and jumping in in my turn; but before I could reach her, he had grasped her, and brought her back to the bank. I joined them while they were still in deep water, and assisted Clarkson in placing his precious burden in safety.

Miss Bromly had neither fainted, nor did she show any sign of weakness. Most likely she would have got through without any assistance, if she had had a little more time. "It was not worth your while to get wet," she said shaking herself like a

Newfoundlander, certainly the handsomest Newfoundlander I ever saw.

Clarkson had been much more frightened than she, but he soon recovered his self possession and an attitude that was becoming his position.

"This is a first rate courier," said papa Bromly. "I am going to give him a large *baksheesh*."

"Yes," said Miss Helena; "he is a brave fellow, and we must reward him."

I looked straight into her clear eyes, while she spoke, and I could discover nothing that her parents could not have seen themselves: simply a feeling of gratitude such as is felt towards a subordinate, who has rendered us a personal service.

In the meantime the courier had gone to change his clothes. When I shortly afterwards passed before his tent, I remembered a rather important order I had to give him, and I entered his tent suddenly. A surprising revelation was in store for me.

He was at that moment putting on a dry article of clothing, and although he made haste to arrange it on his body I had sufficient leisure to observe the difference between the color of his body and that of his face; to be brief, I saw a fair man's body attached to the head and hands of an Arab.

"It is useless to disguise yourself any longer," I boldly told him, "I know all."

"What?—What do you know?" He avoided looking me in the face.

"That you are not the same color from head to foot."

"Well, that is the effect of the sun, which you know in Egypt—"

I interrupted this poor falsehood: "You calumniate the sun; it has nothing to do with this phenomenon."

The impostor became confused; he did not insist, and when I said to him in a tone, that forbade an evasive answer:

"Speak, what does this masquerade mean?" he made a full and complete confession.

I had before me—the reader has already guessed it—that young Bohemian, of whom Mrs. Bromly had given me a far from flattering portrait. After his rejection, to which he could not resign himself, he had followed the family of Helena to Malta, where he, cleverly disguised, had introduced himself as a courier, in the manner, which we read of in novels, or see in comic operas. Mr. Bromly had given him the preference before others, "because he spoke English so well." Under his black curls he hid a blonde, closely-shorn head. Nobody had suspected him, not one, not even Miss Helena.

Thereupon I told him, that she apparently did not love him, because love was said to penetrate every disguise, to unmask every trick.

"Alas!" he replied; "I fear that you are right, and that the love is all on one side."

"Nevertheless,—at Paris she received me kindly, but that was all. She never told me that she loved me."

I felt pity for the poor lad in his grief.

"Look here," I said to him; "be reasonable. What is the use of all this?"

"All that I ask for is to live near her as long as possible."

He implored me not to betray him, and at last I promised him to keep silence at present, but I let him know that I reserved to myself the right to speak, whenever I thought that duty demanded it from me.

On the following day, we made an excursion for about an hour over the burning hot plain until we reached the Arab village El-Riha, built on the site of ancient Jericho. During the promenade, the courier repeatedly approached us to point out the road. We soon reached our goal, twenty or thirty mud-huts, thatched with straw, the whole enclosed within a fence of bush and stone. Of the famous "City of Palms" only a single tree remains, like the last rose of summer. It is in fact the only palm tree to be seen in this district.

"On the spot, where we stand, there were formerly splendid avenues, bordered with palaces, sycamores, palms," explained the courier. "There was likewise a large circus for gladiatorial combats. Herod lived at Jericho, after he had been compelled to leave Jerusalem. The theologians have discovered, that the last period of his life was poisoned by remorse; but most likely it was in reality a very pleasant life, according to Greek and Roman fashion."

"What a first-rate courier ours is!" Mr. Bromly repeated. "Those sterile plains, which now surround us," continued the courier, "were formerly rich gardens belonging to a woman, who was much beloved."

"Who was that?" interrupted Helena.

"Cleopatra, Miss! Mark Anthony made her a present of those gardens. He was also one of those, whose love was never sincerely returned! She did not love him, I am sure, as he loved her."

"Clarkson, you speak on that subject with a great deal of sensibility," Helena remarked in an ironical tone.

"How the deuce do you know all these things, Clarkson?" Mr. Bromly asked.

"Oh, Sir! one picks up here and there bits from the conversation of the tourists. In my profession I have plenty of op-

portunity to hear the talk of well-informed people and to learn from them."

"What is your opinion, Clarkson, of that trumpet, which made the walls of Jericho tumble down?" asked Mr. Bromly.

"It must have been a large trumpet, and it must have required a great deal of wind to blow it with effect," ingeniously answered the pseudo-courier.

"I have an idea that Clarkson is not quite orthodox," Helena observed.

"I beg your pardon, Miss, I am orthodox on one point."

"And that is, if you please?"

"With your permission, I shall tell it at another time."

"Oh! if it is a secret, we don't ask for your confidential communications."

"It is also my intention to make them to you alone Miss!"

"Clarkson, you are taking advantage of my kindness, allow me to tell you, as you seem to ignore it, that a lady cannot feel any interest in the secrets of a——— in short, know once for all, Clarkson, that a courier is nothing but a courier, nothing else."

The poor devil, thus put in his proper place, kept humbly silent, at the same moment a crowd of men, women and children issued from among the stones and the bush, and held out their hands begging for *baksheesh*. We threw them some small Turkish coins before we rode off. Miss Bromly doubtless regretted her harshness, for when we returned, she asked the courier to ride by her side and keep an open parasol over her head. He obeyed without being asked twice, and during our return journey he was so proud and happy, that I could not forbear laughing at him.

When we had returned from El-Riha, I was walking along the river Jordan with Miss Bromly, while dinner was making ready. She amused herself with breaking off small twigs, which she threw into the current, and our conversation turned on Paris. At last I asked her if she had ever known a young painter, who by a curious coincidence bore her name, Bromly.

"Which Bromly?" she said, without moving a feature.

"Charles Bromly, an American."

"Charles Bromly?" as if she were trying to remember, "oh! yes, I know, he lived in the *Quartier Latin*, did he not?"

"I believe, yes."

"Certainly, I did know him."

"And what was your opinion of him?"

"He was amiable—and a nice young man. How dirty that water is! I wonder if it is never more limpid."

Her physiognomy wore the calm of innocence. I could not forbear from thinking, that the loving courier must have been under a strange illusion.

"No," I replied, "it is always more or less dirty! Tell me, don't you regret something you left behind in Paris?"

"Regret! I believe you! Not one thing, but half-a-dozen things at least," she replied with animation. "First, there was my tailor. It was with anguish that I parted from him. And then my milliner, another sorrow; the Opera, that makes three, I so loved the *Théâtre Français*, four, and the *Bois de Boulogne*, now! five. Let me see what was my sixth grief. I have it. Those delicious little dinners at the time when we lived at the *Champs Elysées*."

As we returned to the tent, I risked a still more indiscreet question.

"Then your heart does not call you back to Paris?"

"Why not? Did you not hear what I said? I just told you, since you appeared so desirous to know, that my heart calls me back to half-a-dozen different places. Do you smell that pillow? Doesn't it smell good?"

The dragoman came to tell us that dinner was waiting for us, and we went to sit down at table. The dragoman and the cook were waiting upon us; the courier came in under pretext of lending them a hand. He occupied himself especially with Miss Helena, changing her plate and offering her very dish with a zeal, that seemed to annoy her: "Too much zeal," she suddenly said to him.

He took no notice of the rebuff, but continued to offer her this and that, until she again sharply addressed him: "Clarkson," she said, "you are a good courier, but you are too officious. Moderate your zeal. I believe, that you are under the impression, that you yesterday saved my life in the Jordan, and it appears that I, in consequence, am to pass the rest of my days under your special protection! If you have got such an idea into your head, you had better give it up at once. You did no save me at all, because I am a good swimmer and could easily have gained the bank. And now, we have no further need of your services to-night."

Poor Clarkson bit his lips, bowed and left the tent. As soon as he had gone, Mr. and Mrs. Bromly reproached their daughter for having taken a dislike to the courier, and treating him too severely. These remarks were not wasted, for half an hour afterwards when the ladies were resting and the men were smoking before the tent, Miss Helena, seeing the courier in the distance, called him and offered him a cigar from her father's cigar case. He received it hesitatingly, still smarting under the humiliation she had inflicted upon him, but at the same time happy at this unforeseen turn. The cigar was a peace-

offering after the hostilities at the dinner. Fearing probably a new fit of ill-humor, he almost immediately went away, and his apprehension was not ill-founded, for in the course of the evening, she asked him, for I don't remember now, what service it was which again put him back in the rank of a domestic servant: this was enough to destroy the good effect of the *calumet*. When I entered my tent, I found there the unfortunate Clarkson, who was beside himself with chagrin and was waiting for me.

"It is the life of a dog, that I am leading," he said in anger

"No. ——— not even a dog is so ill-used."

"You have yourself chosen that destiny," I told him, "and whenever it pleases you to do so, you can give it up."

"At Paris, she was not so: did not ten times a day blow hot and cold without reason"

"As you are mentioning Paris," I said, "let me ask you seriously whether you are sure not to have been deceived by your own imagination, which perhaps gave to relations where love had nothing to do, a color."

He interrupted me: "Our intimacy was real I seemed not to displease her. All the appearances were such as to encourage me. I can say nothing further, but you understand, sir, that a man of honor does not exaggerate in a matter so delicate."

"Nevertheless, when I spoke of you this very day, she showed a strange indifference. At first she scarcely remembered your name."

"Oh! she is very deep! you don't know her. She must have wanted to put you off the scent."

"But you don't go so far as to believe that she suspects your disguise?"

"As for that, no!"

The same evening, the Arabs came from El-Riha to offer us a *fantasia*. The nasal voices of these swarthy people, mixed with the tones of a string-instrument of the most primitive construction, accompanied dances in a rhythm that is familiar to the ears of all travellers in the East. There was the *almeh* dance, which the majority of our readers know at least from description: undulations of the body, which remains almost on the same spot, graceful movements with the arms and with a waving scarf. The Syrian moon flooded the camp with a light that is unknown to the western world, and we were talking together with more than usual familiarity and animation. The subject of the conversation was the variety of types in the different people, and the ideas, which each of them forms of beauty.

"I think," said I to Miss Bromly, "that you have your own opinion of what constitutes male beauty? What kind of a man pleases you best?"

"I have no objection to tell you. A dark-haired man, thin and of a little more than middle height."

Now, Charles Bromly *alias* Clarkson was, as I believe I have told you already, fair, strongly built and tall.

"I should like," she added, "that he had a positive turn of mind, capable of comprehending the practical side of things. Heaven save me from those impassioned people, who devote themselves to an art, an airy idea, and afterwards speak of nothing else! Oh! my type has nothing in common with a poet, a musician or a painter, least of all with a painter. A painter's uncertain character is decidedly one of those most repugnant to my taste."

A shadow of pain passed over the features of the courier, who was listening. Mr. Bromly congratulated his daughter: she was capable of appreciating what he called "a square man." According to Mr. Bromly, a square man was an epitome of all the qualities that make a good husband. As for Mrs. Bromly, if she had presumed to express an opinion, she would probably have pointed to her husband as the square man, the model husband.

The following days, Helena was continuously scolding, humiliating and snubbing the courier, so much so that her parents at last told her, that they would no longer stand to be witnesses of such conduct, and ordered her to treat that excellent servant in a manner more worthy of him and of herself.

"But what do you want me to do?" asked the wilful child.

"Be kind to him, that is what we want."

"If that be the case, I shall obey," she said.—The courier was not far off: "Please come nearer, Clarkson," Miss Helena continued, "I wish to speak to you before my father and mother."

The astonished young man made some steps forward.

"They have ordered me to atone for my injustice, my cruelty towards you, and I think they are right."

Clarkson stammered some confused words, which she did not heed.

"My parents think," she continued, "that I detest you, but I intend to show them that they are mistaken. On the contrary, you please me very much, and to speak frankly, I love you."

"You are going too far in the opposite direction," Mr. Bromly grumbled.

"There is a middle-way in all things, Helena," added the mother; "propriety."

"You must unsay that bad joke, my daughter," said the father; "otherwise Clarkson may take advantage of it."

"Let him! That is just what I want."

"What! You don't propose to fall in love with a courier, I hope?" Mr. Bromly thundered, beside himself.

"No, father! certainly not."

"Why then do you tell this lad, that you love him?"

"Clarkson is not a courier."

"What is he then?"

"You shall see."

Turning to the pseudo Clarkson:

"Allow me," she said, "a few small liberties."

Saying this, she with her finger-ends delicately lifted up his black wig, while he was looking on in mute stupefaction. Then she turned to her parents:

"There you see," she said, "that there is something else than a courier under the mask."

"Then you knew who I was?" asked the young man delighted.

"From the first day, at Malta."

"Then my comedy acknowledges the superiority of yours, Helena!"

"Oh! I think that the courier has played his part very well, when one considers what a whimsical mistress he had."

Superfluous to tell, that the parents made angry protests; they declared that they should never allow such a man even so much as to speak to their daughter. They accused him of having perfidiously introduced himself among them with the intention of seducing Helena. Especially was papa Bromly foaming with rage, and the subject of this formidable opposition appeared for a moment to lose all hope.

"Let the storm pass."—Such was the judicious advice of the young lady.

If they had imitated worthy La Fontaine's proud oak, the storm might certainly have thrown them down; but they followed the example of the reed, and that saved them.

The father declared, that he had already chosen a rich and well-established man for Helena, who would secure her a comfortable life.

In answer she picked up a Sodom apple, that had fallen from a neighbouring tree, and said:

"That comfortable life, that you promise me, father! would be like this apple: outside brilliant, inside ashes and bitterness."

That same evening, while they were journeying through the valley of Mar-Saba, and the setting sun threw its rays on the hills of Judea, making the summits of the Moabite mountains shine gloriously, peace was made, and the parents were half reconciled with the young painter. The two lovers knew how to take advantage of this calm, and I have reason to think, that the journey on the Jordan was to them only the first stage of another long and happy journey through life.

LAW REPORT.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Monday, 6th October, 1879.

Messrs. H. P. LILLIBRIDGE and F. E. FOSTER, Assessors.

EMIL WIEGAND vs. WM. COPELAND.

(Continued from 3rd October.)

Mr. Denison said Dr. Geerts was present and he would like to call him.

Mr. Kirkwood said that as he understood that Dr. Geerts objected to being cross-examined, he must object to his evidence.

His Honour said that a great many foreigners here who read reports of trials and examinations in England and America were under the impression that cross-examinations were merely to try and get the witness to contradict himself and Dr. Geerts was under this impression, but he trusted the counsel would bear this in mind.

Dr. Geerts said he had merely come to swear to the correctness of his report and he objected to being cross-examined by counsel.

His Honour said that if counsel would tell him what they wished to ask he would put the question to Dr. Geerts. His Honour assured Dr. Geerts that no one had any wish to question him except to illicit information.

Dr. Geerts consented to this and being sworn said:—I am a professor of chemistry. At the request of Mr. Denison I analyzed the contents of a sealed bottle which he sent me, said to have been used in the Spring Valley Brewery. (Bottle produced exhibit U). This is the same bottle. I personally examined a portion of the contents. The liquid that remains in the bottle is a portion of the original contents when it was presented to me. If necessary this remaining in the bottle can be analysed.

By the Court. After examination did you commit to writing your views?

Witness:—They are embodied in my report (Paper tendered). This is my report.

Mr. Kirkwood objected on the ground that no report of an expert can be put in, only his evidence can be taken.

Witness:—This report is a simple statement that the solution is bisulphide of calcium with a little sulphate of calcium in it, also a little impurities of iron and chlorine.

Mr. Kirkwood observed that as the use of this solution was a

secret in brewing, he thought that the witness' examination ought to be conducted in private.

His Honour said he thought it was to the interest of his client that it be in public, but if necessary the reporters would no doubt not take down the evidence.

Witness:—I think that this liquid in the degree of concentration in which it is found in this bottle, is deleterious to health if taken internally. As soon as air comes in contact with this liquid, sulphurous acid gas is evolved. This gas if inhaled produces cramp of the vocal chord and afterwards if the vocal chord gets lamed and if inhaled in certain quantities it would be poisonous for the blood. Taken into the stomach it would produce irritation and form a real poison. The quantity necessary to produce a deleterious effect depends on the condition of the stomach.

(Cross-examined by Mr. Kirkwood through the Court.)

Was the bottle full when you received it?

Witness:—I do not remember whether it was exactly full or not.

Mr. Kirkwood:—Had you the bottle in your own custody?

Witness:—Yes, it was kept in my own room in a special place locked up.

Mr. Kirkwood:—What is bisulphide of lime?

Witness:—If I am to give chemical lectures I may be kept here two years. Bisulphide of lime is bisulphide of lime, the same as bread is bread.

Mr. Kirkwood:—Would it have the effect of arresting the fermentation of beer?

Witness:—Yes it would in a certain concentration and in certain quantities.

Mr. Kirkwood:—Take a nine gallon keg of beer—what effect would it have on it?

Witness:—I am not a practical brewer and therefore cannot say. By the Court.—Can you not give your idea of its effect?

Witness:—The quantity to be put into a nine gallon keg of beer depends on so many circumstances, for instance strength of the beer, the stage of fermentation, temperature, &c. that I am unable to give an answer from memory. It is a disinfectant and deodorizer and anti-putrescent.

Mr. Kirkwood:—When bisulphide of lime is put into beer what is the chemical change?

Witness:—This liquid when it comes in contact with air will become sulphate of lime after a time by the absorption of oxygen.

Mr. Kirkwood:—Do you know whether this sulphide of lime is largely used in the manufacture of sugar?

Witness:—It is not used as far as I know in Holland.

Mr. Kirkwood:—The arrest of fermentation is caused by sulphurous acid gas. Does the Doctor know whether or not sulphurous acid gas is used in wine manufacture?

Witness:—It is used to drive the air out of claret casks. Sulphur is burned in the casks and after the wine is put in, it absorbs a certain amount of the sulphurous acid left in the cask and a certain vacuum is produced.

Mr. Kirkwood:—Is not bisulphide of lime used in wine to arrest fermentation?

Witness:—I do not know, but I do not believe it is.

Mr. Kirkwood:—This bisulphide of lime put into ordinary beer, would it soon combine with the oxygen in the beer and form sulphate of lime?

Witness:—Yes, but not immediately. Sulphurous acid has quite an affinity for oxygen as I have stated. The alcohol in beer is oxidized by fermentation and this causes acidulation of the beer by the formation of acetic acid. Fermentation cannot take place without the presence of oxygen and ferment. This article if put into beer will afterwards become decomposed and after some time will lose its smell and taste.

Mr. Kirkwood:—Is not this liquid useful for cleaning casks?

Witness:—By cleaning casks with it and afterwards washing with water it would be tolerably good.

Mr. Kirkwood:—Would sulphate of lime have any injurious effect?

Witness:—It would entirely depend on the stomach and the quantity. I would not myself drink it.

Mr. Kirkwood:—Have you analysed English beer and if so how much lime is there in it?

Witness:—I have analyzed it, but not for the quantity of lime. Water is hard from the presence of carbonate or sulphate of lime. I have analyzed the waters of Yokohama; those on the Bluff are very soft and in the swamp very hard.

Mr. Kirkwood:—If two ounces of this mixture were put into nine gallons of beer and allowed to remain, what effect would it produce?

Witness:—That would produce in 1,000 pints of the beer, 0.11824 of solid bi-sulphide of lime. When the change takes place there would be a slight increase in the quantity of sulphate of lime. The same quantity put into Bluff water would make it very hard.

Mr. Kirkwood:—Is it not the custom for English brewers to use hard water?

Witness:—Yes. I believe they prefer water containing some lime. Water containing lime is injurious to health and has been found in Paris to produce gout, therefore they procure other water there for drinking.

In reply to Mr. Denison.

The Spring Valley brewery is on the Bluff and the water there is soft.

Mr. Denison recalled Koidi Shoji: Mr. Kirkwood objected; objection overruled.

Mr. Denison:—Was not this stuff put in the malt in the mash tubs?

Witness:—No. It was only used for washing the tubs.

Mr. Denison:—You said that the first time you saw this medicine put in the beer, Mr. Wiegand was present, was he ever present after?

Witness:—I only saw him present once, and afterwards I was always present when Mr. Copeland put the medicine in the beer.

Cross-examined:—Have you talked with any one about what you should say here to-day?

Witness.—No.

Akai Shokichi, cautioned, said:—I was formerly in Mr. Wiegand's employ in his Brewery at No. 46 Bluff for six months and I then went to No. 68.

Mr. H. W. Denison, sworn said:—I received this bottle (exhibit U) from Mr. Wiegand, which I sealed with a seal with H. W. D. over the cork and sent it to Dr. Geerts with a request to analyze it and he returned it in its present condition, with a written report. When first sent to him this bottle contained about as much more as now remains in it.

By Mr. Kirkwood:—I have received other bottles from Mr. Wiegand and from the firm, but they are all beer.

Mr. Denison, before making his summary of the evidence, read the deeds of partnership and mortgage: he then made his review of the evidence. So much had been said about the books and accounts that he would make that his starting point. At the formation of the partnership, the plaintiff had put into the business stock to the value of \$2,421.65 for which he had only received credit for one half. He had been credited with \$1,210.82 it was true but at the same time he had been charged with the half of the capital, \$15,000 and whichever way it was viewed, one thing was certain, that his client had only received credit for \$1,210.82, and the mortgage had been given for \$13,789.18 instead of for \$12,478.36. Although the plaintiff's evidence in reference to this mortgage was not as concise as it ought to be, still it was sufficiently clear that he had signed it not knowing what it was at the time. This was a strong argument for invalidating and annulling such a document, but another equally strong one was, that at the time of its execution plaintiff had no title to the property so mortgaged. The balance sheets show an overcharge of \$200, on the interest account alone. The plaintiff admits that he signed balance sheets, but it is clearly shown that the ones he did sign, did not contain these items of interest. The clear profit made by defendant in assuming Bernson's loss, and charging interest on improvements in the way he has, is plainly \$1,300. No wonder he was anxious to assume this loss, with such a result, and no doubt that the proposition he had previously submitted to the plaintiff to open agencies at the different treaty ports, was prompted by the same motive. All these charges of interest are clearly contrary to the terms of the partnership. The loan to Clausen is also contrary to its terms. The purchase of the barley without the consent of plaintiff, enough to last six months, is the act of a shrewd man, who expecting that the partnership would be dissolved was anxious to secure himself beforehand. The private chits of defendant amounting to \$140 had been charged against the firm while the profits for the whole year barely reached \$3,000. Mortgage, chits, interest, all these worked one way, and that against the plaintiff. This case ought never to have appeared in Court at all, and if his client and himself had had their way it never would have appeared. The counsel concluded by saying that he thought he had proven sufficient to have the prayer of the petition granted.

Mr. Kirkwood said that it was not his intention to make any lengthy remarks before he had produced his evidence but he would briefly state what he hoped to clearly establish by that evidence. In reference to this deed of mortgage he would be able to prove Mr. Wiegand's connection with it and knowledge of it from the first, by Mr. Copeland, Mr. Hall and other witnesses. In the spring of 1876, Mr. Hall wrote a letter to Mr. Wiegand, for Mr. Copeland, in which the letter offered him terms of partnership, and this letter Mr. Hall took to plaintiff himself. To these terms Mr. Wiegand objected, and sent a counter proposal. The two afterwards met at Mr. Wiebe's house where these terms were discussed and afterwards they went to Mr. Hall's where a preliminary agreement was drawn up and a penalty for any infraction of it. The mortgage was as much Wiegand's as Copeland's. How Mr. Wiegand can now say that he never heard of such a mortgage surpasses comprehension. Mr. Hall took the drafts of the partnership and mortgage up to the brewery and left these there after reading them over to both of the principals in their office. At this time Mr. Dickinson was employed by plaintiff in reference to his own private business. The drafts were afterwards sent with a letter to Mr. Dickinson, and this letter was signed by both plaintiff and defendant, asking him to draw up the proper documents and act fairly between them. Mr. Hall afterwards read over these documents to both; and after they had signed the deed of partnership, Mr. Dickinson told them that they had better execute the mortgage in the presence of the Consul General. Mr. Wiegand however says he had no dealings with Mr. Dickinson. Mr. Copeland spoke to plaintiff about his mortgage to Berger and said that as he was unable to pay it off just then, he would assume it as his private debt. Mr. Copeland will swear that shortly after the partnership, he went into plaintiff's private room and saw him reading over both documents. Mr. Eytton will testify that no documents were taken out of the safe at the time that Mr. Wiegand asserts they were, but on the contrary defendant brought the two documents from his own house for him to read.

The charge of fraud is unjustifiable and should never have been made except backed by the strongest of evidence. The other charges are also frivolous.

Perhaps the books were not opened the way a regular accountant would open and Mr. Hall who kept them wished to keep them different, but they were so opened at the partner's especial request as they wanted them to show the private debts of each member of the firm as well. The item of \$1,200 appears credited to Wiegand on the books and although he is also charged with \$15,000. Mr. Copeland is also charged with \$1,200. The charge about the chits is paltry, any one knows that it is custom for a brewer especially to stand drink among his customers. These country trips will be explained as profitable ones. The charge of trading outside the firm is ridiculous, and proves to be the fend-

ing of a pleasure boat to carry the mails to Yedo when the railway bridge was down. The books have always been at Mr. Wiegand's disposal and he has never been refused access to them. Mr. Hall, the plaintiff's own bookkeeper opened them and they were afterwards kept by Mr. Wiegand's old friend Mr. Eytton, at his (W's) own request. The entry of \$37,000 as capital amounts to nothing, as both partners have an equal share. This was made at plaintiff's own request as there was some talk of selling the brewery to Japanese and he thought it better to put a larger capital down in case they should want to see the books. The Berger loans were made with plaintiff's knowledge and consent and the loan to Clausen as well.

About this "drugging" the beer, it will be proved conclusively (if Dr. Geert's has not already settled the question) that the stuff as they term it and the bottle in court has not been proved as *the* stuff—but suppose it was the stuff, every one knows that things deleterious in themselves have to be used in many things—bread for instance—and in this case was used with the plaintiff's knowledge and consent. The boiled beer was known to be better than that not so treated: the charge about fraudulent weight of barley has not been pursued and will perhaps be withdrawn. The assault will be contradicted by evidence. The whole evidence of plaintiff amounts to but little more than grumbling after all.

Tuesday, October 7th, 1879.

His Honour said that it had been suggested by some members of the Court that the issues in the case would be very much narrowed if the plaintiff would withdraw the charges of fraud contained in the petition.

Mr. Denison did not see what he could withdraw.

Mr. Kirkwood wished to know if the counsel for plaintiff had closed his case.

His Honor said that if the counsel for the plaintiff had any more evidence, he must produce it before counsel for defendant commenced his case.

Mr. Denison said that he had closed the case for the plaintiff.

Mr. Kirkwood read over the petition, when Mr. Denison consented to withdraw from paragraph 8 the words "and that said plaintiff personally," and from paragraph 9 the words "and that the said defendant in violation of said indenture has not diligently employed himself in and about the said business," and also the allegation in the same paragraph charging defendant with defrauding Japanese sellers of barley.

Herbert Bellasis, sworn, said: I have a document in my possession which purports to be a memo. of agreement signed by Copeland and Wiegand on the 6th June, 1876.

Mr. Denison objected to the production of any document by the witness because the document in question is held by witness as trustee for Mr. Dickinson.

Witness: I have also a letter, signed by Copeland and also by Wiegand, dated 13th June, 1876, addressed to Mr. Dickinson.

By the Court: How did those documents come into your possession?

Witness: I am now acting as managing partner of Mr. Dickinson's business.

By the Court: Was not Mr. Dickinson a barrister-at-law formerly practising here?

Witness: Yes.

By the Court: Do you know how these papers came into Mr. Dickinson's possession?

Witness: I believe he was acting as counsel for Copeland and Wiegand although I was not here at that time.

Mr. Denison quoted Greenleaf on Evidence vol. I secs. 237, 238, 239 in reference to the privacy of documents in possession of counsel.

His Honor said there was no question about the general principle of this rule, but this was an action between two partners and it was quite clear that the rule quoted did not apply, he would refer counsel to the same author in sec. 239 in *Rice v. Rice*. His Honor overruled the objection and admitted the documents in evidence, but took a note of the objection.

Mr. Kirkwood then called:

Wm. Copeland, who being sworn said: I am the defendant in this action. I have been a brewer for 7 years. In the beginning of 1876, I was desirous of forming a partnership with plaintiff. His brewery was then the only rival one here. After some preliminary negotiation, we met at Mr. Wiebe's house, and afterwards at Mr. Hall's. Mr. Hall brought out then a letter which he had written, which he read to both of us, sentence by sentence. I then asked Mr. Wiegand if he would agree to it and he said yes. Mr. Wiegand suggested some amendments or additions and Mr. Hall wrote them at the end of the letter. (Paper shown witness). This is the letter I refer to. These signatures are mine and Mr. Wiegand's (put in and marked exhibit 6.)

Mr. Denison objected to the admission of this document as tending to modify existing agreements between the partners. He quoted Greenleaf on Evidence sec. 275, 276, 277 and 278.

His Honor said the production of these documents were evidently for a far different purpose. Objection overruled.

Mr. Kirkwood read the document.

Witness: At that time I was in bad health. I recollect having read to me in the office a draft deed of partnership and mortgage which Mr. Hall brought and which he read both to Mr. Wiegand and myself. After this Mr. Wiegand himself took these drafts down either to Mr. Hall's or Dickinson's office. (Paper shown). The signatures to this are mine and Mr. Wiegand's. This was sent to Mr. Dickinson and was written by our clerk at the time; it is dated, 30th June, 1876 (letter read and put in exhibit 7). I went to Mr. Dickinson's office afterwards in reference to this matter and spoke to Mr. Dickinson in Mr. Wiegand's presence about the mortgage. I asked if the mortgage that Mr. Berger had on the Spring Valley Brewery would in any way interfere with the mortgage which Mr. Wiegand

was about to give me. He (Mr. Dickens) asked me the amount of the mortgage and then said it would not. I spoke to Mr. Wiegand about this mortgage and he even said that he thought I had a much heavier mortgage on the property. At this time Mr. Dickens was consulted by Mr. Wiegand about a case in the German Court, which he (Mr. Wiegand) had against Captain Gush. I heard this from Mr. Wiegand and saw letters about it. I recollect the execution of the deeds of partnership and mortgage. We received a chit from Mr. Hall to come down to Mr. Dickens' office for the purpose of signing the papers. We both went down to Mr. Dickens' office. Before signing them, Mr. Dickens requested Mr. Hall to read the deeds of partnership and mortgage over to us in his presence, which he did. We then signed the partnership deed in duplicate in the office; then Mr. Hall took these papers and the mortgage and came down with us to the U. S. Consulate. Mr. Dickens had previously said it was better to have the mortgage signed at the Consulate. We signed the mortgage in duplicate and left them in the Consulate. Mr. Hall looked after the registration. It was probably three weeks before we got them back. They were handed to us by Mr. Hall. At this time Mr. Wiegand and I were living in the same house. Shortly afterwards I saw the deeds of partnership and mortgage lying on Mr. Wiegand's table where he had been reading them. Mr. Hall started books for us and the first entries were made according to instructions from Mr. Wiegand and myself. The mortgage for \$13,789.18 was executed in Mr. Dickens' office, there was some discussion as to the amount, but this amount was agreed upon. I don't see what difference it makes what capital was put down. When I returned from the country after Mr. Eyton came, Mr. Wiegand did not complain. One time that we went into the country, we left Saturday evening and came back at 9 o'clock on Monday morning. The other time we went and came back on Sunday. The expenses of these trips were more than saved by our purchases of barley. Mr. Wiegand knew all about my going into the country every time when I went for my health. The last time I went in August this year, I did not tell him I was going. Late on Saturday night I received a telegram saying my wife was ill in the country and I could not communicate with him. Mr. Wiegand has not been away much. He drinks the brewery beer. Does not pay for what he drinks, or what his friends drink when they come. His German friends drink pretty freely; when they get beer for nothing they like it. Mr. Bernson's was employed in the brewery when Wiegand joined and he was kept on. When he went to Shanghai, there was no arrangement made in reference to any losses that he might incur. He went there merely as agent for the firm. We had had several orders for beer from Shanghai, and found great difficulty in getting our casks back and he was to go over and take beer in hogheads, and bottle it there. Mr. Bernson had always been employed about breweries and was a good man for the business. The beer that we sent over turned sour and that was the reason of the loss. The beer had none of the sulphide of lime in it or had not been boiled. I afterwards agreed to take over this loss because Mr. Wiegand was dissatisfied with the loss and as he had only agreed that interest should be allowed by the firm to me for money spent on improvements, I reminded him that none had been charged and he then agreed that if I would take over Bernson's loss, the firm should allow me interest on improvements and he went up and told Mr. Eyton to charge it accordingly. The reason I wanted interest in this way was because I charged Wiegand no interest on the mortgage and I had to pay Berger's interest out of my monthly allowance. According to the mortgage I was under the impression that I was entitled to draw out all the money except what was absolutely needed for the business and place that to my credit or do anything I liked with it. By expending it on improvements I deprived myself of any benefits I might have derived from it. Mr. Wiegand's assertion that he did not authorize and agree to the loan from Berger, apart from my mortgage, is incorrect. I remember his telling me that I ought to get the money back from Clausen. The loan to Clausen was made with my own money. Mr. Wiegand knew about this loan. Clausen came to the brewery and I went and saw Wiegand in his private room and told him that Clausen, who was a very good customer of ours, wanted to borrow \$600. Wiegand said then in Clausen's presence that as all the money belonged to me, I could do as I liked with it, but he would assume no part of the risk. I do not know of Mr. Wiegand's objection to any of the improvements made, I have always consulted him about them. I do not think there have been any improvements since this trouble commenced. I did not get his consent in writing as when we first started he said it would occupy all his time to write and answer letters if that clause in the agreement was adhered to. He agreed then to waive it and afterwards his consent was given verbally. The 100 five gallon kegs were ordered with his consent. He wanted to get more to store the beer in the cellar. I have got 400 sacks of barley from San Francisco without his consent instead of 1000 as he says. They arrived here in August. It was when this trouble was brewing that this was ordered. The barley was absolutely necessary. I am prepared to take it over on my own account. For brewing, the California barley is the best. When I went into the country barley was so scarce that there was none to be had at all in Yokohama. I have never prevented Mr. Wiegand's having free access to the books at all times. I never have had charge of the books. Mr. Wiegand kept the cash book in December, 1877, for a month while I was absent in the country. When Mr. Hall kept the books the cash and day-book were always kept in the office. The balance sheets used to be given us by Mr. Eyton and we kept them often 3 weeks before we signed them in duplicate in the office together. I never received any compensation for the *Rindler's* trip to Yedo. I have never been connected with the other hunting trade. As to boiling the beer; it was in the winter and I spoke to Mr. Wiegand about it and he was perfectly willing to have it tried. We put the beer in the boiler, pumped sufficient water in and lit the fires. He was present; he would superintend the coolies; and passed me the beer into the boiler.

This process is used all over Germany. We sold this beer very readily. This is only done to bottled beer, but lots of the bottled beer, not bottled has turned sour. Mr. Wiegand never objected. I solemnly swear I have never called Mr. Wiegand any such names as he asserts. Once I came down into the Brewery, the boys were bottling the beer, and Mr. Wiegand was there and I asked for a glass of it which I smelt and tasted and asked him if it was not a "little bitter or hoppy." He turned round and said "Do you call me a s—n of a ——" and called upon the boy to witness that I had used the words. The night previous to the alleged assault Mr. Wiegand had been in town; the next morning it was time for filling the beer in the kegs: he was not there so I went over to his house about half-past eight. I asked him how he was and he said he felt very bad. I told him not to stir and asked him to tell me what he wanted done. He said he had already instructed the chief boy. I left shortly after. After tiffin the boy came and showed me a glass of beer and said that was the beer he was going to cross over for bottling. The beer was not clear. I took a glass of the beer over to Wiegand's house to show it to him and he was in bed with a towel round his head, and had his pants on. He got angry, said the beer was good enough, and if he couldn't be left alone when he was sick he would know the reason why. I then left and went back to the brewery he followed me and his wife followed him. When I went to the foot of the stairs he commenced calling me bad names in German, part of which I understood, and said he was going to turn out the bookkeeper. His wife tried to get him to go back. He followed me to the foot of the steps and wanted to go up to the office. I told him he was not wanted in the office at that time, he was wanted in the brewery. I stood in the stairway with both hands on the rail and my knee slightly advanced. He put his hands on my shoulders and tried to force his way up, but when I would not let go, he went back and said I had struck him. I swear that I never then or at any other time kicked him or struck him with my knee or anything else. The statement made by the Japanese cooper that he could see us at this time from the place where he works, is not correct, because a part of the building projects out between the cooper's shop and that place. Mr. Wiegand is a very excitable man. I have never seen one so much so. As to the article used in the beer, I had it before the partnership. Before using it I gave Mr. Wiegand a pamphlet on the use of this article. This was just before I went to the country, I think in November 1876. I have a copy of that pamphlet (copy tendered in evidence.)

Mr. Denison objected.

Objection overruled.

Pamphlet put in (exhibit 8.)

Witness:—Mr. Wiegand has both seen and helped me to put this mixture in the beer. He has sent for me to put it in. This preparation is used for beer that is stored away to make it keep. So far as I know it has about the same effect as hard water. It is used when the water is soft. Slightly hard water is the best for making beer. Beer improves by keeping. I know that this mixture is used in every brewery in England for export beer. I also use it for washing out the tubs and to sweeten the kegs and casks. Mr. Wiegand has often used it. It was only a short time ago he wanted me to get some to use for that purpose. In a hoghead I generally use 6 or 7 ounces. In England double that quantity is used. The proportion used would amount to about 1 oz. to 9 gallons.—It is not used in the small kegs. Mr. Wiegand says he collected the stuff from the bottles I had left in the cellar. In that case he would only get the sediment; I never use it after it has precipitated a sediment when in contact with air. From my experience it improves the beer and does no injury to stomach or teeth or anything else. I have always been able to sell beer treated this way better than any other. Lots of beer has been run to waste, where this was not used. It is not correct to say that I call this mixture "flavoring extract." This latter is pure extract of hops. In case you want to draw clear beer without hops, this hop extract dissolved will answer as well as new hops. Mr. Wiegand's assertion that I put a pint of the stuff, as he calls it in each hoghead is untrue. The malt house is under the same roof as my house. When malting is going on fires are kept going day and night, as Mr. Wiegand's house is some distance away I went down to see how the fire was getting along so that the place shouldn't burn down. I never gave orders for a slow fire to spoil the malt. I woke the man up who had charge of the fire and cautioned him. From what I saw of the fire at No. 68 Brewery it was caused by the fire in the kiln. I never refused plaintiff his allowance of \$150 per month. Once he came in and asked for \$200 saying he had some \$300 coming to him. I told Mr. Eyton to make up our accounts and if there was anything due him he could have it or if he wanted anything in advance he could have it; I think this was last spring. The account showed about \$80, coming to him which was paid. I have never instructed Mr. Eyton to refuse him money. When we were taking stock Mr. Wiegand who was with us left because I considered the 100 five gallon kegs as plant and not stock. When we first formed the partnership I took an inventory of my stock and Wiegand's was brought in a lump. Before this Mr. Wiegand had been often at the brewery and during the negotiation he went thoroughly through the brewery.

Cross-examined by Mr. Denison. The inventory was taken about the time of the formation of the partnership. The valuation (\$5,000) was put in afterwards on the same basis as Mr. Wiegand's stock was taken in at. The entry in the books was the real value as well as the estimated value.

Mr. Denison:—When and where did you get this pamphlet?

Witness:—From England, but when I cannot say. I went away in 1871 and returned in the latter part 1872, was absent about six months and this pamphlet was received during my absence. I first heard of this pamphlet from Dr. Daighon.

Mr. Denison:—When and where did you first get this preparation?

Witness:—I think in 1873, from England.

Mr. Denison:—Is this pamphlet not sent as an advertisement?
 Witness:—No. It is only sent when the material is bought.
 Mr. Denison:—You say this stuff is used in every brewery in England for export beer. Is it used in beer for home consumption?
 Witness:—It is used in beer intended for storage. It is never used by me in small quantities sold for immediate use.
 Mr. Denison:—Were you in the brewing business before you went to Norway and did you use this stuff then?
 Witness:—Yes, but I did not use this mixture.
 Mr. Denison:—Were your sales then as good as after the use of the mixture?
 Witness:—No. My sales have been better since.
 Mr. Denison:—When was the fire at No. 68?
 Witness:—The fire at No. 68 was after the formation of the partnership.
 Mr. Denison:—What amendments were made to the letter you say Mr. Hall wrote?
 Witness:—I don't know what particular amendments were made in the letter but they are added at the bottom of the letter. The drafts of the partnership were brought up to the brewery some time in June, I don't remember the day. The letter was sent afterwards because I could not come down. I don't recollect that any amendments were afterwards made in the drafts.

Wednesday, 8th October, 1879.

Cross-examination of defendant, continued.

Mr. Denison:—Is this preliminary agreement (exhibit 6) the only one or is there another?

Witness:—I do not know of any other but there may have been. Mr. Wiegand made a counter proposition that the firm should take over his stock at a lump sum of \$7,500, but this agreement was afterwards accepted by him. We afterwards went to Mr. Wiebe's house where it was arranged at what price we should take his stock over. We went to Mr. Hall's soon afterwards but I don't know who had the letter at that time. The addition at the bottom was then made in our presence by Mr. Hall.

Mr. Denison:—Did you not have a suit against Mr. Hall in the British Court, and did he not charge you a commission for negotiating the partnership?

Witness:—Yes; we commenced a suit against him, but it was brought for other matters. He put in a claim for commission, as you say, as a counter claim. I do not recollect claiming that Mr. Hall only drew up the documents and did not negotiate the partnership. I never saw a long preliminary agreement which contained all the clauses in the partnership, one that was drawn up by Mr. Hall and which he then substituted for exhibit 6.

Mr. Denison:—What time did you use this stuff in the beer?

Witness:—I cannot tell the date when I used it, I must have used it in 1873, 1874, 1875 and 1876. I have used it continually for export beer.

Mr. Denison:—When did Mr. Bernson go to Shanghai?

Witness:—I think it was in 1877. The books will tell. I think that the first 4 hogheads Mr. Bernson took to Shanghai had this preparation in it and the reason I did not put it the others was that it was fresh beer for immediate use, and Mr. Wiegand said it would keep. It was in September I think. This was when Mr. Wiegand was about brewing his "October brew" which he said would keep for ever and ever, it was then too warm to put the article in it, and this beer sent afterwards to Shanghai turned bad. On reference to the books I find that a shipment of beer was sent to Bernson in July, 1877. If he left in July he must have had two or three shipments sent him. On looking through the books I find there is a shipment in May. I will not swear that beer was sent to him after October or September. By reference to the books I find that his account was closed in February 1878, and the last shipment was on November, 1877.

Mr. Denison:—Did not Mr. Eyton have a suit in Court against you?

Witness:—Yes. It was long before the partnership; for beer I bought from Heght's brewery. It was for beer to sell at once and when I racked it off I found it bad. I think I had some of it analysed at North, Thompson & Co.

Mr. Denison:—How long does it take after beer is made before you rack it off?

Witness:—It all depends on circumstances and the degree of fermentation.

Mr. Denison:—Did not North, Thompson & Co. report that the beer they analysed contained this mixture you mentioned?

Witness:—They did not. They reported it sour.

Mr. Denison:—Do you put the stuff in the beer before or after fermentation?

Witness:—After.

Mr. Denison:—In using this mixture is it necessary for a person to know how to use it to make a proper use of it?

Witness:—Yes.

Mr. Denison:—When did you first get this pamphlet?

Witness:—I got a copy in London; can not exactly say when. I think this copy in Court came with the stuff.

Mr. Denison:—The improvements you made and on which you charged interest were they necessary?

Witness:—They were not all necessary. The office was unnecessary. Mr. Wiegand superintended these improvements.

Mr. Denison:—Have you not drawn out of the business, all the profits of the business over and above the \$150 per month allowed to Mr. Wiegand and yourself?

Witness:—I cannot say.

Mr. Denison:—Would you be surprised to learn that you had drawn out over and above the profits?

Witness:—I would be. (Exhibit 4 shown.) This account shows that I have drawn out \$2,014.45.

Mr. Denison:—Did you inform Mr. Wiegand when you signed the promissory notes?

Witness:—It was agreed that I should give promissory notes for the money borrowed.

Mr. Denison:—Do you know where the cooper's block is, and is it visible from the foot of the stairs?

Witness:—Yes, but I do not think it is usual for this block to be in a position where it could be seen from the foot of the stairs.

Mr. Denison:—Do you not feed your live stock on grain, etc. belonging to the firm?

Witness:—I don't feed pigs, sheep, geese or cattle on grain belonging to the firm. A few sheep eat the grass on the land around the brewery.

Adjourned till Monday, 13th instant, at 10 a.m.

THE TIMES OF THE TAIRA.

BY CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XIX.

THE SWORD.

Some score of thatched houses, built for the most part of massive ill-proportioned timbers, and huddled together as though they shrank in their humility from the luxuriant magnificence of wood and mountain that surrounded them, represented the village of Kogiso at the time of which we write. The place told its own story of much thrift and little prosperity, for though every space left vacant by rocks and bushes on the hill-sides was industriously cultivated, and every ray of sunshine utilized for the baking of thin bean-cakes or the drying of such strips and shreds of old clothing as had been able to survive the operations of unripping and washing, still might not all this care suffice to brighten the children's aspect of hunger and hardship, or help the women to lose their likeness to the beasts of burthen whose office they daily performed.

There was but one house in the village that seemed to venture an assertion of independence and comfort. It stood in a wide enclosure completely surrounded by a hedge of great height which had been gradually trimmed to the semblance of a thick evergreen wall, skillfully fashioned above into an outline of hills and hollows that bore no faint likeness to the mountain ranges around. Three quaintly distorted stems of red pine formed a rustic entrance, from which two sinuous lines of moss-embedded stepping stones led, one to the porch of the house, the other to a trellised gate on the right, that gave ingress to a large level space, still retaining some few evidences of its original character in the form of occasional rockeries and azalea clumps, but now converted into a manège or archery ground, where two horsemen were busily exercising as Yoshitsune and Saburo bent their steps towards Kiso Yoshinaka's dwelling.

On the third day of their journey the travellers had separated; Iné continuing her route direct to the capital under the escort of her husband's three vassals, while Yoshitsune and Saburo, turning westward, had threaded their way through the endless ravines and defiles of the many-peaked province of Shinano. Saburo's misgivings as to the issue of his master's design had not in the least abated, though they found no further expression until the moment of setting out from the little hostel in the village of Kiso where they left their horses and obtained confirmation of their idea that the house with the environment of green hedge was the one they sought. Then indeed he urged Yoshitsune at least to take the precaution of wearing a shirt of mail under his silk doublet, but to this the other replied that if there were any just occasion for such provision, neither arms nor armour could be of much avail, and Saburo, constrained to be content with this comfortless argument, followed his young master through the village, uncertain whether to admire his courage or censure his rashness.

Although the day was nearly spent, they had agreed not to defer their visit until the following morning, since it was evidently advisable to anticipate any surmises their presence at the hostel might suggest. Already indeed their appearance had stirred the idle curiosity of the villagers, for by the time they reached their destination a crowd of lounging rustics and ragged urchins had assembled to watch them, keeping however at a distance from the enclosure that testified their experience if its inmates' austerity.

"Apparently our friends are too much engaged to pay any attention to their visitors," Yoshitsune remarked, after repea-

ted calls at the porch had failed to elicit any reply. "Suppose we pass round at once and discover the cause of their preoccupation."

But before he could carry out this idea, Saburo interposed. "Surely, master," he cried, "one might fancy you sought to furnish a pretext for the treatment we have every reason to dread. It we must needs be unceremonious, let me undertake that office at least."

"Poh! Poh! Saburo," the other replied, putting his follower resolutely but not unkindly aside; "neglect of ceremony is more likely to be useful than dangerous in our case. Believe me too, if the worst comes to the worst, we shall leave behind more broken bones than we carry away."

"That may well be," Saburo muttered as he followed his master, "seeing that our own bones are not unlikely to be included amongst the former number."

The two men passed the trellised gate and advanced boldly into the enclosure without attracting any notice, for the attention of those within was entirely engrossed by a spectacle they happened to be watching at the moment.

Here and there at irregular distances and heights on the inner periphery of the manege, small targets, three or four inches in diameter, were suspended from bamboo poles by a single cord, so as not to be pierced but only displaced by the impact of an arrow. This method of attachment, if in one respect advantageous, in another greatly enhanced the difficulty of aiming, for the material of the targets being a light wood, every breath of air swayed them backwards and forwards, or turned them so that their edges were presented to the circle of the manege. In fact under the most favourable conditions of rest and position, to strike such marks at all, demanded the exercise of no mean skill, so that the exploit Yoshitsune and Saburo witnessed on entering the enclosure was well deserving of the applause it elicited.

A girl was riding at full speed round the manege. She seemed about twenty years of age, and might at first sight have been thought almost delicately formed, so exquisitely symmetrical were her proportions, but every movement of her lithe body displayed a combination of grace and force that suggested the perfection of physical mechanism. Her hair, tied back from her forehead, hung in thick masses over her shoulders or streamed behind her as she dashed along, and her face lit up with ardour and resolve, looked so beautiful and withal so gentle, that a saint might have forgotten his orisons to dream of it. Both her hands being necessarily occupied in the management of her bow, the silk ribbon that served her for reins was knotted over her horse's neck, but the animal was so perfectly trained that he obeyed her voice without a mistake, and carried her round with swift unvarying stride as she discharged arrow after arrow full into the centres of the targets.

The spectators were two; one on foot, the other on horseback: this, a man some ten years older than Yoshitsune, with a muscular well knit frame and a handsome though somewhat harsh face; that, a square built bluff looking soldier, chiefly remarkable for a keen eye and an air of quiet watchfulness. The former Yoshitsune easily guessed to be his cousin, Kiso Yoshinaka, and in the latter, Saburo recognized the same Nei who had visited him a year before, and whose judicious efforts were said to have gained so large a circle of allies for his master.

The new-comers might have found themselves embarrassed by the consciousness of their intrusion at such a moment had either of them appreciated this exhibition of skill less keenly, but experience had rendered the difficulties of the exploit so familiar to both that they forgot everything but their admiration, and when the last unerring arrow reached its mark, they made no attempt to restrain their exclamations of applause.

His attention thus attracted, Yoshinaka turned hastily, and scowling at his visitors, seemed to be on the point of framing some angry query, when Nei stepped forward and greeted Saburo with a warmth that was evidently intended as a hint to his master.

"I could not have hoped for anything so fortunate as this visit," he cried. "May I interpret it as an evidence that you have reconsidered your decision?"

"I have had neither ability nor inclination to change my mind," Saburo answered bluntly. "I am here now entirely at my master, Yoshitsune's bidding."

The effect of these words upon both Yoshinaka and Nei shewed plainly that Yoshitsune's fame had preceded him southwards. Nei indeed was too crafty and self possessed to

betray any very conspicuous astonishment, but it was not so with his master.

"Why, cousin," he exclaimed, coming close to Yoshitsune and subjecting him to a scrutiny more curious than courteous, "to what accident must I attribute this meeting? Have you lost your way in the wilds of Sagano, or growing tired of your friends' society, come to seek pastime among your foes?"

Yoshitsune, in no wise perturbed either by this rude greeting or the insolent stare that accompanied it, answered quietly:—"I should be sorry to confirm either of your conjectures, Yoshinaka. On another quest it were easy no doubt to miss one's path among these mountains, but Kiso Yoshinaka's name is an unerring guide to those that seek him."

"So then chance is neither to be approved nor applauded in the matter," said Yoshinaka. "Yet I confess that if it had occurred to me to anticipate a visit from the Earl of Harima's son, I should have looked to see him in a somewhat different guise."

"I understand your meaning, Yoshinaka, but be well assured that the fashion of my coming is not intended to influence the nature of my reception. It may be that I condemn the cause of our enmity no less than you do yourself, but it is certain that I shall never seek to shun its consequences. Choose therefore what issue you please either now or hereafter without reference to anything but your own inclinations."

Yoshitsune's words were no less capable of a defiant than a pacific interpretation, and the man to whom they were addressed need not have hesitated in his reply had he consulted his inclinations alone, but he was too brave not to be embarrassed by the consciousness of his enemy's helplessness. Yoshitsune and his follower seemed, the one so young however courageous, the other so insignificant however devoted, that Yoshinaka began to ask himself whether the fruits of such an opportunity might be gathered by any but an assassin.

That moment's hesitation afforded Nei an occasion to interpose. His sagacity, quickened perhaps by sympathy, foresaw that without wise direction the sequel of this meeting might loosen many of the bonds of fealty by which his master's cause was supported: coming between the two men, he knelt at Yoshinaka's feet, and said:—

"Sir, however profitless my services have hitherto been, I believe that in your eyes they suffice to defend me against any charge of presumption. If it be so, may I entreat you to defer your decision in this matter until you have heard the reasons that induce me to interfere?"

He spoke earnestly, yet not without diffidence, for though he might have known that a most unwonted chance were needed to depreciate his advice, he could not have foreseen how opportune his interposition really proved.

"Cousin," said Yoshinaka, addressing Yoshitsune and at the same time answering Nei, "it may be that this is the last occasion one of us will have of exercising discretion or displaying gratitude. If that be so, it will be pleasant for the other hereafter to remember that he accepted or conferred a favour at such a moment. Frankly, the reflection that I had scorned an old friend and such a friend's advice, were sufficient to blunt my blade. Will you consent to forego that advantage?"

"Not only do I consent," replied Yoshitsune, "but I will even add a hope that our swords may never be crossed till there are none left to profit by our feud."

Yoshinaka was too chivalrous either to misconstrue or undervalue this avowal, but it is hard for those that have suffered much to be generous. Accepting only the permission his cousin's answer conveyed, and ignoring its pacific import, he led the way to the house, where they were received by the girl whose prowess had excited their admiration so much, a few minutes before.

If in this gentle-eyed woman, whose graceful service invested the most trivial of household duties with a nameless charm, Yoshitsune found it difficult to recognize the strong, skillful archer, he was not less less puzzled by the contrast between Yoshinaka's circumstances and the influence report assigned him. The fittings and furniture of his house were unworthy of even a prosperous yeoman's dwelling: floors covered with the coarsest mats; mud-daubed walls; alcoves entirely without ornamentation; surbases of knotty, ill-fitting timbers, and sliding doors which atoned for their lack of handles by the gaping crevices their shrunken frames presented. Neither was the fare presently provided for their evening meal by any means a redeeming feature. It consisted of some salt fish, a dish of pickled vegetables and a vessel of rice so

ill saved that the yellow husks were still clinging to many of its grains.

Yoshinaka, who seemed either ignorant of all this or indifferent to it, partook heartily of everything, with apparently as keen a relish, as though instead of wooden bowls with coverings of scratched and chipped lacquer, the vessels had been of Chinese pottery, and the viands, carp cutlets or pasties in place of dried beans and salted radishes.

After this meal, in which despite the example of their lusty host or the entreaties of their pretty hostess, neither Yoshitsune nor Saburo took much share, the four men drew round the brazier; Nei if possible graver than his wont, Saburo trembling with anxious impatience, but the two cousins, for whom the issue of the conference was of such vital moment, perfectly calm and unmoved.

"Now Nei," said Yoshinaka, "let us judge whether you had just cause to counsel this delay, but above all be speedy, for my cousin and I will need some daylight to finish our part of the affair."

"Say rather that you will need darkness, Sir," replied Nei, "for surely a deed that will complete the ruin of the noblest house in the empire were better hidden than revealed."

"These are strange words," said Yoshinaka, frowning, "to be rash of speech is certainly not your wont, yet I think it will go hard with you to escape the imputation now."

"I have no fear, sir," the other answered quietly. "What I say comes from an authority that is above all evil."

"There is but one man alive whose opinion deserves the men of Gen's deference," retorted Yoshinaka proudly; "and even to the Emperor himself I cannot concede the right of arbitrating between me and my father's murderers."

Nei shook his head in sorrowful censure of this impetuous speech. "The authority to which I refer is less impeachable than even that of the Emperor himself," he said.

The two cousins looked at each other in mute astonishment. "We have a common creed, Nei," Yoshitsune remarked; "a creed beyond the reach of choice or convenience. The legacy bequeathed us by the dead can only be abandoned at the command of the Gods."

"Neither have I ventured to interfere on any lesser warrant," replied Nei. "The revelation of the God of Battles interpreted by your own father, the Earl of Harima, is my justification."

"Speak on then, Nei, and speak speedily," cried Yoshinaka, "if not for the sake of the waning daylight, at least in deference to our curiosity. It seems to me that my cousin's visit is about to bear some strange fruit."

"Grant me your patience a moment, master," returned Nei, after a pause during which the circle of auditors had been narrowed by a common impulse. "However brief I may be I cannot avoid some repetition of things already familiar. Three hundred years ago when the Emperor Seiwa's grandson became Earl of Kotsuke and first received the name of 'Genji,' he caused two blades to be forged by a Chinese sword-smith, after all the craftsmen of Japan had proved themselves unable to produce a weapon that completely satisfied him. They were no common masterpieces of human skill, those wondrous swords; for their forger, well nigh heartbroken by repeated failures, had passed seven days and nights at the shrine of Hachiman, fasting and praying with such fervour that the God was constrained to guide his hand in its work; and thus with divine aid he obtained steel so perfectly tempered and edges so keen that when the two weapons were tried at the execution ground, the one severed the knees as well as the neck of its victim, and the other cut through the beard of the head before it fell. If it were not that the virtue of these godlike blades has somewhat lost its lustre through disuse, I should not need to remind you of their subsequent achievements: achievements so wonderful that the old names of 'beard-divider' and 'knee-severer' were afterwards exchanged for those of 'demon-slayer' and 'spider-slaughterer.' Martial records and household traditions will ever keep the memory of these things green, but in the history of the swords are other incidents which, if less known, are certainly not less important. For even as the earliest downward impulse of the Genji power succeeded the first indignity put upon the swords, so was the redress of that indignity immediately followed by a success no less signal. Tameyoshi, the Earl of Harima's father, gave the 'knee-severer,' or as it was then called, the 'snake,' to his son-in-law, the Lord Abbot of Kumano. It was a princely gift, but Tameyoshi acted under the influence of gratitude and contrition combined, for he had ever treated the prelate as an

enemy until the day when the latter led ten thousand friars to join the Genji forces on the eve of their great combat with the Heike. Yet, though Tameyoshi did not repent his generosity he felt that without the 'snake,' he was shorn of half his strength. Summoning therefore the most renowned sword-smiths of the time, he caused a blade to be made on the model of the 'beard-divider,' and called it the 'raven' from the effigy engraved on its hilt. The imitation was perfect in every respect save one: the 'beard-divider' measured exactly thirty inches from plate to point; the 'raven,' was one-fifth of an inch longer. One day, however, Tameyoshi, taking the swords from his girdle, had placed them upright side by side in a corner of the room, when suddenly and without any apparent cause, the two fell clashing to the ground. He picked them up and examining them carefully to see whether they had sustained any injury, found to his astonishment that the two blades were now of precisely the same length. The 'raven' had lost its excess, not from any fracture of its point, but because the rivet in the hilt had yielded and the iron sunk one-fifth of an inch into its wooden socket. Plainly the mischief had been done by the 'beard-divider,' which from that time received the name of "comrade-cutter." It was a name of evil omen, and ill bestowed on a weapon the Gods had helped to forge. Shortly afterwards Tameyoshi presented the sword to his son Yoshitomo, the future Earl of Harima, little dreaming of the mischievous influence cast from that moment over the fortunes of his house. For the blade's new name presently became a type of the deeds it helped to perpetrate. In the famous battle between the two Emperors, Tameyoshi found himself in the rebel ranks opposed to his own son Yoshitomo, who fought side by side with his old enemies, the Heike. Fain would I refrain from any reference to the things that followed, but the lesson they teach is worth more than the pain of learning. After the downfall of the cause he had espoused, Tameyoshi came to visit his son, confidant in the reception he would himself have accorded. But Kiyomori, whom may the gods curse for a black traitor," cried Nei, flashing into a heat of passion that contrasted strangely with his wonted calm, "Kiyomori, having compassed the death of his own uncle, who was found among the rebels, taunted the Earl of Harima with lack of loyalty in that he spared his father's life. It was an evil influence that would assuredly have failed had not fate and the anger of the Gods fostered it. By Yoshitomo's order five of his six step-brothers and his aged father, Tameyoshi, were all mercilessly beheaded. Then followed the murder that made my master an orphan; the murder of an uncle by his nephew. Is it wonderful that the supremacy of Japan should have slipped from such bloody hands? When next the men of Gen and Hei crossed swords, a few hours' fighting demolished the results of three centuries' triumphs. A hopeless fugitive, the Earl of Harima fled to the mountains, and at the temple of Hira prayed all night before the shrine of Hachiman. By his side lay the sword that had never before shared a defeat. The face of the God of Battles was cold and the glory of the House of Gen had faded. 'Oh! Hachiman,' he cried, 'you that gave us weapons from your own armoury; you that suffered my father's father to be called by your own invincible name, and who for twenty generations have helped us to hand down untarnished reputations and ever memorable memories, is it a small thing thus lightly to desert us, and suffer men to say that even the Gods themselves are sometimes fickle? But if rather the cause of your displeasure lies in my own unworthiness, is there not within the compass of mortal strength, or suffering, some deed by which the expiation may be achieved in my own person and the consequences of my faults averted from my children? Grant me a token to teach me the worst, or enable me to see some light of hope across these mists of misfortune.' It was then," continued Nei, bespeaking his audience's attention by the solemnity of his tones, "it was then that the God vouchsafed the revelation which was not only an answer to his suppliant, but also a warning to all that are gathering to the White Standard to-day. For he said that the evil chance which had overtaken the House of Gen was not the pleasure but the judgment of Heaven. The sword was not less capable of puissant deeds than it had ever been, but its virtue was destroyed by the indignity of its new title neither might it be ably wielded by parricidal hands. 'Nevertheless,' the august voice added, 'though the expiation is as yet incomplete, the future can only be rendered hopeless by a continuance of this internecine strife. The whole strength of the House of Gen will hardly

suffice to effect its restoration, and must be utterly inefficient if diverted to purposes of self-destruction.' The Earl of Harima did not despise this divine warning. He immediately restored to the sword its old name, and knowing that he might no longer use it himself with advantage, gave it to his son, Yoritomo, then a boy of thirteen. That very day Yoritomo, worn out by the fatigues of an unrelenting flight, dropped behind his father's scanty band of knights, and lying down to sleep in a shed by the road side, was surrounded by a company of men-at-arms who sought to take him prisoner. But the boy though alone was not without aid. In his girdle was the sword, now freed from the evil influences that had enfeebled its virtue. He escaped from the midst of his enemies, leaving behind him in the dead and dying an unmistakable evidence of the God's restored favor. And shall not the curse of heaven and the execration of men attend an act that willingly forfeits that favour again? Nay, Sir, though I have little hope that one who neglects the lessons of the past and the admonitions of Hachiman, may be influenced by the loss of a worthless vassal, be assured that if the sequel of this meeting sets at naught the counsel of the God, I shall not live to see the disgrace that must assuredly follow."

This speech did not elicit any immediate reply from either of the cousins. To Yoshitsune many of the incidents recounted by Nei were altogether novel, and this unlooked for narrative of the sufferings by which his father's fate and his brother's exile had been preceded, awakened emotions that for the moment overpowered him. Yoshinaka, on the other hand, though naturally careless of precedent or reminiscence, could not fail to be struck by the parallel between this visit of his cousin, and that of Tameyoshi to the Earl of Harima. It was true that he himself only sought to achieve a just revenge and that he risked his own life in the attempt, but however the issue were attained, there were two consequences he felt to be unavoidable: the reprobation of the world and the censure of his own conscience; for a cousin's blood would have been spilled on his host's threshold, and the strength of a man, pitted against the weakness of a child. Yet even with this conviction he could not bear to assume the whole responsibility of deferring his revenge.

"I may not set your counsel aside, Nei," he said; "neither can I adopt it at my own discretion. Let the election rest with my cousin. I will seek no present appeal from his choice. What is your decision Yoshitsune? Now or hereafter? Since my father's memory forbids me to say, now or never."

If Yoshinaka still entertained some hope of encompassing his purpose by thus proposing to a fearless heart the alternative of mortal combat or the imputation of timidity, he soon discovered that he had underrated Yoshitsune's moral courage. The reply was explicit and unhesitating.

"You have been plain with me, Yoshinaka, and I will not be less candid. I came here to seek a friend or to unmask an enemy. Had I found what I sought the profit might have been mutual: failing it, nothing could be more welcome than an immediate and final appeal to the soldier's arbiter, but for me at least the mandate of Hachiman is inviolable. To this however will I pledge myself: that whereas I had intended to utilize the knowledge of your enmity by seeking to curb the growing strength report assigns you, I now declare that I will in no way thwart or oppose your designs, until the time when we may meet again without injury to our common cause. Then shall the choice given me to-night, together with every possible advantage forfeited by delay, be restored to you, however you have fared."

Yoshinaka looked steadily at his cousin after he had ceased speaking and then burst into a sudden shout of laughter. Restraining himself presently he said:—"Well, well, 'tis fortunate that each looks with his own eyes or few things would seem material. I hope and I do not hope that you will be in a position to keep your promise when that time comes of which you speak cousin, but meanwhile I fancy we cannot profit over much by each others society. Perhaps you will allow Nei to escort you to your inn, lest some accident should bring us scandal without satisfaction."

"I shall be very glad of his company," replied Yoshitsune, without taking any notice of the other's gibe. "There is much in the past to a knowledge of which he can help me, if he will, I am sure;" and without another word the two parted, each knowing well how nearly the other had reached the limit of self-control.

All the way to the village, Yoshitsune never once addressed

his cousin's esquire though he had accepted his attendance on the plea of desiring information. Arrived at the hostel however, he desired his companion to follow him in, and led the way to the principal guest room at the back of the house. There he placed Saburo at the door to prevent intrusion, and then turning abruptly to Nei, said:—

"From what you told us a short time ago, I learned for the first time that the sword given to the Genji by the Gods was in my brother Yoritomo's possession when he was taken prisoner. Do you know where that sword is now?"

Nei, ever imperturbable and of unerring discernment, understood at once what was before him. He hesitated a moment and then answered firmly:—

"I do know where the sword is, but one thing alone can induce me to impart that knowledge."

"What is that?" demanded Yoshitsune.

"The certainty that by persisting in a refusal I shall forfeit the power of ever guiding my master to seek the weapon," replied Nei.

"And for my part," retorted Yoshitsune, "one thing alone can reconcile me to my ignorance."

"May I ask what it is?" enquired Nei in his turn.

"Death at your hands," was the answer, and forthwith the two men, drawing their swords, assailed each other furiously. Nei was strong and skilful of fence, neither would he have been sorry to achieve the deed his master might not yet advisedly essay. He therefore put forth all his force and address, but whether his sight was dazzled by the moon-light or his mind perturbed by surprise, he had scarcely made a dozen passes before three heavy blows from the flat of his adversary's weapon had fallen on his head. At the third he lowered his blade, half stunned, and convinced that he was completely at Yoshitsune's mercy.

"My condition is fulfilled," he groaned. "The sword is at Atsuta in Owari, whither it was sent by your brother when he saw that all chance of escape was gone. And though you have not asked me, I will tell you something more. The 'raven,' which was carried with your father's head to Kiyomori, is now in either the temple of Tenjin or that of Kwan-non at Kiyoto."

"Ha! Ha! laughed Yoshitsune. "You would fain send me on a perilous quest, I see. But I thank you for the suggestion. Since I have been obliged to treat you thus roughly, I promise, as an atonement, that the 'raven' shall be in my girdle before sixty days if I am alive."

(To be continued.)

DOUBLE ACROSTIC.

Hoity-toity! what's all this fuss about?
Are we in Russia where they use the knout?
Or has some spirit from the vasty deep
Been summoned here to make the Angels weep?
Unhappy Angels, we'll defend your cause,
Though wicked spirits have applied the tawse;
Forgive the insult, clearly it appears
Their wisdom's only equal to their years.

1.
If you're acquainted with point lace,
The point of this you're sure to trace,
And seek the pointing of the lace.

2.
'Twas surely thus from childhood's hour,
I've seen my fondest hopes decay,
I never loved a tree or flower,
But it was sure to fade away."

3.
Clara's father was a great composer,
For ought we know she may have been the same,
I'm told that Mendelssohn himself chose her
To add harmonic lustre to his fame.

4.
We always thought that providence was old,
But here you'll find it of a later date,
And out of it the runners, so we're told,
Landed rich cargoes in a rebel state.

5.
In Zululand as well as Afghanistan,
The oppositionists are pleased to say
This is our policy, and when they can,
They thwart the Government in every way.

6.

METEOROLOGICAL REPORT

FOR WEEK BEGINNING FRIDAY, OCTOBER 3RD, 1879,
Observatory of Daigaku, Moto-Fujimicho Hongō, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.

Light Continuous line—max. & min. Thermometers.

Dotted line—represents velocity of wind.

.....percentage of Humidity.

Max. velocity of wind, 13 miles per hour on Tuesday, 11 a.m.

The barometer is reduced to the freezing point and to the level of the sea.

There was a steady rise in the barometer from Wednesday of last week, to Saturday, the second day of the record for this week, on which day it reached the highest average for the year, up to this time, that of 30.45 inches. From this point, however, a rapid decline brought it down to 30 inches, about which it has since fluctuated. The lowest minimum temperature reached since the winter months, was that of Sunday being 50°. Only one "fair" day is reported for the past week.

SHIPPING INTELLIGENCE.

INWARDS.

Oct. 5, Japanese steamer *Tsuruya Maru*, Steadman, 661, from Kobe, Mails and General, to M. B. Co.
Oct. 4, British barque *Claverhouse*, Parsons, 386, from Newchwang, Beans, to Chinese.

Im

COMMERCIAL INTELLIGENCE.

IMPORTS.—A good business has been done in *Cotton Yarn* during the past week, nearly all for arrival at end of the year. Prices have given way slightly, but close steady as annexed. In other articles little has been done, although a better feeling is now apparent, which may be further developed should the present movement in silk lead to greater steadiness in *kansatsu*.

COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$26.00 to 32.25
" " Good to Best ... "	\$32.50 to 33.75
Bombay, No. 20 No. ... "	\$28.50 to 30.50
Nos. 28 to 32 Common to Medium ... "	\$35.25 to 36.50
" " Good to Best ... "	\$37.00 to 37.75
" 38 to 42 ... "	\$36.00 to 37.50

COTTON PIECE GOODS:—

Grey Shirtings:—7 lb. per piece 28½ yds. 39 in.	\$1.60 to 1.90
" " 8½ lb. " 38½ " 39 in.	\$1.90 to 2.25
" " 9 lb. " 38½ " 45 in.	\$3.25 to 2.62½
T. Cloths:—7 lb. ... 24 yds. 32 in. per piece	\$1.40 to 1.65
Drills, English: 14-15 lb. 40 " 30 in.	\$2.40 to 2.87½
Indigo Shirtings:— " 13 " 44 in.	\$1.65 to 1.80
Prints:—Assorted... " 24 " 30 in.	\$1.60 to 2.20
Cotton Italian & Salsena Black 32 in.	\$0.11 to 0.14½
Turkey Reds: 2 to 2½ lb. 24 yds. 30 in.	\$1.40 to 1.55
Do. 2½ to 2½ lb. 24 " 30 in.	\$1.60 to 1.70
Do. 3 lb. ... 24 " 30 in.	\$1.80 to 2.00

COTTON PIECE GOODS:—Continued.

Velvets:—Black ... 35 " 23 in.	\$7.25 to 8.75
Victoria Lawns:— " 12 " 42/3 in.	\$0.77½ to 0.80
Taffetaless:— " 12 " 43 in.	\$1.75 to 2.05

WOOLLENS:—

Plain Orleans ... 40-12 yds. 32 in.	5.50 to 6.75
Figured Orleans ... 29-30 yds. 31 in.	4.00 to 5.10
Lastings ... 29-30 yds. 31 in.	10.00 to 10.25
Italian Cloth ... 30 yds. 32 in.	0.24½ to 0.31½
Camlet Cords ... 29-30 yds. 32 in.	4.00 to 5.00
Mousselines de Laines:—Crape 24 yds. 20 in.	0.17½ to 0.18
do. Itajima 24 yds. 30 in.	0.23 to 0.26½
do. Yuzen 24 yds. 30 in.	0.35 to 0.45
Cloths, all wool plain or fancy... 48 in. to 52 in.	0.80 to 1.50
Pilots ... 54 in. to 56 in.	0.45 to 0.65
Presidents ... 54 in. to 56 in.	0.60 to 0.70
Union ... 54 in. to 56 in.	0.35 to 0.60
Blankets, green 6 to 8 lbs ... per lb.	0.35 to 0.40

SUGAR.—The *Anna*, reported in our last as loading for here, put into Amoy on the 24th ultimo, in distress and was discharging her cargo there. Our market is firmer than ever and stocks are only some 18,500 piculs.

Sugar:—Tahoe in bag ... per picul...	\$5.85 to \$5.95
" " in basket ... "	\$5.20 to \$5.50
Taiwanfuo in bag ... "	\$5.85
do. in basket ... "	\$5.60
Ching-pak and Ke-pak ... "	\$8.00 to \$9.25

China No. 4-5 Kongfun & Kook-fah, per picul	\$2.36.50 to \$3.00
Daitong ... "	\$4.10 to \$4.50
Japan Rice ... "	\$2.50 to \$3.10
Kerosene Oil ... "	\$1.87½ to \$1.80
Newchwang Peas ... "	\$2.20 to \$2.25

KEROSENE.—The large stocks are beginning to make themselves felt, and prices in Tokio are very weak. Any attempt to force sales would be followed by a heavy fall in rates here.

EXPORTS.

SILK.—A very large business has been done during the past week. Prices of Hanks have advanced and close exceedingly firm at the quotations given below.

Filatures have been in good demand, but Kakedas remain totally neglected.

Settlements:—900 bales Hanks, 15 bales Kakedas, and 270 bales Filatures.—Total 1,185 bales. Arrivals 575 bales. Stocks 4,700 bales.

	In London at 3/9½. per lb.	In Lyons at fr. 4.80. per kilo.		In London at 2/9½. per lb.	In Lyons at fr. 4.80. per kilo.
Hanks,—Superior, nom. ...			Kakeda,—Extra ...		
" Best ...	\$580 to 620 19 8	to 20 11 fra. 54½ to 58	" Best ...	\$690 to 700 23 20 to 23 6	fra. 63½ to 64½
" Good ...	\$580 to 620 19 8	to 20 11 fra. 54½ to 58	" Good ...	\$670 to 690 21 7 to 22 2	fra. 60 to 63
" Good Medium ...	\$560 to 570 18 9	to 19 4 fra. 52 to 54	" Medium ...	\$610 to 650 20 8 to 21 11	fra. 55 to 58½
" Medium ...	\$520 to 540 17 9	to 18 5 fra. 49½ to 51	" Common ...		
" Common, Inferior ...	\$300 to 510 17 2	to 17 6 fra. 47½ to 48½	Filatures,—Extra ...		
Oshius,—Good ...			" Best ...	\$660 to 720 22 3 to 24 2	fra. 61 to 67
" Medium ...			" Good ...	\$620 to 640 20 11 to 21 7	fra. 57½ to 59

TEA.—Activity in the Tea market still continues, and prices show an advance of about \$1 to \$2 per picul on all classes, supplies come in very irregularly, the Japanese evidently keeping stocks in Yokohama at low level. The market closes firm at following quotations.

Common ...	\$20 & under	Fine ...	\$33 to 35
Good Common ...	\$24 to 25	Finest ...	\$36 to 39
Medium ...	\$27 to 29	Choice ...	\$40 to 45
Good Medium ...	\$30 to 32		

SHIPPING.

The *S.S. Loudoun Castle* is under despatch for New York via Kobe and Shanghai.

The *Lord of the Isles* and *Junma* have been taken up for coals and the former has left for Nagasaki; and freights on the coast have a decidedly firmer tendency.

The *Bon Accord* leaves for Kobe on Tuesday. The *A. Reimers* and *Nateshda* are under despatch for Chosoo. The destination of the *Alex. McNeil* is yet uncertain, but she is reported as going South. Other ships in port are discharging.

W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the *standard* of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loundene, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouse, Nos. 1 to 5, North-Western Goods Station, and Bonny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

NOTICE TO MARINERS.

No. 1 of the 12th Year of Meiji, (1879.)

KODO NO SIMA BUOY.

AOGI SETO, INLAND SEA.

THE GOVERNMENT OF JAPAN hereby give notice that a Buoy has been moored to mark the sunken rock north of Kodono Sima in the Aogi Seto, the northern passage between Misima Nada and Bingo Nada.

The Buoy is moored immediately to the northward of the rock, in $4\frac{1}{2}$ fathoms of water at low water; on the highest point of the rock, which is of very small area, there is only 10 feet of water at low water of lowest spring tides.

The Buoy is painted Black and white horizontal bands, and surmounted by a cage which stands 10 feet above the water.

The following bearings are taken from the Buoy.

Centre of Kanasima (Single tree)...N. $41^{\circ} 15'$ W.

Eastern extreme of Matsu Sima.....N. $37^{\circ} 45'$ E.

Eastern extreme of Kodono Sima...S. $1^{\circ} 15'$ E.

Bearings true. On the English Admiralty chart No. 132, $2\frac{1}{2}$ fathoms is given as the shallowest water on the rock.

KEATING'S COUGH LOZENGES,

COUGHS,

ASTHMA,

BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges contain no opium nor any deleterious drug, therefore the most delicate can take them with perfect confidence. Their beneficial effect is speedy and certain. The old unfailing family remedy is daily recommended by the most eminent Physicians. (In use nearly 60 years).

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.

Sir,—Your Lozenges are excellent, and their beneficial effects most reliable. I strongly recommend them in cases of Cough and Asthma. You are at liberty to state this as my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Mr. T. KEATING,

Indian Medical Service.

Dear Sir,—Having tried your Lozenges in India, I have much pleasure in testifying to their beneficial effects in cases of Incipient Consumption, Asthma and Bronchial Affections. I have proscribed them largely, with the best results.

W. B. G.—, Apothecary. H.M.S.

KEATING'S COUGH LOZENGES are sold by all Chemists, in bottles, of various sizes, each having the words "KEATING'S Cough Lozenges" engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.—SOLD IN BOTTLES BY ALL CHEMISTS.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I ordered the dragoman Mahomet to inform the Fakay that I was a Doctor, and that I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World
May 17th, 1873.

THE LOOCHOO QUESTION.

II.

IT is not our intention to recite in detail the historical and semi-historical scraps of information relating to remote ages which have been brought to light by one side or the other in the discussion of the present question; still less the attempt to settle the disputed point of actual priority in their relations with Loochoo between the rival claimants. As to this, there is no doubt but that both countries have from very early times held some kind of intercourse with the islands. Reference is made to the existence of intercourse on the side of China as early as 589 A.D. after which time, however, there is apparently a blank of nearly 800 years. While, on the Japanese side, the old chronicles abound with mention of intercourse with places, which later historians have identified with the present Loochoo, in times equally or even more remote; and (to pass these by) in the 8th century of our era several instances are to be found looking like acts of sovereignty exercised by the Emperors of Japan over what are undoubtedly the same islands. Indeed, a circumstantial account is given of the appointment of a Commissioner in 735 A.D. by the government of the southernmost of the main islands of Japan (now known as Kiushiu) to go to Loochoo for purposes distinctly administrative: whilst, an entry is found, in an official record, of the exercise a century later of jurisdiction over the islands by the same Government and the receipt by it on behalf of the Imperial Government of tribute from them. It is also claimed, on the authority of many old works, that the hereditary chieftains of the islands are descended to this day from a scion of the

Imperial House—a political refugee who is said to have founded a family there in the middle of the 12th century.¹ But these are matters of antiquarian rather than of practical interest, nevertheless they have been treated as of some importance in the diplomatic correspondence, in the course of which it has been necessary on the Japanese side to adduce evidence of this nature, to refute an assertion made on the part of China, that Japanese authority in Loochoo was exercised for the first time at the close of the 16th century. Before passing, however, to that period of history which is really epochal and has practical political significance at the present day, attention must be briefly directed to some circumstances of the general history of the islands, such as their geographical position and the race, language, &c., of their inhabitants, which are also not without a bearing upon the main question.

Loochoo forms the extreme group of a chain of islands extending, at irregular intervals, in continuation of the south-westerly point of Japan proper—by which is meant, the main islands. This point is as nearly as possible on the 31st parallel of north latitude, and the islands forming Loochoo extend from the 29th down to the 24th parallel, running also in a westerly direction to about 8 degrees of longitude from the same point of the main islands. There are 37 islands in all, of various sizes, the united area of which is but insignificant. The population, which at the present time numbers 160,000, is ethnically almost identical with that of the main islands: and their manners and customs as well as their religion (which is Shintô, a religion indigenous and confined to Japan) are exclusively Japanese. The personal characteristics of the people are, in a conspicuous degree, those which have always so struck travellers as belonging to the Japanese—a gentleness and suavity of manner and bearing: but if the early histories are to be believed such was not always the case.²

They have for several centuries been accustomed to reckon time according to the Chinese calendar: but their

1. The story is that, in A. D. 1156, Minamoto Tametomo, a descendant of the Imperial family of Japan, flying from the pursuit of his foes, at length reached the Loochoo group, where he married the sister of the chief; and the offspring of this marriage, Shunten-O, became chief in the year 1187. His grandson, Gihon, abdicated, and returned into the mountains: but the line was restored more than 200 years later (the chronicles say "260 years after the foundation of the dynasty by Shunten-O") in the person of Shoyen—the undisputed founder, or restorer, of the present line—who according to some authorities of respectable antiquity was descended from Gihon. This descent is denied by the Chinese; and, though in denying it they have taken bad ground—overlooking their own official annals and referring to works of no authority—yet the evidence in support of the lineage is certainly not of the strongest. For the purpose of practical politics to-day the point is more remote and less important (as involving no legal principle) than an inquiry into the claim of our own Edward III. to the Crown of France.

2. It was left on record by a Japanese Buddhist priest, named Chisho, who was storm-driven to the islands on his way to China in 853 A. D., that the inhabitants were cannibals: and the same charge, and others, of piratical and savage conduct, are made against them in the Chinese history of the Sui dynasty (A. D. 589-617.) The completeness of the change may perhaps be attributed to the prohibition of the possession of arms (which in turn may itself be accounted for by the recognition of their former characteristics) laid upon them by their Japanese Masters at the close of the 16th or beginning of the 17th century.

language, both written and spoken, is (allowing for differences of dialect, by which is meant not only differences of pronunciation, but the retention of words in one dialect that have become obsolete in others) identical with ordinary Japanese, of which it is said, on good philological authority, to be not a corruption but a genuine variety. The written language differs, as in Japan proper, from the spoken dialect; and the syllabary consists of the same 48 characters as the ordinary Japanese. In literary composition the Loochoosans, like the Japanese, usually adopt a combination of Chinese characters with those of the Japanese syllabary; in which case the construction as well as the pronunciation of the Chinese part is such as to be, equally with the Japanese part, unintelligible to a person acquainted with Chinese only: but there are, with both, occasions when pure Chinese is written.³

The period at which the relations of Loochoo with its powerful neighbours first assume practical importance, as facts of political history, commences with the last quarter of the 14th century, when China began to exercise a real influence in the islands. The actual event of importance which occurred at this date (1372 A.D.) was the detachment of thirty-six Chinese families from the province of Fukkien to reside in Loochoo: the avowed and real object of this mission was to facilitate and encourage trade and navigation between China and Loochoo. The effect and influence upon the future course of events of this Chinese immigration will appear subsequently to have been great. These families brought with them to Loochoo the Chinese civilization; and, as their young men, together with others belonging to some of the native nobles of Loochoo, were educated in the colleges of China, being conveyed and left there by the frequent embassies proceeding to Peking, it is to them that the continuance of Chinese learning and of the use of the Chinese calendar is to be attributed. They formed the nucleus of the literary class; and their members frequently filled some of the highest official posts, and their influence was naturally exerted in fostering political relations between China and Loochoo.⁴

At the same time too this movement on the part of China to draw Loochoo into more intimate relations with itself was further assisted by the acceptance from its rulers of complimentary gifts, which afterwards grew to be a customary office and was regarded by China, as it was probably also to some extent intended, by Loochoo, as the payment of tribute from a vassal.

That Japan also had a substantial footing on the islands

3. The allusion is made on the Chinese side to the fact that the Treaties between Loochoo and some of the foreigners, in 1854-5, (to which further reference will be made in another convention) were framed in pure Chinese. Now, apart from the explanation of this to be found in the presence of the Chinese speaking officials in the government of Loochoo (to be shortly noticed), there is another explanation which deprives the circumstance of any value for the purpose for which it is put forward. Acquaintance with Chinese is the mark of a scholar in the Far East; and in fact, from its position as the literary language, in which it compares with Latin in the middle ages of Europe, it has also been, like French in the West, the language of diplomacy. When the Dutch first came to Japan, Chinese was the medium of communication: so also in negotiations with Russia about the question of the northern boundary in 1807 and again in 1852. Moreover, when Commodore Perry came to negotiate his treaty with Loochoo, at the time alluded to, the draft which he proposed was itself written in Chinese.

4. Seven of these families are still remaining, a distinct class. They have always resided, together with certain Loochoosans of the *munran* class, who may be called their 'disciples,' in a separate village called Kame-mura, on the main island of the group. All intercourse with China was carried on through their instrumentality: and all the members of this body, including the Loochoosan element, used two distinct names: thus besides the names by which they were known at home and to Japanese, the Loochoosan members had also what they called their 'Chinese name,' used exclusively for purposes of intercourse with China. So also with the government officers and officials generally: their actual and usual names were identical with those of their Japanese prototypes; but for purposes of Chinese intercourse they had also Chinese names affixed to them.

at or about the same period is shown by the circumstance that not much more than half a century later we find them being practically dealt with by her as an actual territorial possession—being conferred in the year 1441 by the Shōgun, Ashikaga Yoshinori, upon Shimadzu Tadakuni, the reigning prince of Satsuma, and the islands at this time became, and there is sufficient historical evidence to prove that they were thenceforward treated, as a dependency of the powerful house of Satsuma.

But though the nail was thus driven home in the middle of the 15th century, it was not till the close of the 16th that it was finally clinched. During the intervening period the allegiance of the chieftains of Loochoo to their feudal lords, the Shimadzu princes had, owing no doubt to the influence of the Fukkien families, been wavering and only half recognized. When Toyotomi Hidēyoshi (more commonly known by his title of 'Taiko') was contemplating his famous invasion of Corea, which he carried out in A.D. 1592, Loochoo was called upon to furnish, in fulfilment of feudal obligations, a contingent of stores and provisions for the expeditionary force. The imperfect fulfilment of this duty (for the summons, tho' not actually disobeyed, was only partially responded to) was the cause which led shortly afterwards to the complete subjection of the islands to the active and immediate control of the representatives of the Emperors of Japan. For, by the order of Iyēyasu, the first Shōgun of the Tokugawa line, Shimadzu Iyehisa, prince of Satsuma, despatched a force to reduce the islands to obedience and the result of this expedition was the complete subjugation of the people, and the submission of the chieftain, Shonei; who, together with the members of his Council, was conveyed to Yedo as a prisoner of state. The hitherto precarious over-lordship of Satsuma now gave place to a new order of things in the *bona fide* exercise of dominion: the whole administration was reformed and brought under the immediate control of Satsumese officials; the lands were re-surveyed, and the scale of taxation adjusted accordingly; and, after this time, the revenue from Loochoo was formally included, and recognized by the Shōgun, as a part of the general revenue of the province of Satsuma.⁵ The public institutions of the country too were assimilated to a greater degree than formerly to those of Japan proper; and a general ordinance looking in the same direction was afterwards issued, forestalling the natural tendency of things to lapse into the old grooves. New laws were enacted; amongst which was one, already referred to, prohibiting the possession of arms, by any but the official classes. A special ordinance also was drawn up, which the chieftain and his council (who from Yedo were subsequently conveyed to Kagoshima, the castle-town of Satsuma, and there detained for a space of three years), were called upon to subscribe to and observe: and it was only upon binding themselves by a solemn oath to observe this ordinance that they were allowed to return to their homes.⁶ The feudal dependence of Loochoo upon

5. The total yield of the revenue-land of the Shimadzu princes after this time, was, according to the official list, 720,000 *koku*; and in this amount was included 123,000 *koku*, the yield of Loochoo under the new survey. This amount of 123,000 included the yield of the island of Ōshima, off the coast of Satsuma, which at this period formed politically one of the same group as Loochoo proper, though subsequently placed by Satsuma under a different administration. Out of this total of 123,000, a portion representing 88,000 *koku* was assigned to the Chieftain, Shonei, from which to draw his revenue; the remainder paying revenue direct to Satsuma: and the Shimadzu princes, besides the balance so payable, received also from the Chieftain, out of the income derivable from the 88,000 *koku* specially assigned to his share, an annual aid of 8,000 *koku*, representing probably about one-fifth of the Chieftain's actual income from the above source.

6. The text of the ordinance and oath is given on page 1,385. It is on record that Shana-Oyakata, one of the three members of the Council, who belonged to the Fukkien families, and who had, shortly before, given private information to the Chinese Government of Hideyoshi's preparations for the invasion of Corea, refused

Satsuma was formally acknowledged in these oaths as being of ancient date: and, although this declaration, coming as it did from persons under duress, should not be allowed much weight as an admission regarding the past, yet the evidence points to its truth; and the validity of these oaths in their bearing upon the future is unaffected at this day by the circumstances in which they were exacted. But, however loose the bond of dependence hitherto, the complete subjection of these islands and their actual reduction into the territorial possession of Japan at the time we are now speaking of is undisputed: and from that day to this they have (as we shall see) been treated and governed as an integral part of the empire.

EXTRA-TERRITORIALITY IN JAPAN.

WHATEVER views individuals may entertain respecting the English theory of criminal extra-territoriality in Japan, there can, we think, be no serious question as to the actual position of the British Government itself regarding that subject, judging by its legislative acts and official declarations. We have seen that neither the China and Japan Orders in Council nor the Foreign Jurisdiction Acts upon which they are based, warranted the conclusion that Great Britain assumes the right of exclusive extra-territorial power and jurisdiction over its subjects in Japan; and nothing therein contained, when rightly understood, can be construed to imply an assumption by the British Crown of any power or jurisdiction in Japan, derogatory to or inconsistent with the full and free exercise by the Sovereign of Japan of his original inherent power to define and prohibit by general law all crimes and offences by whomsoever committed, within the territorial limits of his empire.

The British Government in transmitting to Her Majesty's Consuls in the Levant, China, Japan and other countries in which extra-territorial jurisdiction is conferred by treaty, the Orders in Council authorizing them to exercise their respective jurisdictions, has indicated the nature and limit of those jurisdictions and the manner in which they are to be exercised with such clearness and accuracy as to leave no room for doubt regarding the British theory, as to the ground upon which all claims of private extra-territoriality are founded. The instructions of Her Majesty's Government to her Consuls in the Levant, China and Japan, have been in each case almost identical, and are in substance as follows:—

"The right of Consular officers to exercise any jurisdiction (in Japan,) in matters which in other countries come exclusively under the control of the local magistracy, depends originally on the extent to which that right has been conceded by the (Tycoon of Japan) to the British Crown and therefore the right is strictly limited to the terms in which the concession is made."¹

There can be no mistake about the meaning of these plain words. They distinctly imply that the British Government lays no claim to any power or jurisdiction whatever in Japan, except such as has been conferred upon the British Crown by the express terms of the treaty; and that whatever power or jurisdiction the British Government may exercise over its subjects within the dominions of Japan, is strictly limited by the terms of the treaty, which alone originally conferred that jurisdiction. The treaty, and that alone, must be looked to for the purpose of ascertaining the extent and limit of the power and jurisdiction of Great Britain over her subjects in the dominions of Japan. And no power or jurisdiction is to

to sign the prescribed oath, and was in consequence beheaded as a traitor at Kagoshima.

¹ Instructions of the British Foreign Office to Her Majesty's Consuls, Turkey, China, Japan and other countries, British Consular Manual, Ch. IV. p. 145, 146, 229, 230; Phillimore's International Law, Vol. II. Ch. V. p. 314; Fynn, p. 174-8.

be assumed as granted, unless the terms of the treaty plainly and expressly concede such jurisdiction.²

We have before seen that the Orders in Council confer upon Her Majesty's Minister a certain legislative power over British subjects in Japan. We have endeavored to point out that such power was not intended to conflict with, to deny, or to usurp the general legislative power of Japan; that it was on the contrary *in aid of the treaty merely*, and that its sole object and intent was, to duly empower Her Majesty's Consuls, in the exercise of the judicial authority conferred upon them thereby, to take cognizance of, try, and punish all unlawful acts committed by British subjects in Japan, against Japanese subjects or the subjects or citizens of other countries.

It appears, however, that Her Majesty's Minister in Japan does not so understand the spirit and intent of Her Majesty's Orders in Council.

The American Minister in his despatch No. 151, to the Secretary of State, regarding the "Shooting Regulations" of Japan states, that Her Majesty's Minister had intimated to him, "that the Government of Japan could not enact laws for the Government of British subjects without the approval of the British Representative: in other words, the laws passed by Japan, were not to be observed, nor regarded as obligatory, by British subjects, save when promulgated or approved by the British Representative in the form by him adopted."³ Precisely the same view has subsequently been put forward by Her Majesty's Minister regarding the Quarantine Regulations of Japan. In his official communications to the Japanese Minister for Foreign Affairs, touching the subject of quarantine, His Excellency distinctly affirmed, that no regulations or laws which Japan might enact, could be enforced against British ships or subjects, unless such regulations or laws first received his "sanction,"⁴ and that, "If the Government of Japan wished to render its Quarantine Regulations obligatory on British ships and subjects, it should invoke the assistance of Her Majesty's Government for that purpose," and further, "That his duty required of him to be satisfied of the propriety," of the Quarantine Regulations of Japan; "before he could consent to their being enforced in the case of British subjects."⁵

There can be no mistake as to the meaning of those declarations. They are an emphatic and complete denial of the right of the Japanese Government to define or prohibit by law any offence whatever, committed by British subjects in Japan; and if the assumption declared is well founded, it follows of necessity that British subjects here are entitled to the same privileges and immunities, as they would enjoy if Japan were indeed a "ceded or conquered territory."

In giving official utterance to these declarations, the British Minister thought fit,—as was only natural and proper,—to place on record the reasons upon which he based his assumption. He endeavoured also,—as was equally natural and proper,—to support his views by certain well understood rules of public law. Let us then consider with all due fairness and candour, the arguments by which the British Minister endeavours to justify his assumption, and if possible discover whether they are indeed grounded in right reason or supported by any acknowledged principle of public inter-

³ Dipl. Cor. U. S. 1875, p. 773.

⁴ Substantially the same view was expressed by the German Minister in Tokio, in his correspondence with the Foreign Office of Japan in regard to the *Hesperia*, published in the *Japan Daily Herald*, Mail Summary, of August 12th, 1879.

⁵ Despatches of the British Minister at Tokio, to the Minister for Foreign Affairs of Japan, regarding the enforcement of the Japanese Quarantine Regulations, Oct. 1878; and letter of instructions of Her Majesty's Minister to Delegate Wilkinson read before the "Quarantine Commission of Japan," MSS. 1878.

national law. The main ground upon which he bases his assumption, he states as follows :—

"According to the treaty British subjects are to be tried and punished by a British tribunal according to the laws of Great Britain; and according to the laws of Great Britain, a British Court will take no cognizance of the penal laws of any other country."

This, it must be remembered, is given as the reason why, in the opinion of the British Minister, the quarantine laws of Japan, cannot be regarded as obligatory upon British ships or subjects, and consequently cannot be enforced against them by British tribunals. Now, it is very true, as stated by him, that as a general rule, the courts of one nation are not bound to take cognizance of the penal laws of another nation. But this rule of public law is based upon another rule equally obligatory, and in fact forms a part of it, viz: That crimes are altogether local, and are cognizable and punishable exclusively, by the courts of the nation within whose territory they are committed; and hence the courts of one nation are not bound to and usually do not take cognizance of crimes or offences committed within the territory of and against the penal laws of any other nation. But in Japan this order of things is entirely reversed. The courts of Great Britain are authorized by treaty stipulation to try and punish crimes committed by British subjects within the territory of Japan. *The conditions being reversed, the rule depending upon those conditions, is reversed also.*⁷ The British tribunals take the place of Japanese tribunals, and in doing so, it becomes their duty to try, and punish British subjects for the precise offences, which in the absence of any treaty provision, the courts of Japan would have been entitled to try, and punish. The only difference being that British tribunals are authorized by the terms of the Treaty to try, and punish British subjects for the commission of crimes and offences in Japan according to the laws of Great Britain: that is, to try them according to the forms and methods of proceeding, and to inflict upon them the measure of punishment prescribed by British laws.

"It is a general principle," says Lord Stowell, "that each treaty is a part of the private law of every nation which enters into that treaty, and is as binding as any of their municipal laws."⁸ Now, when the British Minister asserts that "according to the laws of Great Britain, a British court will take no cognizance of the penal laws of any other nation" he entirely overlooks the essential fact that Great Britain has entered into treaties with other countries, and that those treaties are just as binding upon British courts, as any law of England. He appears to be unmindful of the fact that the courts of his country are bound to, and that they do take cognizance of the penal laws of other nations, every time they surrender a fugitive from justice, upon a writ of extradition. It would be wholly impossible, as every one must perceive, for the Government of Great Britain to fulfil the obligations imposed upon her, by virtue of the provisions of her extradition treaties with other nations, unless British courts took cognizance of the penal laws of those nations, to the extent contemplated by the treaties with those nations.⁹ And for the same reasons, it would be impossible for Great Britain to fulfil her treaty obligations to Japan, unless her courts took

cognizance of the penal laws of the Empire to the extent contemplated by the treaty.

Thus we see, that the treaty, by express provision, contravenes and renders inapplicable the very rule of law upon which the British Minister seeks to rest his assumption; upon the well understood maxim of Lord Coke :—"Ratio est legis anima, mutata legis ratione mutatur et lex."¹⁰

Let us examine the next and final ground upon which the Minister endeavours to rest his assumption. "It was," says he, "the clear intention of the treaty, that British subjects should not be deemed guilty of any offence for any act which might be deemed an offence by the laws of Japan, unless it were also an offence by the laws of Great Britain."

Hence he concludes that Japan can enact no law or regulation that can be binding upon British subjects unless such law has first received his sanction.

A recent English writer on diplomacy asserts that as a general rule, "no living man is ever able to explain the meaning of an Ambassador's despatch, except a Minister interrogated in the House of Commons: and then it is not always easy to determine which is most obscure,—the despatch, or the explanation." We must do Her Majesty's Representative in Japan the justice to acquit him of any obscurity in his conclusions at least. The most prominent and convenient feature of his argument just quoted is, that it takes for granted everything in dispute; and hence the conclusion at which he arrives is fairly clear. The only argument, however, which it contains consists in His Excellency's *ipse dixit*. He asserts that so and so was the "clear intention of the treaty," and therefore he draws the conclusion stated by him. But how does he establish the premise upon which all his conclusions rest? Upon what facts, or by what mode of reasoning, does he feel justified in assuming that the treaty clearly intends what he says it does? These questions he has left in such dense diplomatic obscurity, that we imagine even Her Majesty's Minister for Foreign Affairs might find it difficult to explain them to the satisfaction of the House of Commons if he were called upon to do so.

With all due respect for so high an authority, we must say we can find nothing in the treaty to warrant the conclusion that it was ever intended thereby that British subjects should not be deemed guilty of any offence for acts committed by them in violation of the laws of Japan unless such acts were also offences by the laws of Great Britain. The treaty certainly does not say so, and we are wholly at a loss to understand by what mode of reasoning Her Majesty's Minister is led to infer that it ever intended anything of the kind. On the contrary we think that it was clearly the intention of the treaty, that British subjects should be deemed guilty and should be punished for all offences committed by them in violation of Japanese laws, as long at least as those laws do not conflict with any treaty right. If the reader will turn to Article IV. of the convention concluded between Great Britain and Japan at Nagasaki, on the 14th October 1854, he will find the following :—"British ships in Japanese ports shall conform to the laws of Japan. If high officers or commanders of ships shall break any such laws, it will lead to the ports being closed. Should inferior persons break them, they are to be delivered over to the commanders of their ships for punishment."

Sir Edward Herstlet, commenting on this article says that according to its provisions, "British ships and subjects in Japanese ports shall conform to the laws of Japan," and he adds that, "all this is as it should be."¹¹ Now it does ap-

pear to us that Sir Edward's conclusion is just such a one as most persons would arrive at from reading that article of the treaty. And we scarcely think any one will deny that the Quarantine should be about the last law that British ships or subjects ought to be permitted to disregard. It is not so "clear" then, as Her Majesty's Minister appears to suppose, that it was the intention of the treaty that British subjects should not be deemed guilty of any offence for violating Japanese laws, unless those laws first receive his sanction. If it were merely intended by this assertion that no act committed by a British subject in violation of Japanese law, could be punished by a British court, unless the laws of Great Britain first authorized and empowered the court so to do, we would entirely assent to the proposition. No one contends that British courts in Japan, in the exercise of the jurisdiction conferred upon them originally by treaty can punish any offence committed in Japan, unless authorized to do so by British law. But that fact has nothing whatever to do with the intention of the treaty. It only shows that in accepting jurisdiction over her subjects in Japan, it becomes the duty of the British Government to duly empower her courts in Japan, to try, and punish offences committed by British subjects against Japanese laws, as the treaty provides. As before stated, we think that Government has amply done this. It would be a strange doctrine indeed if the British Government, after making a solemn treaty promise that its ships and subjects in Japanese ports should conform to the laws of Japan, and after promising likewise to punish them for all offences committed by them in the country, should turn round and refuse to fulfil those obligations unless Her Majesty's Minister has first deemed it expedient or desirable to sanction the laws of Japan, which have been violated.

EDUCATION IN EUROPE AND JAPAN.

V.

THERE has been in the last quarter of a century an immense impetus given to the subject of Primary Instruction. Since the time of Lancaster and Bell, the progress has been going forward. Their system of teaching in classes was a great advance in economizing the labour of the instructor, and giving vigour and emulation to the pupil. It was soon perceived that forty or fifty boys could be taught simultaneously with almost as much ease as five or ten. The system received great development in America, where schools for primary teaching have attained the highest perfection. So too in England, in the British schools and the National schools, remarkable progress was made; the monitorial system produced some beneficial results, for by it a school of 100 or 200 boys could be managed by one schoolmaster. The more recent modification of that plan, which gives aid to the master by apprentice pupil-teachers, whose efforts are rewarded by a small payment in their noviciate, and the special instruction of the master, out of school hours, affords a means of training teachers for the same class of schools, and forms a preparatory course for the Normal Training College in which they are perfected and from which they receive their certificates of competency. In order, however, to obtain intelligent pupil-teachers of a good class, it is found necessary to offer some substantial inducements, as so many more lucrative employments offer themselves to intelligent boys.

The system of Government Inspectors, who travel round a district allotted to them, and report concerning the progress of the pupils, their conduct and intelligence, also on the efficiency of the teaching and general management of the school, is bearing much good fruit. These men are selected not from petty officers or decayed

schoolmasters, but are men of high culture and university standing. They look not merely upon the outside of things, but compare the progress of schools in their districts from year to year—for they remain ten or more years in the same localities—and having a keen eye to the efficiency displayed by the masters, and the intelligence with which they teach, are able to form useful generalizations on the whole subject, which are of the greatest value to the Board of Education by whom they are deputed.

So much for the historical part of the subject. The practical side of popular education presents some difficulties, about which there are many opinions. Those who look to a mere perfunctory performance of duties, so many subjects learnt, so many lessons recited—so many books gone through—consider these difficulties trifling if the proper machinery be set to work. Those who aim at instilling a love of learning, a taste for study, at sowing the seeds of a great intellectual power,—and laying the foundation of a sound education—know that the difficulties are very considerable, though not greater than can be overcome by a judicious system of drawing out the mind as well as exercising the memory, of insisting on accuracy and depth instead of superficiality, of demanding rapidity of action in the pupil's mind, instead of a mere cunning and droning over his lessons. At every step the intelligence must be drawn forth. As an Alpine traveller who makes sure his foothold ere he proceeds, so the pupil must have his mind firmly take hold of each fact, and there must be a connexion of facts in order that he may successfully reach his desired goal.

If education indeed were a work that could be begun and ended in the short period of our school days and college days; if the cramming of facts and dates and names and rules constituted the whole of education, the mechanical process might be sufficient, and the scholar might go forth into the world well armed for the conflict, he might enter into its busy life with confidence in the success of his labours. Unfortunately for such opinions the practical work of the world requires something more. Education must go on through life, and in proportion as its beginning is well established, in that proportion will it proceed with security. How many mere scholars are eclipsed in after life and in the conduct of affairs by the man who has learnt to think in his childhood and has received with his early training the germs of a true education. He is marked as the man of common sense, who is not to be deceived by the appearances of things, who knows when a rule must be relaxed, and who can adopt himself and his duties to the ever varying circumstances of his life.

Education of this kind should be begun in the common school, it should be continued in the higher school, and it should be perfected in the university. It is of universal application, and is therefore nowhere out of place. It contains the elements of intellectual as well as moral progress; it is based on the natural powers and therefore has in itself the rudiments of life and growth. Having its development begun, it naturally progresses and produces the fruits of sober and sound judgment. The object of a university according to the great Schelling, is to be productive. "*Lerne um productiv zu werden.*" Facts are to be learnt but with the further object of producing results and attaining power, to reproduce, to utilize, to invent, and in every way to improve all the natural faculties. With regard to the practical ends and aims of the university they are threefold, they contemplate the improvement of the community in manners—ethics,—in the arts of civilized life;—in political freedom—in government. Hence there are three departments in university

national law. The main ground upon which he bases his assumption, he states as follows:—

"According to the treaty British subjects are to be tried and punished by a British tribunal according to the laws of Great Britain; and according to the laws of Great Britain, a British Court will take no cognizance of the penal laws of any other country."

This, it must be remembered, is given as the reason why, in the opinion of the British Minister, the quarantine laws of Japan, cannot be regarded as obligatory upon British ships or subjects, and consequently cannot be enforced against them by British tribunals. Now, it is very true, as stated by him, that as a general rule, the courts of one nation are not bound to take cognizance of the penal laws of another nation. But this rule of public law is based upon another rule equally obligatory, and in fact forms a part of it, viz: That crimes are altogether local, and are cognizable and punishable exclusively, by the courts of the nation within whose territory they are committed;⁶ and hence the courts of one nation are not bound to and usually do not take cognizance of crimes or offences committed within the territory of and against the penal laws of any other nation. But in Japan this order of things is entirely reversed. The courts of Great Britain are authorized by treaty stipulation to try and punish crimes committed by British subjects within the territory of Japan. *The conditions being reversed, the rule depending upon those conditions, is reversed also.*⁷ The British tribunals take the place of Japanese tribunals, and in doing so, it becomes their duty to try, and punish British subjects for the precise offences, which in the absence of any treaty provision, the courts of Japan would have been entitled to try, and punish. The only difference being that British tribunals are authorized by the terms of the Treaty to try, and punish British subjects for the commission of crimes and offences in Japan according to the laws of Great Britain: that is, to try them according to the forms and methods of proceeding, and to inflict upon them the measure of punishment prescribed by British laws.

"It is a general principle," says Lord Stowell, "that each treaty is a part of the private law of every nation which enters into that treaty, and is as binding as any of their municipal laws."⁸ Now, when the British Minister asserts that "according to the laws of Great Britain, a British court will take no cognizance of the penal laws of any other nation" he entirely overlooks the essential fact that Great Britain has entered into treaties with other countries, and that *those treaties are just as binding upon British courts, as any law of England.* He appears to be unmindful of the fact that the courts of his country are bound to, and that they do take cognizance of the penal laws of other nations, every time they surrender a fugitive from justice, upon a writ of extradition. It would be wholly impossible, as every one must perceive, for the Government of Great Britain to fulfil the obligations imposed upon her, by virtue of the provisions of her extradition treaties with other nations, unless British courts took cognizance of the penal laws of those nations, to the extent contemplated by the treaties with those nations.⁹ And for the same reasons, it would be impossible for Great Britain to fulfil her treaty obligations to Japan, unless her courts took

cognizance of the penal laws of the Empire to the extent contemplated by the treaty.

Thus we see, that the treaty, by express provision, contravenes and renders inapplicable the very rule of law upon which the British Minister seeks to rest his assumption; upon the well understood maxim of Lord Coke:—"Ratio est legis anima, mutata legis ratione mutatur et lex."¹⁰

Let us examine the next and final ground upon which the Minister endeavours to rest his assumption. "It was," says he, "the clear intention of the treaty, that British subjects should not be deemed guilty of any offence for any act which might be deemed an offence by the laws of Japan, unless it were also an offence by the laws of Great Britain."

Hence he concludes that Japan can enact no law or regulation that can be binding upon British subjects unless such law has first received his sanction.

A recent English writer on diplomacy asserts that as a general rule, "no living man is ever able to explain the meaning of an Ambassador's despatch, except a Minister interrogated in the House of Commons: and then it is not always easy to determine which is most obscure,—the despatch, or the explanation." We must do Her Majesty's Representative in Japan the justice to acquit him of any obscurity in his conclusions at least. The most prominent and convenient feature of his argument just quoted is, that it takes for granted everything in dispute; and hence the conclusion at which he arrives is fairly clear. The only argument, however, which it contains consists in His Excellency's *ipse dixit*. He asserts that so and so was the "clear intention of the treaty," and therefore he draws the conclusion stated by him. But how does he establish the premise upon which all his conclusions rest? Upon what facts, or by what mode of reasoning, does he feel justified in assuming that the treaty clearly intends what he says it does? These questions he has left in such dense diplomatic obscurity, that we imagine even Her Majesty's Minister for Foreign Affairs might find it difficult to explain them to the satisfaction of the House of Commons if he were called upon to do so.

With all due respect for so high an authority, we must say we can find nothing in the treaty to warrant the conclusion that it was ever intended thereby that British subjects should not be deemed guilty of any offence for acts committed by them in violation of the laws of Japan unless such acts were also offences by the laws of Great Britain. The treaty certainly does not say so, and we are wholly at a loss to understand by what mode of reasoning Her Majesty's Minister is led to infer that it ever intended anything of the kind. On the contrary we think that it was clearly the intention of the treaty, that British subjects should be deemed guilty and should be punished for all offences committed by them in violation of Japanese laws, as long at least as those laws do not conflict with any treaty right. If the reader will turn to Article IV. of the convention concluded between Great Britain and Japan at Nagasaki, on the 14th October 1854, he will find the following:—"British ships in Japanese ports shall conform to the laws of Japan. If high officers or commanders of ships shall break any such laws, it will lead to the ports being closed. Should inferior persons break them, they are to be delivered over to the commanders of their ships for punishment."

Sir Edward Herstlet, commenting on this article says that according to its provisions, "*British ships and subjects in Japanese ports shall conform to the laws of Japan,*" and he adds that, "*all this is as it should be.*"¹¹ Now it does ap-

11. Treaties between Great Britain and Japan in force January 1st, 1879. By Sir Edward Herstlet, C.B., Librarian, &c., British Foreign Office.

pear to us that Sir Edward's conclusion is just such a one as most persons would arrive at from reading that article of the treaty. And we scarcely think any one will deny that the Quarantine should be about the last law that British ships or subjects ought to be permitted to disregard. It is not so "clear" then, as Her Majesty's Minister appears to suppose, that it was the intention of the treaty that British subjects should not be deemed guilty of any offence for violating Japanese laws, unless those laws first receive his sanction. If it were merely intended by this assertion that no act committed by a British subject in violation of Japanese law, could be punished by a British court, unless the laws of Great Britain first authorized and empowered the court so to do, we would entirely assent to the proposition. No one contends that British courts in Japan, in the exercise of the jurisdiction conferred upon them originally by treaty can punish any offence committed in Japan, unless authorized to do so by British law. But that fact has nothing whatever to do with the intention of the treaty. It only shows that in accepting jurisdiction over her subjects in Japan, it becomes the duty of the British Government to duly *empower* her courts in Japan, to try, and punish offences committed by British subjects against Japanese laws, as the treaty provides. As before stated, we think that Government has amply done this. It would be a strange doctrine indeed if the British Government, after making a solemn treaty promise that its ships and subjects in Japanese ports should conform to the laws of Japan, and after promising likewise to punish them for all offences committed by them in the country, should turn round and refuse to fulfil those obligations unless Her Majesty's Minister has first deemed it expedient or desirable to sanction the laws of Japan, which have been violated.

EDUCATION IN EUROPE AND JAPAN.

V.

THERE has been in the last quarter of a century an immense impetus given to the subject of Primary Instruction. Since the time of Lancaster and Bell, the progress has been going forward. Their system of teaching in classes was a great advance in economizing the labour of the instructor, and giving vigour and emulation to the pupil. It was soon perceived that forty or fifty boys could be taught simultaneously with almost as much ease as five or ten. The system received great development in America, where schools for primary teaching have attained the highest perfection. So too in England, in the British schools and the National schools, remarkable progress was made; the monitorial system produced some beneficial results, for by it a school of 100 or 200 boys could be managed by one schoolmaster. The more recent modification of that plan, which gives aid to the master by apprentice pupil-teachers, whose efforts are rewarded by a small payment in their noviciate, and the special instruction of the master, out of school hours, affords a means of training teachers for the same class of schools, and forms a preparatory course for the Normal Training College in which they are perfected and from which they receive their certificates of competency. In order, however, to obtain intelligent pupil-teachers of a good class, it is found necessary to offer some substantial inducements, as so many more lucrative employments offer themselves to intelligent boys.

The system of Government Inspectors, who travel round a district allotted to them, and report concerning the progress of the pupils, their conduct and intelligence, also on the efficiency of the teaching and general management of the school, is bearing much good fruit. These men are selected not from petty officers or decayed

schoolmasters, but are men of high culture and university standing. They look not merely upon the outside of things, but compare the progress of schools in their districts from year to year—for they remain ten or more years in the same localities—and having a keen eye to the efficiency displayed by the masters, and the intelligence with which they teach, are able to form useful generalizations on the whole subject, which are of the greatest value to the Board of Education by whom they are deputed.

So much for the historical part of the subject. The practical side of popular education presents some difficulties, about which there are many opinions. Those who look to a mere perfunctory performance of duties, so many subjects learnt, so many lessons recited—so many books gone through—consider these difficulties trifling if the proper machinery be set to work. Those who aim at instilling a love of learning, a taste for study, at sowing the seeds of a great intellectual power,—and laying the foundation of a sound education—know that the difficulties are very considerable, though not greater than can be overcome by a judicious system of drawing out the mind as well as exercising the memory, of insisting on accuracy and depth instead of superficiality, of demanding rapidity of action in the pupil's mind, instead of a mere conning and droning over his lessons. At every step the intelligence must be drawn forth. As an Alpine traveller who makes sure his foothold ere he proceeds, so the pupil must have his mind firmly take hold of each fact, and there must be a connexion of facts in order that he may successfully reach his desired goal.

If education indeed were a work that could be begun and ended in the short period of our school days and college days; if the cramming of facts and dates and names and rules constituted the whole of education, the mechanical process might be sufficient, and the scholar might go forth into the world well armed for the conflict, he might enter into its busy life with confidence in the success of his labours. Unfortunately for such opinions the practical work of the world requires something more. Education must go on through life, and in proportion as its beginning is well established, in that proportion will it proceed with security. How many mere scholars are eclipsed in after life and in the conduct of affairs by the man who has learnt to think in his childhood and has received with his early training the germs of a true education. He is marked as the man of common sense, who is not to be deceived by the appearances of things, who knows when a rule must be relaxed, and who can adopt himself and his duties to the ever varying circumstances of his life.

Education of this kind should be begun in the common school, it should be continued in the higher school, and it should be perfected in the university. It is of universal application, and is therefore nowhere out of place. It contains the elements of intellectual as well as moral progress; it is based on the natural powers and therefore has in itself the rudiments of life and growth. Having its development begun, it naturally progresses and produces the fruits of sober and sound judgment. The object of a university according to the great Schelling, is to be productive. "*Lerne um productiv zu werden.*" Facts are to be learnt but with the further object of producing results and attaining power, to reproduce, to utilize, to invent, and in every way to improve all the natural faculties. With regard to the practical ends and aims of the university they are threefold, they contemplate the improvement of the community in manners—ethics,—in the arts of civilized life;—in political freedom—in government. Hence there are three departments in university

teaching. I. Philosophy,—those sciences which relate to the cultivation of the mind,—mental science. II. The sciences natural and physical with their applications. III. Jurisprudence,—law of every kind. Preparatory to these special studies certain instruments are to be acquired:—1. The study of language as the instrument for communicating and preserving thought. 2. Logic, as the instrument by which correct thoughts are to be attained and proper inferences drawn. 3. The mathematical sciences by which precision is to be attained in regard to all subject-matter which has quantity—number—form, and which may be considered with reference to order, proportion, symmetry, etc. These form the bases upon which only sound views can be arrived at. The cultivation of foreign languages improves our own—gives us greater power of expression and new powers of comparison. To simplify and polish our own style and to make it a more fit medium for thought is an object of the highest importance. But to acquire a clear and just method of thought is of no less importance, and to be exact in every statement as regards quantity and measure is absolutely necessary in seeking to arrive at the truth.

Japanese leading men and statesmen are beginning to feel the importance of thoroughness in the education of the country, and therefore it is unnecessary to call their attention to all the statements enunciated in these articles on education, but some of those points touched upon which are new will, without doubt, be well considered and may, we trust, not be lost upon the intelligence and wisdom of the administrators of this country.

MR. Roach, the well known American shipbuilder, has evidently, as peculiar notions of political economy as of material and the rivetting of iron ships. As the constructor of the *City of Tokio* and *City of Peking* he gained a celebrity which he, apparently, is desirous of eclipsing by a reconstruction of the principles of economy. He has lately written a letter to the *New York Times*, replying to some remarks in that journal on the carrying trade, for the purpose of disputing the doctrine that, in order to sell to other nations it will be necessary to buy from them, in which he says:—

"The true plan for us is to sell the foreigners our surplus produce, sent over in our own ships, and take nothing in exchange for it but 'bonds and gold,' and then let the ships come back in ballast and let us spend the gold on our own manufacturers. That this is sound doctrine he shows by the fact that when we were importing largely from foreigners our bonds were only worth 50 cents on the dollar, but now, when we export much and import little, our bonds and notes are worth 100 cents on the dollar. If the ships come back in ballast, he says, and bring gold and bonds, it will fill our Treasury and make cheap money throughout the country."

The *New York Nation* observes upon this that:—"Mr. Roach evidently believes that we could go on for ever absorbing the gold of the world in return for our surplus products and running home built ships with freight one way and ballast the other, the loss on the return voyage being made up by subsidies out of the Public Treasury. Trading vessels are, in his eyes a kind of public yachts which need not be made to pay, and a foreigner is a simple-minded man who buys your products for ever as fast as you bring them to him, and delivers his 'gold,' which he apparently gets out of his private mine without selling anything to anybody, and is never 'short.' We remember some time ago hearing of a clever man of business who became insane. 'What was the nature of his delusion?' it was asked. 'Well, the first thing we noticed was that he set his mind upon making water run uphill.'"

MR. DE LESSEPS' scheme for the Panama canal has, for the present, fallen through for want of subscribers and the deposit money has been returned to those who volunteered to take shares in it. It yet remains to be seen whether the personal influence of the great French promoter will overcome the difficulties that have principally been raised in America, and whether he will be able to induce people there to see that an International Panama Canal is no infringement of the Monroe doctrine. We may be sure that only ordinary difficulties will not be those to deter the "Conqueror of Suez" from carrying out his scheme. The latest development of the canal question is the reported acceptance by General Grant of the presidency of a responsible company with a proper concession for the construction of a canal through Nicaragua, and we may therefore assume that instead of offering himself for another tenure of office as President of the United States, General Grant is willing that his name should be connected with the greatest engineering enterprise of the age. It is unfortunate for the success of either of the two schemes for connecting the Pacific and the Atlantic that they should both be brought before the public. The Panama route was almost unanimously chosen at the recent congress in Paris as the only one by which a level canal was practicable and it is to be regretted that the interest of the public in such a grand undertaking should now be divided between two rival schemes, but the enterprise is so vast that many modifications may yet be made before we actually hear of either being successfully launched.

WE publish this week an important notification from the Government on the subject of National Education, which in a great measure modifies the system hitherto in practice; but pressure of other matter obliges us to postpone our own review of this new Educational law. And we would also direct attention to the Memorial of the Tokio Chamber of Commerce upon the subject of treaty revision, the first part of which will be found in another column.

THE CHINESE NAVY.

WE lately published a comparative list of the navies of China and Japan,* which, as regards the latter country we have no reason to alter; but we are now able to furnish an amended list of the Chinese navy, which will be found more precise and more accurate than the one we then extracted from the columns of our Hingo contemporary. Our list does not include the four gunboats which are probably now in the China seas after their voyage from England, and which have already been described in our own and other journals. These formidable little craft are each armed with a 35 ton gun and with two 12-pounders; but, with their exception, it can hardly be said that the Chinese navy is either powerful, heavily armed or well manned. The corrected list is as follows and consists of the vessels under the orders of the Commissioner of the Foochow arsenal:—

	No. of Crew.	Guns.	Armament.
<i>Built at the Foochow Arsenal:—</i>			
1—YANG WOO, wooden corvette, built 1872, tons 1393, h.p. 450	200	9	1-7½ ton Whitworth and 8-3½ ton do.
2—WEI YUEN, composite corvette, built 1877, tons 1258, h.p. 225	125	7	1-7 inch Armstrong, 6-40 p.dr. do.
3—CHAO WU, composite corvette, built 1878, tons 1258, h.p. 225	125	7	ditto. ditto.
4—MEI YUEN, wooden gunboat, built 1869, tons 515, h.p. 130	70	3	1-7 inch Armstrong, 2-36 p.dr. do.
5—FUH SING, wooden gunboat, built 1870, tons 515, h.p. 130	70	3	ditto. ditto.

* *Japan Weekly Mail* of 23rd August.

Purchased abroad:—

6—FUM SHENG, iron gun-boat, built 1875, tons 215, h.p. 50...	35	1	18 ton Vasseur, M.L.
7—CHEN SHENG, iron gun-boat, built 1875, tons 215, h.p. 50...	35	1	ditto. ditto.
8—HAI TUNG YUEN, iron gun-boat, age unknown, tons 330...	—	—	Not ascertained.
9—CHANG SHENG, iron gun-boat, age unknown, tons 300...	—	—	Small brass guns.
10—CHING HAI, 300 tons...	—	4	ditto. ditto.
<i>Woolen Transports, built at Foochow:—</i>			
11—WANG NIEN TSING, built 1869, tons 1,450, h.p. 150...	100	6	Breech-loading 36, 24 and 18 pounders.
12—FON HO, built 1870, tons 1,238, h.p. 150...	100	5	Small pieces.
13—FU YUEN, built 1872, tons 1,238, h.p. 150...	100	7	1-7 inch. Armstrong: 4-48 p'drs. B.L. and 2 small brass guns.
14—THI AX, built 1873, tons 1,238, h.p. 150...	100	7	1-64 p'dr., 4-48 p'drs., and 2-36 p'drs.
15—YUNG PAO, built 1872, tons 1,391, h.p. 150...	100	—	Not armed.
16—HAI CHING, built 1873, tons 1,391, h.p. 150...	100	—	ditto.
17—CHEN HANG, built 1874, tons 1,391, h.p. 150...	100	—	Not armed.
18—YUAN KAI, built 1875, tons 1,238, h.p. 150...	100	5	1-64 p'dr. and 4-40 p'drs., B.L.
19—TENG YING CHAO, built 1876, tons 1,238, h.p. 150...	100	5	ditto ditto
20—TAI AN, built 1876, tons 1,250, h.p. 150...	100	5	ditto ditto
<i>Despatch Boats, built at Foochow:—</i>			
21—CHEN LAI, built 1871, tons 572, h.p. 140...	70	8	2-60 p'drs., 4-40 p'drs., and 2-18 p'drs., B.L.
22—TSUNG YUON, built 1872, tons 572, h.p. 140...	70	6	60 and 40 p'dr. Vassars.
23—CHEN LEE, built 1872, tons 572, h.p. 140...	70	6	ditto ditto
24—YI TAIN, built 1876, tons 235, h.p. 50...	35	4	Small field pieces.

Approximate totals,.....1,905 103

In addition to the foregoing, the AX LAN and TAN YAN, gunboats built at Foochow, were lost on the coast of Formosa in 1874. We are not in possession of any corrections to the list already published of the vessels built in Shanghai, nor of the revenue cruisers stationed on the coast. There are also at Tientsin the four English built gunboats ALPHA, BETA, GAMMA and DELTA, each carrying one 38 ton gun.

LOOCHOO QUESTION;—AN APPENDIX.

The following are official translations of historical documents as set out in the Memorandum, laid before General Grant by the Japanese Ministers, in July last.

(1).—THE ORDINANCE OF SHIMADZU IYEHISA.

[PRINCE OF SATSUMA.]

- Art. 1.—No merchandise shall be imported from China without leave first obtained of the Prince of Satsuma.
- Art. 2.—No emoluments shall be given to any member of any of family, however illustrious, on account of distinguished origin alone, but only to those capable of public service.
- Art. 3.—No emoluments of office shall be given to a mistress of the Chieftain.
- Art. 4.—No kind of private servitude is allowed.
- Art. 5.—The number of shrines or temples to be erected shall not be excessive.
- Art. 6.—No merchants shall be allowed to engage in external trade to or from Riu Kiu without a written permission from Satsuma.
- Art. 7.—No inhabitant of Riu Kiu shall be sent to the mainland as a slave.
- Art. 8.—All taxes or other imposts of a similar kind shall be levied only in accordance with the rules and regulations laid down by the authority from the mainland.
- Art. 9.—It is prohibited [to the Chieftain] to entrust the conduct of public affairs in the islands to any persons other than San-shi-kuan (Council).
- Art. 10.—No persons shall be compelled to buy or sell against his will.
- Art. 11.—Quarrels and personal encounters are prohibited.
- Art. 12.—Reports shall be made to the authorities in Kagoshima, the castle-town of Satsuma, in case of any official making any claim exceeding the amount of taxes and duties properly to be levied according to law upon merchants and farmers or others.

Art. 13.—No merchant ship is allowed to go to any foreign country from Riu Kiu.

Art. 14.—No measure of capacity other than the Government standard measure known as the *Kinban* is allowed to be used.

Art. 15.—Gambling and all other vicious habits of a like nature are prohibited.

Strictly observe each one of the foregoing articles. Those who violate the same shall be liable to severe punishment.

(2).—THE OATH OF SHONEI.

I.—“The islands of Riu Kiu have from ancient times been a feudal dependency of Satsuma; and we have for ages observed the custom of sending thither, at the stated times, junks bearing products of these islands, and we have always sent messengers to carry our congratulations to a new Prince on his accession.

Such had been our custom: but in the time of His Highness Toyotomi Hideyoshi, we, inhabitants of this far-off southern land had failed fully to comply with the requisitions made upon us for supplies and service: therein we were remiss in our duty, and were very guilty: thus did we bring trouble to our shore. You, our lord, sent an army against us to chastise us: I was dismayed. I was carried from my home and became a prisoner in your mighty land: I, like to an unwanted bird shut up in a cage, had lost all hope of returning to my home.

But our merciful Prince has shown his loving kindness; and taking pity on master and servants whose country seemed all lost to them, gave them his leave to return to their homes; not only so, but also allowed them themselves to govern some of their country's islands.

This is a boon indeed; we know not how to show our thankfulness. So will we for ever be the humble servants of Satsuma, and obedient to all commands and never will we be traitors to our Lord.

II.—A writing of this oath I myself will keep and will hand it down to my posterity that they may observe and keep it.

III.—Each and every article of the ordinances already made and of those which shall hereafter be made by Satsuma for our observance shall be faithfully obeyed by us; and herein if we fail may Heaven visit our sin upon our heads.”

THE OATH OF THE COUNCIL.

I.—“The islands of Riu Kiu have from ancient times been a feudal dependency of Satsuma: therefore we would have obeyed and carried out an order of any kind whatever given to us upon any matter. Yet now but little time ago, neglecting our duty fell into the sin of disloyalty. We, master alike and men, were carried away captive and were in despair of returning even with our lives. How great then was our joy when you Great Lord, had compassion upon us and not only allowed us to return but also granted us unlooked-for emoluments. We know not how to show our thankfulness. Ever hereafter will we remain the loyal subjects of Satsuma.

II.—If, peradventure, any man of Riu Kiu, forgetful of this great-hearted deed, ever in times to come, plan a revolt against you: yea, if it were our Chieftain himself who should be drawn to join revolt, yet we nevertheless obedient to the commands of our Great Lord will never be false to our Oath by abetting a rebel, be he lord or churl.

III.—A writing of this oath we each and all of us will keep that our sons may know for ever and observe what we here have vowed and therein may never fail.”

REUTER'S TELEGRAMS.

LONDON, 12th October.

General Roberts repulsed the enemy with heavy loss near Cabul. The British loss was eighty-seven.

LONDON, 15th October 1879.

General Roberts with Yakoub Khan and British Force have entered Cabul.

[From the Hongkong Daily Press.]

London, 23rd September.

At the interview between Count Andrassy and Prince Bismarck it was shown that the interests of their countries are identical.

Lord Salisbury and M. Waddington have come to an understanding with regard to Egypt and Greece.

24th September.

The London Press warmly approve of the Austro-German understanding, which it is supposed will guarantee the maintenance of peace, and the security of Europe from Russian aggression.

Simla, 24th September.

The British convoys have been attacked beyond Ali Kheyl.

Authentic intelligence has been received that the Rus-

sian troops have been defeated by Turkomans at Guzukhtep and have fallen back with a loss of 700 killed.

London, 25th September.

The Elections to the German Parliament have resulted unfavourably for the Government.

The semi-official *Agence Russe*, in contradicting the statement that Russian intrigue has caused the outbreak in Afghanistan, points out that recent events in Central Asia prove the necessity of an *entente cordiale* between the two great European powers of the East.

London, 26th September.

Prince Bismarck in an interview with the French Ambassador said that the alliance between Germany and Austria ought not to cause any uneasiness in France, that in his opinion the relations between Germany and France were daily becoming closer, and that Germany wishes henceforth to live in peace.

The Russian Press declares that Merv is without the scope of their expedition.

London, 30th September.

The son of the Ameer has arrived under escort at the British camp at Kushi.

The Gilzais and Mongols have attacked General Roberts on the Kushi Road.

Cholera has broken out amongst the troops at the Khyber Pass.

Travellers from Cabul report that complete anarchy prevails in the city.

London, 1st October.

Mr. Palgrave is appointed Resident (Consul-General?) at Siam.

The Revenue Returns for the September quarter amount to £16,500,000.

The Trustees of the City of Glasgow Bank have declared a dividend of 3s. 4d. in the pound payable on the 17th November.

Bombay, 1st October.

General Roberts was to make an advance upon Cabul yesterday.

The Japan Weekly Mail.

'FAIS CE QUE DOIS; ADVIENNE QUE POURRA.'

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the JAPAN WEEKLY MAIL, must be authenticated by the name and address of the writer, not for publication but as a guarantee of good faith.

Manuscripts found unsuitable for our columns will be carefully returned to the writers.

It is particularly requested that all letters on business, relating to Advertisements, Job-printing, or Accounts, be addressed to the MANAGER.

And that literary contributions of every description be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 18, 1879.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 10TH MONTH, 18TH DAY, DO-YO-BI.

NOTES OF THE WEEK.

The P. & O. steamer *Savila* arrived from Hongkong on Sunday evening last, with the London mail of 29th August. The homeward despatches were forwarded by the P. & O. steamer *Malacca*, on Thursday morning, at daylight. The Shanghai and way-port steamers have arrived and departed on schedule time.

The M. M. steamer *Volga*, with the European mails of 7th September, left Hongkong for this port, to-day, at 6 a.m.

In consequence of the time which will be occupied by the repairs to the *Takasago Maru*, rendered necessary by the collision with the *Jumna*, the *Sumida Maru* took her place on the Hongkong line, and left to-day for that port via Kobe. The *Niigata Maru*, the pioneer vessel of the new line, reached Hongkong in five days four hours from Kobe, being twenty hours in advance of schedule time.

The German corvette *Prinz Adalbert*, left port this morning and the Russian corvettes *Craysser* and *Djigit* are expected to leave to-morrow.

The otter hunting fleet have now nearly all returned from their long trip to the northern seas. The catch this year has been very small, the average being less than 50 to each vessel, and unless the prices realized for the skins is a good deal in excess of last year, we should hardly think the adventurers would continue their perilous quest for these wary beasts, next year. The hunters report the seals very shy and difficult to approach, although the weather has been favourable. We regret to hear that the *Matinée* of San Francisco lost one of her boats' crews during a heavy blow.

A severe shock of earthquake was felt this morning at about 1.55. The motion appeared to be from south-east to north-west. It is now sometime since we experienced an earthquake, and as usual the first after a long period of exemption is pretty violent.

Here is one extract from a Paris Letter which we must copy for the benefit of the ladies:—

"A novelty in the cotton department is a series of Japanese Indiennes of nondescript patterns, copied for the most part from the screens imported from the Far East. Some are covered with small designs of grasses, reeds or flowers, others have large grotesque blossoms thrown here and there, the intervals filled up with bamboo or wavy lines. The principal tints are dull greens and reds with porcelain blue. The covering of the sunshade is made to match, and the fan, also, is in cotton, mounted, like the parasol, in split bamboo.

The establishment in Tokio of an office for the receipt of bullion intended for coinage in the Japanese mint (full particulars of which will be found amongst our "Notifications") will prove a decided convenience to the public, and the scale of seigniorage now adopted will effect a saving of half per cent. on the rates previously charged for the coinage of silver at Osaka. As the Government doubtless hope that foreign Bankers will avail themselves of the Mint, we presume that an authorized English version of the new Regulations will be issued.

The total number of cholera cases in Japan from the commencement of the epidemic up to the 13th instant amounts, according to the return furnished by the Sanitary Bureau of the Home Department, to 153,451. Out of this number 86,625 persons have died and 33,504 recovered. The death rate being 56.45 per cent.

We had the pleasure of attending M. and Mme Hirsleemann's farewell Concert on Monday evening and regretted to notice the very small attendance. Madame Hirsleemann again carried off the laurels; her fine singing captivating the entire audience in the Grand Air from Verdi's *Ernani*, and above all in the Romance by Offenbach and in the air from *Carmen*. Her singing also in the excerpts from *Galathée* was worthy of all praise; and in these fragments she was ably assisted by a *ci-devant* professional vocalist, who now appears (with no small degree of success) under a new name as an amateur. We should not forget to mention Mr. Alberti, who gave us a Grand Scena in character at the end of the first act. This gentleman possesses a baritone voice of good round tone, with a dramatic power and fire not often seen in private life. His delineation of terror and horror when he discovered whom he had stabbed, was finely portrayed, and we hope to see and hear this talented amateur again ere long. A little more cultivation of the vocal organ, and a more frequent appearance in public to overcome nervousness would make of Mr. Alberti a worthy ornament to our local stage. Mr. Hirsleemann opened the Concert with Prudent's Fantasia on *Lucia di Lammermoor*; a piece thoroughly *en rapport* with the performer's style, and which was exceedingly well played. Over No. 3 we would prefer to draw the veil; the performance was undoubtedly very fine, but—it was not Mendelssohn. At length in No. 5 we heard the desired "Marche Hongroise," founded on a theme taken from the historic national airs of Hungary; and with some extenuations, interpolations and embellishments, worked up into a very pleasing show piece by the performer himself. This was of course played *con amore* and the audience greeted the author with a well deserved round of applause. Now that we have heard two of their concerts, we may perhaps be permitted to pass in review the capabilities of the two artistes. The lady is a vocalist of great merit; her style is magnificent. In the French style of music she is simply excellent, and

although she falls short of our ideal in the great *bravura* airs of the German and Italian schools, yet she is an artist in every sense of the word. We do not expect the Di Murakas, Nilssons, and Pattis to travel round the world for our amusement (it would not pay them, their services are too valuable in the centres of civilization) but we shall rest supremely happy if we never hear worse singing than that of Madame Hirlemann. M. Hirlemann is a young pianist of exceptional manual dexterity (a little more *scrist action* with less *biceps* would improve his style) and executes the modern *pièces de concert* with great power and brilliancy. But, he lacks the training which makes a musician, his renderings are without soul and feeling. If instead of leaving his provincial home in early life for a residence in the Far East, he had entered one of the great music-schools of Europe, where his ideas would have been trained and educated, we might one day have heard his name among the pianists of world-wide fame. He would then have learned that self-imposed titles are worth less than nothing, that the true artist sinks his individuality in that of the composer whose ideas and thoughts he seeks to interpret, and that the greatest masters of our beloved art are the most humble and unassuming of men. We wish both M. and Mdme. Hirlemann every success; an honorable and profitable career is before them if they take good care to keep within the limits of their powers. We may, perhaps, mention that the usual complimentary ticket for Monday's performance was not sent to us; and we learn that it was purposely withheld by the enraged "Maestro" as a just and fitting punishment for our iniquitous conduct in having dared to speak the truth. Possibly this was intended to convey the hint that no *critique* was desired from us on this occasion. If so we must inform M. Hirlemann that we do not write our journal for *his* interests but for those of the public. Our motto is *Fais ce que dois: advienne que pourra* and a bribe of two dollars will scarcely cause us to swerve from that maxim. While we do not refrain from giving honor where honor is due, or fail to encourage the ingenious efforts of earnest and painstaking artists, we shall never stultify ourselves by failing to expose all that is bombastic or that savours of imposition.

The steam yacht *Albion*, Captain Beesley, owned by Mr. Aylesbury, arrived on Tuesday, from Kobe. We published a full description (extracted from the *Hongkong Daily Press*) of this smart little vessel, on the 20th August last.

An interesting ceremony took place on the 11th inst., in the Town Hall, on the occasion of distributing the prizes to the successful exhibitors in the Tea Section of the Competitive Exhibition. The presentations were made in the same apartment that was used for the exhibition, the central exhibits having been cleared away for the occasion and a raised dais occupying the place of the articles used for tea-making. About ten o'clock in the forenoon, Mr. Ito, the Home Minister; W. Matsukata, the senior Vice-Minister of Finance and Director of the Agricultural Bureau and Mr. Kawase, the Director of the Board of Trade, arrived from Tokio and entered the room; the successful exhibitors, officials and visitors having already assembled. Addressing the company, Mr. Matsukata said, that the exhibition had been established with the object of improving the growth and manufacture of tea, which was one of the leading industries of the empire, by exciting a spirit of emulation amongst those engaged in the business, that they had been successful in attracting a large number of exhibits and that the judges appointed to consider their respective merits had completed their task and they were assembled there to-day to hear the results arrived at. He hoped that everyone would be satisfied with the decisions of the judges and trusted that the tea industry would derive great and lasting advantage from the exhibition. Mr. Ito then spoke somewhat to the same effect, and added that the successful exhibitors should feel encouraged to persevere and make greater progress, while those who were not so fortunate should strive to improve, so that on some future occasion, they also would achieve success. Mr. Kawase then called over the names of the prize-takers who advanced to the dais and received their prizes from the hands of Mr. Ito. There were 6 first class prizes of 100 yen each; 22 second class of 30 yen; 35 third class of 10 yen; and 126 fourth class of 5 yen. Each of the successful exhibitors also received a certificate. During the dis-

tribution of the prizes, Mr. Okuma, the Minister for Finance arrived and the Japanese Marine band played several airs in a manner that reflects great credit upon their instructor. After the prizes were handed over, Mr. Nakagawa Mobei addressed the Ministers in a long speech during the course of which he thanked the Ministers for their attendance, referred to the great importance to Japan of the tea-industry and stated that his fellow exhibitors as well as himself, were determined to shew their appreciation of the consideration of the government, by striving in every possible manner to improve their special industry, and thus add to the resources of the empire. This concluded the ceremony and the company, amongst whom we noticed Mr. Nomura the Governor of Kanagawa ken, and the Superintendent of Customs, then adjourned to one of the upstairs apartments where tiffin was served and partaken of by about 150 guests. One of the prize-takers was an old gentleman of over 80 years of age who appeared highly elated at his success. Day fireworks were exhibited in the forenoon, and at night there was a grand display from the gardens; one piece having the word "Tea" in English and Japanese characters. We omitted to mention that a special prize was awarded to an exhibit of the species of tea called "Uji." The exhibition was closed on the 16th instant, and the silk exhibition will now be opened almost directly.

The native papers report, that the British Post Office will be closed on and after the 1st December next, and that its business will be transferred to the Imperial Japanese Post Office. We trust this news is correct, as for some time past there has been no necessity—but indeed some inconvenience—from the existence of the two separate post offices. The English Postal Department will realize a considerable saving by this change, whenever it takes place, and the public will suffer no diminution in their postal conveniences.

A Notification was issued on the 14th. to the effect that Japan had joined the International Telegraph Convention, as agreed to at St. Petersburg, in January of the present year. The native papers also commence the publication of the treaty then signed, and since ratified, which will probably occupy their columns for some days to come, but which is not likely to specially interest our readers.

A fire occurred on Thursday night, at about a quarter past six o'clock, on the premises of Mr. Pillon at No. 162 Swamp. Luckily there was little or no wind and the exertions of the firemen were successful in confining the fire to the small buildings where it originated. The fire commenced in the blacksmith's shop of Mr. Viest and spread to a building used as a workshop, and then to another occupied as a dwelling. These were speedily consumed and the whole affair was over by half-past seven. Mr. Pillon, who was wholly uninsured, estimates the damage at about \$2,000. As usual, there was no water to be had of any consequence and it is only to the fact of there being no wind, that the community owes its escape from an extensive and destructive conflagration. The pony "Petrel," which was in Viest's hands under treatment, was with difficulty taken out of its stable, and escaped without harm, other than a pretty severe singeing.

A most atrocious and cold blooded murder was committed at the Chinese-Legation, Tokio, on Sunday night last. It appears that a Chinese servant belonging to the Legation had been guilty of stealing money from the Minister, and that information of his robbery had been given by another boy and amah, also employed by the Legation. The culprit, to wreak vengeance upon his informers, armed himself with a large knife and, late on Sunday night, entered the room when the objects of his wrath were sleeping. Before any resistance could be offered he plunged the knife into the heart of the boy, and so deadly was his aim that his victim died instantly. The murderer then fell upon the amah in like manner, but as the knife blade had been broken and a part of it still left in the boy's body, he was unable to do so much execution. He succeeded, however, in inflicting a fearful wound from which it is doubtful whether the woman will recover.

A native paper states that the murderer succeeded, on Monday night in committing suicide.

THE AMATEUR BURLESQUE.

Our Amateur Dramatic Corps opened the season last night by a most successful representation of the Burlesque of *Ivanhoe*. This extravaganza was written by Henry J. Byron and first produced on Boxing-night 1862, the piece being brought out simultaneously in London and Liverpool. In addition to the well-worn puns of the author, an entirely new version of some of the songs was supplied by Mr. McClatchie, aided by a dark poet whose modesty prevents him coming to the light; and as these additions treated of passing events they pleased immensely. It is needless to say that the theatre was full to overflowing, for (like the good people who are said to go to church on Ash Wednesday to "curse their neighbours") do we not all delight to hear our fellow citizens rallied, and their little weaknesses exposed in the gay and sparkling rhymes of a new burlesque? And then, if in an unsuspected moment we get a pinch too (for do we not all solace ourselves with the flattering unctious that all men are mortal save ourselves?) how do we redder to the very roots of our hair and either burst into a hearty guffaw or look sublimely fierce and savage. To illustrate our meaning we need only call to mind the flattering portrait of "the three graces" the splendid recollections of the "old respected resident," the awful sublimity of "the great taipan" and the "leviathan" truthfulness of the huge "tea circular," with the exquisite parody on a "speech to the ladies;" and we are sure a smile will "steal o'er the viange" of our readers as they recollect the delight which they experienced as these allusions came successively before them.

As to the actors it would seem invidious to judge too closely or criticise too keenly where amateurs only are concerned. We cannot, however, refrain from giving a few words of well-merited praise. First and foremost we must mention Wamba (Mr. McClatchie). "High o'er the rest the mighty Homer shone" &c. His rendering of the part was perfection throughout, from the loving caresses of the huge pie, through the thimble-rigging scene and the earbiting of a restive horse at the tournament, down to the time where he dons the cowl to rescue *Rocena* nothing was overstrained or exaggerated, but the true gentleman shone through all. This is perhaps the highest praise that can possibly be given, for only those who have tried, know how hard it is to play the fool without degenerating into one. How shall we sing the praises of the fair *Rocena*, got up in all the blaze of glory attending the *môle Parisienne* of the eleventh century? Mr. Howland makes up admirably for the part, his acting is good and with a little more training of the voice and attention to elocution would be irrefragable. *Rebecca* (Mr. Bernard) was a great success, her byplay with a drop of something short, and the defiant speech in defence of her "pa" where she threatens to "forget her sex and wallop" the great de Tracy were grand conceptions. Mr. Eyton was simply inimitable as the old Jew, *Isaac of York*; we have seen him so often and know so well his powers that it would be painting the lily to say more. He is a conscientious player and everything confided to his care is done as it should be done. Mr. Herbert made a first-class irascible old parent, and we are bound to say that the fiendish row which succeeded his good-night speech was enough to distract the mildest and best-tempered of governors. Mr. Townley's manly form as *Sir Briande Bois Guilbert* carried all before it in the great tournament, and every word which fell to his part was given in that sonorous tone and accompanied by those appropriate gestures which we love so well. His toasting of *Rebecca* in the last act was fairly superb and brought down the house in thunders of applause. Mr. Cope as the Japanese policeman was true to the life and we are convinced, that had he appeared on the more extended stage of Main Street, the jinrikisha coolies would have *kotowed* before him in wonder and dismay. His composition, with *Oswald's* (Mr. Douglas) aid, of the great tea circular was thoroughly *en rapport* with the spirit of the piece. Mr. Leckie as *Ivanhoe* acted with care and judgment and sang with more power and *plena voce* than we had given him credit for. The minor parts were satisfactorily done but *Prince John* and his toady want a great deal more experience before they can compare to advantage with the rest of the corps.

What shall we say of the artistic scenery, the gorgeous costumes, the real live (!) horses, the gay escutcheons and bright panoply of the men in armour at the tournament? All this must be seen to be believed and we can only advise any of

our readers who were not present last night to let nothing hinder them from seeing for themselves the repetition on Tuesday next.

The music was compiled and arranged by Mr. Townley and fitted admirably to the words, the bright, nervous music of Sullivan standing out in strong contrast to some excerpts of what we suppose must be called the American school. The accompaniments were in the able hands of Mr. Keil who proved himself an artist in things small as well as great. The band of the *Prin: Adalbert* played the Overture and *entr'actes* with great aplomb, although at times the sound was overpowering, a brass band of even 14 men being almost too much for an indoor entertainment.

In conclusion we must heartily congratulate the Stage manager Mr. Bayne and all concerned for the very effective beginning now made. We hope our Amateurs will not grow weary in well-doing, the settlement is only too ready to support them whenever they open their doors, and if they will only put their shoulders to the wheel we shall never hear again of the debts or difficulties of the Amateur Dramatic Corps.—*verbum sap.*

From such an *embarras du choix* of good things we must limit ourselves to reproducing the following tit-bits:—

"THE THREE GRACES."

Lir.—"I hope I don't intrude."

I.

Sir Brian.—Oh! how 'bally' do I feel each day
When, clothed in flannel jacket,
O'er the Bluff I take my joyful way,
Bearing my tennis racket!
As I 'loaf' across the lawn so gay,
The ladies blush with pleasure,
Because, you know,
I'm such a *brav*,
A dandy without measure!
Oh, dear! don't you wish that you were me!
I'm a member of the 'Graces Three'!
My house is on the Bluff,
In style ne'er seen before,
Because, you know, I'm not a muff,
But dandy to the core!
Most men would give their heads to prove
Such heavy swells as we—
For matron's smiles and maiden's love
Surround us 'Graces Three'!

II.

Howena.—Oh! I know you, then, Sir Knight so grand;
For oft have met my eye, Sir,
Those 'Graces Three,' that dandy band
Who well their rackets ply, Sir!
But, since you've linger'd on a foreign strand,
I'd have you plainly know, Sir,
That I'm a swell,
For I'm the *belle*
As much as you're the *brav*, Sir!
So your devotion's due to me;
I'm the Queen of Beauty, gay and free!
The youths admit my thrall,
My throne is in their hearts,
I queen it over each and all.
They bow 'neath Cupid's dart;
And so, Sir Knight, I'd have you know
Your fealty's due to me,
To me—the *belle*, from you—the *brav*
Amongst the "Graces Three!"

III.

Wamba.—I'm a fool, and that I daren't deny;
In fact, I can't but know it,
For my friends so oft declare that I
Eternally do show it!
E'en the little boys, when me they spy,
At down the Bund, I tool,
Shout and deride
On every side,
"Oh! what an awful fool!"
Oh, dear! how I wish some brains I'd got!
Oh, my! how I then would come it hot!
No swell, alas! am I,
I boast, no 'side' at all,
No shiny boots, no collars high,
No 'chimney-pot,' so tall;
In fact, I've scarcely got the 'style'
A "ladies, man" to be—
No matron's glance, no maiden's smile
For such a fool as me!

ISAAC'S SONG.

Air,—from "H. M. S. 'PINAFORE'."

Oh! when I was young I served a term
As a junior clerk in a leading firm;
Where I tried to do my duty like a good young man,
And was mortally in terror of my big *Taipan*,
And I thought, if I well my duty did do,
In a couple of years they'd raise my screw!
But the time passed by, and, to my dismay,
I was kept at it hard on the very same pay:
'What a fraud!' I exclaimed, 'then I'll change my plan,
'And never care a button for my big *Taipan*!
'What a fraud!' in wrath to myself I said;
'Oh, hang it! then I'll 'go upon the bust instead!'

At the Y. U. O. I was daily seen,
And my chits were a goodly pile I ween!
And though I drew my pay but in paper yen,
Still I never missed my cocktail at half-past ten!
I finished each mail with an S. and B.,
And concluded every evening with a great big spree!

Then the races came on, and I got bit,
For I lost my 'bottom dollar' on the favor-it;
Then I gambled hard at 'poker,' but I'd have you know
I was always so unlucky that I never got a show!
For I never held a 'three,' but some other chap held 'four,'
So the pleasant game of 'poker' interested me no more!

Then at *hiamsten*, too, I took a dive,
But I bought at 32 and I sold at 95;
For a temporary loan to my 'boos' I ran,
But he didn't seem to see it, not my big *Taipan*!
He told me to 'git'—so away I goes,
And I turns an honest penny by a selling of old clothes!

O'er my humble gains I rejoice with glee,
For I've got a little balance at the O. B. C.,—
Which I strives to increase when I catches a flat,
Or can 'do' a merchant-skipper with a tall black hat!
And I hopes, to relieve my doleful damps,
That my ticket for the Lottery may turn up trumps!

If my trade should thrive,—why, who can tell
But I yet may become a leading swell;
For it's trade makes the money, and it's money makes the man
In the circle of Society in far Japan!
Then my big *Taipan*, that surly spark,
Will have to knuckle under to his former clerk!

THE BLACK KNIGHT AND WAMBA.

Black Knight. But how about my circular? Ah me!
How is this Black Knight troubled by Black Tea!
That *Ten*'s a thing that's proved to me a curse,—
E'en babes when "teething" could not feel much worse!

SONG.

Air,—"Gendarmes' Duet."

I.

Oswald. What is it ails this Knight so sabbie?
Come, prythee tell your woes to me!
B. K. Well, it's that I'm quite unable
To write my circular on 'Tea'!
O. Oh! then I'll help you if you'll take me in—to your confidence
so far;
So lets begin!
B. K. Yes, we'll begin!
O. So let's begin!
B. K. Yes, we'll begin our great Tea circ—ar!
Both. So lets begin our great Tea circular.
Our famous circular!

II.

B. K. Dear Sirs,—Another period
Wamba. Of unparalleled activitee
B. K. (Thanks, dearest Wamba, for that word)
Must now reported be!
W. For the shipments of the last three weeks
B. K. Are enormous certain-lee,
W. And "we'll make tin"!
B. K. "We'll make some tin"!
W. "We'll make some tin"!
B. K. "We'll make some tin"!
Is the cry of each Chaaaze!
Both. "We'll make some tin"!
"We'll make some tin"
Is the song of the gay Chaaaze!

III.

B. K. Of course the pri—ces show advances,
W. And the only wonder is,
B. K. That, in view of all the chances,
W. They haven't further "ris,"
When *leriathana* are wading in,
B. K. And for quantity pay free,
And spend their tin,
W. And spend the tin,
B. K. And spend the tin.
W. And spend the tin
Without a thought of "qualitee"
Both. And spend the tin, and spend the tin,
But never think of "qualitee."

IV.

B. K. But, spite of ev'ry dire temptation,
W. It's quite delicious when one sees
B. K. The most polite consideration
W. Of the kindly Japanese!
B. K. They would call an overcharge a sin,
W. Ne'er would do us in the eye!
Three dollars win—
B. K. Three dollars win,
W. Three dollars win
B. K. Three dollars win
Is quite enough, they cry!
Both. Three dollars win
Three dollars win
Upon each *pien*'s not too high!

V.

B. K. But, seriously speaking, ne'er, I ween,
W. Within the memory of man,
B. K. Has such reck'less buying yet been seen
W. Or heard of in Japan!
B. K. Such webs do oft' the wild tea-tasters spin at China ports,
but in the end,
W. They get run in!
B. K. They get run in!
W. They get run in.
B. K. They get run in!
And ruin self and friend!
Both. They get run in,
They get run in!
For their course they can't defend!

YOKOHAMA JOCKEY CLUB.

AUTUMN MEETING.
ENTRIES.

First Day.

Race No. 1.—Checkmate, Sugar Plum, Gled.
Race No. 2.—
Race No. 3.—Saunterer, Black Velvet, Oyama, Skedaddle,
Race No. 4.—
Race No. 5.—Checkmate, Black Velvet, Skedaddle.
Race No. 6.—
Race No. 7.—Brother to Nancy Lee, Oyama, Grey Friar, Jim
Hills, Exile (late King all Frances.)
Race No. 8.—Saunterer, Cumshaw, (late Bonney Dundee)
Black Velvet, Skedaddle.

Second Day.

Race No. 1.—Saunterer, Cumshaw, Black Velvet, Oyama,
Skedaddle.
Race No. 2.—
Race No. 3.—Checkmate, Black Velvet, Skedaddle.
Race No. 4.—Saunterer, Oyama, Skedaddle.
Race No. 5.—Satirist (late Ichi Roku), Admiral Rous,
Warwick.
Race No. 6.—
Race No. 7.—Brother to Nancy Lee, Oyama, Jim Hills,
Exile.
Race No. 8.—

Third Day.

Race No. 1.—
Race No. 2.—Satirist, Admiral Rous, Warwick.
Race No. 3.—
Race No. 4.—
Race No. 5.—
Race No. 6.—Saunterer, Black Velvet, Skedaddle, Gled.
Race No. 7.—
Race No. 8.—

Towse's boat won by about a length, whilst the second and third boats came in so close together that it would be as fair to give them a dead heat as to state which took second honours. This race was a very close one throughout and ended in a capital finish.

Our short twilight was now over and the company soon separated, after a very enjoyable afternoon,—the report of a fire in the settlement hastening the movements of those belonging to the suction, hose or nozzle departments of the fire brigades.

SHANGHAI LETTER.

SHANGHAI, October 8th, 1879.

What placards on the walls and advertisements in papers announced as a Grand Temperance Demonstration took place on the 27th September. The various Temperance Societies of Shanghai arranged to have afternoon's sports on the Base Ball Club's grounds on the Race Course, to be followed by a cold collation on the ground, and music, recitations, &c., at the Temperance Hall later on in the evening. The price of admission to the whole round of enjoyment being \$1.50 for each person. All would probably have gone well had not some enthusiastic members of the League arranged that the Teetotalers should go in procession through the streets to the Race Course, in order to display to the public the strength of the Temperance Army. This led to a split in the camp, and many members abstained from something else than strong liquor, as they refused to demonstrate publicly with their brethren, fearing—and with good reason too—that a public exhibition would not be a complete success. There was, indeed, nothing "Grand" about it but the opportunity for amusement it afforded to the degenerate lookers on. The procession being duly formed at the Temperance Hall, took its way, not direct up the Maloo to the Race Course, but down the Nanking Road and along the Bund as far as the Canton Road, and thence to its destination. As the route had been announced previously and minute directions given as to the order to be followed by the numerous carriages containing ladies which, it was thought would swell the procession, outsiders expected to see something only slightly inferior to the turn out that welcomed General Grant to Shanghai. But greatly was this expectation disappointed. It is true that Mr. C. P. Blethen, the "Marshal of the day" as he was styled, led the way on a white pony, an animal which to those not over-keen in horsemanship was too apparently a very quiet going stable hack, so that the lookers-on were rather inclined to view the appearance of horse and rider in a ridiculous light, and failed altogether to appreciate anything imposing in the pair, as it was only on the day after the fair that we discovered, on reading the morning paper, that the nag was doing duty as a "charger," proudly bearing the Marshal holding "his wand of office in his hand," a blue and white staff with streamers at the top of red, white and blue, the colours of the Order. Following the Marshal came the Town Band, in sufficient force to delude the public that a decent show might be hidden behind them, but when they had passed, a sorry body of total abstainers were discovered walking two and two, most of them decorated with scarves, badges and rosettes, and having amongst them a few gaudy banners blazoned with emblems of the various lodges or societies. The next day we read in the paper above alluded to that one of these flags was the "very tasteful gonfalon of the Star of Hope Juvenile Temple," but as none but the few initiated were at the time aware of the fact, the general public failed to appreciate even this startling appearance. Nearly all those who actually formed the Temperance procession looked woe-begone, and as if they were ashamed of their appearance in the streets, but the band played up and the Marshal and his assistant dashed backwards and forwards along the line (as much as the ponies would let them dash) and the procession managed to pull through, but to say the least of it, however admirable the principles of the devotees of the order may be, their public appearance was not impressive. The line of march was closed by four or five hired carriages in which were a few of the fair sex and several young "Hopes." On arrival at the Race Course the sports began, but though they afforded great fun to those who participated in them, from a sporting point of view they were of no account. A good programme had certainly been drawn up, but no effective arrangements had been made to carry out the different events, and the result was general confusion. The Judge, however, was most impartial, and on the suggestion of an outsider would cheerfully give a race as a dead heat and have it run over again. Let me suggest this course to your Athletic Club if they find a difficulty in arranging a programme to fill up the day. It is a course that only annoys the few competitors, but this is far compensated for by the intense satisfaction it gives the more numerous on-lookers. If the Yokohama Club despises this suggestion it ought at least to be welcomed by the Tokio Club, as no one can assert that the latter are not fond of novelties in athletics. The prizes awarded to the successful competitors, when such were at last decided by the Judge, were not of any

great intrinsic value, though their denomination may have led the lucky recipients to expect a great deal: thus "a complete dinner set" turned out to be an ordinary Chinese bowl and a pair of chopsticks. But still it was an odd idea to award *our* cigar case to the necessarily joint winners of the three-legged race, and how to divide it was at first a puzzle. Dead heats being the order of the day they treated this as one more, and ran it off for 100 yards. But there was no failure about the cold collation that followed the games, to which ample justice was done, and as the shades of evening began to fall the procession reformed and returned to the Temperance Hall, where the rest of the evening was passed listening to songs, addresses, etc.

The entries for the forthcoming Races closed on Saturday last, and the result may be considered very satisfactory, though not up to that of last Autumn, as the total amount realized is a trifle short of £4,000. The "Consolation" of course stands at the head of the list with 59 ponies entered, the Maiden Stakes coming next with 47. For the St. Ledger only 37 ponies are entered, which is below that of last year by two, and then comes in point of numbers the Mongol Cup with 36 entries, followed by the Shanghai Club Cup with 33, the Northern Cup with 31, and the Hack Stakes with 30 ponies, while of the remaining fifteen races only six of them have less than 20 ponies entered, the lowest being the Welter Cup with 12 ponies. The last week was a busy one, and 'pows' took place as often as possible with a view to decide the merits of the various griffins purchased. On the entry day, Saturday last, the usual small race meeting took place, the course being opened again at 11 o'clock. Several interesting 'pows' took place, that being the very last chance for owners to decide on the merits of their animals, and to make up their minds finally for which races to enter them.

Numerous have been the rejections, and hopes have been sorely blighted, but prospective paper hunters rejoice as they note how many good animals, whose turn of speed is not sufficiently good for this fast course, are being sent to auction, where as a rule, they may be purchased for £20 each. During the selection there was a good deal of animation on the course, with plenty of good-natured chaff floating about the sharp morning air, enlivened still more now and then by the vagaries of a bucking griffin. No little amusement was occasioned one morning when it was discovered that one of our ardent sports, who is fleshing his maiden sword on the Shanghai turf, had by mistake mounted a griffin preparatory to taking him round the course, which belonged to some other owner. The gentleman in question did not discover his mistake until it was pointed out to him by a friend, who remarked that the said pony had freely indulged in bucking on the previous day. The rapidity with which the unconscious appropriator clomb down from that animal was a caution. Of course it is much too early for the favourite to be yet declared, but by some the St. Ledger is given again to the Ewo stable, not to *Jolly Friar*, last year's winner, but to *Driving Cloud*, while a good many favour the "Wild" stable. Some of the names selected by Mr. Ten Broeck are sufficiently absurd in all conscience, as witness *Wild Gift*, *Wild Glen*, *Wild Boer* and *Wild Eddy*, but these are all capped by one of his ponies being now named *Wild Idol*. Whoever heard of an idol being either tame or wild?

The English and Scotch crews are in steady training for the Regatta, but are not yet far enough advanced to admit of any decided preference. Without this usual contest our annual boat race would lack much of its interest, and it is satisfactory to know that the crews are made up notwithstanding the rumours to the contrary, and that in all human probability nothing will interfere with the event coming off. The Chefoo Races were held on the 23rd and 24th September, but would have been nothing at all without the Shanghai ponies that were entered. There were six races on each day, of which all on the first day were won by Mr. John Peel's ponies, and on the second day all but the Hack Stakes and the Consolation, by the Blue and Silver again, the Champion Sweepstakes bringing out only three ponies from that stable. *Toujours penitrix* with a vengeance!

An interesting cricket match, Old v. New residents was played on Saturday last, but of course it was not possible to play with a full team, one of the juveniles being unable to resist the attractions of shooting up country. The New Residents, looked like winning at one time, as their opponents had sent their "last" man to the wicket and still they were several runs short. But the two last men, one of them, Mr. Burns, being an old Japan resident, saved the game, and by steady and good play ran the score up to 137, or 7 more than the younger players had made.

The Woosung Bar has been a great trouble to the steamers desiring to visit this port lately, as hardly any decent sized vessel could get over without detention, and some had to content themselves with discharging and loading miles away from the Settlement. Not only have the English and French Mail steamers and nearly a dozen other ocean going steamers been seriously inconvenienced by the obstruction, but even the Hankow and Ningpo steamers have been detained, and the *Genkai Maru* on her last trip from Japan had to discharge much of her cargo at Woosung before she could ascend the river. To make

matters worse, there is no provision in the Custom House regulations for meeting such an emergency, and the result is aggravation to shippers and consignees and delay and expense to ship-owners. Whether anything can be done to alter this state of affairs is an open question, as professional men differ greatly on this point, but it seems certain that the silting up of the bar is not so much due to the obstructiveness of the native authorities as the majority of foreigners are too ready to assert. There are natural difficulties in the way of deepening the bar of such a river as this so that vessels of deep draught can pass at neap tides, which only those well versed in such matters can appreciate.

Some little time ago the English Municipal Council determined they would levy wharfage dues on all opium stored in the bulks, no matter whether landed by residents on the English or on the French settlement. This was, however, found impracticable, as they had no jurisdiction over those living on the French side, where wharfage dues are unknown, as the revenue is there derived from a higher tax on land and house property than on the English side. Two of the principal opium firms living in the English settlement long ago pointed out the injury done to their trade by having to pay heavy dues from which the numerous dealers in that drug, resident on the French side, were exempted, and with the view of bringing the Council to abolish the dues altogether lately removed from the English to the French settlement. By this change the English Council will lose Tls. 20,000 per annum, so that a serious blow has been struck at the system of levying wharfage dues, and in all probability their abolishment will be voted at the next Council meeting, and the deficiency of revenue caused by the withdrawal of this rate, be made up by increased taxation of property, particularly of houses tenanted by Chinese. We all wish that carriages let for hire by natives were more heavily taxed, as foreigners are now crowded off the roads leading from the settlements to the country, the native vehicles being at least twenty times as numerous as those owned by foreigners.

A translation of the Japanese official statement of the Loo-choo Question has been published in the *N. China Daily News* and attention forcibly drawn to it by an excellent leader in that paper under the same date over the signature of Clie, which points out how completely the ground is cut from under the Chinese by their own action in the Formosan difficulty, where they paid Japan a certain sum of money for damages done to Japanese subjects—Loo-chooans as they well knew—by the Formosan savages. As you will probably refer to this question at greater length than I am able to do within the compass of a gossiping letter, I leave it to your more able hands, but certainly the case cannot be stated more clearly than appears in the *N. China Daily News* of the 6th instant.

The U. S. S. *Monocacy* and *Palus* have returned here from Chfoo, leaving the U. S. S. *Ashuelot* and H. M. S. *Moderate* in that port, both these vessels being expected here shortly. H. M. S. *Maggie* is busy surveying the mouth of the Yang-tze, and the *Lily* is lying here in port.

YOKOHAMA LOCAL BOARD OF HEALTH.

The nineteenth meeting was held on the 1st October, 1879, at the Machigai-cho, at 10.30 a.m.

President, the Governor of Kanagawa *ken*.

The following subjects were put on the order of the day.

1. Results of the investigation at the Kencho of the cost of the new system of closets adopted by the Board, and proposal to add to the two kinds of closets adopted a third one for the poorer classes.
2. Proposed local government rules for erecting drains and closets in new houses.
3. Communication of Dr. Wheeler about complaints of the residents as to the irregularity of removing garbage and kitchen-refuse from the premises, and request to remedy the matter by controlling the contractors.
4. Proposal by the President, that a committee of the Board might inspect that part of Yokohama known as the new swamp (eastward of the public garden) and that a report be drawn up as to the question whether this part of the town must be called a healthy one or not.
5. Report by the Cemetery Committee on the proposed new site for another burial place for foreigners.
6. Communication of a letter received from Messrs. Galy and Larrien containing some further details, and answers upon different questions, in regard to the properties and cost of Wyckoff pipes for aqueducts.
7. Results of the investigation at the Kencho of the cost of the proposed reservoirs and filterbeds at Kashimada.
8. *Revue* of the minutes of the seventeenth meeting, held on the 19th September, 1879.—
9. The President informed the meeting that the Kencho, when investigating the matter of the closets further, as adopted at the 9th and 10th meetings, had found two serious difficulties; the first one being that the owners of the poorer nagaya's would be unable to

construct the closets at a high cost, and the second one regarding the date within which the alteration must have been made.

The plans 1 and 2 adopted by the Board at the 10th meeting would cost, if properly constructed, from 15 to 20 yen. A third plan of the local sanitary office, being a slight modification of the pot system adopted by the Board would only cost 4.98 yen per closet, the difference being that the glazed pot, instead of being put wholly in a hole filled with cement, shall be covered with a layer of cement of 3 *sun* thickness.

As to the date, the President remarked that it would be recommended to have all closets changed within six months, but as there were as yet no laws by which people could be punished, if they did not make the new closets within that time, it seemed difficult to give to the recommendation the form of an order.

Drs. Gutschow, Geerts, Wheeler, and Diyajima were of opinion that the third plan would be sufficient for those houses which are too poor to construct one of the two other kinds, and consequently they approved the addition of the third plan as made by Mr. Tsumagi of the local sanitary office.

Drs. Gutschow and Geerts deemed it, however, better to enforce the construction of the new closets by local sanitary police-regulations, and to fix a certain fine upon those people who should be found unwilling to build a new closet within the fixed time. If however the laws of the country did not permit of such a step being taken, then the only way open for them would be to advise or recommend the construction of the new closets to the people.

After some further discussion upon the details of construction, it was resolved 1st. that the third plan of Mr. Tsumagi shall also be adopted for the poorer classes and 2nd. that the order for building the new closets within six months shall be given in the form of a general recommendation time.

II. The President stated that the government had the intention to issue now at once an order to effect 1st that for new houses it shall be obligatory to build drains and closets according to the plan adopted by the local sanitary office; 2nd that rebuilding of houses must be notified to the Local Sanitary Bureau; 3rd that in cases of non-conformity to the rules the houses will be closed until the closets and drains are made according to rule, 4th that in case of resistance to the rules the local government shall make the closets at the owners' expense; that those who violate the regulation shall be punished according to law. As to the closets the choice was left between the pot or the pail system but either of them must be built according to one of the three plans adopted. As to the drains, the new order fixed 1st. that all house-drains must connect with the main-drain or sewer; 2nd that the drains be made of glazed earthenware pipes with cemented joints and iron grates to choke them; 3rd the cesspits must be made of hard stone or brick, cemented, and with edges fitted and joined with cement; 4th that in some cases where wooden drains are necessary, the wood shall have a thickness of one *sun* and shall be covered with coal-tar, and the President asks the opinion of the members on these regulations which he intended to issue as soon as possible in order to do what is possible against a possible return of cholera in next summer.

Dr. Geerts observed that the speedy issue of the order for the new closets would be very desirable, as this subject had been well discussed and had been thoroughly investigated by the Board before a decision had been taken. There was no doubt that the three plans now to be ordered were best which could be made for this country. But as to the drains he was of an opposite opinion, because this subject had not yet been sufficiently investigated and discussed by the Board. He wished that first a systematic plan of sewerage should be adopted for this town, that a system of sewers, cesspits, and main-drains be mapped out accurately beforehand, that the inclination of the main-drains and sewers be well fixed, etc. If we now should already order housedrains to be made according to a certain capricious rule, it might very possibly happen that the new drains made would not suit the plan to be adopted afterwards, and thus it would perhaps occur that the new house-drains had to be relaid again, when in future new main-drains or sewers are to be made.

Mr. Kawan expressed the same opinion and thought it also preferable to issue now only the order for the closets and to leave the question of the drains to a future decision.

The President observed that the subject of drainage had already been discussed in the Municipal Council of this town, that a minute survey had been made already last year, and that a systematic plan for drainage and sewerage of the town had been made and adopted by the local municipal assembly, that the expenses were however not yet sufficiently estimated and that it would take further time before this project could be commenced with, in carrying it into practice, that he would be glad to bring the plans of the system before the Board at a future meeting.

Dr. Gutschow, Mr. Tsumagi and others preferred to issue the order both for the closets and the drains now at once, first because

it might still last a tolerably large amount of time before the new system could be commenced with, and secondly because it would always be possible to change the position of the house-drains in the future, if this should be found necessary, and the meeting then adopted to issue the order, both for the drains and closets of new houses, directly.

III. Dr. Wheeler asked if the local sanitary office could remedy the complaints made by many residents in the Settlement, that the contractors were very irregular in removing the kitchen garbage and other refuse matter from the premises? The foreign residents even pay for it, and have the right to desire that the removal is properly and regularly attended to. On rainy days the scavengers never appear. The President answered that he would order the contractor to attend at the Kencho and give to him and to the local sanitary officers the necessary orders to the effect of a regular removal of garbage, excreta and refuse matter.

IV. The President requested the Board that a committee might be nominated to inspect that part of the town known as the "new swamp" and that this committee may report the results of its inspection and answer to the question whether this ground is fit for habitation or not.

It was decided that Messrs. Shumagi, Ninomiya, Miyajima, Geerts, Gütschow and Wheeler shall form the committee and inspect the place on Saturday the 6th October.

V. The cemetery committee reported their inspection of the new site for a second cemetery near the village of Kitagata. The place selected had been found to answer the purpose in every detail, and to form therefore a very desirable ground for a new cemetery.

It was decided to add this report to the other one on the old foreign cemetery, and to publish both together as a single one.

VI. Dr. Geerts communicated to the Board that he had received a second letter of Messrs. Galy and Larrien, containing some further details and answers upon the properties and cost of the Wyckoff pipe for aqueducts, when made from Japanese materials.

It was decided to accept this letter for information and to hand it over to the committee charged with the experiment to be made at Kasaku Bun Kiyaku, Tokio, with the said tubes.

VII. The President informed the meeting that an estimation of cost of the proposed reservoirs and filterbeds at Kashimada had been made at the Kencho, and that the amount had been found 88,000 yen if they were to be made very substantially of brick, and 30,000 yen if constructed in the cheapest manner. As the money required for this purpose could not easily be found for the moment, and as the water—the innocuous clay-particles excepted—had not been found of bad quality, but on the contrary to possess excellent properties, so it might for the moment be sufficient to advise the people to filter it each for himself.

Besides, other expenditure towards the aqueduct in regard to the pipes within the town, had soon to be made and would for the moment seem to be more urgent than the filtering at Kashimada although this would also be a very desirable matter.

It was decided that the water-supply committee shall confer further with the Kencho engineer about the possibility of a cheaper means of purifying the water of the aqueduct.

VIII. The *résumé* of the minutes of the 17th meeting, held on the 19th Sept. was read and adopted for publication.

Meeting adjourned at 1 30 p.m.

JAPAN NEWS.

[The following Notes on various Japanese matters are chiefly derived from the native papers, occasionally supplemented from original sources of information, and are carefully collated and edited, so as to make them readable and intelligible.]

GOVERNMENT NOTIFICATIONS.

NOTIFICATION No. 40.

It is hereby notified that the educational regulations notified by Notification No. 224, in August 1872, have been repealed and those contained in the accompanying pamphlet substituted.

(Signed) SANJÔ SAN'EYOSHII,
Prime Minister.

September 29th, 1879.

EDUCATIONAL REGULATIONS.

Art. 1.—All affairs connected with education throughout the country will be under the sole control of the Minister for Education. All public and private schools, and all public libraries &c. will therefore be under the supervision of the Minister.

Art. 2.—Schools will be divided into primary and high schools, colleges, normal schools, technical schools, and others of different kinds.

Art. 3.—Primary schools are for giving general education to children, and the subjects for study will be the elementary

parts of reading, writing, mathematics, geography, history, moral science, &c. According to the state of the district, drawing, music, gymnastics, &c., or the outlines of natural philosophy and history &c. will be added. Sewing classes will be established for girls.

Art. 4.—High schools are for giving general education to advanced students.

Art. 5.—Colleges are for the study of special branches such as law, science, medicine, literature, &c.

Art. 6.—Normal schools are for the instruction of teachers.

Art. 7.—Technical schools are for the study of special branches of science or industry.

Art. 8.—Every person will be allowed to establish any of the schools above mentioned.

Art. 9.—In all the provinces, a primary school will be established by the Government in every town or village, or for several towns or villages where the population is small.

Note.—But in case there should be a good private primary school in any town or village, the Government need not establish one.

Art. 10.—Officers will be appointed to take charge of educational affairs in towns and villages.

Note.—The number of the officers and their salaries will be decided according to the convenience of the towns or villages.

Art. 11.—Such officers will be selected by the people of the town or village to which they are appointed.

Art. 12.—The officers will be under the supervision of the Governors of *Fu* or *Ken* and will control all matters connected with the education of children, and the establishment and maintenance of schools.

Art. 13.—From their 6th to 14th years shall be considered the "educational age" of children.

Art. 14.—All children should receive general education for a period of at least sixteen months during the "educational age."

Art. 15.—The parents, guardians &c. of children will be responsible for seeing that children during their educational age receive the required instruction.

Note.—Those who are unavoidably prevented from letting their children receive the required instruction must report the reasons to the educational officers.

Art. 16.—In the primary schools established by the Government, eight years are fixed as the period of study, and although this period may be shortened according to the circumstances of the locality, it must not be shortened to less than four years, and during those four years children must receive education annually, for a period of at least four months.

Art. 17.—Even though children do not enter the school, if they have the means of receiving general education otherwise, they shall be considered as having complied with the requirements of the regulations.

Art. 18.—In those provinces where the people are unable to provide the funds required for establishing schools, arrangements may be made for visiting teachers, so that the children may receive instruction.

Art. 19.—The schools will be divided into two kinds,—public and private. The schools established by means of the local tax, or by the public funds of a town or village will be called public schools and those established at the cost of private individuals will be called private schools.

Art. 20.—The establishment or abolition of all public schools must be with the approval of the Governor of *Fu* or *Ken*.

Art. 21.—The establishment or abolition of all private schools may be done by simply reporting the fact to the Governor of *Fu* or *Ken*.

Art. 22.—The rules for education in public schools must receive the approval of the Minister for Education.

Art. 23.—The rules for education in private schools must be reported to the Governor of *Fu* or *Ken*.

Art. 24.—The cost of maintaining public schools which have been approved of by the *Fu* and *Ken* Assemblies, will be defrayed out of the local tax, and the cost of maintaining public schools established with the consent of the people of a town or village, will be defrayed out of the public funds of such town or village.

Art. 25.—If it is necessary to grant a subsidy out of the local tax, to the schools established and maintained out of the public funds of a town or village, such subsidy must be granted with the approval of the *Fu* or *Ken* Assemblies.

Art. 26.—No tax will be levied upon the ground occupied by public schools.

Art. 27.—Gifts by the people for educational purposes must not be used for any other object than that indicated by the donors.

Art. 28.—The Minister for Education will grant to every *Fu* and *Ken*, an annual sum as a subsidy to the public primary schools.

Art. 29.—The Governors of *Fu* and *Ken* will distribute the subsidy thus granted by the Minister for Education to every public primary school.

Art. 30.—To those public primary schools which were opened for less than four months in the previous year, a subsidy will not be granted.

Art. 31.—Even to private primary schools, a subsidy will be granted, if the Governors of *Fu* or *Ken* consider them to be useful to the people of the town or village.

Art. 32.—Such subsidy will also be granted to the towns or villages where the system of having visiting teachers is established, provided that the classes are open for over four months in a year.

Art. 33.—Public normal schools may be established in every *Fu* or *Ken* according to circumstances.

Art. 34.—The public normal schools will grant after examination, certificates of the completion of their studies to the students of the schools.

Art. 35.—The public normal schools will also grant such certificates, on application, to those who have not studied in those schools, after examination and if they are found suitable in other respects for the post of teachers.

Art. 36.—The Minister for Education may grant a subsidy to any *Fu* or *Ken* in order to perfect the establishment and working of public normal schools.

Art. 37.—All teachers, male or female must be above the age of 18 years.

Art. 38.—The teachers of all public primary schools must, as a rule, hold certificates of competency from the normal schools.

Note.—Persons who do not hold certificates may be appointed if they are found to be competent.

Art. 39.—The Minister for Education will despatch officers occasionally to *Fu* and *Ken* to inspect the actual state of educational affairs there.

Art. 40.—Both public and private schools must not object to be inspected by the officers despatched by the Minister for Education.

Art. 41.—The Governors of *Fu* and *Ken* will forward a report annually to the Minister for Education containing the actual state of educational affairs under their respective control.

Art. 42.—In all schools, the rooms for teaching males and females will, as a rule, be separate.

Note.—In the case of primary schools, the male and female scholars need not always be separate.

Art. 43.—All schools may or may not, according to circumstances, charge fees for teaching.

Art. 44.—Children who have not had the small-pox or who have not been vaccinated will not be admitted into the schools.

Art. 45.—No person suffering from epidemic disease will be allowed to have access to the schools.

Art. 46.—In all schools, no corporal punishment (such as striking or binding with rope) will be allowed.

Art. 47.—On the occasion of the examination of students their parents, guardians &c. will be allowed to be present.

NOTIFICATION No. 101-A.

It is hereby notified that gold and silver bullion brought by the public (native and foreign) to be coined will, for the sake of convenience, be received at the Branch office of the Mint, established in the compound of the Finance Department, in accordance with the following Regulations.

Note.—The date of commencing to receive the bullion, will be notified hereafter.

(Signed) OKUMA SHIGENOBU,
Minister for Finance.

October 10th, 1879.

REGULATIONS FOR RECEIVING BULLION FOR COINAGE.

Art. 1.—Gold and silver bullion brought to the Branch office of the Mint, will at once be received and assayed by the chief officer of the office, in the presence of the owner, and coin (gold coins for gold bullion and the trade silver one yen for silver bullion), will be given in exchange, deducting the fees mentioned in Article 4 out of the actual value of the bullion. (All fees, with exception of those for coining will be received in currency) within the period mentioned in Article 6.

Note.—The waste of the metal in the process of assaying must be borne by the owner.

Art. 2.—Bullion will only be received in the following quantities:—gold, 50 ounces and upwards; silver 500 ounces and upwards, gold or silver impure bullion, old coins, and gold and silver mixed, of 200 yen in value and upwards.

Art. 3.—Bullion will be received daily from 9 a.m. to 12 noon, with the exception of the following days:—Sundays, Annual and Casual Holidays, from 1st to 3rd January, from 16th June to 15th August and from 25th to 31st December.

Art. 4.—According to the description of bullion, the following fees will be received at the Branch office:—

For (gold which does not require refining and analysis and which does require to undergo those processes.

Fees for testing by melting:—

For a parcel of less than 500 ounces.....	Yen 1
For over 500 ounces but under 1,000 ounces ..	2
For every 500 ounces or fraction of 500 ounces over 1,000 ounces.....	1

Fees for testing by analysis:—

For a parcel of less than 500 ounces.....	" 2
For over 500 ounces but under 1,000 ounces ..	4
For every 500 ounces or fraction of 500 ounces over 1,000 ounces.....	2

Fees for coining:—One per cent.

Expenses for transit and insurance fees

[65 Yen per 10,000 Yen.

[If the coin is to be taken delivery of in Osaka, only half of the last mentioned amount will be charged.]

Note.—In the case of impure gold bullion, Yen 1.377 of the fees for refining and analysis will be charged per 10 ounces of gold refined by thus analysing, besides the expenses above mentioned, but in such case, no fees for testing by melting will be charged.

For silver bullion which does not require refining and analysis and which does require to undergo those processes.

Fees for testing by melting:—

For a parcel of less than 1,000 ounces.....	Yen 1
For over 1,000 ounces but under 2,000 ounces ..	2
For every 1,000 ounces or fraction of 1,000 ounces over 2,000 ounces ..	1

Fees for testing by analysis:—

For a parcel less than 1,000 ounces.....	" 1
For over 1,000 ounces but under 2,000 ounces ..	2
For every 1,000 ounces or fraction of 1,000 ounces over 2,000 ounces.....	1

Fees for coining:—One per cent.

Expenses for transit and insurance fees

[65 Yen per 10,000 Yen.

[If the coin is to be taken delivery of in Osaka, only half of the last mentioned amount will be charged.]

Note.—In the case of impure silver bullion, Yen 0.213 of the fees for refining and analysis will be charged per 10 ounces of the silver refined by thus analysing, besides the expenses above mentioned, but in such case no fees for testing by melting will be charged.

For old gold, or silver coins and gold and silver mixed bullion, which requires refining and analysis. Fees for testing by analysis:—

For a parcel of less than 1,000 ounces in weight	Yen 2
For over 1,000 ounces and under 2,000 ounces...	4
For every 1,000 ounces or fraction of 1,000 ounces over 2,000 ounces.....	2

Note.—In case the owner shall desire the bullion to be returned to him after being tested by melting and analysis, or in case the bullion is returned to him on account of its being unfit for refining and analysis; the following fees for testing by melting will, besides those for testing by analysis, be charged:—

For a parcel of less than 1,000 ounces.....	Yen 1
For over 1,000 ounces and under 2,000 ounces...	2
For every 1,000 ounces or fraction of 1,000 ounces over 2,000 ounces.....	1

Fees for refining and analysis.

For bullion which contains less than 100 parts of gold per 1,000:—

Yen 3.23 per 10 ounces of gold thus refined.
0.213 " 10 " " silver " "

For bullion which contains over 100 parts but less than 200 parts of gold per 1,000:—

Yen 1.904 per 10 ounces of gold thus refined.
0.128 " 10 " " silver " "

For bullion which contains over 200 parts of gold per 1,000:—

Yen 1.377 per 10 ounces of gold thus refined.
0.085 " 10 " " silver " "

Note.—The above rates are fixed, supposing that the bullion always contains less than 100 parts of miscellaneous metal per 1,000. If therefore the bullion contains over 100 parts of miscellaneous metal per 1,000 the following additional fees will be charged, and if the bullion contains over 200 parts of miscellaneous metal per 1,000, the said additional fees will be doubled. Bullion which contains over 250 parts of miscellaneous metal per 1,000, will not be received:—

Yen 0.349 per 10 ounces of pure gold contained in the bullion.

0.022 " 10 " " silver " "

Fees for coining:—One per cent of the pure gold or silver contained in the bullion.

Expenses for transit and insurance fees.—Yen 65 per yen 10,000.

[If the coin is to be taken delivery of in Osaka only half of the last mentioned amount will be charged.]

For gold or silver bullion, the fineness of which is apparently known and which does not require testing by melting:—

(*Note.*—Foreign gold or silver coin will be received only by the Mint in Osaka, but if already tested by melting, it will be received at the branch office.)

The fees for testing by analysis will be the same as those for testing gold or silver bullion by analysis (as previously given).

Fees for coining:—One per cent (gold or silver).
Expenses for transit and insurance fees:—Yen 65 per yen 10,000.

(If the coin is to be taken delivery of in Osaka, only half of the last mentioned amount will be charged.)

Art. 5.—In case the amount of bullion brought by the public shall be in excess of the capacity of the Mint, acceptance of the bullion may be refused.

Art. 6.—The coin will be delivered after the expiration of the following periods after the bullion has been tested by analysis and its fineness ascertained. When old coin is received, the delivery will be made as early as possible after the completion of the testing.

In case.	Value.	After the date of the completion of testing (excluding holidays.)
The gold or silver bullion is fit for coining		25th day
The bullion is of impure gold or silver, or of gold or silver mixed.....	Over yen 200	28th "
do.	" " 500	30th "
do.	" " 1,000	32nd "
do.	" " 5,000	35th "
do.	" " 10,000	40th "

Note.—To those who wish to obtain coin before the above dates, coin will be delivered after deducting yen 1 per yen 10,000, for each one of the days previous to the expiry of the above periods.

Art. 7.—All metals, other than gold and silver, which may be contained in the bullion brought by the public, will not be returned.

COURT, POLITICAL AND OFFICIAL.

The new palace about to be erected in Tokio for the Mikado will, when finished, be a magnificent pile of buildings. The native papers state, that the erection of the palace will take seven years and that the interior will be in Japanese style while the outside will present the same appearance as similar buildings in Europe.

Reports from Kiyoto state, that as the Imperial palace there is to be occupied shortly, the local authorities have ordered two thousand new mats and given instructions to have the gardens and grounds put in order without delay.

Mr. Chida, the acting-governor of Tokio Fu, has issued a Notification that a meeting of the Fu Assembly, will be held in the consulting Hall of the Encho, on the 24th October, to discuss the management of the joint property of the fifteen Ken of Tokio.

The *Mainichi Shimbun* mentions, that two Chinese officials of high rank have lately arrived at the Chinese Legation in Tokio, bearing important despatches containing instructions from their Government for the Chinese Minister.

The Government have handed over to Mr. Shotai, the ex-King of Loochoo, in lieu of a pension, Government bonds of the value of 200,000 yen. The bonds are of the issue which bear interest at ten per cent.

The native papers state that the National Debt Bureau, of the Finance Department is engaged in preparing the pension bonds for the *shizoku* of the Okinawa Ken.

The *Mainichi Shimbun* states, that Prince Henry, accompanied by three other officers of the German frigate *Prinz Adalbert*, had a day's duck shooting on the 15th instant, over the property of Mr. Kuroda, the Minister for Colonization.

We regret to have to announce the death of General Kawaji, which occurred on Monday night. During the day he was so ill, that telegrams were despatched to several persons in the afternoon, stating that he was in a very precarious condition, and in consequence the Assistant-Superintendents of Police, and other officials connected with General Kawaji's Department, assembled at the Central office.

In consideration of the late General Kawaji's long and faithful services, His Majesty the Emperor has presented his relatives with 2,000 yen, to defray the expenses of his funeral.

Mr. Ito, the Minister for Home Affairs, accompanied by Mr. Matsukata, Director of the Agricultural Bureau and Mr. Marahara, the 2nd secretary of the Home Department, will leave Tokio for Fukushima ken, about the 20th instant, in order to inspect the site of the extensive operations about to be undertaken for bringing into cultivation the waste lands in that prefecture. The subordinate officers preceded the party, on the 16th instant.

Mr. Nomura, the Governor of Kanagawa Ken, left on the

14th instant, on a visit to the hot springs in Ikaho, Joshiu, for the benefit of his health. During the Governor's absence Mr. Kawano, the under-Secretary of the Ken will act for him.

It is rumoured that Mr. Hanabusa, the Japanese Envoy to Korea, will return to Tokio during next month.

Mr. Sawasaki, a Judge of the Tokio *Saibansho*, has been ordered to proceed to the Loochoo Islands.

Mr. Inouye, the Minister for Foreign Affairs, visited the German man-of-war *Prinz Adalbert* on the 10th instant.

The Minister of Finance issued a Notification on the 10th instant stating that Branch Offices of the Taxation Bureau have been established at Osaka, Hiroshima, Kumamoto, Nagoya and Sendai.

The fifth annual report of the Minister for Education has just been made public and contains a very interesting account of educational affairs in Japan. Amongst other matters of importance the report contains a memorial from Mr. Tanaka, the Senior Vice-Minister for Education, affirming the desirability of establishing a National Educational Assembly, for deliberating upon and deciding all matters connected with public education throughout the empire.

Those medical students of the Tokio University who have been successful in passing their examinations, will be publicly presented with diplomas to-morrow. A banquet will take place in the evening.

NAVAL AND MILITARY.

The Naval and Military authorities have made an arrangement with the Mitsu Bishi Co., under which the passage money charged to Japanese officers travelling by the company's steamers will be twenty per cent, less than the ordinary public. The agreement will take effect on the 1st November next.

The Japanese man-of-war *Tsukuba Kan*, arrived in Hakodate from Muroran, on the 12th instant.

The *Mainichi Shimbun* states, that a rumour is very prevalent respecting forthcoming changes of great importance in the administrative department of the army.

The Council of State have made public the rules and regulations affecting enlistment in the Army and the conduct of all business connected with the Military Department.

General Fukuoka, the Commandant of the garrison at Sendai, has been in very bad health for some time past and lately sent in his resignation to the Government. The resignation was accepted.

INDUSTRIES, TRADE AND FINANCE.

Information has been received from Hakodate that great progress is being made in the preliminary arrangements of the *Hokkaido Kaishin Kaisha* (Association for the development of the Hokkaido). The cultivation of a portion of the ground allotted to the Association in Yezo by the Government was to have been commenced a few days after the date of the report—2nd instant.

Information has been received by the Japanese Government, that the International Exhibition of Industry at Sydney was to have been opened on the 17th ultimo. It was also stated that the exhibits from the various countries were so numerous, that the space allotted to those from Japan had to be curtailed.

The *Choya Shimbun* states, that as the climate of the province of Kishiu is well adapted for raising sheep, the authorities of the Agricultural Bureau are about to establish an extensive sheep farm in that locality.

Another mishap has occurred at the Usakayama tunnel on the Kiyoto-Otsu railway, near the place where the former accident happened. On the 8th instant, at about 3 o'clock in the afternoon, some 13 *ken* (26 yards) of the tunnel fell in, burying 12 coolies, who were however shortly afterwards dug out uninjured.

The Colonization Commission have determined to hold an Agricultural show in Hakodate, on an early date.

There has been a great increase lately in the number of persons engaged in shell fishing off Yanagawa in the province of Chikugo. The bivalve known as *agemaki* is highly esteemed by foreigners and is exported from Nagasaki to the value of two hundred yen daily.

Cork trees were discovered not long ago in the province of Aki and other places throughout Japan, and lately a kind of tree similar to the cork tree is said to have been found growing in abundance in the Hakone mountains.

A great sale of horses from the province of Oshiu, will be held in Mita, Tokio, on the 21st instant and four following days.

The mercantile community of Yamanaishi Ken, are taking the necessary measures for the establishment of a Chamber of Commerce in their locality.

MISCELLANEOUS.

Our readers will probably remember that General Grant was so pleased with the entertainment provided for him by Mr. Morita, the proprietor of the Shintomiza theatre on the occasion of his visit to that establishment, that he presented him with a beautiful drop scene. To show his gratitude Mr. Morita had a splendid set of gold-lacquered harness specially manufactured for the General, and on the 11th instant, it was forwarded to the Foreign office for transmission to General Grant.

The annual religious ceremonies at the temple of Ikegami took place on the 12th and 13th instant, and attracted a large number of visitors from Tokio and other places. During the time the ceremonies lasted, special trains at reduced fares were running between Shimbashi and Omori, and conveyed 6,557 passengers who paid 948.95 yen. The total amount of receipts on the line between Tokio and Yokohama, on the 12th instant, was 3,100 yen, or nearly three times as much as on ordinary days.

Another of those destructive conflagrations so common in Japanese cities occurred in Shinauigōri, Idzumo, on the 21st ultimo, and was not finally extinguished until 111 houses had been burnt down.

The *Sendai Nichi Nichi Shimbun* states, that the number of prisoners who perished in the recent fire in the prison at Yamagata was eighteen, one was slightly injured and nine made good their escape.

The *Hochi Shimbun* says, that when General Grant was in Tokio he expressed great admiration for Japanese house architecture, and stated that he would very much like to build one for himself in America. The Foreign office have accordingly ordered a model to be made, complete in every particular, which will be forwarded to General Grant.

A flower show was held in the grounds of Morita Rokusaburo, situated within the Asakusa public gardens in Tokio, on the 17th instant, and will remain open for ten days. The display comprises flowers peculiar to Japan, China and Western countries, and is well worth a visit.

The Imperial Household Department have recently acquired, at the price of 850 yen, a very ancient bronze vase, unearthed not long since in the province of Yamato.

The two temples, Tenriusha and Chiriusha, which have existed in Lochoo ever since the islands were inhabited, have recently been ranked as "Provincial Temples" under the Japanese system and will be subsidised accordingly.

The native papers state, that a Korean priest named Tunin has become such a devoted disciple of the Japanese form of religion known as *shinshin*, that he recently applied to the chief priest of Nishi-hongwanji to allow him to enter as an acolyte in the temple for five years, in order that he may be thoroughly instructed in the doctrines of that particular faith.

A native contemporary states, that a gathering of Buddhist nuns will take place shortly at Kamakura to make arrangements for establishing a girls' school for the children of poor people, in connection with the nunnery at Kamakura.

Yamanouchi, an officer of the Educational Section of Kanagawa Ken, committed suicide by blowing out his brains with a pistol, on the evening of the 11th instant. No reason can be given for the act.

A fatal accident occurred about five o'clock in the afternoon of the 14th instant, on the Tokio-Yokohama railway. A farmer of Daitauka Mura, Yabaragōri, when returning from his daily work in the garden, crossed the line while the train was coming in his direction, and was overtaken, run over and cut to pieces.

Chinese policemen have lately been appointed by the Chinese Consul, to keep order amongst his countrymen. Two or three of them pay periodical visits to the Chinese quarter.

The first fall of snow this season occurred on the 30th ultimo, at the mountain of Téincyama, Sapporo, in Yezo.

The acting chief superintendent of Police in Tokio, has issued

a Notification that the Cholera Lazarets for prisoners, situated in the 4th fort off Shinagawa and at Ichigaya, would be burnt down on the 13th instant.

The treasury is said to have commenced the preparation of a list of Sanitary officers and Policemen in the different provinces, who have carried out their duties faithfully and diligently during the recent epidemic of cholera, in order to present them with suitable rewards.

Cholera is reported to be re-appearing in Kiyoto Fu and in consequence, the schools have again been closed.

The total number of cholera cases throughout the country since the commencement of the epidemic up to the 11th instant was 153,486; of which 86,644 proved fatal, 33,504 persons attacked recovered, and 33,338 remained under treatment on that date.

The number of new cases of cholera and deaths in Tokio, reported during the week, is as follows:—

Date.	New Patients.	Deaths.
October 10th	5	—
" 11th	8	2
" 12th	2	2
" 13th	8	1
" 14th	2	1
" 15th	3	1
" 16th	2	1
Total	30	8

Return of cholera cases in Kanagawa Ken, from the commencement of the epidemic up to the 17th October, 1879:—

Date.	New Patients.	Died.	Recovered.	Under Treatment.
June 18th to {	2109	1482	567	80

MEMORIAL OF THE TOKIO CHAMBER OF COMMERCE RESPECTING TREATY REVISION, ADDRESSED TO H.E. OKUMA, THE MINISTER FOR FINANCE.

The question of Treaty Revision being of the utmost importance to Japan and as upon it depends whether she is to rise or fall in the scale of nations, the Government proposed some considerable time ago to effect a revision of the treaties. With this object they instructed the Japanese representatives at foreign Courts to bring under the notice of the respective

Governments to which they were accredited full particulars of the wishes of the Japanese Government. At the same time our Government invited an expression of opinion from the public here, and in particular requested this Chamber to forward its views upon certain questions arising out of the subject of treaty revision. This Chamber accordingly held many meetings and considered the matters submitted to it very fully, and now begs to transmit to the Government the result of its deliberations. In dealing with this question the Chamber considers it is only carrying out a duty which is imposed upon every Chamber of Commerce.

After careful consideration of the effect the existing treaties have had, we are of opinion that not only have they been prejudicial to the country, but also to the development of foreign commercial intercourse, thus injuring both natives and foreigners. The Government have probably been aware of this for some time past, and we can readily imagine that the Treaty Powers are of a similar opinion and will gladly comply with our desire for a revision of such clauses of the existing treaties as affect commercial affairs. If, however, the Treaty Powers object to revise the objectionable clauses, we shall consider their conduct to be similar to that of persons who have violated the spirit of morality and ignored the ordinary dictates of common sense. We will now give our reasons for arriving at this conclusion.

The existing treaties were made towards the end of the late Government, at a time when Japan had never had any previous relations with foreign nations and consequently no experience of them. As regards the tariff established by these treaties our Government had no opportunity of considering whether it would be advantageous or not, but were under the circumstances then existing unavoidably compelled to submit to it. As might have been expected it will be found, if our treaties are compared with those existing between other nations in Europe and America, that in no other instance has a treaty been entered into so partial and unreasonable as ours.

Since the existing treaties were made, our civilization has increased year by year, and it is quite evident that circumstances have entirely changed. Such being the case our Government might now fairly ask for a reasonable revision of the treaties, even if no mention of revision had been made in the treaties, how much more therefore are they entitled to do so, when the date of such revision is distinctly provided for in the treaties themselves?

The foregoing is what we consider the case as regarded by the light of common sense and from the actual circumstances. Should the Treaty Powers still object to revise the treaties, our obligation to act in a friendly way towards them will be rendered null and void. Our Government will then be acting justly and reasonably in exercising its undoubted right as an independent nation to impose a tariff to suit the convenience of the country, without the sanction or assistance of any foreign power.

That a revision of the existing treaties is an unavoidable necessity we have already explained, and we will now point out more particularly the great injuries inflicted upon the finances of the country, and the reasons why the treaties obstruct the progress and prosperity of the foreign trade of Japan.

Japan considered agricultural production as of paramount importance since the very earliest times and raised the principal revenue of the country by means of a land-tax. This system continued in force for over 2,500 years or until the restoration of the Imperial Government. It was then observed that the land-tax bore too heavily upon the farmers and the system of levying the tax was revised and the impost itself lessened. Again in 1875 the tax was further reduced to 2½ per cent. of the value of the land. The Government have endeavored to bring the land-tax on an equality with other taxes, but up to the present their efforts have not been crowned with complete success, as may be seen by the estimates for the 12th financial year of Meiji lately published by the Finance Minister. These estimates show that the total estimated revenue for the year is 55,651,379 yen, out of which the internal taxes are 53,470,069 yen while the custom's duties are only 2,181,310 yen.

The land-tax amounts to the large sum of 41,376,458 yen of the internal taxes, so that it forms 74.35 per cent. of the total

revenue of the empire, while the custom's duties only amount to 3.9 per cent.

We will, for the sake of example, compare the amount of our revenue with those of various countries in Europe and America, and shew the great discrepancy which exists between these countries and Japan in the sources from which they derive their incomes:

Country.	Internal taxes.	Custom's duties.	Miscellaneous revenue.	Total revenue.	Percentage of custom's duties as against the total revenue.
	yen.	yen.	yen.	yen.	
Japan *	43,881,462	2,358,651	4,460,171	50,700,284	4.6
England	137,320,000	99,845,000	161,651,495	398,816,495	25.
Canada	4,911,897	12,546,987	4,570,390	22,029,274	56.8
France	271,699,360	56,601,000	230,332,201	558,632,561	10.1
America	110,581,624	130,170,680	17,011,474	257,763,778	50.5

The above table shows that the internal revenue of Japan bears a much smaller proportion to the custom's revenue than in any other country. How therefore can this state of things be called just or reasonable? Agricultural products form by far the most important portion of our exports, for instance in the 11th fiscal year of Meiji the total value of exports was 24,614,760 yen, out of which raw silk, tea and rice came to 18,666,730 yen or about 67 per cent. of the whole. It may therefore be taken for granted that agriculture is the staple industry of Japan and the source from which we may expect the principal increase in the national wealth in the future. At present however, the taxes imposed upon the land are so heavy and the import duties are so light, that we are following a most suicidal financial policy. Should we then be content with the existing state of things and not endeavour to effect some remedy? If matters remain as they now are, not only will there be no development of the agricultural industry, but we can have no reasonable expectation of a prosperous future for our trade.

Let us explain the situation more fully. We will first consider the annual profit the agriculturist can derive from the land under the system of taxation which now obtains in Japan. Although differing in various provinces the average value of one *tan* (75 square yards) of paddy-field is about 47 yen. One *tan* produces about 1.3324 *koku* (1 *koku* is equal to 5.13 bushels) of rice, which will sell on an average for 5.5774 yen. Now if from this sum is deducted 1.8591 yen, the cost of 0.4441 *koku* of seed rice, manure and other incidental expenses, 1.185 yen or 0.2831 *koku*, being the land-tax of 2½ per cent on the value of the land and 0.2377 yen or 0.0566 *koku* being the local tax of 1-5th of the land-tax, there will remain to the agriculturist only 2.296 yen or 0.5485 *koku* as the net profit on the cultivation of one *tan* of land which only amounts to 4.8 per cent of the value of land! We may here state that these calculations are based on the return prepared by the Taxation Bureau of the Finance Department when the value of the land throughout the country was fixed, and that as some fields bear two crops a year this has also been taken into consideration. There are also some additional burdens, such as "public expenses defrayed by the mutual consent of the people," and "the fund for relieving agricultural distress," &c. which are not included in the above calculation. With respect to vegetable gardens, although no doubt some few make considerable profits from the sale of tea and mulberry plants, yet taking the whole of them, if the large additional expenses are deducted, the net profit will be found not to differ to any material extent from the paddy-fields.

From these causes the capital possessed by the farmers has been for a long time extremely limited. Their implements consist only of hoes, spades and other similar rude appliances, the cases being very rare where oxen or horses are employed to assist human labour. Now as the profit in agriculture is so small, although it is the great mainstay of the country, it follows that every endeavour should be made to alleviate the condition of the farmer, so that he may derive greater profit from his operations and also gradually accumulate capital to enable him to extend them. This we consider the most pressing necessity to effect an improvement in the revenue of the empire. It may perhaps be argued that as the number of people, including aged men, women and children who are dependent for their livelihood upon agriculture amounts to 15,320,000 or about 43. 7

* Japan's revenue is for the 10th Financial year of Meiji.

per cent. of the whole population of Japan, farming must be a profitable business or else a number of these people would have changed their occupation long before. This idea however proceeds altogether upon a mistaken view of the position and of the peculiar customs of this country. Farming in Japan has been handed down from father to son, from one generation after another and it would be considered a breach of filial piety to abandon the occupation of ones ancestors. It is therefore found that with the exception of those who lose their property through idleness or dissipation, the farmers cling to their land regardless of the miserable return they receive for their toil. This custom has existed for such a long period that it has become deeply rooted and a leading characteristic of the farming population. Now however, a gradual change is taking place, the postal and telegraph systems have brought the inhabitants of even the most remote districts into constant communication with the outer world and they are consequently well acquainted with the comparative ease with which some classes of the community earn a livelihood as compared with themselves. As a natural result they are becoming dissatisfied with their condition, already they complain of the amount of the land-tax, and unless some measures are adopted to render their business more profitable to them they will most surely become permanently dissatisfied and a source of constant uneasiness to the authorities.

Under these circumstances the Government should make every effect to put the finances of the country on such a footing that a reduction can be made in the land-tax and the roads improved so as to facilitate the transport of produce from one part of the country to another. But this requires very careful consideration. Although the annual revenue of Japan is about 55,000,000 yen, the outlay occasioned by the reorganization of every department of the state, rendered necessary by the alteration in the circumstances of the empire, absorbs any surplus that may be left after the ordinary expenditure is provided for. Are fresh taxes to be imposed upon trade in order to create a surplus out of which to relieve the farmers? This is not by any means advisable, because the Government, in order to make good the deficiency after the last reduction of the land-tax, promulgated a stamp act and levied duties, on saké, tobacco, &c. It must be apparent, that although it is very desirable and in fact necessary, to reduce the land-tax no fresh or heavier imposts can be levied on trade to make up the deficiency. It is therefore evident that the Government have only one course open to them. The revision of the treaties must be insisted upon and a suitable increase made in the duties levied upon imports. There is also another cogent reason why the import duties should be increased. The foreign debt and the interest upon it have to be paid in coin and coin is continually being exported from the country owing to the balance of trade being against us ever since the opening of the ports, and at present has almost entirely disappeared and is no longer available as currency.

Although the credit of Japan has not yet suffered, we cannot view the future without grave apprehension and the custom's revenue is all that is to be depended upon to meet the difficulty. It is manifestly unfair that the foreign debt should be paid in coin and the internal debt in inconvertible paper money as at present. The most urgent necessity exists for a revision of the treaties in order to increase the import duties, decrease the land-tax and thus effect the development and prosperity of the agricultural industry of the empire.

Again it may be said, that if the import duties are increased the export duties ought to be increased also. This is a serious error to fall into. We have already shewn the necessity which exists for decreasing the land-tax and that our exports consist principally of agricultural produce. If heavy export duties are imposed it will have exactly the same effect as if a heavy tax was levied upon the land itself. The export duties are detrimental to the farmers and for our part, not only are we opposed to their being increased, but we should like to see them abolished altogether.

The question also presents itself from another aspect. It may be said that the effect of increased import duties would be to raise the price of imported articles to such an extent that the public generally would be unable to purchase them, and thus not only would the people be deprived of what have now become necessities, but the import trade would decline and great loss be con-

sequently inflicted both on natives and foreigners. This, however, is a very superficial view to take. Let us see what our producers really require—food clothing, implements, houses. Out of these, the only imported goods are cotton-yarn, muslin, kerosene oil, and a few other trifling articles, the whole forming only about twenty or thirty per cent of all their requirements. So even if the price of these articles was raised, it would scarcely affect our producers or raise the price of exports. It is also evident, that as these imported articles have come into general use, so long as the purchasers—whether agriculturists or not—can better afford to pay for them, they will still buy even if the price is higher than at present. The import market lately is an example of the truth of our assertion, that the consumption of imported goods depends, not so much upon the price, as upon the capability of the people to purchase. Not long since the prices ruling in the interior were very high in consequence of the great increase in the value of bullion, and yet more imported goods were consumed than when the prices were lower. Such being the case, it would appear to be evident that by decreasing the land tax, improving the means of internal communication, and thus developing production, the purchasing power of the people will be augmented and a great increase take place in the consumption of imported goods.

It must also be borne in mind that our exports to foreign countries are almost entirely agricultural or marine products, such as raw silk, tea, rice, barley, camphor, vegetable wax, seaweed, dried *anabi* &c., &c. The following table shews the value of all the exports of Japan for the five years ending 1878.

	1874.	1875.	1876.	1877.	1878.
Raw produce	18,064,955	17,173,271	26,399,404	21,809,044	21,121,900
Manufactured goods	619,848	566,597	488,054	688,923	769,836

It will thus be seen that the articles which are likely to increase our exports are almost all raw products the result of agricultural industry. The exigencies of the country therefore imperatively demand the expansion of the capacity of the people to purchase imported articles by the development of these productions. If this is done our exports will increase and the import trade prosper in an equal degree. But if we fail in accomplishing this important object, not only will we be unable to increase our productions but we will have to denude the country of bullion to purchase what imported goods we require.

The gold and silver coin exported from Japan, from 1872 to June 1879, to make up the adverse balance of trade amounted to the enormous sum of 43,398,529 yen! If this state of things continues much longer it will result in all the bullion in the country, the amount of which is limited, being exchanged for imports, which are of unlimited quantity, and the exhaustion of our products for export; then importation will cease and trade die out altogether.

It is well known, that no country in the world depends entirely upon its accumulated stores of bullion, to purchase such of the products of other countries as it requires. The true principle of trade is an equal exchange, everyone who sells does so with the object of purchasing, those who purchase do so to sell, but Japan is buying and not selling to any extent and if we continue much longer the same course of dealing, we will most assuredly be reduced to the condition we have already mentioned. Those who fear a rise in the price of imports consequent upon an increase in the custom's duties, and disregard the improvement of the condition of the producer are like people who wish for a healthy growth of leaves without bestowing any attention upon the tree. Should these erroneous opinions be insisted upon and the augmentation of the import duties be considered disadvantageous, we must liken the supporters of these views to people who are anxious only for their private benefit and are acting contrary to the true principles of trade.

For all these reasons we earnestly desire the Government to resolutely insist upon an immediate revision of the treaties so that the condition of the producers in the interior may be ameliorated, production increased, and trade rendered prosperous.

As regards our other suggestions on the revision of the treaties we will deal with them below under their separate headings.

(To be continued.)

THE FAMOUS PLACES OF YAMATO AND KISHIU.

FROM NACHI FALLS BY THE KITAYAMA-GARA TO KAMI-KUHI.
(Continued.)

We have now got into the ordinary track of pilgrims, who after first visiting the Temples of Ise, follow the coast to Shiōgū, continue on to Nachi, whence they cross the mountains to the Hōgū, and from there take the cross-country path to Kauya-san which has already been described. The road from Shiōgū becomes very pretty as soon as it gets out of the tract of rice-fields which intervenes between the hills and the sea south of the town. It passes below the rocky hill of Kami-kara yama, on which stood a Shintō temple dedicated to unorthodox Gōngēn, who are not recognized by pure Shintō, and it was for this reason demolished a few years back. Amongst the low hills which fringe the shore further on the sweet-scented lily (a variety of *Lilium Japonicum*) abounds, and the jasmine-like *Parcelites Thunbergii* hangs luxuriantly from the trees. Kumano is also the home of several species which require a warm climate, such as the *hamayu* (*Crinum Asiaticum*), the beautiful sawfern (*nokogiri-shida*, *Nephrolepis tuberosa*) and the tonguefern (*hitotsuba*, *Nipholobolus lingua*). After an hour's easy walking, the path approaches the sea, and then winds among the pines which crown the cliffs for ten minutes more, until it reaches Mitarahi-zaka, which commands an enchanting view over the bay of Miwazaki. The sharp point behind which lie a few junks is cape Miwazaki. Suzu shima and Kushi shima are the two islets opposite its end. Beyond Miwazaki town comes Akitsu no ura, then the pine-wood called Sano no matsubara, Katsura head, near which are some warm springs, and Mezamashi-yama. Whale-fishing enlivens the coast during the winter. Miyazaki consists of a long street bent at a right angle in the middle, with but one good inn on the right hand side, otherwise very poor and dull, as all fishing-villages are. Sano no Matsubara succeeds, and for a mile or so we walk along a smooth sandy road under the shade of pine-trees close to the sea beach, with refreshing green hills near at hand on the right. Crossing a small stream, we leave the sea, then rounding a headland, come to the huge spreading pine-tree at the entrance of Uguwi village, on which Koremori is said to have hung his clothes before drowning himself in the bay. The road now passes inland behind some hills, comes out again to the shore for a moment, then climbs behind the hills again and issues at a tea-house where there is a pleasant view of Katsura head, and beyond it the promontory of Ashi no hana. In this part women are frequently met carrying burdens on their heads, and both sexes smoke tobacco rolled up in camellia leaves. About a mile further stands the Shintō temple Hama no miya, where the Nachi road turns to the right and gradually ascends the valley to the great *torii*, in one hour's easy walking, about four hours from Shiōgū, not counting stoppages. There is a capital inn here, close to the *torii*, but the traveller will probably find it more convenient to climb for half an hour up through the wood to the temples, and procure a lodging in one of the houses of the former priests about 900 feet above the sea. Shihosaki Hayata can be recommended. It is advisable to engage a guide to the falls. Unfortunately there is no point of view from which the Great Fall, celebrated as being the highest in Japan, can be seen to advantage. The visitor has to descend by a well-laid pathway to a decayed chapel of Kuwañō at the bottom of the fall, whence he cannot well appreciate its height as it pours over the edge of a cliff far above him, and tumbles into its basin below. Various statements have been made of its height and breadth. The most recent work on Japanese geography published by a government department gives 840 feet as the height and 108 feet as the width. These figures appear to be gross exaggerations. The writer was informed that an accurate measurement had lately been made by means of a cord lowered from the cliff above, which showed the height to be 420 feet. Captain St. John, R.N., states the height at 275 feet, but does not say how he obtained these figures. Another Japanese authority estimates the height at 1,000 feet, the width at 48 feet. Tradition says that the Buddhist Saint Mōngaku remained three weeks fasting in the water just below the basin, performing penance. At the age of seventeen he fell in love with his beautiful cousin Kesa, who was already married to another, but carried away by his passion, he did not

hesitate to demand her from her mother. In order to protect her parent from his violence, Kesa consented, on condition that he would first kill her husband, and then taking her husband's place in bed, awaited the assassin. Mōngaku accordingly entered the room at midnight, murdered his beloved and cut off her head, but was so horrified on discovering who his victim was, that he vowed to forsake the world, and became a monk. Returning up the paved path from the bottom of the fall, we enter the wood by a narrow track, and climb up some distance through the wood down on to the stream just above the first fall. An Azalea with minute pink blossoms is abundant here. To reach the Second Fall we walk up the stream for some 300 yards, stepping from rock to rock, under the trees whose tops meet overhead, to the circular basin or high-walled amphitheatre into which it falls. A thick canopy of evergreen oak excludes the sky, and a more beautiful and romantic spot could not easily be found. The height given by the guide is 68 yards, Captain St. John estimated it at 70 feet, and it certainly is not more. Above this again is the Third Fall, to reach which we have to walk along some steep, slippery rocks at the side of the stream, which can only be done safely barefoot or in *icariji*. Rare ferns and mosses cover the rocks in lavish abundance. Beyond this again are numerous smaller cascades higher up the mountain, which are rarely visited. The Shintō temple of Nachi is uninteresting. On the right of the area stand five chapels in a row, dedicated 1st to Izanami and Koto-Saka-no-Wo, 2nd Izanagi, 3rd Kuni-toko-tachi, 4th the Sun-Goddess, 5th Oho-namuchi. Opposite is the chapel of Eight Accessory Deities, namely the four ancestors of Zhiānu Teāwan, and Toyo-kūnu, Kuni-sa-tsuchi, Uhi-ji-ni, Oho-to-no-ji and Omo-daru as at Shiōgū. Close by is the more imposing temple of Kuwañō, No. One of the Thirty-three Places. The priests of Nachi formerly belonged to both Shiōgō and Teūdai orders, and were married. Tradition relates that long ago in the prehistoric age, a boat containing seven persons was driven ashore in Kumano, one of whom landed, while the others pushed off again. The individual who landed was an Indian priest, naked with the exception of a *kachaya* (*kesa*) or priest's scarf, and the name Ragiyau, Naked Form, was given to him in consequence. During seven centuries this holy man practised the austerities prescribed by his religion, bathing in the cascade during the day, and passing the night seated on a rock. As the reward of his devotion an image appeared to him out of the pool, in honour of which he built a chapel-hut, but as Buddhism had not yet been introduced into Japan, no one could explain what the image was, and when the saint died, his chapel fell to pieces, leaving only the memory of his actions behind. When Buddhism began to flourish in the beginning of the 7th century, a man called Shiyabutsu, who was visiting the temples of Kumano, had a vision of Ragiyau, who directed him where to find the image, which turned out to be that of Kuwañō, and the Mikado on hearing of the incident, ordered that a temple should be founded on the spot where Ragiyau's hut had stood. A wooden image of the goddess was carved, ten feet in height, and the original image placed inside it, as the custom is. The present building is very ancient and dirty. In front hangs a gigantic *icari-guchi* gong, presented to the temple nearly three centuries ago by Hideyoshi. A chief priest has lately been appointed, who sells a sort of charm called *ketu-miyaku*, by virtue of which the possessor, becoming a child of S'ākya-muni, is placed under the special protection of Kuwañō, and after being delivered from the seven calamities of this life is finally admitted into the Heaven of Amida in the west.

From Nachi the route to the Hōgū is by the passes called Oho-kumo-tori and Ko-kumo-tori, a very hard day's work. The path starts from the back of the temple of Kuwañō, and turns up to the left at once. After climbing about 250 yards, there is a path to the left to the Buddhist temple Mei-hofu-zhi, about 1½ miles further, originally a temple of the Shiōgō sect, founded by Konbōfu Daishi and dedicated to Amida, but now belonging to the Zen sect. Half a mile above this is the chapel of Shiyaka (S'ākya-muni,) near the summit of a hill called Shikui yama, from the number of trees of *Skimmia Japonica* which grow there. Mei-hofu-zhi commands a fine view of the coast from Uguwi no hana, Katsura head and port, to Urugami port and headland, with Ohoshima beyond. The path rejoins the main route some time before the latter reaches the first hut on the pass, called the Thirty *chiyan* tea-house. Rough accommodation for the night can be had here. Half an hour further on is

the Funemi tea-house, which commands a fine sea-view towards the south and east. The height above the sea is about 2250 feet. From this point the path varies very much, sometimes climbing to a great height, descending again, and then re-ascending, the summit of the pass, from which nothing can be seen, being about 2950 feet high. During two hours hard walking we do not pass any kind of shelter. At last the path makes a sudden plunge into the valley of the Koguchi-gaha, and at an inn in Nishimura (350 feet above the sea) decent accommodation is to be had. The walk from this place down the valley is charming. Passing through Nagawi to the Koguchi ferry, which is crossed by travellers going to the Hōgun by the Kokumo-tori, the path keeps along the precipitous rocks which overhang the right bank, and descends through a village to the weir at Akagi, which has been ingeniously constructed so as to render the river navigable for small boats from Nishimura as far as this place. To shoot the rapids just below the Koguchi ferry looks exciting work. Crossing above the weir by ferry-boat, we keep down the valley to the left to Kitari village, passing many delicious green pools between the rapids, and carefully keeping the rice-fields always on our right. The village close to the Kumano-gaha on the other side of the valley is Kumagi. At Mitari (110 feet) the path descends for a few moments to the bed of the Kumano-gaha, then climbs on to the bank and continues up the river for about a mile under a damp, thickly wooded cliff, then crosses by a ferry to the Yanzhi no Yakushi-ian noticed in descending the river. After traversing a part of the dry river bed, the path ascends on to the bank, and continues through the wood overhanging the stream to the confluence of the Kitayama-gaha and Kumano-gaha. Here is a ferry across to Miyawi, and a path mounts the right bank of the Kitayama-gaha past Shidaki to Kujiyuu (190 feet) at the foot of Tamaki san. Another path ascends the left bank, and crosses by the ferry nearly opposite Kujiyuu. This place is just on the Northern border of Muro department in Kishiu, and the road over Tamaki san is the only means of communication with the Eastern part of Yamato and also with the Totsu-kaha valley by way of Takataki. Kujiyuu is built on the side of a hill just like the villages in the Alps, house above house, and fully justifies its name, which signifies Nine-fold. After climbing for twenty minutes from the grove of *hinoki* which surrounds the village temple, the path proceeds for about half a mile alongside of an aqueduct cut in the side of a valley, and then ascends through a wood to a hut by the highest plot in which rice is cultivated (1430 feet above the sea) said to be 50 *chian* from Kujiyuu. In another 20 minutes we reach a hut called the Gohō matsu tea-house, where five pine trees formerly stood (2260 feet). Here a path comes in from Taketou, a place 1 *ri* E. of Kujiyuu, on the main-road between Totsukaha and Kishiu. We take this main-road, which is a little more than a bridle-path, and for half-an-hour continue along the mountain-side always slightly descending, then cross two streams and have an exceeding stiff climb for fifteen minutes to a ridge (2360 feet), opposite to which is Yuriga take, a continuation of Tamaki San. Three quarters of an hour more by a fair path through the wood bring us to the temple and the tea-house (3350 feet) just below the summit, where accommodation for the night can be had. The path from Hōgun comes in shortly before we reach the temple. This is dedicated to Susanowo, and is held to be the Oku-no-wiā of the Hōgun. Two annual festivals are celebrated, on the 24th of May and 24th of September. The path, which formerly led over the summit, now passes a little below on the East, but there is a narrow track by which the summit (3750 feet) may be gained, by turning aside to the left a short way above the tea-house. The view which it commands is very extensive. On the N. E. is Kasazute yama; E. S. S. is Uri-ga-take, where lilies are to be found in flower at all seasons (according to local tradition); S. E. we see two bends of the Kitayama-gaha thousands of feet below us; S. S. E. a glimpse of the Kumano-gaha near the mouth of the Koguchi-gaha; N. N. E. Kami Kuzu-gaha lying far away down at the bottom of a valley; W. S. W. the bare top of the Hatemashi pass, and generally, a sea of mountains in all directions. After ascending to the top of the pass, 200 feet above the tea-house, we walk down a pleasant grassy spur, with a gradually expanding view of the Totsu-kaha valley on the left and a deep, thickly wooded ravine below on the right hand. At thirty minutes distance the path down to Takataki and Oritachi, which latter place is

the metropolis of Totsukaha, branches away to the left, and rapidly descends the mountain-side. Ten minutes more bring us to a post where this path divides, right to Shimo Kuzugaha, Kamiyama-mura and Kumanogi, left to Wokaha, Kami Kuzugaha and Naka-mura. The former is the most direct route to Ura-mukahi on the Kitayama road, but the latter affords opportunities for seeing the primitive style of life in these remote valleys, and involves more climbing than the first. Half an hour brings us to a post marked, right Naka mura, left Wokaha and Kami Kuzugaha, and in five minutes more the Wokaha path breaks away to the right. The village of Kami Kuzugaha (1910 feet) is 40 minutes further, where the mayor or *soudai* must be applied to for lodgings, as there are no inns in the place. Worthy of note are the wild camellias still in flower on the tops of these hills in the end of May, and the numerous horse-chestnuts just coming into blossom. From this place there was formerly a short cut to Uramukahi for pilgrims who crossed the mountains to Ohomine, but it has not been used for years, and the guides would now have difficulty in finding it. Kami Kuzugaha to Ikemine in the valley of the Kitayama gaha is a good day's work. Starting early in the morning, we cross the stream at the upper end of the village, and climb straight up the mountain-side to the shoulder in 35 minutes, where we turn to the left, and enter a wood composed chiefly of horse-chestnut and *nara* oak (*Quercus glandulifera*). The path continues along the top of the ridge (about 3500 feet) for about half an hour, and then ascends for about the same space, when it reaches the point where the old *yamabushi* path turns off to the left. It is so overgrown with bamboo grass as to be almost undistinguishable. In a few minutes more we reach the top (3910 feet), and begin to descend a steep hill-side, and after half-an-hour's work find ourselves on the bank of a rivulet (2830 feet), which loses itself under the stony bed of a dry torrent close by. Ten minutes more in the flat bottom of the valley bring us to the foot of another ascent, which takes 35 minutes to the top of a ridge (3530 feet). Crossing this we descend during three quarters of an hour though a wood of rhododendrons, which are all in flower in the end of May. This is one of the most beautiful sights in Yamato, after the cherry-trees of Yoshino and plum-orchards of Tsuki-ga-se, but much less known to fame than either. The trees are mostly from 20 to 25 feet in height, and nothing else is visible to right or left, except the wooded mountain-side far away opposite, by glimpses through the dense foliage. It is a steep and slippery descent, especially the last bit just before reaching the stream (1,000 feet), into which we have to plunge boldly as there is no path on either side. Here is the best spot to rest and lunch. A few yards further the track turns up the valley of another stream which joins the last on the left, and follows it upwards for half an hour, finally ascending through a wood for an hour and three quarters. The summit of the ridge (3,020 feet) is three quarters of an hour from the nearest water. It is an extremely steep climb over loose soil amongst the roots of conifers, and the track is marked by pieces of wood driven into the earth like tent-pegs, on which the foot has to be set in order to obtain the necessary purchase for lifting the body. These paths are evidently used only by wood cutters and mushroom-gatherers. Frequently the track disappears altogether, and a guide is therefore absolutely necessary. The path now winds round to the left along the flank of the hill, and after descending for about twenty minutes joins the new, broad road from Nanairo on the Kitayama-gaha in Kishiu, which must not be confounded with Nanairo on the Totsu-kaha, a few miles above the Hōgun. In three-quarters of an hour we arrive at the tea-house below by easy gradients, and in a few minutes more reach the bridge at Uramukahi, a scattered hamlet in a broad and fertile valley. Crossing the bridge and rounding the hill to the left, the path rises gently along the left bank of the stream. Teragaito lies on both sides of the valley. In the middle of a fine grove of cryptomeria a little further, we turn up a narrow valley by the side of a tiny rivulet, which gradually becomes silent, and continue along its dry hollow bed, to Ike-mine (1,710 feet). This pretty little village is situated in a circular valley surrounded by low hills, which nevertheless entirely exclude all view of the lofty ranges which lie on every side of it. It is a perfect oasis of cultivation in the midst of a desert of mountains covered with dense and useless forests. The whole population is employed in tea-cultivation. There is no decent inn in the village, but here, as elsewhere in the mountains,

there is no difficulty in obtaining accommodation in the house of a farmer. After passing Ike-mine the path crosses a delicious piece of green pasture surrounded by forest, at the lower end of which is a circular pool of considerable size, from which the village takes its name,—Pool-summit. A steep descent leads down to the bed of the Kitayama-gaha, whose sudden appearance flowing down from the north takes us quite by surprise. This river is formed by the junction of two separate streams, called the Eastern and Western Kitayama-gaha. The latter rises on mount Ohodai-ga-hara, the former on the East side of the Oba-ga-mine ridge, and uniting at Kahahi with another torrent from Kuni-mi-yama, flows south to a point about a mile North of Ike-bara, when the Eastern and Western branches unite. They take their name from the group of mountain villages called Kitayama shiyau which lies between them. On the left bank lie the few scattered houses of Ike-bara (1090 feet.) The houses which cluster about the mouth of a small tributary on the right bank are also part of the same village. Better accommodation can be had here than at Ike-mine. From this point the path ascends the valley of the Western Kitayama-gaha, climbing gradually to the top of a lofty spur (1670 feet) opposite to the confluence of the two branches, and as it winds round the projecting angles we have frequent views of Ike-bara looking back, and the green waters flowing tranquilly along far below. Descending the spur again, the path proceeds alongside of the river for 1 *ri*, to a point where a path turns off up a ravine on the left to Zefiki, 2 *ri*, from which place the ascent of Shiyaka-ga-take, the second highest mountain in all Yamato, is made. The main road mounts a spur here (1,560 feet), from the summit of which another path turns off to Zefiki, intended for the use of travellers coming from the north. At Shirakaha, 1 *ri*, 30 *ch.* further, is a small inn. Opposite to this village is a path over the mountains to Wowashi in Kishiu, about 8 *ri*. The path is always along the right bank, and the excellent map of the Gokinai, published by the Topographical Bureau, is incorrect in this instance, owing probably to the route having been altered to a slight extent since the map was drawn. In 50 minutes more we reach Kahahi (1,480 feet), where there is a small inn. Here begins the ascent of the Oba-ga-mine pass, or more properly ridge, 6 *ri* in length with only one resting place, which is on the very summit about half-way. The usual way is across the river just below Kahahi, and follows its main branch through Koze, which village has been lately amalgamated with Tochimoto, under the joint name of Ko-tochi. From Tochimoto Ohodai-ga-hara can be ascended, and there is a route across the mountains to Deguchi on the Higashi Kitayama-gaha (four hours), and then over another pass 3,000 feet high to Wowashi bay in about five hours more. Ohodai-ga-hara is the name given to a lofty plateau, averaging 4,200 feet above the sea, extending over some thirty square miles of surface, at the junction of the three provinces of Yamato, Ise and Kii. Ohodai-ga-hara-yama, its principal summit, on the border of Ise and Yamato, measures 5,400 feet. On a clear day Fuzhi is distinctly visible from it, and the view of the coast of Kishiu and Ise and of the interior of Yamato, etc. is very extensive. Wolves, bear, wild-boar, hares and sheep-faced antelopes are plentiful. Splendid forests of oak and beech, besides maple, chestnut, yew and box abound on the top. The lower slopes are planted with cryptomeria and hinoki (*chamaecyparis*). The streams abound with trout. Another path from Kahahi crosses the stream a short way above the village, and then begins to ascend the side of the mountain, at once reaching a height of over 800 feet above the river in three-quarters of an hour. The path now seems to continue for a while nearly on one level, then issues on to the top of a long ridge running north and south, full of depressions into which it dives only to emerge again immediately, until at last it takes a spiral turn round a conical hill, and finally reaches the hut tsuji-dau (4,690 feet), a climb of about 3 hours for a good walker. A species of red tick which infests these mountains causes much annoyance by fastening itself on the legs of travellers. Oba-ga-mine takes its name from a demon called *yama-oba*, Mountain-Aunt, formerly supposed to haunt the woods, and to be especially troublesome on the 20th night of the 12th month. About 6 persons on an average pass this way daily throughout the year, and the number is not sufficiently large to make it worth while to improve the track, which from Kahahi to Oba-ga-tani on the north side is only fit for pedestrians. Not even cattle can climb the ridge. A project has been set on foot for carrying a new road across the

mountains to Kashiha-gi on the Yoshino-gaha by way of Nishino, which lies further up the valley from Kahahi, but it seems doubtful whether any passage could be found at a lower level than Oba-ga-mine, which is about 4,700 feet above the sea. From Nishino it is possible to make the ascent of Ohomine, but there is no properly marked path, and the services of a guide who knows the country well would be indispensable. The view from the Tsujidau is monotonous, comprising the ridge up which comes the path from Kahahi bearing S.W. Mount Oho-dai-ga-hara to the S.E., and densely wooded mountains all round. One of the chief articles of food in these regions is the young stalks of *itadori* (*Polygonum cuspidatum*), a weed which grows to the height of ten or twelve feet. Cultivation is impossible at such an elevation, and everything has to be brought up from the villages below, including water. Another path to Ohodai-ga-ha-hara turns off here, and in about three hours arrives at the spot where an abortive attempt at reclamation was made some years back under the auspices of the local government. From the hut the path continues in a northerly direction for two hours. During the first 1,500 feet of the descent azalea trees are common, with flowers as large as the cultivated variety, which seldom attains to greater size than that of a shrub in the low-lands. Descending at last with great rapidity to the bed of a stream, it then ascends again about 500 feet in 25 minutes to the small hamlet of Oba-ga-tani (2,400 feet), picturesquely situated under a huge wall of rock halfway up the side of the densely wooded valley. It contains one inn, the third house from the entrance. The path still ascends for a few minutes, and then descends through the little hamlet of Ohosako to Kashiha-gi (1,140 feet), where there are two good inns. Guides can be obtained here to the limestone caves close by. These are four in number. The nearest, called Kiku no Iha-ya, or Chrysanthemum cave, is about forty feet deep, the bottom being reached by ladders and beams of wood with notches cut in them. It is damp, and dirty with the smoke of torches. The guide points out various incrustations formed by the drippings from the roof, to which out-of-the-way names have been given. One set, indeed, partly resembles the Chinese idea of a lion, and another is a little like a huge bed of chrysanthemums. The Fudou no Iha-ya is finer; it consists of three vaulted chambers, adorned with many curiously formed stalactites, and contains a cascade. The passages between the chambers are very low in the roof. Weñ no Senkaku is said to have lived in it. Of the remaining caves, the Shiyauzen no Iha-ya is uninteresting, and the fourth, Shiyauten no Iha-ya, is accessible only with great difficulty. Beyond this place the path descends to the Yoshino-gaha, and crosses it to Wada, where there is another cave, called the Suvi-shiyau no Iha-ya, Crystal cave, from which most of the crystal has been carried off. From Kashiha-gi there is a path along the left bank about 2 *ri* up a winding valley to Shihono-ha, where there are hot springs. A cave here contains a cold spring which deposits salts, and petrifies leaves, sticks, etc. which fall into it. Ohomine may be ascended from Kashiha-gi by a very difficult path past a fine cascade. About one hour's walk from Kashiha-gi a path turns off to the right to Washika, which forms a short cut to Hase and to the temples of Ise. Here we have to cross to the left bank of the Yoshino-gaha, which is fordable in fine weather, if there be no bridge. The path continues close to the bank of the river, through Shinno Tako, Wido, between high wooded hills. On reaching the hamlet of Hitoji the valley widens out considerably. On the opposite side half-way up the hill is perched the picturesque village of Shiraya. The path then descends and continues generally on the level close by the river side, at the bottom of a narrow valley past Sako (1230 feet) where there is an ancient Shintau temple called Nifu no kaha-kami, and past Terawo to Ohotaki, a busy little village situated opposite some very steep rapids, down which it is pleasant to see the timber rafts shooting, skillfully guided by a couple of men, who seem for a moment to disappear beneath the foaming waters as they slide down into the lower reach of the stream. The path now quits the river, and turns away on the left to the village of Nishikaha, where there is good accommodation. Yoshino can be reached from this place by a path through the hills, nearly 3 *ri* by the Seimei-taki cascade, a stiff climb. Here also commences the ascent of the Urushi pass (2120 feet) which has been much improved lately, that empty *kuruma* can be drawn over it. The descent on the W. side is tedious. Below on the right hand lies the valley of the Yoshino-gaha, and the

flourishing village of Kashiwa down on the flat by the river side. Opposite to Kashiwa is the village of Yaji, from which interesting excursions can be made, in particular the ascent of Washino-gan, to the Midzumomi, and then down through Takegi to the Yoshino-gaha again opposite Wido, which will take a whole day. From Kashiwa a path follows a tributary of the Yoshino-gaha up to Washika, and then crosses by the mountain-pass of Takami-goye into Ise. Plunging down upon Natsumi (good restaurant), the path shortly afterwards crosses the river where it flows silently in narrow channels between huge blocks of stone which almost fill up its bed, at a point called the Higuchi or Spigot, to Miyadaki (900 feet, poor inn), and then through Narawi, Kahara and Tatsuno to Kami-ichi (700 feet), passing under the Imoyama now a government wood, entry into which is forbidden to the public.

From Kami-ichi the traveller has a choice of the two routes to Nara already described, or he may descend the Yoshino-gaha by boat to Hashimoto, and return to Ohozaka by the usual Kaayasafu road over the Kii-mi Pass.

(The end.)

LAW REPORTS.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Monday, 13th October, 1879.

Messrs. H. P. LILLIBRIDGE and F. E. FOSTER, Assessors.

EMIL WIEGAND vs. WM. COPELAND.

Mr. Kirkwood called:—

Sato Keuzo, cautioned, said:—I am employed at the brewery of Copeland and Wiegand. I know the place where the cooper works. The bottom of the stairs cannot be seen from this place. I have seen the beer boiled by both partners. Once I saw Mr. Wiegand boil the beer when Mr. Copeland was absent in Yokohama. I think at this time some 18 or 20 bottles burst. I have seen a white medicine put in the beer and afterwards the beer was shaken up. Mr. Copeland always put this stuff in and Mr. Wiegand was present and looked on. I have heard the partners using angry language.

Cross-examined by Mr. Denison:—I have been in the brewery about 4 years as collector of bills, but in the morning and evening I assist in the brewery. After the 15th of the month I am generally in the brewery all the time. I have seen this mixture put in the beer in the spring of the year. Formerly there were two old casks containing this mixture. I know where the cooper's block is. It is often moved about. I have seen the mixture put in the beer when Mr. Wiegand was absent. I have known it to be put in during the past three years. I have seen the beer boiled last spring.

Yagishita Narukichi, cautioned, said:—I have seen a whitish medicine used for cleaning the casks. I have used it myself. After it is used in the casks it turns white. I have received this stuff from both plaintiff and defendant. I recollect when Mr. Wiegand came to the brewery. I received this stuff from Mr. Wiegand when Mr. Copeland was in the country. I have seen the same medicine put in the beer by Mr. Copeland and Mr. Wiegand stood alongside and shook the casks after the stuff was put in. I know where the cooper's block is. From where the block generally is, the bottom of the steps cannot be seen.

Cross-examined by Mr. Denison:—A little of the top of the stairs might be seen from where the cooper generally works, but he could not see any person standing at the bottom. I have been over 3 years employed in the brewery. I have seen this mixture put in the beer ever since I went there. I don't recollect seeing any put in for the first few months. The stuff was kept in two casks. It was bottled afterwards and kept in a small room. I have received the key of this room from Mr. Copeland, but don't know if he kept the key.

John W. Hall, sworn said: I recollect Copeland and Wiegand entering into partnership. I had been employed by Mr. Wiegand from the time he commenced his brewery in 1875, as accountant and collector and correspondent until the formation of the partnership. Previous to June, 1876, the subject of the partnership had been mooted. (Exhibit G shown). This is my hand-writing. I wrote it under instructions from Mr. Copeland and took it to Mr. Wiegand at 68, Bluff, on a Friday and left it with him and received it back on the following Tuesday. I find these dates from my diary. On reference to this diary I find it was on Saturday that I left the paper with plaintiff. At this time Mr. Wiegand did not accept the proposal. On Monday, the 5th June, plaintiff came to my office and made a counter-proposition, which he requested me to submit to Mr. Copeland, but this proposition was not accepted and I told plaintiff so. On the same evening I arranged with him to come to my office the next morning. Copeland and plaintiff both came on the morning of the 6th to my office. After a long talk, the terms of my letter of 3rd June were accepted and an indorsement made at the foot of it, signed by both parties in my presence. I left the next day for the country and returned on the 12th. At the time of signing the letter I was asked to get Mr. Dickens to draw up the documents. I went to him on the 15th June as he was out of town previously. Drafts of the documents were prepared by Mr. Dickens and I took them to the Bluff on the 24th, and read them over to both partners. There was then some discussion as to the amount to be put in the mortgage. These

drafts were afterwards taken to Mr. Dickens where the same subject was discussed by him and plaintiff and again by both partners and Mr. Dickens. (Mortgage shown.) This is my hand-writing. The amounts were inserted after writing it. They were put in on the morning when it was signed, on the 18th July, 1876. (Deed of partnership shown.) This is also my writing. On the day when these documents were executed both parties came to Mr. Dickens' office where I read both documents over to them. The deed of partnership and a letter from Copeland to Wiegand were also signed in Mr. Dickens' office. The mortgage was brought to the U. S. Consulate by me where it was signed by both parties before the U. S. Consul General. Both documents were then left for registration. They remained in the Consulate until 4th August when I obtained them and paid the registry fees. To the best of my belief I took the documents to the brewery myself. I was frequently at the brewery as I kept the accounts. I made the first entries in the books of the firm under instructions from Messrs. Copeland and Wiegand. On page 1 of the Journal the first entry is, land, buildings and plant, estimated value \$30,000. This was put in by request of both partners. At this time there was some talk of a purchaser for the place and beside they considered it worth that amount. Stock in the brewery at this date \$5,000, stock brought in by E. Wiegand \$2,421.65—Total \$7,421.65. The entry, E. Wiegand dr. Amount of his half share in the business, property and everything connected therewith \$15,000. This was his share without his stock. He is afterwards credited with \$1,210.82, his share of the stock brought in from No. 68. Copeland is debited with \$1,210.82 and credited with \$15,000. The reason why Wiegand was not credited with the whole amount of his stock was that an arrangement had been made that Wiegand should purchase a half share of the Spring Valley Brewery for \$15,000; that the stock at No. 68, Bluff, should be brought in by each partner equally and be an addition to the stock of the Brewery. Instead of paying Wiegand for his half, Copeland credited it to him and it so appears on the books. The result of the entries on the first page of the journal will be that each partner owned one half of the Brewery plus the stock brought in by Wiegand and he owed Copeland privately the amount that appears in the mortgage. It was at the particular request of both parties that the private accounts as well as the firm's should appear. I have some work now for Mr. Wiegand. I have known Mr. Wiegand for a long time and have always found him a particularly careful man. He would certainly not sign a document or paper without first making himself acquainted with its contents. I know that Mr. Wiegand was aware of Berger's mortgage because he specially asked me to find out about it. Mr. Copeland told him about it and Mr. Wiegand was surprised that it was for such a small amount. This mortgage was known to Mr. Dickens. (Paper shown). This is Mr. Dickens' receipt for his charges for preparing the documents (exhibit 8). I paid it myself and was afterwards repaid.

Cross-examined by Mr. Denison:—I think I charged this bill on their books. I received an inventory of the stock. I think the amount carried out was a little more than \$5,000. I entered it as "estimated" value. The stock of Wiegand was small and could be got at much easier. I have a copy of the original counter-proposition by Wiegand. To the best of my belief no other document was drawn up except this letter. Mr. Dickens had this letter, I believe he followed its terms. Copeland and Wiegand had a suit against me and I brought in a counter-claim for commission. This letter was produced in Court in evidence. The suit was compromised and I continued to keep the books. Before the entries were made in the books I had them on a piece of paper which I showed to both partners. Wiegand's indebtedness did not show in this so they wanted the entry made. If I had had my way I would not have put in Wiegand dr. to Copeland \$15,000 and treated the mortgage as a private matter. If the stock of Wiegand had been a part of the \$30,000 there would have been no need of a credit to him; that would have been a private matter between him and Copeland. It would naturally make a difference in the books of \$7,000 if the capital was entered at \$37,000 instead of \$30,000 but no difference to the partners. It would make a difference if Wiegand's stock had been brought in to increase the original stock. Wiegand's stock is entered as part of the original capital of the firm of \$37,000.

Mr. Denison:—Does not that \$2,421 together with the mortgage represent the amount he has to pay for his half of the partnership?

Witness:—No.

Adjourned till 1.30 p.m.

Court resumed at 1.30 p.m.

Cross-examination of Mr. Hall, continued: (paper shown) this is an account current of E. Wiegand with Copeland and Wiegand up to December 31st, 1876, taken from the books. It was made by me. This shows that Wiegand has drawn out \$522.93 and a balance due to the firm \$14,211.12. This is correct according to the books. It is the same indebtedness as the mortgage. Without any other account this would show that Copeland was equally indebted to the firm. (Paper shown). This is Mr. Copeland's account current with the firm. Mr. Wiegand's indebtedness to Mr. Copeland at this time would be the amount of the mortgage. The amount on the mortgage has been put through the books as Wiegand's indebtedness to the firm. As a matter of fact these accounts represent the standing of the partners the one to the other.

Mr. Denison:—What was the counter-proposition of Copeland?

Witness:—I have a press copy of it.

Mr. Denison:—You have referred to your diary for the dates you mention. I wish to know what the statements are in the diary?

Witness:—It reads June 3rd "Copeland and Wiegand nearly all day"; June 5th "Wiegand and Copeland to each house bluff"; June 6th "Copeland and Wiegand" I referred to these and also in another diary I have here, under the heading of "Copeland and Wiegand" June 3rd "Conference, Copeland for letter to Wiegand, to Copeland bluff to Wiegand, nearly all day" June 5th "Conference Wiegand letter to Copeland and attendance at bluff" June 6th "Conference C. and W. agreement made 9 to 11" June 13th "to

bluff Copeland and Wiegand 3.30 to 5 p.m." "June 14th" Conference long to bluff Wiegand."

Re-examined by Mr. Kirkwood:—The entry in journal \$1,210.82 refers to the stock brought in by Wiegand after the formation of the partnership. The page is headed 15th June, 1876.

John L. O. Eyton, sworn said:—I was engaged by Copeland and Wiegand in July, 1877. The same day Mr. Copeland left for the country. Mr. Wiegand gave me the deed of partnership and mortgage to read. I did not take them out of the safe from Mr. Copeland's papers. I saw these papers on two occasions: the first time, Mr. Wiegand after a conversation we had, went over to his house and brought the deeds of partnership and mortgage back with him. I casually looked through them and told him that it would take me some time to thoroughly understand them and he asked me to take them home with me. I did so and read them, returning them the next day to Mr. Wiegand: on the second occasion some short time afterwards I was over at Mr. Wiegand's house. We were talking over business and I asked him to let me read the documents again. We were in his sitting-room. Mr. Wiegand left the room and returned with the papers. The first time I read them I read aloud the headings to Mr. Wiegand. It was because I had been looking through the accounts that I asked to see his papers. I told him that the original entries were in my estimation very stupid and liable to mix things up in future I could not see what Wiegand's private indebtedness to Copeland for which he had given a mortgage had to do in the firm books at all. I asked him particularly about his stock (\$2400) if it was part of the original assessment of \$30,000. He told me that he had bought half of everything in the firm and his stock was taken over afterwards. I told him that in that case he ought to have given a mortgage for \$15,000 and stock ought to have been charged with the \$2,400 and he credited with it. I also told him that in case he had sold half of his stock to Copeland and received credit for it on his private account, that half would then be Copeland's own property. If it was then put into the firm the entries should be, stock account dr. \$2,421.65; E. Wiegand cr. \$1,210.82 and Copeland the same. In comparing what the entries should be to what they are, I think the actual result is detrimental to Copeland. In one way Wiegand would have a credit for all his stock from the firm and in the other he has credit for half from the firm, the other half is put into the firm and balances Copeland's half. If you strike out the entries, Copeland dr. \$1,210.82, Wiegand cr. \$1,210.82, and also the entries regarding the \$15,000, then Copeland gives Wiegand credit on his mortgage for half, then half of stock belongs to the firm put in by each in equal shares. I have tried these accounts various ways and the result is always the same taking the mortgage and what Mr. Wiegand told me as the basis. In the summer of last year Mr. Wiegand said he would like to have a look through the books. I went to the office with him, put the books all out on the desk, and read through the receipts and expenditures in the cash book for about a year previously. I showed him the outstanding accounts owing the firm: explained a page of the journal and afterwards made him a list of all the ledger balances. I told him, if he required it I would give him such a list at the end of every month. In the future the items of interest were read to him out of the cash book and he expressed no disapproval. On going over the cash book I found that there was an omission of \$100 paid to Mr. Wiegand and not charged to him and an amount of \$198 paid to Gerard for tiles, which also had never been entered. Mr. Copeland perhaps asked me every day how the sales were &c., but never looked through the books like Mr. Wiegand did. Mr. Wiegand used to look frequently in the letter-book which was kept in the press, not in the safe. Mr. Wiegand has never given me, or Mr. Copeland in my presence, any reason for dissatisfaction except at the commencement he said that he had not received value for his stock &c. In June this year Mr. Copeland showed me plaintiff's petition; before this I had not the slightest idea that such charges would be made. I was present in March this year when the stuff was being put in the beer. Mr. Wiegand and Mr. Copeland and the cooper were present. Previous to this Mr. Wiegand had asked me where Mr. Copeland was as the beer was ready; I told Mr. Copeland and he went. I saw them putting it in out of a little measuring glass. I know that Mr. Wiegand has ordered the boys to clean the tubs with this stuff. Shortly after I came, Mr. Wiegand gave me two bottles of this stuff, saying it was a good disinfectant. This was at the time of the cholera scare. I have seen Mr. Wiegand superintend the filling of the boilers with bottles when the beer was boiled. He used to look after the work until the water got hot then he would send for Mr. Copeland to see about the temperature. I did not see the alleged assault. I recollect the time as I heard voices outside. On this day Mr. Copeland had brought a glass of beer to me which was very muddy and he said "what do you think of that for bottled beer." Shortly afterwards I heard Mrs. Wiegand's voice calling out excitedly. I heard Mr. Wiegand come to the stairs and go back again. I know Mr. Wiegand to be a very careful business man. I have known him to always read documents before signing. It is usual for brewers to give beer and drinks to solicit custom.

Cross-examined by Mr. Denison:—I do not remember seeing any letter from you in January this year in reference to this suit. We had a party at Mr. Copeland's once, but I am not responsible for after-dinner speeches. I only made Mr. Wiegand one list of ledger balances, but I cannot say if the items of interest appeared on it. When I read the cash book to Wiegand I recollect an item of \$90 appearing at the top of the page. It might have been before this that I made out the ledger balances. The item in the cash book I refer to is dated January 2nd, 1879. I think it was in the spring of 1878 that the 100 five gall. kegs were purchased. On reference to the books I find the invoice is dated San Francisco, 30th June, 1878. Up to the 30th June this year these kegs had not been used.

Mr. Denison:—Supposing the entire capital contributed by Wiegand including the \$2,410.65, and the amount furnished by

Copeland had been entered in the books at \$30,000, in what amount then would Wiegand be indebted to Copeland?

Witness:—He would owe \$15,000 less \$2,421.65.

Adjourned till 15th instant at 10 a.m.

Wednesday, 15th October, 1879.

Mr. Kirkwood called.

Theodore W. Holm, sworn said: I was formerly in the employ of Copeland and Wiegand. While in their employ I heard conversations between the partners respecting interests. Mr. Wiegand at this time occupied the upper part of the brewery, but as he did not feel comfortable there, it was agreed that a gallow on the premises should be converted into a dwelling house for him. Defendant said although it would cost a good deal of money to make this house, still he was willing to do so, provided plaintiff would allow him interest on the money expended. It was then agreed that it should be built on those conditions. I have seen the mixture being put in the beer frequently, but never saw it being done except in Mr. Wiegand's presence.

Cross-examined by Mr. Denison:—I entered the employ of Mr. Copeland in March, 1876. I was discharged after a year by the firm. I was prosecuted by the firm for embezzlement, and also for shooting at plaintiff. The conversation I have related occurred, I think during the first three months of the partnership, before September, 1876. I think it was in the spring of 1877 that I saw the stuff put in the beer. I was a salesman at this time and a general assistant.

H. W. Hohnholz, sworn, said: I am part owner of the steamer *Reinderr*. In August, last year, Mr. Copeland and his wife, Mr. Retz and wife, Mr. Bohm, and myself and wife made a trip to Tomioka. We had a very pleasant trip and then Mr. Copeland said that it would be very nice if we had a steamer for such trips, and it was finally agreed that Mr. Retz, Mr. Bohm, defendant and myself should buy the steamer *Reinderr*, from Captain Walker, in equal shares and we did so. One day when the Kawasaki bridge was down I sent this steamer with the mails to Yedo.

Cross-examined by Mr. Denison:—I think this steamer measures 48 feet by 11. I have used her for towing once or twice.

This closed defendant's evidence.

Mr. Denison wished to recall Mr. Wiegand.

Mr. Kirkwood objected.

Mr. Denison quoted from a book called "Reed's Practical Suggestions."—

His Honour said he would hear what the counsel proposed to ask the witness. If he wished to rebut any evidence given, he did not see why he was not entitled to recall the witness.

Mr. Denison:—When was it decided that your stock should be taken over by the Spring Valley Brewery?

Mr. Kirkwood objected.

His Honour said it seemed to him that this was not following the rule that Mr. Denison had quoted.

Mr. Denison:—How many barrels of beer could have been brewed before the new brewery was built in 1874, at one brewing?

Mr. Kirkwood objected to questions in general.

Witness:—I think seven.

Mr. Denison:—How many brewings a week?

Witness:—Three times in cold weather.

Mr. Denison:—What time of the year do you brew to store away?

Witness:—From the middle of November to the middle of March.

Mr. Denison:—How much did these casks of mixture contain?

Witness:—About 60 gallons each; Mr. Copeland told me he had bought two.

His Honour said he could not allow this examination to go on as it had previously been referred to. He did not see where the cause would end if this was allowed.

Mr. Denison called Robert Clark.

Mr. Kirkwood objected.

Objection overruled.

Witness sworn said:—I had a conversation with Mr. Wiegand in reference to the partnership.

Objected to unless it was shewn that Mr. Copeland was present. Objection sustained.

Witness:—Mr. Wiegand brought the deed of partnership to me last year, in a sealed envelope, and handed it to me asking me to open it. This envelope contained two other papers, but I do not know what they were.

Cross-examined:—The seal was a large red seal.

Mr. Kirkwood then addressed the Court:—He said he would premise by saying that the evidence of plaintiff had utterly failed to prove any one of the charges he had made against defendant. The evidence of plaintiff in reference to the mortgage was incomprehensible and had only succeeded in trying to make him out a fool. The plaintiff perhaps had a very bad memory, perhaps he had forgotten all about this mortgage, but the evidence had most positively proved that he knew all about it at the time he signed it. The Court ought to severely reprimand Mr. Wiegand for having preferred such grave charges, while it exonerated Mr. Copeland. The agreement made to purchase the half share of the Spring Valley Brewery for \$15,000 did not include Wiegand's stock. That was brought in afterwards and Wiegand had received his full credit for it. But if the evidence of plaintiff was to be believed, then Messrs. Copeland, Hall, Eyton and Dickens, were a band of rascals trying to do a poor wretched man out of \$1,200. When the plaintiff fails to prove fraud he then tries to say that the Brewery was not a new one. He would refer the Court to Story's Equity Jurisprudence in this matter, as that authority had most distinctly laid down that a dissolution of partnership could not be ordered except on the strongest grounds, and which in this case were not proven.

The Court adjourned till 1.30 p.m.

On the Court resuming at 1.30, Mr. Kirkwood continued his address. He read over and commented on the different charges in

the petition, which he said had been proven to be of the most trivial nature, though made in the strongest language. The whole of plaintiff's conduct shows the deepest malice, in endeavouring to get a dissolution of the partnership and destroy defendant's character. The books had not been properly started, but the mortgage was a good one and could not be invalidated because the partners wanted certain entries made in their books.

Mr. Denison asked for an adjournment of the case as he had not had time to prepare his argument.

Mr. Kirkwood objected. He said that it was the invariable custom for counsel to reply at once and counsel had no right to ask for an adjournment.

His Honour said that if the counsel said he was unable to go on with his argument, he would adjourn the hearing.

Adjourned till 10 a.m. 17th instant.

Friday, 17th October, 1879.

Mr. Denison read his summing up of the evidence. He contended that one of the most important matters that the evidence had shown was that the partners could not continue together, the firm must be dissolved. The counsel for plaintiff had almost admitted this point, and wanted the Court to give his client a certificate of character. Parsons on Partnership had laid down the duty of partners to one another and the causes that would justify a dissolution of partnership. The deed of partnership of this firm was exceedingly strict. The clause that no partner could purchase \$100 worth of goods for the firm without the consent of the other in writing had been continually violated by defendant even to buying 400 sacks of barley without plaintiff's consent. As to the mortgage, although Wiegand had an equitable title to the Spring Valley Brewery he certainly had no legal title to it. Mr. Berger had no knowledge of the formation of the partnership and his consent was not obtained. That Mr. Copeland had no right to transfer the property was an important question and ought to be well borne in mind. Plaintiff was never indebted to defendant \$15,000; his stock was just as much part of the original capital as any of Copeland's. For the \$2,421.65 therefore that he brought in he only got credit for half of it. The counsel for the defence has admitted that the accounts are not kept right and that they can be adjusted hereafter. Without a dissolution of the partnership this cannot be done. The items of interest were referred to in the former address. In regard to Bernson's loss of \$500 in Shanghai, it was quite clear that he had been sent there without plaintiff's consent and as he was Copeland's brother-in-law, it was no wonder that he took over this loss. These charges for interest were not provided for in the partnership, and no assumption of any such loss as Bernson's could warrant his charging them. Dr. Geerts' evidence had settled the question of drugging the beer.

The assault had been clearly proved and if the Court would visit the premises doubts could be easily settled. The defendant's counsel had laid great stress on the fact that fraud had been charged in the petition. The whole circumstances would certainly justify them, and in Robert's on Equity it was laid down that such cases as had been proven in this case were quite sufficient to warrant a charge of presumptive fraud.

Copeland is the managing partner and the business has been a good one and if Mr. Wiegand is not to be believed in his statements of being wronged and ill-treated how is it that he wishes to get out of a profitable concern. The plaintiff had waited patiently before he brought this case in Court. He did not rush away at the first disagreement they had but waited until it became unbearable. Certainly all these things, disagreement, assault, overcharges, &c., had been sufficiently proved to warrant him in asking that the prayer of the petition be granted.

His Honour wished to know from defendant's counsel whether he would agree to a dissolution of the partnership, irrespective of any decision the Court might arrive at as to the terms. He thought that no one was in a better position to know the whole surroundings of the case than the members of the Court, and if it was determined to make any outside reference, the whole case would have to be gone over again and that would involve a great deal of labor and trouble. If the defendant would agree to a dissolution it would save the Court the labor of going over the whole question to see if there was sufficient grounds to warrant the Court ordering it, as in his opinion a Court of Equity had power to warrant a dissolution.

Mr. Kirkwood said he could not give any reply to this question without consulting his client. If it was agreed to dissolve the firm he did not see on what basis it could be done, as unless the property was sold or assessed there would be no means of getting at its actual value. The property might or might not be worth less now than when the partnership was entered into.

Mr. Denison said he was of course anxious to have such a dissolution agreed to.

His Honour said he would adjourn the hearing twenty-four hours, to give defendant's counsel time to make his answer.

THE TIMES OF THE TAIRA.

By CAPTAIN F. BRINKLEY, R.A., AUTHOR
OF THE "TIMES OF TAIKO."

CHAPTER XX.

THE STAIN OF THE DEMON'S BLOOD.

It was the seventh and last day of the triennial festival at Atsuta in Owari, and all the country folk had turned out in holiday attire to see or share in the sacred procession

as it wound in and out among the village streets with much glitter and solemnity. Little matter how often the same pageant had been witnessed before, so long as it took place while the throatle snug among the cherry blossoms, and spring hazes filled the spaces of the hills with a fathomless depth of rosy light. The service of the gods was always a pleasant pretext for the idleness so seldom possible to these vassals of toil, and from the lusty farmer with long sleeved doublet and tight black hose, to the ruddy cheeked servant girl with thickly powdered neck and bright scarlet girdle, every class of the community furnished its quota to the motley total of merry-makers.

These were the times when the germs of a taste for frippery and display, destined to attain its fullest development two centuries later under the Ashikaga dynasty, were beginning to take root. Already among the wealthy yeomen families this pageant had summoned from their homes, there were not a few whose costumes elicited constant admiration and remark from the humbler constituents of the crowd. Here was a man who to the conventional vine pattern on his doublet had added the trellis on which the tendrils twined, and there was an officer who bore on his surcoat a device representing not the auspicious tortoise and storks alone, but also the plains over which these flew and the ponds in which those fed. Conspicuous above all was the crimson fringed canopy of glittering damask borne over the Lord Abbot's head. There were not wanting folks among the spectators sufficiently old to remember the days when this canopy was nothing more than a plain stout umbrella, though none might look forward to the time when it should develop into the huge festival car with its freight of posturing beauties, and all the curious concomitants of subsequent carnivals.

But the diversions of the day were not confined to taking part in the procession or wandering at its conclusion among the gardens and cedar groves of the fano. There was also the inspection of the temple relics exposed to view on this last afternoon of the festival, and therefore once only every three years. Simultaneous with, or perhaps a little prior to the birth of sumptuous fashions in secular life, the cenobites of the great monasteries had recognized in the sacred security of their cloisters a means of preserving to posterity objects of interest and masterpieces of art which might otherwise be sacrificed to the sacrilege of party spirit. Perhaps the subtle mind that first conceived this idea saw in it a method of prompting those donations to which the monasteries afterwards owed so many of their rare collections. Already indeed in the times of which we write, the princes and nobles of the empire were beginning to bestow gifts of traditional or æsthetic value on the custodians of their ancestors' cenotaphs, and the fane at Atsuta had not fared ill in this respect. The quiver that the hero Iwako had carried in his battle with the monstrous ghoul; a dragon's claw which had fallen in a thunderbolt; an effigy of the martyr Michizane carved from the wood of the miraculous plum tree transplanted by the Gods to his garden; a picture painted by the imperial monk, Shotoku Taishi; a scroll penned by the king of calligraphers, Kukai; these with chaplets of precious beads, baldrics and amices of elaborate embroidery, and many other curious objects, formed a collection well warranting the reverential care its owners bestowed on it.

Amongst the whole number of curiosities, however, there was none that seemed to excite more interest than a sheathed sword, lying in a quaintly contrived rack of embossed lacquer that stood on a table draped with damask before the alcove in the chief chamber. The sword itself was not of particularly rich workmanship so far as its scabbard and mountings were concerned, or to speak more correctly, its ornamentation, though exquisitely chaste and delicate, was not sufficiently splendid to divert the mind from the contemplation of the stern and almost miraculous legends associated with its history. Outwardly indeed it presented no noteworthy feature, except perhaps the peculiar shape of the hilt, which was cunningly designed so as to adapt itself perfectly to the hand that grasped it, but within the enshased scabbard, tradition said there was a stain that might never be removed by art or time, for it was the mark of the blood that had clung to the blade when Watanabe cut off the arm of the River Demon as it was carrying him off to Mount Atago. There was as much to be said about the details of this legend and so

much more to be surmised about the appearance of the wonderful blade and the indelible stain whose awful contact it was doomed for ever to endure, that each visitor stopped long before the damask-draped table, feeding his curiosity on every crumb of information or conjecture that fell from those around.

Still it was by no means the first time these gaping rustics had carried home an uncomfortable consciousness of demoniacal influences and dread mysteries from their contemplation of the weapon, and not a few would have been disposed to content themselves on this occasion with a mere cursory glance, had it not been for the action of two men who set the example of gazing with an intentness that betrayed something more than idle curiosity. The tradesman's garb these two wore was obviously a disguise, for the elder owned thumbs and muscles that could never have been developed by handling the abacus or the steel-yard, while the noble bearing of the younger was completely irreconcilable with any notion of trade or traffic. They had strolled into the room where the relics were displayed, and suffered themselves to drift irresolutely with the stream of sight-seers until it carried them opposite to the celebrated sword, where they had suddenly halted, and not only expressed their admiration enthusiastically, but even ventured to address some questions to the old priest, who, sitting placidly on a pile of wadded cushions, watched his parishioners' enjoyment with a face of pleased benevolence.

"Was this indeed the renowned 'Beard divider'? Wonderful good fortune that a passing visit should chance to be so timed as to permit the sight of such a marvel!"

"The speaker was then a wayfarer, it would seem?"

"Yes; he and his companion were travelling in performance of a religious vow. But could the priest tell them how long the sword had been at Atsuta?"

"Something like seventeen years. It had been sent there by the Governor of Kansano, he believed."

"And was it not surprising that a weapon so renowned should be suffered to remain all these years unused?"

"Not altogether, since the hands that had always wielded it were now so weak, and their enemies' too strong to need its aid. But if he did not mistake, information of this sort ought rather to be given than sought by his questioners."

"Not so, in truth. Their travels had kept them well nigh ignorant of everything that was going on. But the sword. Was it really true, as the villagers said, that the stain of the demon's blood might still be traced within the scabbard?"

"Yes, quite true. He had seen the mark himself just beyond the point where the scabbard bit the blade."

"And what was the nature of the trace? Surely a mere discoloration of the wood must be very difficult to detect within the scabbard?"

"Ah! that was the curiosity of the thing. The mark indeed was only a sort of rust or incrustation on the wood, neither might it be discerned by a mere examination of the empty scabbard, but when the sword was introduced a little way, not only was the stain reflected clearly in the bright steel, but if watched for a short time, it was seen to spread over the blade and run along its edge, just as it must have done when Watanabe fell with the demon's severed hand entangled in his hair."

"Wonderful! If only it were permitted to see the miracle oneself. Could nothing persuade the priest to draw the blade out so far from its sheath that the reflection might be visible for a second?"

A universal chorus of entreaty from the assembled gazers testified the gratitude to be won by compliance with this request. The good-natured old priest seemed to hesitate a moment, but finally overcoming his scruples, rose and walked over to the table where the sword-rack stood.

What a thrill of excitement and awe stirred the spectators! They were about to witness something that had actually once been a portion of the gruesome fiend's body, and who could tell what the result of the inspection might be. Perhaps some other monster had undertaken to avenge his murdered comrade, and that old mysterious spiriting away of helpless men and women might again be repeated in their own village. All this, however, did not deter the spectators from pressing forward as far as they might, while the elders and magnates of the community took advantage of their authority to thrust themselves unceremoniously into positions of vantage. Nobody gave any

heed to the two men who had been the means of persuading the priest to show the sword, though in truth their action was sufficiently curious to warrant attention. For whereas they had been hitherto standing side by side opposite the alcove and consequently in an excellent place to see clearly, the elder now passed behind his companion, and stretching out his brawny arms, thrust the people aside from the passage that led outwards, while the younger gathered the skirts of his garment under his girdle like a man who prepares for rapid motion. Could it be possible that these two apprehended some horror which would necessitate immediate flight, or had their whole course of proceedings been in pursuance of some design now approaching consummation? Whatever their project might be, if to escape observation was necessary for its success they were certainly fortunate so far. Had they been completely alone they could not have run less risk of scrutiny. All eyes were riveted on the priest's movements and all attention concentrated on the coming wonder.

Raising his hands to his forehead as if in reverential apology for the presumption he contemplated, the old man took up the sword and turned slowly towards the breathless band of spectators. No doubt he found it pleasant to scan the row of eager faces in which so many varieties of curiosity were depicted, and perhaps too he was struck by the aspect of the younger of the so-called pilgrims, who with compressed lips and straining muscles seemed as though the space that separated him from the sword could never be sufficiently narrowed. At any rate the old priest's movements were so unfortunately deliberate, that before he came within arm's length of his audience his progress was arrested by the voice of the sub-prior who appeared suddenly on the threshold, and seeing the sword in its custodian's hands, called out:—

"Hold! hold! Friar Zenko. The abbot has immediate need of the sword. I will relieve you of its charge at once, if you please."

"Truly," replied the other, "it is perhaps fortunate that you have come, lest I might have been betrayed into an unwise action at the instance of these good people."

"Indeed" said the prior incredulously as he received the weapon from the old man. "Well at any rate you will be saved from the possibility of any fresh indiscretion for the sword leaves Atsuta to-day."

"Leaves Atsuta!" the friar repeated in astonishment. "That is strange news, through of less moment to me in truth than to these good folks who are thus disappointed. However, Sirs," he said, turning to the audience, "the Lord Abbot must have no light reason for haste, else would he not suffer one of our chief objects of interest to be carried off on this day of all others."

The spectators, to whom this sudden removal of the sword furnished a fresh theme of marvel and surmise, moved off reluctantly one by one after the prior had disappeared with his precious burden, until finally the two strangers alone remained. It might then have been seen that this unexpected defeat of his desires had caused the younger some overpowering emotion, for his companion had deemed it necessary to grasp his girdle as though to restrain him from an act of violence, and was now anxiously urging him to follow the example of the other spectators: advice which was, however, entirely unheeded for a time; nor was it until its recipient himself became conscious of the inconvenient attention his distraught air and palpable disquiet were beginning to attract, that he at last consented to follow his more circumspect companion.

Passing through the temple gates, the two men did not descend the steep flight of stone steps that led to the main route, but turned into a grove on the north of the faue, where long rows of mossy tomb-stones stood under the shadow of the yews and cedars. Here they took up a position from whence they were able to see the path without being themselves visible, and after they had transferred to their girdles swords which each had apparently kept until then concealed under his doublet, the younger addressing his companion with a voice scarcely yet calm, said:—

"You did well to dissuade me from any hasty action, Saburo. I confess that but for you I could never have held aloof when I saw yonder shaveling carry the sword off. But what think you? Were we suspected?"

"Hardly so bad as that, master, I hope. For my own

part I see nothing in what has happened but the result of some contrivance devised by that crafty Nei. It was perhaps a mistake that we did not take the surest of all ways to prevent him from forestalling us."

"Not so, Saburo. In serving my cousin Nei serves us too since he opposes our enemies. That we owe our failure of to-day to his devices I have no doubt, but he only merits the more credit."

"But, Sir, you speak of failure before we have well essayed. Why not adopt my suggestion now? Let me go direct to the abbot and demand the sword in your name."

"Every plan that enables you to appropriate the whole burthen of peril yourself seems to content you, Saburo. Yet I do not know that I should reject your counsel in this case were it not, as I have told you, that the abbot is my step-brother's uncle. It were sore against my will to involve him in the consequences of complicity."

"Then what do you propose to do, Sir, for it seems to me that we are farther from our goal than we were before you beat the secret out of Nei's skull?"

"What I propose is simply to wait here until the bearer of the sword leaves the temple. He cannot have set out yet, neither can we fail to see him when he does so."

"And when we do see him, Sir; what then?"

"When we do see him, we shall perhaps be compelled to exact another act of submission by the same process as before."

Saburo looked up in astonishment at these words.

"Then you think it possible that Nei himself is here?" he asked.

"I think it more than possible. If it were only Nei's messenger, he would not have had the wit to leave his horse behind him at the village, and come in this quiet, stealthy way."

"Why, master," cried Saburo suddenly springing from the tombstone on which he was seated, "heaven pardon me for a numskull! There's another issue from the temple on the eastern side and I never thought of telling you."

The words had scarcely been uttered, when like an echo of the disquiet they caused their hearer, the sound of a horse's tread reached the ears of the two men from the direction Saburo had indicated. They did not need to question each others purpose again. To thread their way through the cedars and reach the eastern limit of the grove was the work of a very few moments, but those moments had sufficed to carry the rider to such a distance that it was barely possible to recognize him.

Followed by one retainer he was trotting quietly down the road that led inland, and having his back thus turned to his observers, he did not quicken his pace when the younger, casting off his doublet, started at the top of his speed in pursuit.

The hill on which the fane stood was crescent shaped towards the east; its thickly wooded slope stretching down to a rice valley, across which the road ran from horn to horn of the semicircle. It resulted from this formation that to follow the contour of the upland involved a considerable increase of distance, apart from the fact that as there was no clearly defined path, it was difficult to make any rapid progress among the entanglements and under-wood. Nevertheless this route had the advantage of affording concealment and Yoshitsune chose it without a moment's hesitation, leaving his companion to follow as best he might.

Saburo, in whose well knit frame years of a hunter's life had developed no common powers of speed and endurance, would nevertheless have been far from conceiving so extravagant an idea as that a man on foot might hope to intercept one on horseback under such conditions, but on the other hand, he would have been equally far from anticipating what he was presently fain to admit, namely, that for all his stout limbs and undiminished resolution, he had not the faintest chance of keeping within sight of Yoshitsune in the race. In truth he had scarcely run a furlong before even the sounds of the other's swift feet ceased to be audible, and after a moment's hesitation he adopted what was perhaps the wisest course under the circumstances.

It was just possible that if the rider found himself suddenly confronted he might seek to elude his opponent by a rapid retreat; a measure which would render Yoshitsune completely powerless. Saburo therefore, descending warily and speedily from the hill, struck the main road, and

without making any rash attempt to shorten the distance between himself and the object of pursuit, fell into a swinging trot that was well nigh as fast as that of the rider.

Thus with an enemy behind and impassible rice plains on either side, the traveller's retreat was completely prevented, but was there any reasonable possibility of his advance being intercepted? This was a question he might at any moment solve by a sudden increase of speed, but meanwhile apparently quite unconscious of the perils closing around him, he pursued his way at the same unvarying pace. Once only he checked his horse for a moment and looked back towards the monastery, but in the long stretch of road that led to the margin of the cedar wood no object was visible save one solitary figure, sauntering along with an utter absence of the watchful vigour that had animated it before the rider's retrospect.

This unwonted desertion of the road no less than the dilatory gait of that lonely way-farer were both alike referable to the holiday spirit that obtained among the villagers, so the horseman, though he looked like one little apt to be betrayed into a hasty inference, took no further note of his surroundings, but urged his horse again into the old steady trot.

At the point where the highway and the hill approached each other nearest, a niche had been cut in the rocky bank to serve as a shrine for the wayside gods. Here a group of giant bamboos, bowing under the weight of their luxuriant garbure, stretched dense plumes of foliage over the heads of the deities' stone images and across the road beneath, shielding the latter so completely from the sunbeams that the water, trickling from the bank, lodged there unmolested in its miry domicile. At this point therefore, the horseman was constrained to draw bridle, which he did with an amount of dissatisfaction that seemed rather disproportionate to the occasion.

It may be, however, that the strange disquiet which often visits us on the verge of an unknown danger, contributed more to his mood than the mere aspect of mud or ruts, for just as he passed the miniature shrine, a man stepped out from the shadow of the bamboos, and laying hold of his bridle, barred his further progress.

The rider's first impulse was to cut his way through this impediment, but his half-drawn sword fell back into its sheath when his glance fell on the smiling face of his opponent.

"It was well done, Nei," said the latter; "and lest you should be grieved by the idea of having been outwitted, I tell you frankly that you owe this interruption to the veriest accident. Truly my cousin is fortunate in the possession of such a servitor."

No shadow of chagrin had crossed Nei's stern features when he understood his mishap, neither did any ray of content brighten them at this compliment.

"Sir," he answered quietly, "my master's gain, not your loss, has been my object. Tell me therefore plainly, I pray you, what choice I am now called on to make."

"I am well reprov'd, Nei," was the reply, "Idle words are worse than useless between you and me. If I mistake not, your risk only extends to the loss of the sword you have carried from the fane; mine includes the loss of my life as well. These are the conditions. They are too simple, I think, to require much reflection."

On foot and deprived of every alternative but to cross blades with one who had already proved himself his master, Nei would not have hesitated in his election, but on horseback there were so many additional chances any one of which might turn the balance in his favour, that he could not bring himself at once to resign all hope of recovering the advantage.

A slight pressure of his heel sufficed to place his horse on the ledge below the shrine; a manœuvre which, without in any way resembling the prelude of escape, gave him a position of considerable command. He had observed from the first that Yoshitsune did not appear to anticipate resistance. Not only was his sword thrust too far back in his girdle to be easily accessible, but also before drawing it, he would be obliged to relinquish his hold on the bridle, which he grasped with his right hand. All this was strangely careless, and must have suggested an opportunity, had it not been accompanied by a smile of tranquil assurance which Nei was too heedful to overlook and too astute to despise.

Instead therefore of forthwith essaying an already con-

ceived plan, he took another careful survey of his position, and saw to his surprise and consternation that the purposeless loiterer he had observed behind him a few minutes before, was now transformed into an armed man, traversing the distance between them with such eager speed that already the features of Saburo Yoshiuaka were plainly discernible.

Nothing remained but to make a merit of a necessity. Taking from his girdle a sword carefully enveloped in brocade, Nei handed it to Yoshitsune, without suffering the slightest shadow of reluctance to mar the spontaneity of his action.

"I had mistaken its proper owner," he said, "but since my error has not been consummated it may perhaps be forgiven."

"The more readily," replied Yoshitsune, "seeing that though you have caused me a moment's uneasiness, you have also saved me from considerable embarrassment. Moreover you may be very sure that my cousin will be far less disappointed to see you return empty handed than I should have been had I failed to intercept you."

"As to that, Sir," replied Nei, "I am already satisfied, for my master knows nothing of the purpose that brought me here to-day."

"I might have guessed as much," said Yoshitsune with evident satisfaction. "You were not likely to increase the pains of failure by want of secrecy. But Nei," he added, "finding you thus prompt and provident alike, I would fain ask you a question you cannot have failed to consider ere now."

"Is the answer to be given on the same conditions as those you proposed at our last meeting?" enquired Nei with some symptoms of impatient remonstrance in his tone.

"By no means" replied Yoshitsune smiling, "I have no desire to abuse the good fortune that aided me then. Nor will you, I think, see any reason to remain silent on this occasion. What I seek to know is, whether the plans you have devised and so ably executed in my cousin's behalf, include any method of legalizing the Genji cause. I confess frankly that this difficulty seems to me at present insuperable."

"Am I to understand," enquired Nei, "that my discretion is left entirely uncontrolled in this matter?"

"Entirely," was the answer. "I seek advice no less than information."

"Then let me in my turn ask you a question," said Nei. "Is it your intention to visit Kiyoto soon?"

"Undoubtedly," replied Yoshitsune. "I have only delayed for the sake of the purpose achieved to-day."

"So I fancied," resumed Nei. "Then I promise you that if you remain there until the fall of the year, you will be able to answer the question you have just proposed sooner than I shall myself, though this time you will not need to seek the information either from your friend, Shomon, or at the trysting oak in the Valley of the Spring Blossoms."

Yoshitsune's astonishment at this speech was so great that he suffered Nei to ride away without another word. By what conceivable means could the secrets of the past have become known to this strange man?

"I begin to think Saburo," he said to his follower as the two walked back to the village, "that we shall have to exercise more caution than we fancied in our visit to Kiyoto."

"In truth I am much of the same opinion, master," replied Saburo. "And I trust that suffering Nei to go free will not prove to have been our first imprudence."

(To be continued.)

DOUBLE ACROSTIC.

Never lonely's my first, though unwedded it be,
And you'll guess it, no doubt, in a trot;
Then, my second's a friend you're delighted to see
Close at hand when you're thirsty and hot;
While my whole—well, keen sportsmen, October is here,
So get ready your 'irons' and look out your gear.

1.

"Sad-colored raiment," sober, trim and neat;—
A broad-brimmed beaver makes the suit complete.

2.

For a highly sensational, tragical tale
Just apply to this author, who'll doubtless avail.

3.

Search your color-box through with a resolute mind,
And on one of the cakes there my name you may find.

4.

Scarcely tree, barely shrub—seen in thicket and wold;
It is said that Lord Lovell did grow it of old.

5.

Next, a story;—no novel, nor fairy romance,
Nor—but there, that's sufficient to give you a chance.

6.

"It's a daub," do you say!—then our strife will begin,
For I stand by the painter through thick and through thin.

HOODLUM.

DOUBLE ACROSTIC.

Two shady kings as ever wore a crown,
Both earned most unenviable renown,
The one is not, the other's to the fore,
Although we hope he will be king no more,
Nor will he, unless the opposition,
Who have no policy but to oppose,
Should to benefit their own condition,
Maintain a thorn is far before a rose,
And make the mob believe, though now defeated,
He's all along been very badly treated.

1.

Two lines or circles, for it will be found,
That lines are circles, when they're carried round,
Sol gambols between them for good reasons,
Thus it is you have the varied seasons.

2.

He may be very good, but all the same,
This excellence applies but to the name.

3.

You seek the public ear, but fail to gain
The praise ambition leads you to attain;
Succeed, you'll find the consequence is this,
A brilliant halo's sure to crown your bliss.

4.

Some men are ever talking of their rights,
As if the world were made for them alone,
It leads to many bitter words and fights,
Nor do they get them after all is done:
'Tis when the soul is from the body riven,
That this last right will then be freely given.

5.

I'll tell you what it is my friend, you bet
You're still a drain of liquor in my debt,
And if you don't repay it I will sue,
So give the little drop that still is due.

6.

If you have this, you're in a sorry plight,
'Tis no wonder you cannot see the light.

7.

I never liked this fish it is too flat,
The sun pours down upon my solar hat,
But still its welcome gleams my spirits raise,
I hav nt seen it shine for many days.

8.

I am the riddle to expound,
Before the sum I will be found;
Reject the sum, and I remain,
'Tis I alone this light contain.

METEOROLOGICAL REPORTS

FOR WEEK BEGINNING FRIDAY, OCTOBER 10TH, 1879.

Observatory of Daigaku, Moto-Fujimicho, Hongu, Tokio, Japan.

REMARKS.

Heavy line represents Barometer.

Light Continuous line—max. & min. Thermometers.

Dashed line—represents velocity of wind

.....percentage of Humidity

Max. velocity of wind 23 miles per hour on Thursday, 10 a.m.

The barometer is reduced to the freezing point and to the level of the sea

The change in the range of temperature incident upon the change of season makes it necessary to modify the thermometric scale, on the right hand side of the diagram. It will be observed that the lower set of numbers belongs to the maximum and minimum thermometers, while the upper, beginning with 100, and running down, belongs to the line representing the percentage of humidity. A minimum temperature of 46°, was reached on Thursday of this week, which is the lowest point, since last winter. On the same day the percentage of humidity was unusually low, being 71 per cent. There was no rain; the wind was from the north, and it was the one fair day of the week included in the record.

INWARDS.

- Oct. 11, Japanese steamer *Sumida Maru*, Hubenet, 896, from Kobe, Mails and General, to M. B. Co.
 Oct. 11, Japanese steamer *Kumamoto Maru*, Drummond, 1,240, from Hakodate, Mails and General, to M. B. Co.
 Oct. 11, Japanese steamer *Kishu Maru*, —, —, from Kobe, Mails and General to M. B. Co.
 Oct. 12, Russian gun-vessel, *Djigit*, De Livron, —, from Vladivostok.
 Oct. 12, British barque *Santa Rosa*, Archer, 568, from Antwerp, General, to M. Raspe.
 Oct. 12, British steamer *Sunda*, Reeves 1,704, from Hongkong, Mails and General, to P. & O. Co.
 Oct. 14, British steam yacht *Albion*, Beesley, 38, from Kobe.
 Oct. 16, Japanese steamer *Hiroshima Maru*, Haswell, 1,200, from Shanghai and ports, Mails and General, to M. B. Co.
 Oct. 16, Japanese steamer *Tokai Maru*, Hogg, 1,042, from Kobe, Mails and General, to M. B. Co.
 Oct. 16, French corvette *Champlain*, Comd. Michaud, 2,000, 10 guns, 220 men, from Chefoo.
 Oct. 17, German brig *Maid Marian*, Holm, 298, from Nagasaki, Coals, to P. Bohm.
 Oct. 17, Dutch ship *Gustav and Marie*, F. Kurich, 335, Beans, to Chinese.
 Oct. 18, American schooner *Otomi*, Brinckmeyer, 72, from Kurile Island, to H. Snow.
 Oct. 18, Dutch schooner *Otago*, Isaacsen, 46, from Kurile Island, to H. Cook.
 Oct. 18, German corvette *Prinz Adalbert*, McLean, 3,500, 15 guns.

PASSENGERS.

- Per Japanese steamer *Kumamoto Maru*, from Hakodate:—30 Japanese.
 Per British steamer *Sunda* from Hongkong:—Mr. Thompson, Mr. and Mrs. Aston, Messrs. Longford, Webb and Juvelini.
 Per Japanese steamer *Hiroshima Maru* from Shanghai, &c.:—His Ex. Governor Nabeshima, Judge Rennie, Messrs. T. Walsh, E. C. Kirby, Arnold Hague, A. R. Dent, J. W. Lanark, H. Harding, Mr. and Mrs. Murray, Dr. Harris, Messrs. Mori, Shiohara, Kitakase, Tamada, Kawai, Harige, Shibakawa, Shindo, Imada, Nishikawa, Hashiguchi Takahashi, Kinashi, Takagi, Kanaya, Morikuma, Nagaye, Kama, Mr. and Mrs. Tokichi; 37 Japanese and 1 Chinese in steerage.
 Per Dutch schooner *Otago*, from Kurile Island:—Messrs. R. M. Fonot, Anguste Nebbe.

OUTWARDS.

- Oct. 12, Danish brigantine *Nadachila*, Brodersen, 185, for Chefoo, despatched by Chinese.
 Oct. 12, German brigantine *Anguste Reimern*, Thompson, 207, for Chefoo, despatched by E. B. Watson.
 Oct. 14, British steamer *Londoun Castle*, Marshall, 1604, for Hiogo, General, despatched by Adamson, Bell & Co.
 Oct. 14, Japanese steamer *Genkai Maru*, Conner, 1,260, for Shanghai and ports, Mails and General, despatched by M. B. Co.
 Oct. 16, British steamer *Malacca*, Smith, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.
 Oct. 18, British barque *Bow Accord*, Wilson, 400, for Kobe, General, despatched by L. Kniffler & Co.
 Oct. 18, Japanese steamer *Sumida Maru*, Hubenet, 896, for Hongkong, Mails and General, despatched by M. B. Co.

PASSENGERS.

- Per *Londoun Castle*, for Kobe:—Mrs. Hannen and two children, Mr. and Mr. MacMillan, Doctor Winn, Doctor Johnson, Messrs. Butgoyne and Broom.
 Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—General Nodzu, General Miura, Mrs. H. C. Wood, Miss Howes, Mr. and Mrs. R. C. Bredon, Mrs. Hasegawa Nameo, Miss Hasegawa Utango, Mr. and Mrs. Yoneda, Drs. Hashimoto, Muranaka, Tanaka, Naitow, Satow, and Ochiya, Messrs. Yoshii, Ishimaru, Okamoto, Okazaki, Salvan, Abe, Noda, Nirei, Florent, Nakaoka, Kagaya, Sasaki, Asano, Miyashima, Yamagata, Kajibi, Katsuda, Yoshizawa, Yoshida, Mamiya, Uyeda, Yabuki, Shimidzu, Hirazawa, J. Horigan, Nakayama, Suzuki, Ikeda, Ohara, G. Smith, W. A. Woolley, H. J. Hawkins, W. Miller, Kojima, Katamo, Matsumo, Sonoda, and Miyasaki.
 Per British steamer *Malacca* for Hongkong:—Mrs. Allen and 3 children, Messrs. Strachan, Mollison, Cruickshank, Leverage, and Rustonjee in cabin; 4 Europeans and 5 Chinese in steerage.
 Per Japanese steamer *Sumida Maru*, for Hongkong:—Mr. and Mrs. Hirleman and infant, Messrs. D. Reynolds, Asheda, Horiye and child, D. Gillis, P. Geckie, W. L. Merriman.

CARGOES.

- Per British steamer *Sunda* from Hongkong:—
 Total amount of cargo ... 8,387 pcks.
 Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—
 Treasure ... Yen 32,400.00
 " ... " 68,000.00
 Per Japanese steamer *Hiroshima Maru*, from Shanghai, &c.:—
 Treasure ... \$102,086.00
 " ... yen 100,000.00

Per British steamer *Malacca* for Hongkong:—

Silk for London...	592 Bales.
" France	142 "
Total	724 Bales.

REPORTS.

- The Russian gun-vessel *Djigit* reports: Left Vladivostok on the 30th September, had fine weather to port.
 The British steamer *Sunda* reports: Had strong N.E. winds and high sea throughout the voyage.
 The British barque *Santa Rosa*, report: Leaving Antwerp on the 19th of May, had fine weather and light winds to Equator, from 10 South had strong S.W.N. westerly seas, thence light winds from S.S.E. through the Java sea, after which had moderate breezes from S.S.W. to Raabe Channel, thence to port light variable winds. Sighted the British barque *Simare* off Anjer bound to Yokohama.
 The British steam yacht *Albion* reports: Left Kobe on the 9th instant, and experienced strong north and east winds and light sea during the passage.
 The Japanese steamer *Hiroshima Maru*, reports: Leaving Shanghai on the 8th of October; arrived at Nagasaki on the 10th, left on the 11th; arrived at Kobe on the 13th, left on the 14th, and arrived at Yokohama on the 16th instant. First part of passage had strong N.E. winds, from Kobe first part variable winds and rain, latter part fresh N.W. winds and fine weather.
 The Dutch schooner *Otago*, reports: Fine weather with variable winds throughout, arrived 18th.

- The brig *Maid Marian* reports: Had strong N.E. winds and high sea throughout.
 The ship *Gustav and Marie* reports: Had strong N. and N.E. winds to Quelpart Island, from thence to Van Dieman's Straits had light easterly winds, passed the British barque *Emulation* bound for Yokosuka from Van Dieman's Straits, had northerly winds and high sea.

COMMERCIAL INTELLIGENCE.

IMPORTS.—The market generally has been rather quiet during the past week. Transactions in *Cotton Yarns* have been comparatively restricted and prices are easier, but some considerable sales of *Grey Shirtings* have been reported for long arrival. *Indigo Shirtings* and *Velvets* are wanted; in other kinds of *Fancy Goods* there is not much doing.

COTTON YARNS:—

Nos. 16 to 24 Common to Medium ... per picul	\$26.00 to 32.00
" " Good to Best ... "	\$32.25 to 33.50
Bombay, No. 20 No. ... "	\$28.25 to 30.75
Nos. 28 to 32 Common to Medium ... "	\$35.00 to 36.25
" " Good to Best ... "	\$36.75 to 37.50
" 38 to 42 ... "	\$36.00 to 37.50

COTTON PICKER GOODS:—

Grey Shirtings:—7 lb. per piece 28½ yds. 39 in.	\$1.60 to 1.90
" " 8½ lb. " 38½ " 39 in.	\$1.90 to 2.25
" " 9 lb. " 38½ " 45 in.	\$2.25 to 2.62½
T. Cloths:—7 lb. " 24 yds. 32 in. per piece	\$1.40 to 1.65
Drills, English: 14-15 lb. 40 " 30 in.	\$2.40 to 2.57½
Indigo Shirtings:— " 12 " 44 in.	\$1.60 to 1.95
Prints:—Assorted... " 24 " 30 in.	\$1.60 to 2.20
Cotton Italians & Satens Black 32 in.	\$0.11 to 0.14½
Turkey Reels: 3 to 2½ lb. 24 yds. 30 in.	\$1.40 to 1.55
Do. 2½ to 2½ lb. 24 " 30 in.	\$1.60 to 1.70
Do. 3 lb. " 24 " 30 in.	\$1.80 to 2.00

COTTON PICKER GOODS:—Continued.

Velvets:—Black ... 35 " 22 in.	\$7.50 to 9.00
Victoria Lawns:— " 12 " 42/3 in.	\$0.77½ to 0.80
Taffeta-lace:— " 12 " 43 in.	\$1.75 to 2.05
WOOLLENS:—	
Plain Orleans ... 40-42 yds. 32 in.	5.50 to 6.75
Figured Orleans ... 28-30 yds. 31 in.	4.00 to 5.10
Lastings ... 29-30 yds. 31 in.	10.00 to 10.25
Italian Cloth ... 30 yds. 32 in.	0.24 to 0.31½
Camlet Cordes ... 28-30 yds. 32 in.	4.00 to 5.00
Mousselines de Jaines:—Crape 24 yds. 30 in.	0.17½ to 0.18
do. Itajime 24 yds. 30 in.	0.23 to 0.26½
do. Yuzen 24 yds. 30 in.	0.35 to 0.45
Cloths, all wool plain or fancy... 48 in. to 52 in.	0.80 to 1.50
Pilots ... 54 in. to 56 in.	0.45 to 0.55
Presidents ... 54 in. to 56 in.	0.60 to 0.70
Union ... 54 in. to 56 in.	0.35 to 0.60
Blankets, green 6 to 8 lbs ... per lb.	0.35 to 0.40

SUGAR.—Since the issue of our last weekly report on the 11th instant, we have no further supplies to hand. Quotations remain firm as undernoted.

Sugars:—Tahao in bag ... per picul	\$5.85 to \$5.95
" " in basket ... "	\$5.20 to \$5.50
Taiwanfoo in bag... " "	\$5.85
do. in basket... " "	\$5.60
Ching-pak and Ke-pak ... "	\$8.00 to \$9.25
China No. 4-5 Kongfun & Kook-fah... per picul	\$6.50 to \$8.00
Daitong ... " "	\$4.10 to \$4.50
Japan Rice ... " "	\$2.60 to \$3.10
Kerosene Oil ... " "	\$1.90 to \$1.92½
Newchwang Pass ... " "	\$2.20 to \$2.25

KEROSENE.—A slight improvement, or rather steadiness, in the native currency quotation has induced buyers to come forward, and small sales have been made at quotations.

Stocks are still very heavy.

EXPORTS.

SILK.—A very good business has been done during the week, especially in Hanks and Filatures. All prices close very firm and many holders have withdrawn their stock from the market.

Settlements:—540 bales Hanks, 170 bales Kakedas, and 435 bales Filatures.—Total 1,145 bales. Arrivals 660 bales. Stocks 4,300 bales. Total export 4,388 bales, against 5,253 bales last year.

	In London at 3/9½. per lb.	In Lyons at fr. 4.80. per kilo.		In London at 3/9½. per lb.	In Lyons at fr. 4.80. per kilo.
Hanks,—Superior, nom. ...			Kakeda,—Extra ...		
" Best ...	\$580 to 620 19.8	to 20.11 fra. 54½ to 58	" Best ...	\$710 to 720 23.9	to 24.1 fra. 66 to 67

" Medium ...			" Good ...	\$640 to 660 21.7	to 22.3 fra. 60 to 62

TEA.—Business for the past week presents no special figure for comment. Amount settled is about piculs 5,900, and prices remain much as last reported. Stocks on first hands are almost nominal and the amount of Tea held in the hands of producers very difficult to arrive at. Export from this port and Kobe up to date about 26,000,000 lbs.

Common ...	\$20 to under	Fine ...	\$33 to 35
Good Common ...	\$24 to 25	Finest ...	\$36 to 39

Good Medium ...	\$30 to 32		

SHIPPING.

The S.S. *Loudoun Castle* has been despatched for New York via Kobe and Shanghai. S. S. *Scindia* is in port, and is advertised for Kobe and Nagasaki.

The *Santa Rosa* has arrived from Antwerp. The *Bon Accord* has left for Kobe with original cargo. The *A. Reimers* and *Nadeschda* have been despatched for Chefoo. The *Jonathan Bourne* goes to San Francisco under home order. The *Claverhouse* is still disengaged. The *Importer* is yet discharging inward cargo.

MISCELLANEOUS.

W. & A. GILBEY'S WINES AND SPIRITS.

W. & A. GILBEY have special facilities for carrying on an extensive Foreign Trade, having held for many years in their Excise Bonded Stores, for the purpose of their Home Trade, a stock of not less than 12,000 Casks of Wines and Spirits, which are equally available for Export. These stores are by far the largest private Duty Free Warehouses in the World, and are under the supervision of a staff of Excise Officers specially attached to these Warehouses.

THE EXTENT of W. & A. Gilbey's purchases enables them to give the best VALUE to the public, as a twentieth part of the Foreign Wines consumed in the United Kingdom is supplied from their stock. In the year 1876 W. & A. Gilbey paid duty on 1,881,049 gallons of Wines and Spirits, and the average quantity bottled and sent out by them daily was 3,050 dozens or 36,600 bottles.

QUALITY is guaranteed by W. & A. Gilbey, and is the same whether the Wines or Spirits are obtained direct from their Head Establishments or from any of their Agents. The purity and genuineness of every article in this list are guaranteed in accordance with Act of Parliament, 38 and 39 Vict., Cap. 63.

W. & A. Gilbey have always adhered to the standard of Bottle Measure recently recognised by the Government, namely—

6 bottles contain one gallon; 12 half-bottles contain one gallon.

SECURITY is ensured to the purchaser, each bottle bearing W. & A. Gilbey's seal and label guaranteeing quality and measure, and the strength also in the case of Spirits.

W. & A. Gilbey's Head Establishments:—

England.—(Offices) Pantheon, Oxford Street, London; (Warehouses, Duty Paid) Oval Road, Camden Town, London.

Ireland.—(Offices) Upper Sackville Street, Dublin; (Warehouses, Duty Paid) Upper Sackville St., Dublin.

Scotland.—(Offices) Haymarket, West End, Edinburgh; (Warehouses, Duty Paid) Haymarket, West End, Edinburgh.

France.—Principal Establishment, Chateau Loudenne, near St. Estephe, Medoc.

Excise Bonded Stores.—Warehouses, Nos. 1 to 5, North-Western Goods Station, and Bunny Street, Camden Town, London.

Distillery.—James Street, Camden Town, London.

Printing Department.—Poland Street, Oxford Street, London.

IMPERIAL GOVERNMENT TELEGRAPHS.

ANY information required regarding the conditions for forwarding LOCAL TELEGRAMS which were slightly altered on the 1st day of the 7th Month (July) can be obtained at the principal Telegraph Offices, where also copies of the Regulations may be had at the price of 5 sen per copy.

THE NEW EDUCATIONAL CODE.

GOVERNMENT NOTIFICATION No. 40, bearing the date September 29th, 1879, conveys the important information that the Educational Regulations of 1872 are repealed and a new Code, accompanying this Notification, instituted in their stead. The new regulations were published in the last issue of this paper, but the subject is one of so much interest and importance to all interested in the progress of this country, that it demands of us something more than mere publication.

Among the numerous changes that have taken place since the "period of restoration" in the internal affairs of Japan, none have been more important, of greater moment to the welfare and prosperity of the people, than the institution of a general educational system and the promotion and encouragement of higher education by the establishment of various institutions for higher instruction, and of thoroughly organized and well equipped special schools. In this, as in many other matters, Japan has enjoyed the advantage of building upon the experience of many other nations in which systems of education have grown up under circumstances not always favorable. She has not been slow to make use of this experience, and educators in other countries, as well as all friends of Japan, have watched and will continue to watch with interest all operations of the Government in this direction.

Although schools had existed for many centuries previous to the restoration of the Mikado's power, so far as they were provided or supported by the Government, they had been confined to the military retainers and to the upper classes. A very little learning, indeed, existed among the lower classes for which, it seems, they were obliged to look out for themselves. During the first three or four years of the present period the educational affairs in which the government was concerned, were under the control of an educational board and consisted

principally in the establishment of schools for instruction in foreign languages, the opening of a school of medicine, and in the translation and publication of various works on Western Science and Literature. The year 1871 forms an epoch of great importance in the history of education in this country, for at that time was created the Department of Education, and the work of the organization and establishment of an extended system of public instruction was formally undertaken. An embassy was sent to foreign countries for the express purpose of studying foreign systems of public instruction; a normal school was opened, as it was recognized that the proper training of teachers was one of the first steps in the new order of things.

In 1872 an educational Code was issued which was the result of much earnest thought and careful observation of tried educational systems in foreign countries. The magnitude of the change attempted to be wrought, as well as the spirit which moved the authorities who were engaged in the undertaking, can easily be seen in the following brief selection from the introduction to this Code of 1872:—"Recently an improved educational system has been formed and the methods of teaching remodeled. It is designed henceforth that education shall not be confined to a few, but shall be so diffused that there may not be a village with an ignorant family, nor a family with an ignorant member. Learning is no longer to be considered as belonging to the upper classes, but is to be equally the inheritance of nobles and gentry, farmers and artisans, males and females." This Code has remained in force up to the date of these regulations, although in its practical working out, it has been found necessary in more than one instance to modify its provisions, and this the Department has not hesitated to do when it has appeared to be clearly desirable.

The new Code now issued may be presumed to be the result of the experience of seven years under the old. While in many respects its regulations are not strikingly different from those of the old Code, yet it contains many things to which the attention of those interested may be drawn and to some of these we shall briefly refer. It may also be desirable to point out certain difficulties which may be anticipated and to indicate some features which have been found to be objectionable in the experience of other countries.

The first six or seven articles are devoted to a classification of schools, which does not differ materially from that of the old regulations. The principal schools recognized are the elementary, the middle or high school, the college and university, the normal school, and special or technical schools. It is provided that elementary schools must be established of sufficient number to accommodate all of the children in the various Fu and Ken. But these are not necessarily all government establishments or public schools proper, for in localities where efficient private schools exist, and are properly maintained, a public establishment may be dispensed with. A certain amount of aid from the Government is distributed annually to these schools, the distribution of which is under the control of the Governors of the Fu and

Ken, who are authorized to make grants to private as well as to public schools. The establishment of schools of a higher grade than primary is to depend upon the needs and conveniences of the various localities.

Article 8, which follows the enumeration of the various kinds of schools, is somewhat peculiar and certainly is not entirely free from objection. It is that "any person will be allowed to establish any of the schools above mentioned." This means that any person or persons will be permitted to establish a College, University, Normal school, or special school of medicine, law, &c. &c. The objections to this article are certainly not lessened by articles 20 and 21, in which it is provided that the establishment or abolition of all public schools must be with the approval of the Governor of the Fu or Ken, but that the establishment of private schools may be done by simply reporting the fact to the Governor of the Fu or Ken. In countries older than Japan in matters of this sort much trouble has arisen from too much freedom in the establishment of schools, especially of schools of a higher grade and special schools of medicine and, indeed, of normal schools as well. It is extremely difficult to demand and maintain any standard of instruction and graduation in private schools. Although it is generally necessary to secure some legislative or governmental authority, before granting degrees, yet even this requirement has not proved a sufficient safe-guard. For instance, it is a notorious fact that medical diplomas have been bought and sold, no previous study or attendance upon courses of lectures having been exacted of the recipient. In hundreds of other instances the shortening of the course of study and the almost entire neglect of proper examinations have rendered the possession of the degree of Doctor of Medicine more a matter of form than anything else. It would seem that the people who, from the very nature of the case, are generally ignorant of the requisites of a professional education and training, ought to be protected from blundering practitioners in medicine or any other profession, and of course it is difficult to foretell how this system may work out in Japan, but it is fair to assume that what has so certainly happened elsewhere is likely to happen here. If we mistake not it is only within the present year that collegiate degrees have been granted in any institution of learning, appropriate degrees having been recently conferred on graduates of the several departments of the University of Tokio. To this, and to institutions of a similar grade and character, the power to grant degrees may safely be entrusted, if, indeed, it be wise in any case to delegate this power to the authorities of the institution in which the candidate has pursued his studies.

As regards a Special School of Medicine, there hardly seems to be room for more than one opinion as to the desirableness of thorough and complete government control, and we hold that the same is nearly if not quite as true in reference to almost all other kinds of special instruction and professional training, here in Japan. This arises from an entire lack of familiarity with many of the technological professions which is almost peculiar to this country. In most countries a good civil engineer, a good architect, a good mining engineer, or even a good teacher is recognized very quickly and by those who know nothing of the details of his profession, but who have long ago learned what results he ought to produce. The lack of this experience among the people here will render it more easy for them to be imposed upon by pretenders and it is against these that a wise government should protect them. One of the most efficient ways to do this is to insist on a high and rigid standard of educational qualifications and to this end private schools, to which privileges are extended and subsidies granted, should be looked after very sharply. By attending to this Japan may avoid many difficulties into which other countries have fallen.

Besides the compulsory establishment of elementary schools,

compulsory attendance of the children is provided for. In this matter the requirements are not onerous. The minimum amount of time spent in the school-room is sixteen months and this is wisely divided into four parts, so that each child is required to attend school at least four months in each year for a period of four years. The maximum length of time to be spent in the elementary school is eight years and when children have facilities for receiving instruction out of school such instruction is accepted as a substitute for school attendance.

The cost of maintaining the public schools is defrayed out of funds derived from the taxes of the Fu and Ken, from aid granted by the government and from local taxation of the people of the village or town in which the school is maintained. It is also provided that all schools may or may not charge fees for tuition. It is to be regretted that the public schools are not made entirely free, any deficiency which might result from the abolition of fees to be made up by increased taxation. The existence of even a small charge for tuition is often a bar against admission to school and even when its payment is suspended the result is likely to lead to distinctions that are objectionable in a public school. Among other noticeable features is the requirement that all teachers shall be above the age of 18 years; a demand that might be profitably made outside of Japan. "No corporal punishment will be allowed"—and thus the East solves a problem with which the schoolmasters of the West have been wrestling for many years. All schools, private as well as public, must be open to inspection by officers despatched for that purpose by the Minister of Education, and the parents and guardians of the pupils will be allowed to attend on any occasion set apart for examination.

One of the most interesting results which will attend the introduction of these regulations will be the increased responsibility of the people in the control and management of the schools. In this, probably, exists the greatest difference between the new regulations and the old. The old code was necessarily an experimental one and subject to alterations which experience should show to be desirable. Founded, as it must have been, upon the results of an inspection and study of many of the best systems of instruction in foreign countries, it was nevertheless and, indeed, almost in consequence of this fact, a probable failure in one particular and that is in its adaptability to the necessities and conditions of the Japanese people. It was impossible for the wisest to foretell what modifications would be rendered necessary on account of local environment; nothing but experience could do this. That results deserving the highest praise have been reached under the old system no one can doubt, but it has been recognized for some time that changes ought to be made in it which might render it somewhat more flexible; somewhat more easily accommodated to the varying conditions of the people upon whom it was made to operate. The new Code is intended, of course, to remedy any evils which may have existed or grown up under the old. As before stated, under the new regulations something of the control of local educational affairs is delegated to the people. The managers of the educational interests of a village, or of a ward of a town or city, are to be elected by "the people" and their number, as well as the amount of their compensation, is to be determined by the same. Unless other instructions or regulations than those given in the Code are issued, these school officers will have pretty nearly the entire control of the operations of their local school, for the Code is remarkable for containing very little of the detail of the establishment and maintenance of schools. What it does not contain is as full of import as what it does.

Undoubtedly there is much to be gained by thus localizing educational interest and control. On the one hand those who pay the taxes pay them more willingly and generously for

that which they themselves manage and administer, and on the other hand the details of the work are apt to be more in harmony with local conditions and demands when originating with local managers than when under the control of a central and distant bureau. Under a judicious system of local control it is possible to get better and more satisfactory results than under any other. But it is also possible to push this plan further than is desirable and great care should be exercised to avoid this. In most countries it has been found that when once a privilege or franchise of any kind has been granted the people it is extremely difficult, often impossible, to withdraw it afterwards. However desirable a privilege may be if properly exercised, it is wise to be tolerably certain of its safety before granting it. In the present instance the question arises: are the people sufficiently familiar with the educational system now being introduced into this country and especially, are they sufficiently impressed with its value and necessity to be entrusted to any great extent with its management?

But after all, the first article of the new Code is the "saving clause" which may wisely be relied upon for the cure or prevention of any ills which might make the history of education in Japan during the next decade less interesting and less remarkable than that of the last. It says that,—"All affairs connected with education throughout the country will be under the sole control of the Minister of Education and all public and private schools and all public libraries, &c. will therefore, be under his supervision."

THE LOOCHOO QUESTION.

III.

'HAPPY is the nation that has no history;' and, from the time of its complete subjugation by Satsuma in the year 1599 until a few years ago, this was the case with Loochoo: it enjoyed, unbroken, a period of unaccustomed tranquillity; and its history consists only of the dry annals of administration regularly carried on by its appointed rulers according to the laws and constitution imposed upon them. After Shonei, each successive chieftain, at his accession, and every member of the Council, on appointment, took an oath of allegiance to Satsuma, similar in effect to that of Shonei and his Council; and the same oath was repeated at the accession of each successive prince of Satsuma. These declarations of 'homage' (for so in the fullest sense they were) were continued without interruption to the present time; the now ex-Chief, Shotai, having subscribed such an oath on his accession in 1858: and the members of his council repeated their oaths in the following year upon the occasion of a new prince entering upon the succession in Satsuma.¹ Too much weight however should not be given to this lip-service; for, with the calculating duplicity which throughout their history has characterized the rulers of these islands, they have habitually performed towards China acts capable at least of being construed into a continual recognition of a similar (but not identical) feudal relationship with that empire—though China never exacted or received a promise of anything in the nature of obedience to her laws or commands.²

When famine threatened the Islands, succour in food and money was supplied from the treasury of Satsuma;

¹ A translation of these documents is given by way of appendix on page 1,421.

² The Chinese Government in their despatches are careful to explain that their relations with Loochoo did not extend to restricting the administrative autonomy of the islands, and did not operate as even affecting in any degree their status as a distinct and sovereign nation.

As an instance of the duplicity alluded to above, it may be mentioned, that in a report to the Chinese Government of the events of 1599 and the following years, the Loochooan Government gave a positive assurance that Shonei had in no way submitted to Satsuma.

and the protection of the empire itself was extended to avenge wrongs inflicted on the inhabitants by foreigners. Just two hundred years before the recent occasion when Japan avenged the murder by Formosan savages of her Loochooan subjects, the very same case had arisen, and is important, both as affording a precedent which shows that the action of Japan in the recent affair was no new political departure, and as establishing the fact that so much as two hundred years ago, Japan asserted, and obtained from foreign countries explicit recognition of sovereign rights of empire over Loochoo. In 1670 A. D. some Loochooan sailors were attacked by the piratical savages of Formosa, the whole of which island at that period owned the sway of a single chief. Upon report of this event being made in due course to the prince of Satsuma, he took the necessary steps to obtain redress. At that time the only regular channel of intercourse between Japan and the outside world was the port of Nagasaki in the south-west; and the Governor of Nagasaki accordingly became the official medium of communications with foreign countries: to him the prince of Satsuma addressed himself, and he at once sent a despatch, couched in imperious terms, to the Chieftain of Formosa. The remonstrance had the desired effect, and the Formosan Chief sent the Governor an apology and an indemnity of 800 *kiramme* weight of silver. The Bakufu (the Government of the Shogun, which in those days administered the affairs of the empire) ordered this money to be transmitted to Satsuma, by whom it was handed over to the Chief of Loochoo, with instructions to compensate out of it the sufferers and their families. The circumstances of this occurrence have been related at length because they show how complete, so long ago as 1670 A. D., was the recognition and exercise of the external as well as of the internal sovereign rights over Loochoo of the Government of Japan.

Most of our readers will be more or less familiar with the modern repetition of this chapter of history in the Formosan expedition of 1874, undertaken with the primary and avowed object (delayed but not forgotten) of avenging the murder by Formosans, a little more than two years previously, of Loochooan subjects. It will be enough to say here, that, after receiving from the Chinese Government a distinct disavowal of responsibility for the acts of the perpetrators of the outrage, the Japanese Government sent an expedition to Formosa. Complications arose with China in consequence of their previous disavowal giving place to remonstrances against an attack being made on the Formosans whom she now declared to be under her protectorate; but into these difficulties it is beside the present question to enter: the expedition resulted in the explicit acknowledgement by China, in a formal diplomatic convention, of Japan's right to have undertaken it, and in the payment to Japan by China of a sum of money, as compensation to the families of the victims of the outrage, and of a further and larger sum in the nature of an indemnity for the expenses of the campaign. The only other events of any importance in the recent history of Loochoo, the administrative changes effected since the revolution in the form of Government throughout the empire,—have already been noticed, and need not be recapitulated here.

For nearly 300 years, then, Japan has held absolute and undisputed territorial possession of Loochoo. What is the basis of the rival claim now for the first time put forward by China? Passing by for the present other matters of argument and collateral evidence adduced in support, the foundation laid for the claim itself, and dwelt upon by the Chinese Government with persistent iteration, is the receipt of tribute from the chieftains of the islands and their ceremonial investiture (through

envoys sent to Peking for the purpose) by the Emperors of China. The origin of these customs has been pointed out; their continuance is accounted for both by reference to the influence of the Fuhkien families, and by other considerations to which we shall advert directly. But first let us examine this claim of China to sovereign rights over Loochoo, by the light of similar pretensions made on similar grounds by that Empire in other directions. The claim of the Emperors of China to universal dominion is notorious; and they have been prone to regard the bringing of gifts and the use of complimentary language by ambassadors as acknowledgements of this claim. Illustrations of these pretensions are to be found in abundance: for instance, in 1402 A.D. the Emperor of China sent a mission to the Japanese Shogun, Ashikaga Yoshimitsu in these terms:—"You, Minamoto Yoshimitsu, King of Japan, have proved faithful to the Imperial family [of China] and have cherished sentiments of affection towards the Emperor Now, therefore, we send you an embassy, and we forward a calendar for your adoption." Shortly afterwards another embassy was sent, bearing an Imperial Decree, by which Yoshimochi was formally invested with the title of the "King of Japan"—a title also conferred at a subsequent date upon Hidéyoshi when he invaded Korea; the Chinese Emperor seeking by this means to conciliate him and avert invasion from his own territory. In a Chinese official publication it is written:—"The barbarous countries tributary to our empire are as follows: in the east, Korea; in the south-east Riu Kiu (Loochoo) and Suro (the Sooloo islands); in the south, Annam and Siam; in the south-west, 'the Western Nations,' (elsewhere explained to include "Italy, England and others") Burmah, and Nansho (the Shian States.)" So again the Chinese Emperor Shun-chie, addressing Liso, King of Korea, expresses himself thus:—"Now all lands, both middle [i.e. China itself] and foreign, have become united in one vast empire; and so the whole earth has become one family, and all the people of foreign countries are my children." But enough of this. The despatch of an embassy and the presentation of gifts to the Emperor of China assumes the form of tribute and the acknowledgment of suzerainty and is sufficient, in the eyes of the Chinese Government, to constitute the country from which they came a dependency of China, with which no other country may venture to interfere without incurring the risk of trespassing upon the sovereign rights of that empire. And this is the one foundation of their claim to rights of empire over Loochoo. The case of Loochoo can of course be distinguished from some of the others, in so much that, the island being in the immediate vicinity of China and in constant communication with her, the offices of 'tribute' and 'investiture' were fulfilled with some regularity and continued down to a recent date. The value of investiture may be gathered from the parallel instances given above; and, it must be remembered, it was sought by envoys sent for the purpose; and it is not even pretended that the so-called tribute was ever anything more than honorary; indeed, the Chinese Government in its recent despatches has

3. From the Ta-tsing-hwei-ten (Code of Ceremonial Observances); chapter on the "Board of Ceremonies and Tribute." The explanation given of the expression "Western nations" in the passage quoted is afforded by Hoi-wen (Gigen) a famous Chinese writer of the present century—almost of the present day—in the Shin-wu-ki (Political History) in commenting on the passage. He also, in commenting on the same passage and with regard to the relations of China to Russia, gives a list of the countries held by China as *not* tributary to herself, but as standing in commercial relations only: amongst these are Japan and France; and the commentator adds, "still more clearly is the relation of Russia [to China] commercial only." This deliberate mention of certain countries as *not* being tributary, shows (what would otherwise be scarcely credible) that, in speaking of the other nations as tributary, the Chinese official writers are not using a figure of speech but asserting a claim in all seriousness!

almost gone out of its way to disclaim setting any store by the tribute, and to declare that the order for its discontinuance is not the ground of its complaint against Japan. But both the origin and circumstances attending the performance of these ceremonial offices afford a clue to their true nature. Their origin, coeval and intimately connected with the planting of the Chinese commercial colony (to use a slightly inaccurate phrase) of which indeed they were the earliest results, has already been mentioned: their continuance was due to a natural law—they subserved the purpose for which they were devised in promoting the commercial interests of both countries. By the ordinance of Iy-chisa, it was sought to prohibit all intercourse between China and Loochoo: but commercial interests were too strong, and by a systematic evasion of the prohibition, things went on in spite of it in the old groove.

The *raison d'être* of these ceremonies was a commercial one: they were in fact, at any rate after the period referred to, nothing else but constant renewals of a kind of commercial treaty—indeed such forms are the counterpart, and the only counterpart, among oriental nations of the commercial treaties of the west. Awe, and the desire on other than merely commercial motives to stand well with a powerful neighbour, no doubt entered to an extent into these observances on the Loochoo side: but the element vastly preponderating was commercial interest; and though a certain amount of political significance would be attached to them, partly unconsciously and in the natural order of things, partly by the ever-present influence of the Chinese official element in the islands, it is probable that the indirect channel of commercial intercourse with China kept open in this way for Satsuma, made it worth the while of the authorities of that province to wink at the evasion of their ordinances—ignoring, or more probably not perceiving, the risk of diplomatic complications.

Now if the claim of China, based as it is solely upon this matter of tribute and investiture, were not confronted by any adverse claim upon the allegiance of Loochoo, it would afford no doubt a *prima facie* ground on which to rest a title to the suzerainty of the islands. But even thus the utmost right established would be one of mere suzerainty, and not one entitling China to regard Loochoo as an integral part of her empire, as it is (somewhat inconsistently) claimed in the despatches to be. For the rendering of homage and tribute in the manner alleged is not incompatible with the separate existence or with the sovereign rights of the tribute-bearing state; and this proposition is not only recognized, but given a prominent place in the Chinese despatches, as truly expressing her relationship with Loochoo—the independence and sovereign authority of the latter in all matters foreign and domestic being declared to remain intact. But whilst being thus *ex confesso*, independent as towards China, we have seen that, as a matter of fact, Loochoo, so far from being a sovereign or independent state, or one enjoying even complete administrative autonomy, has for nearly 800 years, at any rate, formed an integral part of the empire of Japan. What then becomes of the claim of China, based, as it is and must be, solely upon these tributary relations—?

The title of Japan on the other hand, though not without other support both fundamental and collateral, may be rested upon one basis which is conclusive of the case: that basis is *Prescription*—a prescription gained by the undivided and undisputed possession of nearly three centuries. A much shorter period of similar possession would have sufficed, on most unquestioned principles of International Law, to establish a Prescriptive Title. Uninterrupted possession, especially if practically undisputed

by force, is the best and most recognized of all foundations of sovereign title. And this, without regard to the original method of acquisition, whether rightful or wrongful. Before questioning a title created by even a short prescription, such as the period covered by a single generation, a rival claimant must be able to give a satisfactory explanation, as for instance complete and unavoidable ignorance, of his own previous silence and absence of protest or of armed interference; for the necessary presumption from such silence is an intention to disclaim or relinquish all right and title. But when such silence has continued for generation after generation, no explanation of it is admissible: then, lapse of time alone makes the title of the possessor absolutely indefeasible; and all adverse claims and pretensions, however strong originally, are utterly and forever lost.

For certainly more than 200 years, then, Japan's title has been placed beyond the legal reach of question. If China had protested or interfered, at, or within a reasonable time after the time of, Iyéhisa's invasion of Loochoo, in 1599 A.D., she might well have kept alive whatever claim she then had: but she *did not do so* then or since. Even of late years, when the matter was brought so prominently under her notice, as in the erection of Loochoo into a 'Han,' or principality, of the Empire, and still more by the events in connection with Formosa in 1874, she refrained from asserting her claim: and although a claim made then, or for generations before, would of course have been open to the same answer that is given to her claim to-day, her reticence on these occasions makes her present demand more than ever inexplicable. No explanation can of course avail at this day to mend the fatal defect of staleness in the claim; but it will not be without value, in considering the future possibilities of the question, to endeavour to ascertain some of the causes to which it may be owing that a claim, so easily and so completely refutable, should have been seriously and deliberately put forward, with such apparent disregard of the consequences of a diplomatic defeat, seen by others to be inevitable, by a responsible and anything but incautious Government like that of China.⁴

4. *Note on the Formosan affair of 1874.*—The Formosan affair of 1874 has, doubtless for good and statesmanlike reasons on both sides, not been given any prominence in the diplomatic correspondence on the present question: but there is nothing to prevent its discussion here. The results of that affair cannot be said to have embraced any explicit settlement with respect to the question now in issue; but one would certainly have supposed the point to have been sufficiently set at rest by necessary implication. The original object of the expedition undertaken in 1874 was to avenge the murder of certain Loochooans; and this object was openly avowed and recognized in the diplomatic negotiations with China on the matter which resulted (as has been mentioned in a previous passage in the text) in the express recognition by China of the right of Japan to have undertaken the expedition, and in the payment of a compensation in money by the former, on behalf of the aggressors, to the latter power, for the benefit of her aggrieved subjects, and by way of indemnity generally. Attempts which cannot be ascribed entirely to ignorance, have been made to deprive the Japanese case of the benefit of the inference necessarily drawn from these facts, by denying the facts themselves. As this disingenuous line of argument continues to be used, in the press and elsewhere, in spite of previous exposures of the false premises on which it rests, it becomes necessary to refute it here. It is alleged that before the expedition to Formosa was despatched, other Japanese subjects, inhabitants of a province nowise in dispute, had also been attacked by Formosans—which is true; and it is further alleged that mention of these alone, and no mention of the Loochooans, at any rate no mention of them *en nomine*, was made between the Chinese and Japanese negotiators—which is distinctly *not* true. It might be sufficient in refutation of a part of these mis-statements to point to the awkward circumstance that the second outrage did not occur until a Japanese Embassy was actually at Peking negotiating with regard to the first. And it may be added that, in point of fact, during that period of the negotiations, not only the Chinese Government but the Japanese Embassy itself, was ignorant of this second outrage. It remains however to show that not only the murder of Loochooans, but of Loochooans *en nomine* was the subject of negotiations. The Chinese Foreign office writing to that of Japan on the matters discussed in negotiations held at this time with the Japanese Embassy, mentions 'Loochooans' as the persons murdered. And in the

EXTRA-TERRITORIALITY IN JAPAN.

XI.

ABSOLUTE immunity from the penal laws of the country, or complete criminal extra-territoriality, we have seen, is claimed for foreign subjects in Japan on the ground, that according to the treaties between Japan and the Western powers no subject owing allegiance to either of those powers is justiciable, or amenable to the criminal jurisdiction of any court but that of his own country. Hence it is argued, that no penal law which Japan may enact can be obligatory on such subjects unless such law has first received the sanction of the Government to which that subject belongs.

An examination of the treaty provisions, however, as we have before shown, renders it clear that the obligation of foreign subjects to obey the municipal laws of Japan does not depend upon, but is anterior to, and wholly independent of the question of jurisdiction. By the express terms of Article IV. of the convention of Nagasaki, of October 14th, 1854, it is plainly and unmistakably made the duty of British ships and subjects in Japanese ports, to obey the laws of Japan. That article is just as much in force to-day as it then was. But aside from any express agreement to that effect, it must be apparent to every one that it could never have been intended by the extra-territorial clauses of either of the treaties to wholly exempt foreign subjects resorting to, or living in Japan for purposes of trade, from the municipal laws and regulations of the territorial government.

Every man's common sense must teach him that the end of civil government requires that the territorial sovereign should have the right to forbid by law, the commission, by all persons whomsoever within the limits of the Empire, of any act hurtful to the state or any of its subjects. To deny this principle would be to deprive native subjects of the just protection and benefits of their own national laws, by denying to the sovereign himself the power to enact laws necessary for their protection and welfare. No extra-territorial privileges of which we have any knowledge,—not even those accorded by the usage of nations to Public Ministers and Ambassadors,—deprive any independent sovereign state of the exercise of this inherent power, its exercise is absolutely necessary to the existence of the state itself no less than for the protection of its members. "The state that parts with the exercise of this power," says a great French jurist,—"*must soon cease to exist among the family of independent nations.*" If, as claimed, it was intended by the extra-territorial provisions of the British treaty that Japan could enact no law binding on British subjects unless such law first received the sanction of the British Minister, it necessarily results, that she can enact no law binding upon Americans unless the American Minister or his Government, likewise sanctions such law; and so also with regard to the subjects of each of the other treaty governments. Now there is a law of Japan making it a crime for any person to counterfeit the national coin of the Empire. And so likewise it is made a crime to commit highway robbery in Japan; and so also rape,

Agreement finally concluded as the result of the second (Okubo's) mission to Peking, 'subjects of Japan' are spoken of as 'murdered'; and the compensation-money agreed upon is expressed to be paid as compensation to the families of the shipwrecked subjects of Japan upon whom the outrage was committed. Now, the Loochooans were the only persons for whose families any compensation was called for, as they were the only ones murdered; in the second attack no lives were taken, and Lihachi, the Bichiu mau, and his comrades, were afforded food and shelter: all of which facts were well known to the Chinese negotiators, as is proved by express references to them in their despatches at the time: the special language used is also conclusive to the same effect; but enough has been said to prove the point. The name of Loochoo does not occur in the convention itself; nor for the matter of that does the name of Bichiu. But granting that the former omission was studied, the object presumably aimed at had already been sacrificed too completely to be greatly assisted by such a device.

larceny, and numerous other acts are similarly made criminal offences. We are not aware that Her Majesty's Minister has ever sanctioned either of these laws; and we are quite sure that neither the American Minister or his Government has ever done so. Is it to be supposed that it was the intention of the British or American treaties, that either of these acts, if committed by an English subject or an American in Japan, were not to be deemed crimes, simply because the law of Japan making them such has never been sanctioned by the British or American Ministers? Murder and insurrection or rebellion are the *only* acts committed by Americans in Japan, which are specifically defined and prohibited by express statutory enactments of the United States.¹ Let us suppose that an American is guilty of counterfeiting the coin of Japan. Can it be rightfully maintained, because the American Minister or his government has never sanctioned the law of Japan making this particular act a crime, that it was therefore intended by the treaty that such act should not be deemed an offence? Or suppose that a British subject commits an act of rape, or highway robbery in Japan, can it be said that it was the intention of the British treaty that such acts should not be deemed offences or crimes, simply because the British Minister has never sanctioned the laws of Japan making them such? There can be no question that it was the intention of the treaties that all such acts should be deemed offences, and punished accordingly.² The sanction of a foreign minister to the penal laws of Japan, to render them obligatory on foreign subjects, was never dreamed of by the framers of the British and American treaties. And moreover, it was never the intention of the British Government that Her Majesty's Minister should exercise any legislative power in regard to crimes and offences of so serious a nature as these. The highest penalty which he is empowered by the Order in Council to impose for any offence, is \$500 fine, with three months imprisonment.³ Such a penalty, it is clear would be wholly inadequate for offences of so grave a character as those just named. The truth is, neither the British nor American Government appear to have ever questioned the perfect right of Japan to define and prohibit all offences by whomsoever committed within its territory. We have before said that this is clearly evinced by the legislative enactments of the two Governments, to carry into effect their respective treaties with Japan. We cannot better illustrate this, than by taking two of the examples first mentioned of offences against Japanese law by American and British subjects. We will first take the offence supposed, of counterfeiting the national coin of Japan by an American; and see how it would be dealt with by an American consular court, under the Act of Congress of the United States, enacted June 22nd, 1860, to carry into "effect the provisions of the treaties with China, Japan and other countries." Without going through the formalities of the trial, we will suppose that the Consul finds

the defendant guilty as charged in the indictment, viz:— of the act of "Counterfeiting the national coin of Japan, contrary to the laws of the Japanese Empire, &c., &c."

The second Section of the Act referred to declares, that:—

"In regard to crimes and misdemeanours, the said public functionaries, (Ministers or Consuls of the United States,) are hereby fully empowered to arraign and try, in the manner herein provided, all citizens of the United States, charged with offences against law, which shall be committed in said countries respectively, and upon conviction to sentence such offenders in the manner herein authorized."

Section IV. of the same Act, provides that:—

"Jurisdiction in criminal matters shall in all cases be exercised and enforced in conformity with the laws of the United States, which are hereby, so far as is necessary to execute said treaties respectively, extended over all citizens of the United States in said countries, (and over all others to the extent that the terms of said treaties respectively, justify or require) so far as such laws are suitable to carry said treaties into effect; but in all cases where such laws are not adapted to the object, or are deficient in the provisions necessary to furnish suitable remedies, the common law, including equity and admiralty shall be extended in like manner over such citizens and others in the said countries."

And finally it is provided by Section VII. that:—

"Each of the Consuls aforesaid at the port for which he is appointed shall be competent under the authority herein contained, . . . to issue his warrant for the arrest of any citizen of the United States charged with committing in the country, any offence against law, . . . And upon conviction to sentence him in the manner herein provided; always meting out punishment in a manner proportioned to the offence."

It is held by the American Government that these provisions fully authorize and empower American consular courts in Japan to try, and upon conviction, to punish every *infraction of Japanese Law*, committed by an American citizen in Japan.⁴ It is also held that every act committed by an American in Japan, in violation of a public law of the empire is a common law misdemeanor and punishable as such by American consular courts.⁵ It will be perceived therefore, that the Act of "counterfeiting the national coin of Japan," which is made a crime by the laws of the empire, would be punished "according to American law" as a *misdemeanour*, and that punishment would be meted out in "proportion to the gravity of the offence."

When the Government of Japan therefore issues a notification of the enactment by it of a penal law, the American Minister does not "sanction" or "approve" that law, his sanction or approval has nothing to do with the binding force

1. See the Act of Congress of June 22nd, 1860.

2. As a matter of fact everybody knows that all such acts if committed by English subjects in Japan, are deemed crimes or offences and punished by British Consular Courts according to British law. We think it is unquestionably the meaning and intention of the Vth Article of the China and Japan Orders in Council to authorize and empower British Courts in those countries to try and punish British subjects for all acts committed by them in said countries in violation of the territorial laws, of such a nature or character, as are deemed crimes or offences and punishable by the common law or statute laws of England. Rape is both a common law and statute law offence in England. And accordingly we find that one Archibald King, a British subject resident in Tokio, was charged before H. B. M.'s Vice Consul Dohmen in that city, May 9th, 1873, with the act of committing a rape on a Japanese girl. The offender was tried, found guilty of the act charged, and sentenced to six months imprisonment. The judgment of the Vice Consul on appeal to the British Supreme Court in Shanghai, was subsequently confirmed. For an account of the trial see *Japan Weekly Mail*, June 15, 1875.

3. Digest of the British Orders in Council for China and Japan Sec. 86, P. 23.

4. An American citizen residing at the Port of Hakodadi, in violation of the laws of Japan went without a passport beyond the limit within which foreigners are allowed to travel; he was arrested by the Japanese Authorities, and turned over to the American Consul for trial and punishment. It was held by the United States Government that his conviction for such an act was fully warranted by the Act of Congress of June 22nd, 1860, and the Regulations of the United States Minister made thereunder. "When this offender was delivered to the principal officer of an American consular court," says the Secretary of State, "it became the duty of that officer to try him, and upon conviction to punish him according to American law. . . . The Statute of 1860, authorizes a Consul to arraign and try citizens of the United States, charged with committing 'any offence against law' in Japan, and upon conviction to sentence him to fine and imprisonment. The same statute authorizes the Minister of the United States to make regulations for the due execution of these powers. . . . In the opinion of this Department the offence in question, if proved, was a *misdemeanour*, and punishable as such under the Regulations prescribed by Minister De Long," Dip. Cor., U. S., 1874, pp. 668-9.

5. "The act charged (of violating the Japanese Railway Regulations) was, if committed, a *misdemeanour*, as it was an act committed in violation of a public law of this Empire, which as I have already instructed you, was obligatory on American citizens in Japan. "Our Government intends to respect all its treaty obligations with Japan, and to punish as therein required all offences committed against Japanese, and against Japanese law by Americans in this Empire." *Instructions of Minister Bingham to the U. S. Consul at Hiogo and Osaka, Oct. 3rd, 1878*, see Dip. Cor., U. S., 1878, p. 519.

and efficacy of any penal law of Japan. His sole and only power and duty is to notify his countrymen of the existence of that enactment, to the end that they may not offend against its provisions in ignorance thereof.

Now, if we do not entirely misapprehend the spirit and intent of the British Orders in Council, they are in general accord with the theory of the American Act of Congress.* Let us take the case supposed by us, of an English subject who commits, an act of highway robbery in Japan, and see how, under the provisions of the Orders in Council a British court would deal with such an offence.

Section VI. of the revised Orders in Council provides that:—
“Except as to offences made or declared such by this Order, or by any rule or regulation made (by Her Majesty's Minister) under it;—Any act (committed by a British subject in Japan,) other than an act that would by a court of justice, having criminal jurisdiction in England, be deemed a crime or offence, making the person doing such act liable to punishment in England, shall not, in the exercise of criminal jurisdiction under this Order, be deemed a crime or offence, making the person doing such act liable to punishment.”

It is perfectly apparent, that the act of highway robbery is precisely such an act as “would be deemed an offence or crime” by any court of competent jurisdiction in England: and that upon conviction thereof, the person committing such act would be liable to punishment in England.

Turning to Article V. of the Orders, we find the following provision:—

“Subject to the provisions of this Order, the civil and criminal jurisdiction shall, as far as circumstances will admit, be exercised upon the principles of and in conformity with the common law, the rules of equity and the statute law and other laws for the time being in force in and for England.”

According to both the statute and common law of England the very act of which we have supposed the defendant guilty viz. highway robbery, is punishable with imprisonment and hard labour. Now it does appear to us that a British court in Japan is fully empowered by the these provisions to punish “according to the laws of Great Britain,” any British subject found guilty of highway robbery in Japan. The criminal authority conferred upon British courts by the Orders in Council, it seems to us, is almost *identically* the same as that conferred upon the American courts in Japan, by the Act of

6. In confirmation of this, the reader is referred to a letter of E. Hammond, Esq., of the British Foreign Office, in reply to the Shanghai Chamber of Commerce, and the despatches of the British Minister at Peking in relation to the Yangtze River Regulations of the Chinese Government. In the former, Mr. Hammond holds in substance, that a foreign Minister in China when notified of regulations, enacted by the Chinese Government, if they are not in contravention of any treaty stipulation, is under obligation to notify the same to his countrymen, upon whom they become binding. He recognizes the propriety and even the duty of a Minister to do what he can in his diplomatic capacity, to perfect such Regulations, but he appears to entirely agree with the position taken by Mr. Marcey, American Secretary of State, “that no authority inferior to that which made and approved those Regulations, can absolve foreigners from obedience thereto.”

The question of the reserved legislative powers of the Chinese Government over its rivers and watercourses is another question discussed with great ability and fairness, by Her Majesty's Minister in China, in his despatches to the Chairman of the Shanghai Municipal Council. *See Papers to Parliament, 1867.* His Excellency there argues, with great force and learning, that the extra-territorial provisions of existing treaties do not take from China her inherent legislative power over all persons in the empire, with respect to her rivers, harbors, watercourses, etc., etc.

Contending against the delegation or surrender of the legislative power of the Chinese Government, His Excellency says: “There are not wanting those well versed in the history of foreign relations with China, who looking at the question from an international point of view, and with the light of past experience, contend earnestly, that every step in this direction, has been an injury to the Chinese Government and people, and a mistake as regards the true interest and position of foreigners within the dominions of the emperor.”

See also the Despatches of Mr. Marshall to Mr. Marcey, on this general subject, November 1, 1853; also of Mr. Cushing to Mr. Marcey September 19, 1855; Sir Fitzroy Kelly and Sir James Stephen, Temple, May 22, 1862, MS.; Despatches of Sir Frederick Bruce, Her Majesty's Minister at Peking, British Blue Books Nos. 2 and 3, China and the Opinions of Sir W. Atherton and others, Temple, March 6, 1862 MSS.

Congress of June 22nd, 1860. Let us imagine that a British subject should plead in bar of his sentence, that the act of highway robbery, committed by him in Japan, is no offence because forsooth, Her Majesty's Minister has never “sanctioned” the Japanese penal enactments against robbery. Would any British court for a moment entertain such a plea? Of course not. The plain conclusion of all this is, that the assumption of the British Minister, that Japan can enact no law binding on British subjects without his sanction, is unwarranted by treaty, is unsupported by any rule of public law, and is in contravention of the spirit and intent of Her Majesty's Orders in Council. It appears to us that it was clearly the intention of Her Majesty's Government to authorize and empower British courts in Japan to try and punish British subjects for every act in violation of Japanese law, of such a nature or character, as is punishable by the statute or common law of England. Such we have seen is the general spirit and intent of the American Act of Congress, and the enactments of the two Governments are so nearly identical, both in their declared purpose and in their forms of expression, as to scarcely leave a doubt that both governments alike intended to confer almost identical powers upon their respective tribunals in Japan. There is, however, one difference between the two enactments which deserves especial notice. The American enactment empowers the consular courts to try and punish “all offences against law,” while the British orders, expressly limit the jurisdiction of British courts to such acts as would be deemed crimes or offences by the common law or statute law of England, or such other acts as are declared so by the order, or any regulation made under it.

The British Government in defining the criminal jurisdiction to be exercised by its courts in Japan under the treaty, obviously deemed it best to simply empower them generally with authority to try and punish its subjects for the commission of such acts only, as from their nature or character, were punishable by the laws of England. And in this the Government was no doubt wise enough, as almost every conceivable act committed by its subjects in violation of Japanese law would necessarily be of such a nature as to render the persons committing it, liable to punishment by the statute or common law of England. But this limitation upon the criminal jurisdiction of its tribunals, was evidently not intended by Her Majesty's Government to absolve British subjects from their duty to render obedience to all the municipal laws of Japan; nor was it intended thereby, that British courts should not be finally and fully empowered to punish such other offences against Japanese law as might not be punishable by the laws of England. On the contrary, it was manifestly for the very purpose of enabling its courts to punish its subjects for infractions of all such other Japanese laws, that a limited legislative power was conferred upon Her Majesty's Minister in Japan.

The sixth section of the Orders in Council is nothing else than a general limitation upon the criminal jurisdiction of British courts in Japan. But the British Government manifestly perceived that there were other acts which might be committed by its subjects in violation of Japanese law, of such a nature or character, as could not be punished under its provisions; and in order that its courts might be finally and fully empowered to try and punish such acts, it very wisely and properly invested its Minister in Japan with suitable legislative power to that end. Some legislation of this kind was of course necessary on the part both of the British and American Governments to enable them to carry into effect the system of jurisprudence contemplated by their respective treaties with Japan; but rightly understood, neither of them can be construed to deny to Japan its original inherent power to define and prohibit by general law, the commission of any act by British subjects or American citizens living in Japan.

WE sincerely trust that the appeal which now has to be made to the community to place the financial position of CHRIST CHURCH upon a proper footing will be cordially responded to, and that the still numerous protestant members of this settlement will regard it as a point of duty to see their representative church relieved from the reproach of embarrassment and actual debt. The accounts presented at the meeting held on Tuesday last and the statement then made by the Chairman, Mr. Wilkin, disclose a most unsatisfactory state of affairs, and they show that, not only is a liberal contribution required to pay off actual debt, but that unless a permanent increase to the receipts of the church is obtained, the present deficit will constantly repeat itself and that even sufficient funds will not be forthcoming to pay the chaplain's stipend. When we consider that the committee have only felt able to guarantee, on behalf of the Yokohama community, a salary of \$150 a month to the chaplain who may shortly be expected to take Mr. Garratt's place,—not more than is paid to any junior clerk in a merchant's office—we can indeed realize the change that has come over Yokohama. In 1876 a special annual "Fund" had to be raised, to supplement the income derived from the pew-rents, the result of which was \$1,187 in the first year, \$772 in the next, and \$282 in 1878! And, in addition to this, the pew-rents threaten to show a falling off this year of \$300 or \$400. With such facts before us it is not surprising that a deficit of \$1,200 will show itself for the current year, without taking into consideration some necessary repairs to the personage which should have been carried out during Mr. Garratt's occupancy and which become still more imperative now that another chaplain is expected.

It is impossible to think that the English speaking protestant community of Yokohama will submit to their church being closed for want of funds, or to think that out of the 515 British residents alone in Yokohama a more liberal stipend cannot be raised for a chaplain than \$150 per month! As explained by the Chairman, the subscriptions now raised come almost solely from a few willing hands; but it is not fair that the brunt of maintaining a church, the loss of which would be a disgrace to the community, should continue to fall only upon about one-tenth of those who ought to share in it. There are public spirited men enough in Yokohama to subscribe to various clubs and other institutions, from which they derive no benefit themselves but are willing to support from a feeling of *esprit de corps* or from a wish to assist in the enjoyment of their fellow companions in exile from home. Certainly equal public spirit can be found amongst men who themselves may not be church-goers but who still cannot forget that the church is an institution which imperatively demands their support. Our eastern life is devoid of many of the softening influences of home, our religious sentiments are deadened, if not obliterated, by the engrossing cares of work and the absorbing duties of business or pleasure; but we surely have still sufficient sentiment left to retain and support one of the principal beacons of our civilization even if we do not make constant use of its guidance. We feel sure that the direct personal appeal to be made to each member of the Protestant community by those gentlemen who have kindly undertaken the task of canvassing, will be cordially responded to; and we cannot doubt that the result of their labour will be to secure a permanent list of annual subscribers to our church establishment, the position of which can never be satisfactory unless, not only relieved from its present debt, it stands secured for the future by a regular and sufficient income.

SIR JOHN SMALE has attacked, in a bold manner, an evil which few Englishmen would have expected to exist in one of the Queen's dominions, but which actually has pre-

vailed in Hongkong throughout the whole of our proprietorship of that island. The Chief Justice states that not even in Cuba or Peru, the hotbeds of slavery, do such striking instances of a recognized traffic in human beings exist as some that have lately come to light in Hongkong, where the actual slave population must now be estimated to have reached 10,000 souls!—consisting principally of women and children who have been either kidnapped from or sold by their parents for purposes of domestic servitude, or for prostitution. Sir John Smale admits that the existence of this blot, upon the good name of England is due to the supineness of the various Hongkong administrations, but he pleads, as an excuse, that its extent was not known and that he himself did not become fully aware of it until last year. Now, however, the question was brought officially before the Judge by his having to pass sentence upon five prisoners who had severally been convicted of kidnapping, detaining with intent to sell, and selling and purchasing children. These culprits were sentenced to terms varying from eighteen months hard labour to three years penal servitude; the occasion being availed of by the Chief Justice to make a lengthened address upon the existence of slavery in the Colony and upon his determination to carry out the law in putting it down, which he considered already to be ample for the occasion. But, although the crimes committed by the prisoners then before him may have been clearly provided for by Ordinances of the Colony, and allowed no doubt to rest on the Chief Justice's mind as to the sentences they should entail, still it is clear that the practice of slavery, as shown to exist in Hongkong, will not be checked by the occasional capture of a few of the actual kidnappers. In order properly to stop a system which has been tacitly sanctioned for forty years, and which has attained the enormous dimensions now acknowledged, it will become necessary to institute a determined crusade against the owners of these 'domestic servants.' And the difficulties against such a crusade are by no means light. The Chinese were invited to settle in the British Colony under the promise of protection to their religious rites, ceremonies and social customs; and, although the Chief Judge argues that even according to Chinese law, traffic in human beings is prohibited and punishable, still the well known facts of Chinese social life leave it unquestionable that, in practice, it exists in every part of China. In many instances there can be no doubt that children who would otherwise be totally unprovided for are now (although actually slaves) well looked after and even happily situated in the better class Chinese households. But, whatever mildness, even happiness, the practice of slavery may in many instances possess in China, its abuses are too great and—in one form—too detestable to permit of its being even ignored by the authorities now that the question has once been raised. As Sir John Smale rightly declares, slavery in no shape or form can be tolerated under the British rule; and, whatever the difficulties in the way, we may be sure that this traffic in human flesh will gradually and with patience, but surely and with determination, be eradicated from the Colony.

THAT portion of British India known as the Eastern Deccan has lately suffered from a plague of rats and mice to such an extent that the villagers' food supplies were destroyed by these puny ravagers. The evil grew to such an extent that the Government were obliged to step in, and special enactments were passed to meet the emergency and to destroy if possible, by combined action and wholesale slaughter, the multitudes of rodents which caused the complete destruction of the crops over thousands of square miles of the Deccan. From an interesting paper on the subject by the Revd. Dr. Fairbank, we learn that there are no less than seven different

descriptions of rats and ten varieties of mice in the Deccan and that their fecundity is something surprising, the Indian Jerboa Rat (the most destructive of all) occasionally producing 16 or 20 young at a birth! Rat plagues were not unknown in India formerly. In 1826, the monsoon having been deficient in the usual rainfall in the commencement of the season, the metatades (mole rats) ate up the seed as soon as sown and continued their ravages when the grain approached maturity, climbing up the stalks of the plants and biting off the ear to devour the grain with greater facility. In that year whole fields were devastated, and numbers of farmers were unable to pay their rents. The recent plague however exceeded all others in extent and intensity. After two years of drought and famine the unfortunate people were rejoicing in the promise of fine crops, but the ravages of the rats destroyed everything. In some fields they did the work of devastation leisurely "cutting down with their sharp incisors cart loads of the stalks each night, and either eating the grain or dragging the heads into their burrows. Into other fields an army of the rats suddenly entered in the night, and in a few hours ate up the grain like a flight of locusts." The effect upon the country was something deplorable. Dr. Fairbank, who was an eye witness of what he describes, says, "Half the population has gone. Many years must elapse before the old prosperity can fully return. It seems strange that the last of the plagues that have wrought this desolation, should be an invasion of rats and mice."

COLONEL GORDON, well known in the East as "Chinese Gordon," who crushed the formidable Taping rebellion which for years defied all the efforts of the generals of the "Middle Kingdom," and even threatened the very existence of the Tartar dynasty which occupies the throne of China, has for some years past, been doing good work in Soudan as proconsul of the Viceroy of Egypt. With the able assistance of his lieutenant Gessi, who gained his first knowledge of the art of war as an interpreter attached to the British army in the Crimea, Colonel Gordon has succeeded in destroying the great slave-dealing fraternity who annually dragged thousands of wretched victims from equatorial Africa to supply the slave markets of Turkey and Egypt. Taking into consideration the short time that Colonel Gordon has been employed, his success more than sustains his previous high reputation. He first went out in 1874 and found everything in confusion and completely given over to the rapacity and incompetence of native officials. Between the time of his arrival and 1876 he organized the government, opened to peaceable intercourse the line of the Nile to the Equator, pacifying all the riparian tribes and establishing posts along the banks, so that a letter now travels in safety from Cairo to the Equatorial Lakes. In addition to all this he has captured literally hundreds of slave caravans and finally has destroyed the whole power of the slave-dealers at the very source of their supplies. These valuable services to the cause of humanity and civilization deserve more than passing comment, and we trust that the exploits of Colonel Gordon in Africa will find as graphic and able a historian, as his prior achievements in China have done in Colonel Chesney.

APPENDIX TO ARTICLE ON LOOCHOO.

The following are official translations made from the original documents.

I.

OATH OF SHOTAI, MADE ON HIS ACCESSION AS CHIEF OF LOOCHOO, A.D. 1858, TO THE PRINCE OF SATSUMA.

This is my Solemn Oath:—You, our great Lord, having graciously called me to succeed our late Chieftain, I owe to

you a debt of deepest gratitude for so permitting me to inherit this domain without interruption of the succession in my family; and never through all my life will I forget the favour so granted to me.

It does not lie in me to requite your goodness in bestowing peace upon these islands of Riu Kiu—goodness in which is seen, one time the more, the benevolence your Lordship has ever shown towards us: but this I swear:—that, of my parents, brothers, children, none, forgetful of this great benevolence, shall ever in the time to come make revolt against your rule—but we all, submissive always to your will, for evermore will prove our obedience and fidelity.

The writing of this solemn oath I will hand down to my posterity and warn them thus:—that they all, so long as the lineage of my family exists, shall forever observe that which I here have sworn: and if any one of my posterity, ever in times to come, conceive a wicked thought and prove traitor to our country's laws, we will forthwith bring you report thereof and punish the offender: and never will we neglect our duty towards you.

And herein if I fail may the the vengeance of all the Spirits of Heaven and of Hell fall upon me, etc., etc.

II.

OATH SUBSCRIBED BY EACH MEMBER OF THE COUNCIL UPON THE ACCESSION, A.D., 1859, OF A NEW PRINCE OF SATSUMA.

This is my solemn oath;

Whereas, notwithstanding my great unworthiness, you, My Lord have deigned to name me on the Council of the Chief, for this goodness I owe to you eternal devotion; and I swear that I will forever prove myself your faithful servant in the execution of my duty.

Conscious of my own littleness I will never attempt to revolt against your Lordships, Shigehisa and Saiko.

Whatever orders I may have from your mighty land I shall strictly obey, even to the letter of your revered decree. If any one of us conceive a wicked thought, in disobedience of your commands, I will not fail forthwith to bring report of it to you.

I too myself, will be obedient to our chief and zealous in his cause.

All rules and precepts, and all other matters of the government of these islands, shall be executed and done justly and with an equal hand.

And furthermore I swear that each particular of what is herein articulated we will faithfully perform according to the settled custom, which shall not be contravened. And herein if I fail, may the vengeance of all the Spirits of Heaven and of Hell fall upon me, etc., etc.

REUTER'S TELEGRAMS.

LONDON, October 20th, 1879.

The Ameer has resolved to abdicate. General Roberts has made provisional arrangements for the administration of the Government.

The Kurruum tribes are in a state of commotion.

LONDON, 22nd October, 1879.

The Russian Troops have occupied Merv.

LONDON, October 24th, 1879.

The occupation of Merv by the Russians is officially denied.

(From the *Hongkong Daily Press*.)

London, 30th September.

The Russians claim to have routed the Turkomans with a loss of several thousands. The Russian loss is given at 435 killed and wounded.

Simla, 30th September.

Bahka has been reoccupied without opposition.

London, 3rd October.

An interview has taken place between Signor Cairoli, the Prime Minister of Italy, and the Baron d'Haymerle

Ambassador to Italy for Austro-Hungary, at which assurances of friendship were exchanged.

The Greek Commission is at a stand-still,

London, 6th October.

The *Standard* publishes a paragraph stating that the India Office has requested the Admiralty to station a sufficient protective force at Rangoon.

JAPANESE ERA 2539, MEIJI 12TH YEAR, 10TH MONTH, 26TH DAY,
DO-YO-DI.

MARRIAGE.

At Nagasaki, on the 14th inst., E. PYS, Esq., of Amoy, to
LENA, daughter of E. H. M. GOWEN, Esq., of Nagasaki.

NOTES OF THE WEEK.

The P. M. S. S. *City of Tokio* arrived from San Francisco last evening bringing American dates to the 4th instant, and European dates of the previous day. The M. M. steamer *Volga*, with the English mail of 5th September, arrived from Hongkong this morning. The homeward mails were despatched by the M. M. steamer *Tibre*, on Thursday morning. The Shanghai and way-ports steamers have arrived and departed as usual. The *City of Tokio* is circulated to leave for Hongkong, on Monday, at daylight.

The O. & O. S. S. *Gaelic* left Hongkong for this port on the 22nd instant, and the S. S. *Oceanic* left the same place for London, on the 3rd instant.

The P. & O. S. S. *China*, with the London mails of 12th September, left Hongkong for this port on the 20th instant, at noon.

The CHURCH MEETING, last Tuesday, disclosed not only the necessity of funds being raised to pay off an existing debt; but also showed that, unless we are to allow our Church to be closed altogether, an increased permanent income must be secured for its future support. Of course we are not going to let the reproach attach to us of the Church being closed, nor indeed of its being in debt; the only question is what are the best steps to be taken? We have heard one suggestion which we cannot help thinking very feasible, especially as its success must depend upon the one source which, in such a good cause, is sure to be obtainable:—the ladies. The suggestion we refer to is that, under the patronage of and with the assistance of the ladies, a concert should be given in aid of the Church funds. Once started, the idea would, we feel sure, meet with every support, and volunteers from the musical talent of Yokohama (of whatever christian denomination) would, we doubt not, readily respond to any canvass the ladies themselves might undertake. And who amongst the 'listening talent' of the community is likely to refuse tickets for a ladies' concert if asked by one or other of the fair members of the Committee? If such a person existed, he would—to plagiarise once more the words of our popular orator—"deserve to be shot." We feel sure that if the ladies will act upon this suggestion a great portion of the present load of debt upon the Church may at once be written off.

Mr. E. J. Pereira has compiled another instructive diagram showing the fluctuations of *Kinsatsu* during the year 1878, from which we notice that in January, the rate stood at its highest, viz., 414, whence it fell to 455 early in March, rose again to 422 within two months; remained within a reasonable range of that figure until September when, after a few jerks, it suddenly dropped to 486 on the 22nd October (the lowest point reached during the year). Six days later the rate was up again to 440, after which the curve becomes erratic, but at first gradually, then quickly descending, until at the end of December, it stood at 478. The following were the average rates for each month in the year: January 418.09; February 429.75; March 440.80; April 431.56; May 426.96; June 427.80; July 426.93; August 430.29; September 439.20; October 459.37; November 452.13; December 465.58. The average for the whole year was 437.37.

The 'dead heat' for the Champion Pairs, which created so much excitement at last week's regatta, was rowed off on Thursday afternoon. The race was appointed for 4 o'clock, and in spite of the very unfavorable weather, there was quite a gathering at the boathouse to witness the event. A stiff breeze was blowing from the North, and shortly after 4 o'clock a drizzling rain commenced. Messrs. Playfair and Fraser got their boat in the water ready to start, when Mr. Whitney protested against the race being rowed in such rough water and asked for another adjournment. The Committee, however, saw no reason to postpone the race and ordered that it should be rowed off, upon which Playfair and Fraser went down to the stake-boat, accompanied by a four-oared crew, and rowed over the course. The water was lumpy, but certainly not so bad as when we saw this same race rowed last year. The boat came in with little or no water in her; the champions, however, getting a thorough wetting from the rain. After the row-over the Cups were handed to the winners by Mr. Litchfield, who congratulated them on their success. Messrs. Playfair and Fraser now own the Cups, having won them twice in succession.

CHAMPION PAIRS.

DECIDING HEAT.

Bow—D. Fraser	11st. 3lbs.
Stroke—G. W. F. Playfair	12st. 3lbs.
Cox—A. H. C. Haselwood	9st. 8lbs. 20

The race for the "Champion Pair Oars" was instituted in 1877, and two Cups were presented, the conditions being that they were to be won twice by the same crew before becoming the property of the winners. The first race for this prize was rowed at the Spring Regatta in 1877, and was won by Litchfield and Hall against Jeyes and Towse. In the fall of that year there was no race, owing to the failure of the Tokio challengers to put in an appearance. At the Spring Regatta, in 1878, Julius Dare and Alfred Dare took the prize from the holders, and in the Autumn, they surrendered it to Playfair and Lilburn. Mr. Lilburn's departure from Yokohama last Spring left the Cups free in the hands of the Club, and at the Regatta in May, 1878, Playfair and Fraser won them against Wood and Leckie. It will be seen from this brief summary that Mr. Playfair has been a winner three times and has well earned the prize which now becomes his property, whilst the second cup falls to Mr. Fraser, who, in the last two races, has rowed with him.

A telegram from Adelaide, dated the 19th September, in the *Northern Territory Times*, says:—"Opening of Sydney Exhibition a splendid spectacle; the weather, which had been bad for some days, turned out lovely. Lord Loftus performed the opening ceremony, and made a short but appropriate speech. The Prince of Wales intends to visit Sydney before the Exhibition closes."

Treaty revision is, apparently, making quicker progress between Japan and some of the Continental powers than it is doing with England:—The Hamburg correspondent of the *London and China Telegraph* says: "A new treaty of commerce is now under negotiation between the governments of Germany and Japan. The Japanese Ambassador at Berlin, Aoki left the metropolis in the month of May for Japan, in order to obtain instructions from his Government, and Herr van Eisen-decker, the German Plenipotentiary at Tokio, has obtained the necessary instructions from our Government. The new treaty will, it is said, be far more liberal in its provisions than the old

one. The subjects of Germany will be permitted to travel through the whole of the Japanese empire, and to trade wherever they please on Japanese territory."

Amongst our 'Japan News,' will be found an assay report from Mr. W. Gowland, upon the coinage issued by the Japanese Mint during the past financial year. It will be noticed that the stipulated "fineness" of the coins has been more than maintained by the Osaka Mint.

The repetition of *IVANHOE* was given on Tuesday evening before a large audience; and was, if possible, more successful than on the opening night. Although the *ensemble* lacked the military precision which shone forth in every turn and twist of *ALI RABA*, yet the choruses were certainly much improved, the words being this time audible; and many little roughnesses in the general acting, which were only too perceptible on the first performance, now disappeared. Among the actors *Wamba* (Mr. McClatchie) was again peerless; the part being played with even greater *verve* and *abandon* than on Friday. Mr. Howland as *Roscena* was, if possible, more bewitching than ever, although we think the costume rather too modern: still it is just possible that the "poor flaxen Saxons" wore satin skirts on great occasions such as tournaments and the like. The trio of the "the three graces" pleased immensely (and no small part of this was due to the "belle"), but the audience were considerably disappointed: the piece was vociferously *encored*, and when all flattered themselves that at least one verse would be repeated, three barren nods was all the compensation they received. Mr. Eyton, as *Isaac of York*, was again irreproachable, but we imagine the fierce *Sir Brian* must have sliced off part of the Jew's former prominent feature, as some slight return for the usurious interest on his overdue bills. With "three shocking bad hats on the top of his head" (like *Iugoldaby's Shylock*), and his admirably comic version of the big *Taijan* song, Mr. Eyton brought down the house. Mr. Townley as *Sir Brian de Bois Guilbert* once more carried everything before him (except *Rebecca* whom he dragged after), and his parody on a recent speech to the ladies was enthusiastically greeted. *Ivanhoe* was carefully played; but, we are sure Mr. Leckie will pardon us when we say that he does not yet sufficiently sink his own identity, in that of the part he undertakes. *Rebecca* was, as before, a grand conception:—the "little mild refreshment" and her tender (!) scene with *Sir Brian*, giving ample scope for Mr. Bernard's admirable *by-play*. And we are glad to be able to compliment Mr. Townsend on an improved reading of his part as *Prince John*.

If we may be permitted to give a few words of advice to the members of our local Corps,—and we would pray them to believe that our remarks are dictated by no captious spirit, but simply arise from our heartfelt wish that they may make the best of the undoubted talents at their command—we would recommend them to give special attention to chorus-singing, to *ensembles*, and grouping on the stage. However well individual actors may perform, it is always necessary that they be well supported: the finest artistic work needs always a good background. To the principals, we would advise a good curriculum of elocution, to eliminate all strange accent and inflections of the voice. If once we thoroughly conceive the part of a Saxon or Norman, we must be convinced that it is impossible for either of them to speak with a broad Scotch, or acute American accent. There are plays in which these traits would prove invaluable, but not in a romantic or chivalric piece of the eleventh century. We hope soon to have the pleasure of seeing our Amateurs again; for, there is nothing like constant training and work to keep everything up to the mark.

An Amateur Concert, under the auspices of the Tokio Christian Association, took place in the hall of the Association, 12 Sanchoime, Ginza, Tokio, on the evening of Thursday, 16th October. There was a large attendance, the place of meeting being well filled. The programme was as follows:—

- 1.— { Glee for four voices:
"The bells of St. Michael's tower," } W. Knyvett.
- 2.—Song: "When lovers say good-night" J. L. Hatton.
- 3.—Glee for three voices: "Lightly tread" J. Scotland.

- 4.— { Trio for piano, violin, and violoncello:— } Beethoven.
Op. 1, No. 2
(a.) Adagio, allegro vivace.
(b.) Largo.
(c.) Scherzo.

- 5.—Four part song: "Hunting song" Mendelssohn.
- 6.—Song: "Left on the quay" J. L. Hatton.

INTERVAL OF TEN MINUTES.

- 1.—Glee for six voices: "The cloud-capt towers" R. J. Stevens.
- 2.—Duet: "The larboard watch"
- 3.—Song: "The buccanier" Berthold Tours.
- 4.—Solo for violoncello: "Tre Giorni" Pergolesi.
- 5.—Duet: "I know a bank."

- 6.— { Glee for four voices:
"Sleep, while soft evening breezes " } Sir H. R. Bishop.

We cannot attempt any detailed criticism of the pieces. It will be sufficient to say that, while some were more effective than others, there was in no case a failure. The glee party and their conductor deserve much praise for the patient practice of which their singing gave evidence. Their voices were all in good condition, and each part was rendered well, and with fitting regard to due proportion of parts. Probably the most successful of the glees was "The cloud capt towers," which was rendered in admirable time and with good attention to light and shade. Mendelssohn's "Hunting song," sung by four male voice, was quite a success, the *crecendoes* and *diminendoes*, on which it so much depends for effect, being done in very good style. It is rare to find in a limited community such a mellow and well-controlled tenor voice as that of the gentleman who sang "When lovers say goodnight" and "The buccanier." In both, but especially in the former, the singer's admirable modulation called forth well deserved applause. "The larboard watch" was sung by a baritone and a tenor with very decided success; the two voices were well adapted to one another, and flowed together in well modulated harmony. The remaining vocal solo, "Left on the quay," was spiritedly rendered by the same baritone. There were no solos by ladies, but the applause that greeted "I know a bank," sung by two ladies, showed how deservedly it was appreciated by the audience.

The *pièce de résistance* of the first part was however furnished by the three gentlemen who performed a portion of one of Beethoven's Trios, op. 1, No. 2, for piano, violin, and violoncello. Of this composition 3 movements were given: an *Allegro vivace* introduced by a short *adagio*, a *Largo*, and a *Scherzo*—all rendered as only accomplished musicians, accustomed to play together, could render them; and the satisfaction of the audience was loudly demonstrated at the close of each movement. To attempt to criticise the work of such a composer as Beethoven requires more musical knowledge than we can pretend to. We can only express the delight we received as humble listeners. In the second part the violoncello solo, the *Tre Giorni* by Pergolesi, was so highly appreciated by the audience, notwithstanding its somewhat severe character, as to call for an *encore*, which was given in the shape of a charming *Romance* by Gottermann, played with such evident enjoyment as to suggest its being a favourite piece of the performer's.

The concert undoubtedly reflected much credit not only on the performers, to whom of course, the chief meed of praise is due, but through them on the foreign community of Tokio, to which they without exception belonged.

The Amateur Athletic Association have had a glorious afternoon for their annual gathering, which is just being concluded as we go to press. We have not time now, to do more than congratulate Mr. Whitmore on winning the Ladies' Purse, and must postpone until next week our full account of the proceedings.

ASIATIC SOCIETY OF JAPAN.

TOKIO MEETING.

The first general meeting of the Asiatic Society of Japan, for the session 1879-80, was held at the Shohei-kuwan, Seido, Tōkiyō, on Tuesday, Oct. 14th, Dr. Divers, vice-president for Tōkiyō, in the chair.

The chairman referred to the great loss the Society had sustained in the departure from Japan of its president, the Rev. E. W. Syle, D.D., and said that at the last meeting of Council, at which Dr. Syle had been present, he made a fare-

well address, which the Council determined should be read at the next general meeting. The recording secretary then read Dr. Syle's address, which treated of the history and objects of the Society and suggested directions in which future effort was likely to be profitable.

It was announced that Professor Nordenskjöld and the Rev. E. W. Syle, D.D., the retiring president, had been elected Honorary members of the Society.

Prof. R. W. Atkinson then read a paper entitled "Yatsu-ga-dake, Hakusan, and Tateyama. Notes of a summer trip," of which the following abstract has been furnished by the author:—

This paper is divided into three parts, one part being devoted to each of the three mountains mentioned in the title. The first part includes the road from Tōkiyō, through Ōmiya, and by the Jiumonji-tōge, Umijiri, in the valley of the Chikuma-gawa, from which place Yatsu-ga-dake was ascended; thence, the road over the Mikaburi-tōge and some low hills into the valley of the Tenri-gawa, and over the Gombei-tōge to Fukushima, on the Nakasendō. The second part is devoted to Hakusan, and describes the route from Fukushima into Mino, over the Shindō to the south of Ontake-san, thence to Miboro, in Iida, up the valleys of the Masuda-gawa, Mase-gawa, and Shirakawa, from which place, by following the course of the Ojira-kawa, a tributary on the left bank of the Shira-kawa, the summit of the mountain was finally gained. The road from Hakusan to Yumoto, in Kaga, and thence to Toyama, in Etchū, is also described in this part. The third part includes the ascent of Tateyama from the baths, the direct passage to Kurobe, and the crossing of the Horinoki-tōge to Ōmachi, from which a direct road over the hills to Uyeda, on the Hokurikudō, was taken. From Uyeda, a return to Tōkiyō was made along the Hokurikudō and Nakasendō by wheeled vehicles all the way. To the paper are appended a sketch map of the route, and two tables, the first giving the heights, distances, and barometric measurements, the second a list of the plants collected during the trip.

At the conclusion of the paper the Chairman called on other members of the society, who had travelled over the same ground.

Mr. W. G. Dixon said that he could add little to the information contained in Professor Atkinson's exhaustive paper. Quite recently, however, he had, through the kindness of a Japanese gentleman, learned a few facts that might be interesting. Very well-deserved praise had been given to Tashiwara-dani. It formed an example of savage grandeur such as was only occasionally met with in this land of picturesque, but generally soft, scenery. To the magnificent castellated cliffs that towered above this glen, the suggestive name of Onigashiro (The Devil's Castle) had been given. In regard to the view from Harinoki-tōge, it should be mentioned that the jagged peak that serrated the middle of the southern horizon was Yari-ga-take, a mountain remarkable both on account of its extreme steepness and from the fact that it had been found by a foreign gentleman who had ascended it to reach a height of about 10,000 feet, thus rivaling Ontake-san for the second place in altitude among the mountains of Japan. The darkly wooded eminence behind which Yari-ga-take was from the pass seen to rise, was vested with a certain tragic interest. It was related that about the time of Tarko, a warrior named Sassa Narimasa, while fleeing from Shinshū to avoid the pursuit of his enemies, here perished of hunger, with all his family. The speaker had also been informed that Ōmachi was only 10 *ri* distant from Shinonai on the Hokurikudō, a place about 10 *ri* on the Zenkōji side of Uyeda. The route from Ōmachi to Uyeda, via this place, might form an alternative to that described in the paper as having been followed between these towns.

Mr. Marshall remarked that last summer he had, in company with the Chairman, himself gone over parts of the ground just described. The *shindō* which leads from Ōmachi in Shinshū to Hara in Etchū was, only three weeks before Messrs. Atkinson and Dixon traversed it, covered in many places with snow. Before reaching the summit of Harinoki-tōge from Ōmachi, they had to cross 10 or 11 great snow-fields and this, added to the enormous height to be ascended and the fact that the road was greatly torn up by last winter's storms, made the ascent both laborious and dangerous.

Mr. Marshall also desired to add a few remarks about a village in this region called Arimine. He said: "A writer in the Yoko-

hama Herald, mentioned that last year he had heard at the *onsen* at the base of Tateyama that this village was inhabited by a very exclusive people who did not even trade with other people and were ignorant of the use of money, who intermarried only amongst themselves and in consequence had great similarity of features and limited intellect. At Higashi Mozumi, in the valley of the Takara-gawa we were further told by an apparently intelligent miner, who had visited Arimine with a friend, that the people were really very peculiar, would not speak to strangers or give them food, were evidently exceedingly stupid, and had great similarity of features. In order to visit this village we left the valley of the Takara-gawa at Domura (1 *ri* from Higashi Mozumi) and thence travelled up the valley of the Atotsu-gawa. The following is the route from Domura:—

	<i>Ri.</i>
Domura... ..	0
Nakamura	1
Sakomura	1
Odawa	1
Arimine... ..	3½

At Sakomura we procured a guide. From Odawa there is nothing but a woodman's track to the solitary village and as torrents require frequently to be crossed and for short distances ascended, it would be quite impossible to go without a guide. The track is through a grand mountain forest. Unfortunately it thunders and rains every day in this region and this somewhat mars what is otherwise a very interesting trip. The village consists of 13 houses scattered over a beautiful green plateau and must be, I think, about 5,000 feet above the sea level. The people we found to be just like those of other villages. They were very polite, but as we expected said that they could not afford to give us any food. However, on my assuring the head man that we had brought food with us he welcomed us into his house. Each house seemed to have one horse at least and from the good treatment they apparently received and the number of pictures of horses we saw at the *miya* and in the houses, we concluded that the horse must be here either a pet animal or held in great veneration. Our host told us that they had no bedding and so we had to sleep with *goza* (coarse matting) both about and below us and with a lump of wool for a pillow. Before we started next morning all the people came on our invitation in groups to see us, men, women and children, and we could detect neither signs of idiotcy nor striking similarity of features. We also learned very decidedly they knew both how to trade and the use of money. Their principal export is the bark of trees. They grow all their own food and live principally on *hiye* (a kind of millet?) and coarse vegetables. They also drank coarse tea and smoked very inferior tobacco. The bowls of their tobacco pipes were much larger than the ordinary Japanese pipes and were similar to those used by the Koreans in the late embassy. Although very poor they all seemed quite happy, and although we were the only foreigners they had seen, even the children showed no signs of fear and accepted some biscuit we gave them."

Mr. W. N. Whitney said, "Hakusan, I believe, now belongs to the province of Kaga, but was formerly claimed by the *daimyo* of the three provinces on whose borders it was situated. The dispute, I have heard, was settled at last by the government at Yedo, to whom the *daimyo* of Kaga applied. It is said that upon presenting himself at the Shogun's court, the representative of Maida said, "I have come concerning the matter of the ownership of Hakusan in Kaga"—upon which he was told, that, if Hakusan was in Kaga there could be no dispute about it. In the public gardens of Kanazawa there is a well or pond called Kanazawa-no-ike, in which a dragon is supposed to dwell, and which is said to be connected with Hakusan by a subterranean passage some eighteen *ri* in length. These gardens are well worth a visit, as much money has been spent on them by the former *daimyo* of Kaga, who were considered the wealthiest in Japan. They are situated near the end of a ridge called Oyama (tall mountain) and are noted for their beautiful scenery. In the gardens are two lakes, a waterfall, and a fountain, all supplied with water brought along the ridge from the Saigawa, some four miles above the town. The view from here is fine indeed, especially in spring, when the plum and cherry trees are in bloom, and the mountains are capped with snow. On one

side a broad plain stretches out to the sea, on the other tall peaks touch the sky, while away to the north a lake, low flat hills, and the high mountains of Etchu and Noto complete the view. The temple called Daijōji, the castle, and Muko-yama, are all places of interest. From the top of Muko-yama, the view is a grand one, especially at sunset, as the sun is sinking into the sea, when the plain from the town below, the castle, and the mountains in the background assume a peculiarly weird aspect. Just outside of the town, near the road to the shore, lies the famous Benke-isbi, a huge boulder said to have been drawn thither by Benke, the robber-priest of Heizan. It weighs many tons and is quite unlike any rock within miles of its present resting place. Not far from here is Kahoku, a lake covering many thousand acres, which a certain Zenya Gombé wished to fill up, that he might use the land for agricultural purposes. In order to destroy the *namadzu* that undermined the banks, he caused large quantities of lime to be thrown into the lake. This, however, killed the other fishes, too, which being collected and sold by the fishermen to the poor farmers about, caused many deaths. For this, Zenya was thrown into prison, and his property confiscated: shortly after he died and his body was crucified at Kanaiwa. This Zenya was the richest man in Japan, and it is said, was the first to establish foreign trade at Takeshima."

The Chairman thanked Mr. Atkinson in the name of the Society for his interesting communication, and the meeting was then adjourned.

THE CHURCH MEETING.

In pursuance of advertisement, a meeting of the seat-holders and congregation of Christ Church, was held at the Chamber of Commerce rooms, on Tuesday afternoon, to consider the financial state of the Church and what steps should be taken to place it in a satisfactory condition. The chair was taken by Mr. Wilkin, the Chairman of the Church Committee. About twenty-five gentlemen were present, amongst whom we noticed Messrs. Wilkin, Enslie, Rickett, jr., Robison, d'Iffanger, Macpherson, Kirkwood, Keswick, Ahrens, E. Fischer, Edwards, E. Whitall, F. S. James, Dallas, McDonald, Murray, Townsend, Dunlop, Thomas and Wilson.

Mr. Wilkin opened the meeting by saying:—"The Committee of the Church Establishment have called this meeting in order to place before it a statement of the present position of the finances of the church, in the confidence that this community, i.e., the English speaking Protestant portion of it, will readily respond to the call which that position makes. There can scarcely be amongst us any who would be content that the maintenance of public worship should be in the undignified position which any uncertainty must entail, nay indeed, who will not rather feel that its proper and honourable maintenance is a first and a sacred duty. And the most careless would scarcely be willing to forego those offices of religion which the church renders at the grave as at the cradle. It must, however, be stated that for the past three years the finances of our Church Establishment have not been in a satisfactory condition. When the government grant was withdrawn at the end of 1874, it was attempted to supply the deficit thus caused by an increase of pew-rents. These were raised during that year to a rate which is as high as it is possible or desirable that it should be. In 1876, it was apparent that the increase thus obtained was insufficient, and recourse was had to a special subscription, called the "Sustentation Fund." This yielded in 1876, \$1,187; 1877, \$772; and 1878, \$282: the decreasing amount indicates the difficulty there is in obtaining subscriptions to it. The bad feature, in fact, about it is that it is chiefly derived from those who have already given, and given considerably, and that they are now becoming tired of bearing the unequal burden year after year. The pew-rents, which up till now have been fairly maintained at about \$2,750, have lately threatened to show a falling off for this year of \$300 to \$400, and the accounts sketched in advance to 31st December exhibit a deficit of about \$1,200, without taking into consideration the expenditure for some repairs which will be required. Besides, it is to be feared that changes in business will bring a further dropping away of some subscribers absolutely. It becomes, then, incumbent upon the congregation of Christ Church to look the state of the

finances in the face and resolve not only to recover them from their present unsatisfactory position, but to place them for the future upon a safe basis. The present occasion makes this especially needful. You are all aware that in the early part of this year, the Rev. Mr. Garratt expressed a positive and decided wish to retire as soon as a successor could be provided, and the committee could only with regret accede thereto, and take steps to procure a new Chaplain. Learning that Dr. Burdon, Bishop of Victoria, was kindly ready to help in this matter, the Committee in May last applied to him, and definitely placed in his hands full authority to select a clergyman for this chaplaincy. Dr. Burdon's endeavors, through his commissary at home, have been so far successful, that by last advices we are given to understand that one might be expected to sail from England about this time, and should therefore be here before Christmas. The Committee were of course obliged to state some definite terms, and accordingly guaranteed that the minimum salary should be \$150 per month, with every hope that it might be made larger. It is incumbent upon the congregation that the practical elements in the reception of the new chaplain should be of a cordial and pleasant kind. It can only be matter of regret with the Committee that such necessary steps as a thorough repair of the Parsonage building should not have been accomplished while the present chaplain resided there, but for a newcomer this at least cannot longer be delayed. Nor is it possible to allow any difficulty to occur as to providing funds for current requirements: and the Committee feel every confidence, that once the attention of the Congregation is thoroughly alive to the matter, that there will be none. One of the first elements in the flourishing condition of a Church Establishment, must be that of cordial relations between pastor and people, and a primary expression of these will be a generous and liberal contribution to its support. Much of the usefulness of a pastor must be crippled without a reciprocity of such cordiality. It is not in a human soul to work on satisfactorily and successfully, if the object of its endeavours remains unsympathetic or displays a lack of cordiality. A responsibility rests upon us then, and one which I hope there is no doubt we shall discharge. The question is, what shall be done? We can raise a special subscription, and thus remove our present difficulties. But after that, what seems to be the most important is that the regular yearly subscription list should be spread over a large area. Instead of fifty subscribers, we might fairly expect to have a hundred, and I would specially call upon the juniors in houses to give a helping hand, not doubting that they will readily respond when they recognize what is needed."

An enquiry elicited the following:—

SKETCH OF THE POSITION OF THE ACCOUNTS OF CHRIST CHURCH, YOKOHAMA, AS ESTIMATED ON 31ST DECEMBER, NEXT ENSUING.

DISBURSEMENTS

Balance due Treasurer 31st December, 1878.....	\$ 207.88
Chaplain's stipend 12 months	2,400.00
Fire Insurance, repairs and sundries already disbursed to 17th October.....	717.56
Additional for remainder of year, say	225.00
Tuning organ	100.00
	<u>3,650.44</u>

RECEIPTS.

Pew-rents received to date including \$50 due in 1878	\$1,960.00
Due but not yet received	380.00
Special subscription	95.00
Collection	50.00
	<u>\$2,485.00</u>
Estimated deficit 31st December, 1879, exclusive of special repairs	<u>\$1,165.44</u>
	<u>\$3,650.44</u>

Mr. Fischer, referring to a subscription list that had been circulated to raise an amount sufficient to defray the passage from England of a new pastor, asked whether the Rev. Mr. Syle had not signified his willingness to remain in Yokohama.

Mr. Wilkin replied that he had never officially done so.

Mr. Keswick said that, as one of the members of the church committee, he had attempted, through the heads of firms, to induce the junior members of the community, the supporters of

our various clubs, to support the church, but that the attempt had proved altogether unsuccessful; a general discussion then ensued, in the course of which it transpired that the bulk of the subscriptions had always fallen upon the comparatively few residents who are actually renters of pews, and that the majority of the community do not in any way contribute towards the maintenance of the church. Several suggestions were brought forward as to the best means of covering the deficiency, resulting in the general opinion that a personal canvass would be productive of better results than the circulation of an ordinary subscription list.

Mr. Macpherson then proposed, and Mr. Rickett seconded, that the accounts of the Church be drawn up, printed and circulated among all the members of the community, accompanied by a report of this meeting and a statement of accounts; that an estimate of the amount required yearly for the church be made, and that a canvass be made by a committee for yearly subscriptions.

This was carried unanimously.

The following gentlemen were eventually chosen members of the canvassing committee,—Messrs. Whittall, Robison and Rickett,

Mr. Whittall, referring again to the subscription list for the passage out of a new chaplain, enquired whether the committee had not received an offer from a gentleman in Foochow to undertake the duties of the position.

Mr. Wilkin replied that such a letter had been received, but that the writer had been referred to Bishop Burdon, in whose hands the matter had been placed.

The sum of \$250 was subscribed in the room, before the meeting separated.

MEMORIAL OF THE TOKIO CHAMBER OF COMMERCE RESPECTING TREATY REVISION, ADDRESSED TO H.E. OKUMA, THE MINISTER FOR FINANCE.

(Continued from last week.)

COASTING TRADE.—It will be a most important matter in the forthcoming treaty revision to secure to Japan the exclusive control of her coasting trade and we much desire to see this carried into effect. As this country is surrounded by the ocean in every direction, every effort should be directed to the development of our means of water-carriage. The theory of navigation alone is insufficient, it must be learned practically. The Government has long recognized this and taken the necessary measures to establish a national line of coast-traders by affording protection to those who engage in the business. If foreign vessels were allowed to compete on the coast, native maritime enterprise would suffer a relapse and it would probably result in the decline of ship-building and navigation in Japan. This is the reason why, considering the circumstances of the country, we earnestly desire to see the coasting trade of the country in the hands of our countrymen alone. It may perhaps be argued that our views on this question are narrow and behind the spirit of the age, because the Mitsui Bishi Company, which exists simply on account of the special protection afforded it by the Government, precludes any other company or individual from engaging in the trade and that therefore foreign competition should be permitted to increase the facilities of transport and act as a check upon the Mitsui Bishi Company. But this idea is, in the peculiar circumstances in which Japan is situated, entirely erroneous. According to the following statistics furnished by the General Post Office in January last, it will be found that vessels of foreign form of construction have steadily increased since the year 1870:—

Year.	Ships.
1870	48
1871	72
1872	30
1873	31
1874	20
1875	41
1876	32
1877	52
1878	89

The actual number of steamers and sailing-vessels owned in Japan in January 1879, was:—

Ships.	Tons.
Steamers	40,669
Sailing-vessels	23,966
	64,635
Hulks, (Mitsui Bishi Co.)...	8,416
	73,051

These vessels may be divided into the following classes:—

Steamers over ...	100 tons	59 tons	36,228
" under ...	"	"	109 "
Sailing-ships over ...	"	"	70 "
" under ...	"	"	76 "
			3,856

It will thus be seen that our facilities of water-carriage have very much increased and that although the Mitsui Bishi Company is receiving special protection from the Government, it is unwilling to rest contented with the present state of its business and is evidently striving to further develop its transactions. This company possesses at present thirty-seven steamers and seven sailing-vessels. These vessels ply to all the important ports in the empire, Kobe, Osaka, Yokkaichi, Shimizu, Shimonoseki, Kōchi, Nagasaki, Kagoshima, Niigata, Hakodate, Awamori, Sakata, Hachinohe, Sabusawa, Funakawa, &c., &c., and regular lines of communication have also been opened abroad with Hongkong, Shanghai and Korea. Now although it might appear from the rapid growth of the company's business in the course of a few years, that it was absorbing the whole marine carrying trade of the country, still this is not by any means the case, and our contention is readily proved. The total number of steamers owned by natives in Japan is 168, of these 37 belong to the Mitsui Bishi Co. and the remaining 131 belong to 107 different individuals. Again out of the total number of sailing-vessels (146), 7 only belong to the company, the remaining 149 having 131 different owners. As we have already stated, carriage by water is annually increasing; its advantages are well known and recognized and we have good grounds for expressing our belief in its future development, and that a large amount of capital will be invested in building a better class of vessels, so as to carry on the traffic on a more extended scale. The idea that the Mitsui Bishi Company possess the monopoly of the whole coasting trade is altogether fallacious and if people would only consider, that in protecting this company, the Government is in reality encouraging the coastal trade of the country they would cease to fall into this error. It should also be remembered that our Government is not singular in their action in this matter, the English, French and other Governments do the same and indeed in Japan it is absolutely necessary to do so under existing circumstances. If at any future time the Mitsui Bishi Company should act in opposition to the interests of the public, the Government will no doubt find means to curb them. If the circumstance of the few foreign vessels employed in the coasting trade be kept in mind it will be patent that the entire exclusion of foreigners from the trade would not cause any inconvenience to trade. From the report furnished to the British Minister by the foreign Chamber of Commerce at Kobe, it appears that foreign vessels conveyed Japanese cargo from Kobe 18 times during the 17 months from 1st January 1878, to 31st May 1879, earning an aggregate freight of only \$13,375. The Mitsui Bishi Company on the other hand, made 179 trips from Tokio to Kobe during the 12 months from the 1st January to 31st December 1878, (excluding steamers which called at Kobe on the way to the north) and earned an aggregate freight of 301,640 yen. Such is the enormous discrepancy over even a portion of the lines of one company and if all the other vessels of foreign form of construction and native junks are taken into consideration the difference will be as great as that between heaven and earth. There is no doubt, however, that had we been solely dependent upon foreign vessels the cargoes shipped in them would not have been so small as actually was the case. We have now shown sufficiently clearly, that we have no need of foreign ships in our coasting trade. It may perhaps be urged that by allowing foreign vessels to compete for this trade, freights will be lowered and merchants and passengers will reap a great benefit. This would not continue long. While the competition lasted, no doubt freights and passage money would be low, but as soon as competition ceased, as it most surely would, by either of the competing parties withdrawing, unable to withstand the losses inflicted upon it, then the victorious party would at once raise the rates to recoup themselves. It is therefore foolish to expect cheap freights permanently by allowing foreign competition.

Ship-building cannot yet be said to be in a flourishing condition, although there are ship-building yards owned by the Government at Kobe, Nagasaki, and Yokohama, and private yards in Osaka, Tokio, Kobe, Hakodate and other places, all of which are busily employed, still we cannot affirm that all the vessels built in these yards are of the most approved construction. There is no doubt however that they are far superior to the native junks. A Marine Insurance Company has lately been established and the officials of the Marine Department of the Post Office have to examine all vessels before an insurance can be effected on either hull or cargo; when this becomes generally known shippers will only employ the best vessels, and builders will be compelled to construct their ships according to standard rules and in the most approved manner. It is also certain, that since the transport of goods by water can now be made without risk, in consequence of its being possible to insure them, the coasting

trade will greatly increase. Since the Marine Insurance Company commenced operations 58 vessels of an aggregate tonnage of 31,877 tons burden, have passed the required examination and been insured. We feel no doubt that, when these facts become more generally known, the foreign companies will grant insurances on goods shipped in Japanese vessels, which have been passed by the officers of the Marine Department and insured by the Tokio Company. When this is done, neither native or foreign merchants will have any cause to complain of the want of facilities in the coasting-trade of Japan. If foreign vessels are allowed to enter the coasting trade, the Japanese mercantile marine must inevitably decline, indeed we feel assured that its future development and prosperity altogether depend upon denying this privilege to foreigners, and we most strongly urge upon the Government the absolute necessity of reserving this trade to Japanese vessels alone, in the forthcoming treaty revision.

THE OPENING OF NEW PORTS:—In the whole of Japan there are only five ports and two cities open to foreign trade, so that all the products of the interior, intended for exportation, must first be brought to these few places. Those who take a superficial view of the subject of opening more ports to foreign commerce may say, that as trade has now fallen into long established grooves, producers will not send their produce to any new ports that may be opened in their vicinity, but will continue to forward them as usual; silk to Yokohama, and tea to Yokohama and Kobe, and that consequently but few foreigners will enter into business at the new ports. But a special and important reason exists why this Chamber desires to see a number of new ports opened to foreign trade, and this we will now proceed to give.

Japanese coal is now in general use throughout the Eastern Seas, the export to China especially, being very great, no less than 123,382 tons having been sent there during the 11th year of Meiji, and we have every reason to believe that the trade will still increase, because many people who formerly burnt foreign coal now use Japanese instead. The working of our coal mines has been greatly improved, machinery has been purchased to aid in raising the coal and steamers bought to convey it to the consumers, so that ere long we shall be in a position to supply cheap coal to the inhabitants of all parts of the East. At the present time in order to export coal, the producer has first to send it to the nearest open port. This not only involves unnecessary expense, but valuable time is lost also, and the development of the industry checked. For example, coal from Takashima, Karatsu, Taku and Suminoye, must first go to Nagasaki before it is exported. Again coal from Horonai and Iwanai in the Hokkaido, two mines which are about to be opened, will have to go to Hakodate. If this state of things continues, the profits of the mine owners will be very small and it certainly is a bad system under which to hope for any great future increase in the trade. It must also be borne in mind that the consumer has now to pay much more for the coal than he otherwise would.
